

housemate
Configuration
User Manual

In order to easily configure the wireless setting for **housemate®**, you will need a laptop or a USB wireless adapter for your desktop.

Install the **housemate®** device as described in the installation manual and wait until the power button is solid green. As soon as you hear the greeting message the device is ready for initial configuration.

Note: Initial device boot up may take several minutes to complete.

Next step is to set the **housemate®** device as a point of connection in order for the Configuration tool to transmit the initial settings (this process is necessary for **WiFi Configuration only**, you will **only have to redo this process if you change the wireless settings**).

In order to set the **housemate® device as a point of connection you have to tap the green power button 5 times within 8 seconds.**

If the above process is done correctly, **you will see the flashing green power led.**

At the same time, the WiFi led will turn red, as well as the notification led.

At this point you will have to wait while the housemate device is setting up the adHoc network.

Note: This step may take several seconds.

Once the network is ready for your PC to connect, the notification led will turn off and the WiFi led will turn green. The flashing green power led will continue to flash until the end of the configuration process.

At this point, you will have to manually connect to the housemate network.

**Simply open the (add name of windows wifi settings)
and click on the network «housemateAP».**

Once you are connected,
you can continue with the WiFi setup described below.

Select the first button for WiFi Configuration

Send Configuration to
Housemate

WiFi

Press the «Search Networks» button

SSID

Authentication

WiFi

If the process was successful you will receive the appropriate message.

The **housemate® green power led will stop flashing and the device will reset in order to connect to the newly setup WiFi network.**

The above setup is required only the first time, or if you change any of the WiFi setting (i.e. SSID, encryption type or password)

If you fail to configure the WiFi settings, housemate will not be able to access the internet.

KNX commands

Select the second button for KNX Configuration

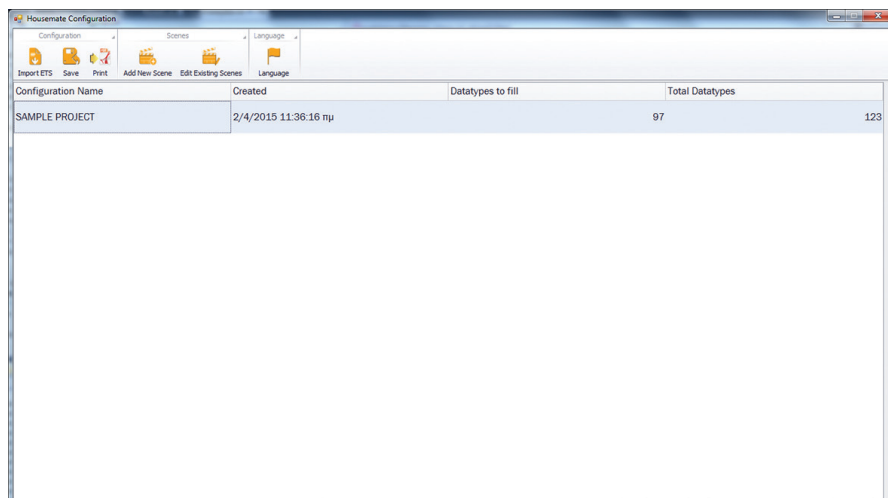

Send Configuration to
Housemate

If you have KNX devices in your smart home installation that you wish to control via housemate, you will have to import the ETS file.

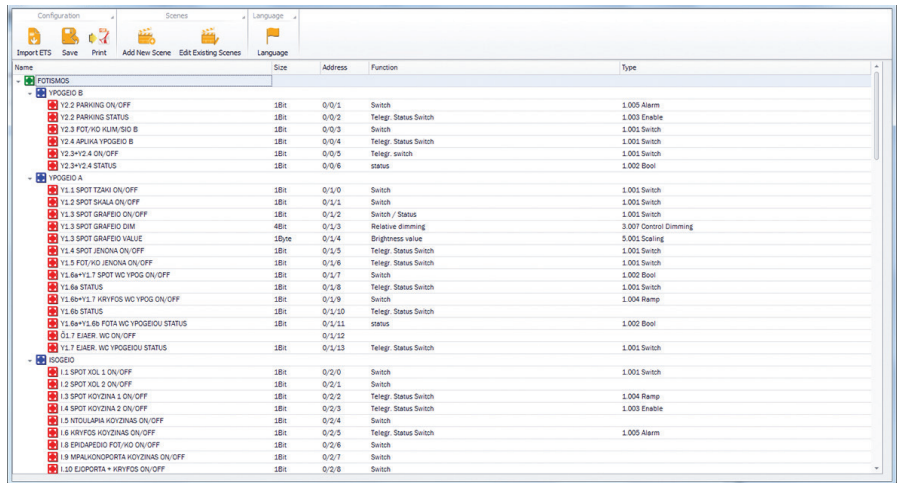

Simply **click the button “Import ETS”** and navigate to the desired project.
(Supported ETS projects have to be exported by ETS4 or later and they have to be of file type «.knxproj»)

Next, open the imported KNX project by double clicking the project name.

KNX commands

The Housemate KNX Configuration will display all the installed devices

Next step is to configure every device that you want to control through voice commands.

In order to do that, simply

select the appropriate command from the related drop list.

This step is necessary only for the devices that you wish to interact with housemate.

KNX commands

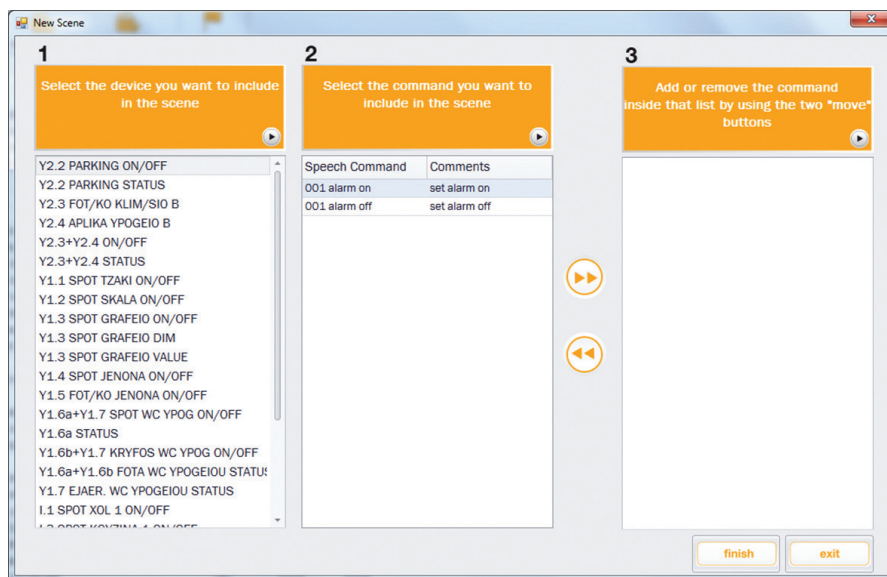

Next step is to create the appropriate voice commands that **housemate®** will recognize. **housemate®** interprets voice commands as scenes.

To create a new Scene, simply click the button «Add new scene» located in the main application bar under the category Scenes.

Next, select the device that you want to include in the scene.

This will auto fill the available KNX commands for the selected device at column 2.

Finally, select the desired KNX command and click the right arrow button (>>) to include this command in the scene.

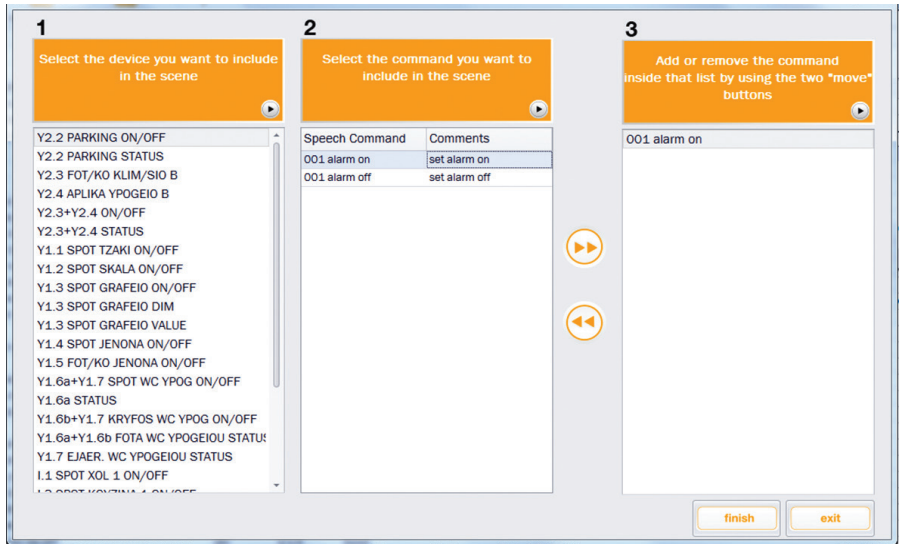

Tip:

You can create a scene that will execute multiple commands at the same time.

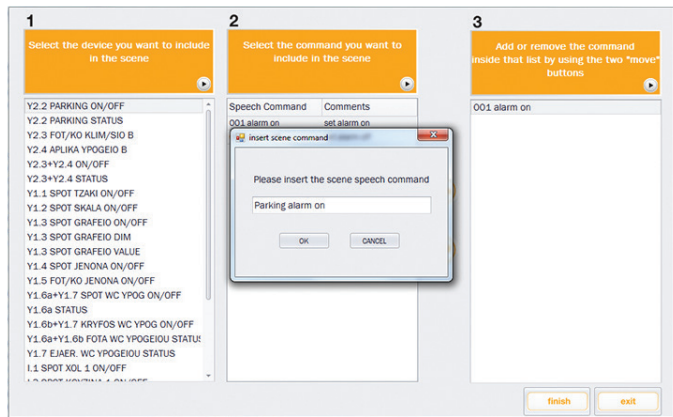

KNX commands

If you need **to remove a KNX command** that is already placed in column 3,
you can do so by

selecting the command and clicking the left arrow button (<<).

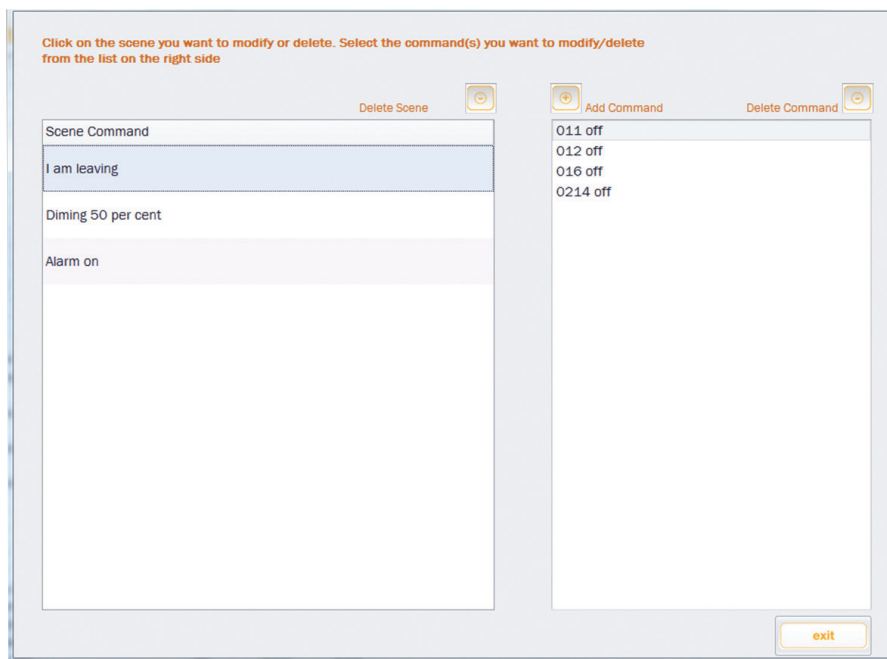

Once you have selected all the desired KNX commands,
click finish and add the Voice command that housemate® will recognize.

KNX commands

To change an existing voice command, **choose «Edit Existing Scenes»** from the main menu, **where you can modify functions from existing commands, and delete Voice Commands.**

Tip:

Double clicking the Scene name will allow you to edit the specific scene command.

Smart commands

At this point, you will configure the **housemate®** smart commands. During the initial set up, the smart commands configuration will walk you through every category displayed above.

News

You do not have to receive updates for every news category.

 **Simply select the desired news categories and click «Next».**

Smart commands

At the next screen you will see only the selected categories.

Click on any category to view more details.

Once you are done with the modifications press the next button. 

The details of each category are depicted in the popup below. When you select a category for the first time some default sites will be displayed. You can edit the information or even completely delete them. Available options include the total number of news you wish to receive from the specific news feed, and the associated voice command that housemate will recognize.

By clicking the Reset all button, any changes made will be reset.

Once you are done editing the information

click the «Save» button

to continue with the rest of the news feeds.

Smart commands

Extras

By pressing the “Extras” button, you will be redirected in another screen where extra commands and settings are presented.

Time

At this section you can **setup the time zone and voice command that interests you.**

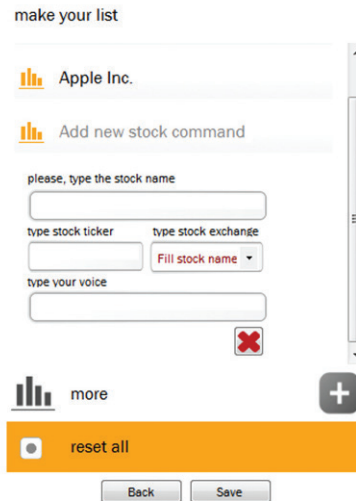

The screenshot shows the 'Time' configuration screen. It has a clock icon on the left. The first section is 'select a timezone' with a dropdown menu showing '(UTC+02:00) Helsinki, Kyiv, Riga, Sofia, Tallin'. The second section is 'type your voice command' with a text input field containing 'What time is it'. At the bottom, there are two buttons: 'Back' and 'Save'.

Smart commands

Stocks

housemate® is capable of retrieving stock information. In order to do that, **you will have to setup a stock ticker and associate it with a voice command.**

By clicking the Stocks button in the main application window will be redirecting in a window as depicted below.

At this stage, you simply have to type the full stock name. The **housemate®** configuration will start to auto fill the stock name. **Once you have finished with the stock name, you will have to select the appropriate stock exchange.** As soon as the stock name and stock exchange are selected, the appropriate stock ticker will be displayed.

When you have finished with the stock ticker, it is time to type the voice command that will be recognized by housemate.

You can always add more stock commands by pressing the “more” or “+” button.

Tip: If you are aware of the stock ticker you can write that instead of the full stock name. The search engine will match your ticker and auto fill the rest of the information.

Smart commands

Change Name

housemate® is developed to respond, every time the word “housemate” is recognized by the system.

On the other hand, the user is able to add an alternative name that he wish to use in order to trigger the system.

Note: Adding an alternative name will not delete the «housemate» command.

By pressing the «Change Name» button in the «extras» configuration window, the user can type the desired word/trigger.

Once you are finished, press the save button and you will be redirected back to the «extras» configuration window.

View the list of Commands

When configuration is complete, the user can press the «View Commands» button located in the main configuration windows.

Note: This process can take several seconds to complete.

Once inside the «View Commands» window, the user is able to print the configured voice commands for future reference.

Save

Once the Smart Command Configuration is completed, you can press the “Finish” button located in the main configuration window. This will close the Smart Command Configuration window and redirect you back to the

Smart commands

Send configuration to Housemate

After completing the 3 steps (WiFi, KNX commands, Smart commands), you can press the button «Send configuration to Housemate». **This process might take a few minutes, so please don't close the program until you get the message that the process is complete.**

Using the voice command «housemate» or the one that you defined in the Smart Command Configuration, the **housemate®** logo led will light up, indicating that the device is waiting for a follow up command.
