

Packaged Gas/Electric Rooftop Units

**Precedent™
YSC060-120
50 Hz**

Introduction

Precedent™ . . . The same Trane quality... with added flexibility.
Precedent is a flexible line of packaged units that covers a wide variety of applications.

Reliatel™ microprocessor controls provide superior flexibility for the simplest to the most sophisticated applications. In addition to controls, Precedent offers many other outstanding features and option choices.

With its sleek compact cabinet, rounded corners and beveled top, it may just be the most aesthetically pleasing packaged unit on the planet. And, of course, Precedent carries the Trane reputation for excellence, quality, and reliability. *It's hard to stop a Trane.*

From simple applications, to the most complex, Precedent has the solution.

Features and Benefits

Unit Cabinet

The compact cabinet with rounded corners takes up less room and is less costly to ship. The beveled and ribbed top is not only aesthetically pleasing, it is designed to prevent water from pooling.

Single Point Power

A single electrical connection powers the unit.

Compressors

Precedent™ contains the best compressor technology available to achieve the highest possible performance. Our compressor line includes Trane built Climatuff™ reciprocating and scrolls.

Easy Access Panels

Easy access panels reduce the number of possible water entry points.

Low Ambient Cooling

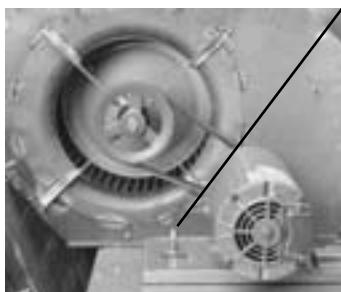

All Precedent units have cooling capabilities down to -18°C (0°F) as standard.

Easy Access Panels

Remove two screws for access to the standardized internal components and wiring.

Easy-Adjust Idler Arm

With the Easy-Adjust Idler Arm, the belt and sheaves can be quickly adjusted without moving the mounted fan motor. The result is a major savings in time and money.

Colored And Numbered Wiring

You save time and money tracing wires and diagnosing the unit.

Convertible Units

- The units ship in a downflow configuration. They can be easily converted to horizontal by simply moving two panels.
- Units come complete with horizontal duct flanges so the contractor doesn't have to field fabricate them. These duct flanges are a time and cost saver.

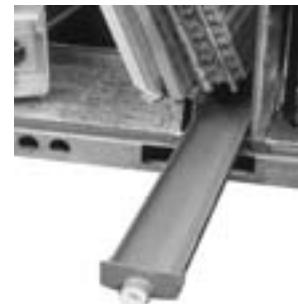

Unit Base

For added water integrity, Precedent has a raised 29 mm (1 1/8") lip around the unit's downflow supply and return to prevent water from blowing into the ductwork.

Patented Condenser Coil

Precedent boasts a patented 1+1+1 Hybrid coil, permanently gapped for easy cleaning.

Sloped Drain Pans

Every Precedent unit has a non-corrosive, removable, double-sloped drain pan that's easy to clean and reversible to allow installation of drain trap on either side of the unit.

Through the Base Condensate

Every unit includes provisions for through the base condensate drain connections. This allows the drain to be connected through the roof curb instead of a roof penetration.

Foil-Faced Insulation

All panels in the Evaporator section of the unit have cleanable foil-faced insulation. All edges are either captured or sealed to ensure no fibers get into the airstream.

Features and Benefits

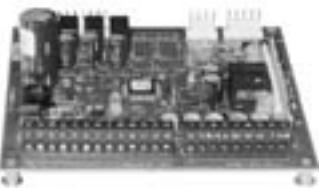

Standardized Components

- Components are placed in the same location on all Precedent™ units. Familiarize yourself with one Precedent and you are familiar with every Precedent.

Easy Access Low Voltage Terminal Board

Precedent's Low Voltage Terminal Board is external to the electrical control cabinet. It is extremely easy to test operation of all unit functions. This is another cost and time saving installation feature.

Low Voltage Connections

The wiring of the low voltage connections to the unit and the zone sensors is as simple as 1-1, 2-2, and 3-3. This simplified system makes it easy for the installer to wire.

Single-Side Service

Single-side service is standard on all Precedent units.

Progressive Tubular Heat Exchanger

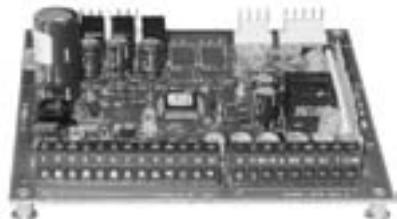

The compact cabinet features a tubular heat exchanger in low, medium and high heat capacities.

The heat exchanger is fabricated using stainless steel burners and corrosion-resistant aluminized steel tubes as standard on all models. It has an induced draft blower to pull the gas mixture through the burner tubes. The heater has a direct spark ignition system which doubles as a safety device to prove the flame.

Flexible Applications

- Only two roof curbs for the 5-10 ton Precedent line. . .simplifies curb selection.
- ReliaTel microprocessor controls to meet either the simple or the more complex application.
- Low or high gas heat capacities.
- Airflow is outstanding. The Precedent can replace an older machine with old ductwork and, in many cases, improve comfort through better air distribution.
- Belt drive —standard or oversized supply fan motors meet a wide airflow range.
- Precedent offers ultimate flexibility. Options and components are not pre-packaged at the factory. Units are built to order in our standard "shortest in the industry" ship cycle time.

Features and Benefits

Micro Controls

Several years ago, Trane was the first to introduce microprocessor controls into the Light Commercial Market. That design, along with immeasurable experience, has provided the technology for Trane's second-generation ReliaTel™ microprocessor controls.

ReliaTel Micro:

- Provides unit control for heating, cooling, and ventilating by utilizing input from sensors that measure outdoor and indoor temperature.
- Improves quality and reliability through the use of time-tested microprocessor controls and logic.
- Prevents the unit from short cycling, considerably improving compressor life.
- Ensures that the compressor will run for a specific amount of time, which allows oil to return for better lubrication, enhancing the reliability of the compressor.
- Reduces the number of components required to operate the unit, thereby reducing possibilities for component failure.

- Eliminates the need for field-installed components with its built-in anti-short-cycle timer, time delay relay and minimum "on" time controls. These controls are factory tested to assure proper operation.
- Requires no special tools to run the Precedent unit through its paces during testing. Simply place a jumper between Test 1 and Test 2 terminals on the Low Voltage Terminal Board and the unit will walk through its operational steps. The unit automatically returns control to the zone sensor after stepping through the test mode a single time, even if the jumper is left on the unit.
- As long as the unit has power and the LED is lit, the Micro is operational. The light indicates that the Micro is functioning properly.
- Features expanded diagnostic capabilities when used with Trane's Integrated Comfort™ Systems.
- As an energy benefit, softens electrical "spikes" by staging on fans, compressors and heaters.
- The Intelligent Fallback or Adaptive Control is a benefit to the building occupant. If a component goes astray, the unit will continue to operate at predetermined temperature set points.
- Intelligent Anticipation is a standard feature of the Micro. Functioning constantly, the Micro and zone sensors work together in harmony, to provide tight comfort control.

Features and Benefits

Factory-installed Options

Hinged Access Doors

These doors permit easy access to the filter, fan/heat, and compressor/control sections. They reduce the potential roof damage from screws or sharp access door corners.

Economizer

Equipped with either dry bulb, reference or comparative enthalpy sensing, this feature provides free cooling as the outdoor temperature and/or humidity decreases. Economizers, correctly installed, offer valuable energy savings. Factory-installed economizers save time and ensure proper installation.

Phase Monitor

Phase monitor shall provide 100% protection for motors and compressors against problems caused by phase loss, phase imbalance, and phase reversal. Phase monitor is equipped with an LED that provides an ON or FAULT indicator.

Clogged Filter/Fan Fail Switches

These sensors allow a zone sensor service light or Integrated Comfort System to indicate a dirty filter or a fan that's not working. The field installation charges for these valuable feedback devices often eliminate them from consideration. Factory installation can make such features a good investment.

COMM3/4 Communication Interface

Available factory or field-installed. This module, when applied with ReliaTel™, easily interfaces with Trane's Integrated Comfort™ System.

The following options round-out the complete line of Precedent™ options:

- 0 - 50% Manual or Motorized Outside Air
- Discharge Air Sensor
- Hail Protection Quality Coil Guards
- Wide array of Zone Sensors and Thermostats
- Liquid Propane Conversion Kits
- Factory built Roof Curb

One of Our Finest Assets:

Trane Sales Representatives are a Support group that can assist you with:

- Product
- Application
- Service
- Training
- Special Applications
- Specifications
- Computer Programs and much more

Precedent has the features and benefits that make it first class in the light commercial rooftop market. Designed with input from field contractors and engineers, its airflow performance is outstanding.

Precedent...The same Trane quality...with added flexibility.

Features and Benefits

Quality And Reliability Testing

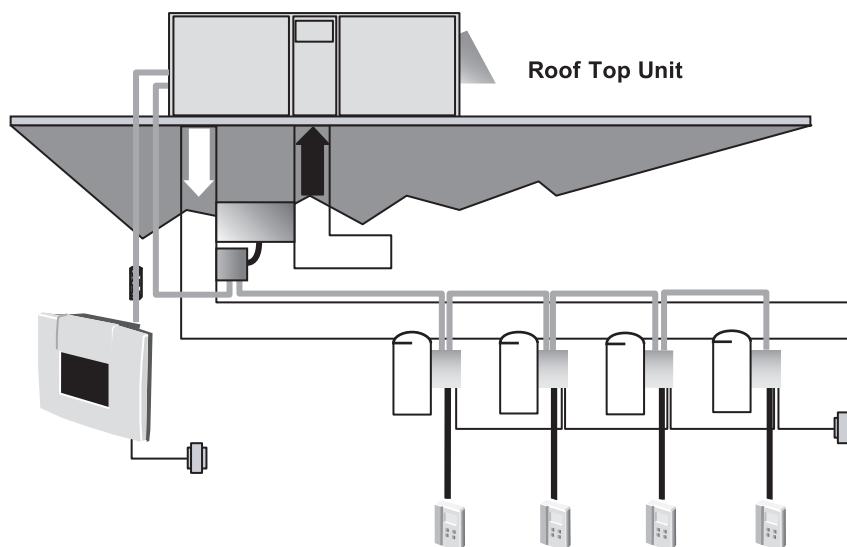

- All Precedent™ designs were rigorously rain tested at the factory to ensure water integrity.
- Actual shipping tests were performed to determine packaging requirements. Units were test shipped around the country to determine the best packaging.
- Factory shake and drop tests were used as part of the package design process to help assure that the unit arrives at the job site in top condition.
- Rigging tests include lifting a unit into the air and letting it drop one foot, assuring that the lifting lugs and rails hold up under stress.
- We perform a 100% coil leak test at the factory. The evaporator and condenser coils are leak tested at 1375 kPa (200 psig) and pressure tested to 3100 kPa (450 psig).
- All parts are inspected at the point of final assembly. Sub-standard parts are identified and rejected immediately.
- The requirement for cycle testing of heat exchangers is 10,000 cycles by ANSI Z21.47. This is the standard required by both UL and AGA for cycle test requirements. Trane requires the design to be tested to 2½ times this current standard.
- Every unit receives a 100% unit run test before leaving the production line to make sure it lives up to rigorous Trane requirements.

We test designs at our factory not on our customers!

VariTrac™

VariTrac

When Trane's changeover VAV System for light commercial applications is coupled with Precedent, it provides the latest in technological advances for comfort management systems and can allow thermostat control in every zone served by VariTrac.

Application Considerations

Application of this product should be within the cataloged airflow and cooling considerations.

Low Ambient Cooling

The Precedent™ line features, as standard, low ambient cooling down to -18°C (0°F). Contact your local Trane Representative for more assistance with low ambient cooling applications.

Barometric Relief

This product offers an optional barometric relief damper for use in conjunction with economizer option. This option consists of gravity dampers which open with increased pressure. As the building air pressure increases, the pressure in the unit return air section also increases, opening the dampers and relieving the conditioned space.

NOTE: THE EFFECTIVENESS OF BAROMETRIC RELIEF DAMPER DURING ECONOMIZING OPERATION IS SYSTEM RELATED. PRESSURE DROP OF THE RETURN AIR SYSTEM SHOULD BE CONSIDERED TO CONTROL BUILDING PRESSURIZATION.

Heating Operation

The heat exchanger is manufactured with aluminized steel. To prevent condensation within the heat exchanger, do not exceed 50% outside air.

Condensate Trap

The evaporator is a draw-thru configuration. A trap must be field provided prior to start-up on the cooling cycle.

Clearance Requirements

The recommended clearances identified with unit dimensions should be maintained to assure adequate service, maximum capacity and peak operating efficiency. Actual clearances which appear inadequate should be reviewed with the local Trane sales personnel.

Unit Pitch

These units have reversible sloped condensate drain pans. Units must be installed level; any unit slope must be toward side of unit where condensate drain is connected.

Selection Procedures - SI Units

Cooling Capacity

Step 1 — Calculate the building's total and sensible cooling loads at design conditions. Use the Trane calculation form or any other standard accepted method.

Example: The following are the building cooling requirements:

- a. Electrical Characteristics: 380-415/50/3
- b. Summer Design Conditions: Entering Evaporator Coil: 27° DB/ 19° WB
Outdoor Ambient: 35°
- c. Total Cooling Load: 16.5 kW
- d. Sensible Cooling Load: 11.8 kW
- e. Airflow: 3400 m³/h External Static Pressure: 125 Pa
- f. Downflow Configuration

Step 2 — Size the equipment using Table PD-1 to match the cooling loads at design conditions.

Table PD-1 shows that a YSC060AD has a gross cooling capacity of 17.8 kW and 14.4 kW sensible capacity at 35 DB ambient and 3400 m³/h with 27 DB/ 19 WB air entering the evaporator.

Use the following formula to calculate fan motor heat, which can be found in the notes in Table PD-8:

$$\begin{aligned}\text{Fan motor heat (kW)} \\ = 1.144 \times (\text{Fan kW}) + 0.132\end{aligned}$$

For example: With 3400 m³/h and 125 Pa, specified by the engineer, Table PD-8 shows 0.73 kW for a high heat model.

$$\begin{aligned}\text{Fan motor heat} = \\ 1.144 \times 0.73 + 0.132 = 0.97 \text{ kW} \\ \text{Net Total Cooling} = \\ 17.8 \text{ kW} - 0.97 = 16.8 \text{ kW} \\ \text{Net Sensible Cooling Capacity} \\ 14.4 \text{ kW} - 0.97 = 13.4 \text{ kW.}\end{aligned}$$

Heating Capacity

Step 1 — Calculate the building heating load using the Trane calculation form or other standard accepted method.

Step 2 — Size the system heating capacity to match the calculated building heating load. The following are building heating requirements:

- a. Total heating load of 17.6 kW
- b. 3400 m³/h
- c. Fuel - Natural gas

For the YSC060AD there are two heating capacities available, 19.6 kW and 29.3 kW input models shown in Table PD-32. The output capacities of these furnaces are 15.7 kW and 23.4 kW respectively. The high heat model with 23.4 kW best matches the building requirements, indicating a YHC060AD* should be selected.

Air Delivery Selection

External static pressure drop through the air distribution system has been calculated to be 150 Pa. Enter Table PD-8 for a YSC060AD*H at 3400 m³/h and 150 Pa static pressure. The standard motor will give the desired airflow.

Accessory Selection

Select accessories needed to accommodate the application.

Selection Procedures - IP Units

Cooling Capacity

Step 1 — Calculate the building's total and sensible cooling loads at design conditions. Use the Trane calculation form or any other standard accepted method.

Example: The following are the building cooling requirements:

- a. Electrical Characteristics: 380-415/50/3
- b. Summer Design Conditions: Entering Evaporator Coil: 80° DB/ 67° WB
Outdoor Ambient: 95°
- c. Total Cooling Load: 58 MBh
- d. Sensible Cooling Load: 42 MBh
- e. Airflow: 2000 cfm External Static Pressure: .6 in wg
- f. Downflow Configuration

Step 2 — Size the equipment using Table PD-1a to match the cooling loads at design conditions.

Table PD-1a shows that a YSC060AD has a gross cooling capacity of 62.0 MBh and 46.4 MBh sensible capacity at 95 DB ambient and 2000 cfm with 80 DB/ 67 WB air entering the evaporator.

Use the following formula to calculate fan motor heat, which can be found in the notes in Table PD-8a:

$$\text{Fan motor heat (MBh)} = 2.915 \times (\text{Fan bhp}) + 0.451$$

For example: With 2000 cfm and 0.60 inches, specified by the engineer, Table PD-8a shows 1.06 bhp for a high heat model.

$$\begin{aligned}\text{Fan motor heat} &= \\ 2.915 \times 1.06 + 0.451 &= 3.5 \text{ MBh} \\ \text{Net Total Cooling} &= \\ 62.0 \text{ MBh} - 3.5 &= 58.5 \text{ MBh} \\ \text{Net Sensible Cooling Capacity} &= \\ 46.4 \text{ MBh} - 3.5 &= 42.9 \text{ MBh.}\end{aligned}$$

Heating Capacity

Step 1 — Calculate the building heating load using the Trane calculation form or other standard accepted method.

Step 2 — Size the system heating capacity to match the calculated building heating load. The following are building heating requirements:

- a. Total heating load of 70.0 MBh
- b. 2000 cfm
- c. Fuel - Natural gas

For the YSC060AD there are two heating capacities available, 67 MBh and 100 MBh input models shown in Table PD-32. The output capacities of these furnaces are 54 MBh and 80 MBh respectively. The high heat model with 80 MBh best matches the building requirements, indicating a YSC060AD*H should be selected.

Air Delivery Selection

External static pressure drop through the air distribution system has been calculated to be 0.6 inches of water. Enter Table PD-8a for a YSC060AD*H at 2000 cfm and 0.60 static pressure. The standard motor will give the desired airflow.

Accessory Selection

Select accessories needed to accommodate the application.

Notes:

1. Cooling Performance is rated at 35.0 C (95 F) ambient, 26.7 C (80 F) entering dry bulb, 19.4 C (67 F) entering wet bulb. Gross capacity does not include the effect of fan motor heat. Net capacity includes the effect of fan motor heat. Units are suitable for operation to ± 20 % of nominal airflow.
2. EER are rated at ARI conditions.
3. Heating Performance limit settings and rating data were established and approved under laboratory test conditions using American National Standards Institute standards. Ratings shown are for elevations up to 2000 feet. For elevations above 2000 feet, ratings should be reduced at the rate of 4% for each 1000 feet above sea level.
4. Outdoor Sound rating shown is tested in accordance with ARI Standard 270. For more information refer to Performance Data Table "Sound Power Level".
5. Refrigerant charge is an approximate value. For a more precise value, see unit nameplate and service literature.

Notes:

Data Includes Pressure Drop Due To Wet Coils And Filters.

1.12 kW - Fan Motor Heat (kW) = 1.144 x Fan kW + 0.132

Factory Supplied Motors, In Commercial Equipment, Are Definite Purpose Motors, Specifically Designed And Tested To Operate Reliably And Continuously At All Cataloged Conditions. Using The Full Horsepower Range Of Our Fan Motors As Shown In Our Tabular Data Will Not Result In Nuisance Tripping Or Premature Motor Failure. Our Product's Warranty Will Not Be Affected.

 1.12 kW - Fan Motor Heat (kW) = $1.144 \times \text{Fan kW} + 0.132$
 1.50 kW - Fan Motor Heat (kW) = $1.178 \times \text{Fan kW} + 0.464$

Factory Supplied Motors, In Commercial Equipment, Are Definite Purpose Motors, Specifically Designed And Tested To Operate Reliably And Continuously At All Cataloged Conditions. Using The Full Horsepower Range Of Our Fan Motors As Shown In Our Tabular Data Will Not Result In Nuisance Tripping Or Premature Motor Failure. Our Product's Warranty Will Not Be Affected.

Notes:

Data Includes Pressure Drop Due To Wet Coils And Filters.

2 HP - Fan Motor Heat (MBH) = 3.000 x Fan BHP + 0.500

3 HP - Fan Motor Heat (MBH) = 2.900 x Fan BHP + 0.475

Factory Supplied Motors, In Commercial Equipment, Are Definite Purpose Motors, Specifically Designed And Tested To Operate Reliably And Continuously At All Cataloged Conditions. Using The Full Horsepower Range Of Our Fan Motors As Shown In Our Tabular Data Will Not Result In Nuisance Tripping Or Premature Motor Failure. Our Product's Warranty Will Not Be Affected.

Zone Controls

Zone Sensors

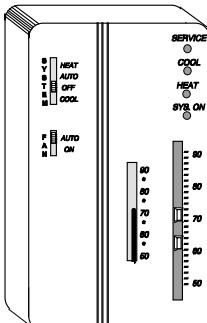

Zone Sensors are the building occupant's comfort control devices for Precedent™ units with ReliaTel™ control:

Manual Changeover — Heat, Cool or Off System Switch. Fan Auto or Off Switch. One temperature setpoint lever.

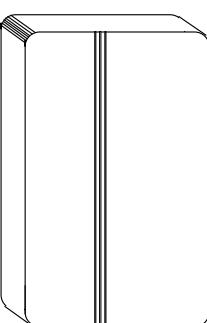

Manual/Automatic Changeover — Auto, Heat, Cool or Off System Switch. Fan Auto or Off Switch. Two temperature setpoint levers.

Optional Status Indication LED lights, System On, Heat, Cool, or Service.

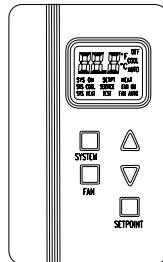

Remote Sensor

Sensor(s) available for all zone sensors to provide remote sensing capabilities.

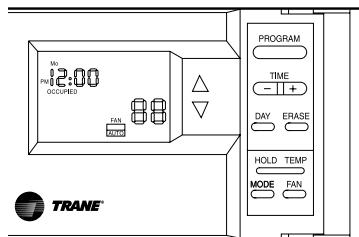

Non-Programmable Manual Auto Changeover with Digital LCD Display

Auto, heat, cool or off mode selection button. Auto or off fan button. Status indication LCD indicators - System on, heat, cool, or service.

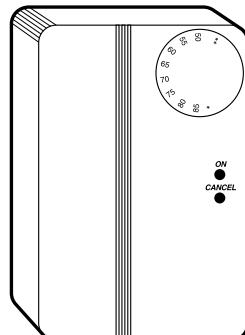

Programmable Night Setback — Auto or manual changeover with seven-day programming. Keyboard selection of Heat, Cool, Fan, Auto, or On. All

programmable sensors have System On, Heat, Cool, Service LED/indicators as standard. Night Setback Sensors have one (1) Occupied, one (1) Un-occupied, and two (2) Override programs per day.

Integrated Comfort™ System

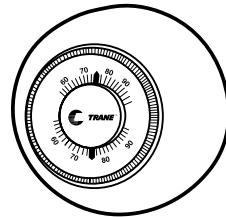

Sensor(s) available with optional temperature adjustment and override buttons to provide central control through a Trane Integrated Comfort™ system.

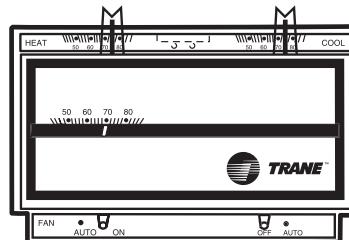

Conventional Thermostats

Conventional Thermostats are the building occupant's comfort control devices when a generic thermostat is desired.

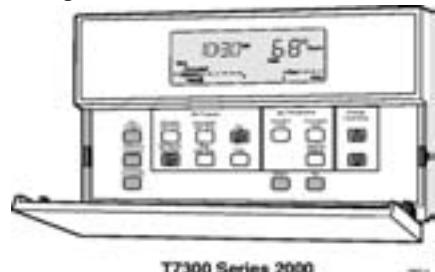

Manual Changeover — One Heat, One Cool Thermostat. Heat, Cool or Off System Switch. Fan Auto or On Switch. Set Point Dial. Adjustable Heat Anticipator.

Automatic Changeover — One Heat, Two Cool Thermostat. Off, Auto System Switch. Auto/On Fan Switch.

Programmable Electronic Night Setback Thermostat — Heating setback and cooling setup with 7-day, programming capability. Available in two-stage heating/cooling or one-stage heating/cooling versions with automatic changeover.

Roof Curb	70	115
Oversized Motor	5	8
Coil Guards	12	20
Hinged Doors	10	12
Electric Heaters	15	30

Notes:

(1) Weights for options not listed are < 5 lbs.

(2) Net weight should be added to unit weight when ordering factory-installed accessories.

(3) Some accessories not available on all units.

Mechanical Specifications

General

Units shall be convertible airflow. Operating range in cooling shall be between 46°C and -18°C (115°F and 0°F) cooling as standard from the factory for all units. All units shall be factory assembled, internally wired, fully charged with R-22, and 100 percent run-tested before leaving the factory. Wiring internal to the unit shall be colored and numbered for simplified identification.

Casing

Unit casing shall be constructed of zinc coated, heavy gauge, galvanized steel. Exterior surfaces shall be cleaned, phosphatized, and finished with a weather-resistant baked enamel finish. Cabinet construction shall allow for all maintenance on one side of the unit. Service panels shall have lifting handles and be removed and reinstalled by removing only a single fastener while providing a water and air tight seal. All exposed vertical panels and top covers in the indoor air section shall be insulated with a cleanable foil faced, fire-retardent permanent, odorless glass fiber material. The base of the unit shall be insulated with 13 mm, 16 kg (1/2 inch, 1 pound) density foil-faced, closed-cell material. All insulation edges shall be either captured or sealed. The unit's base pan shall have no penetrations within the perimeter of the curb other than the raised 29 mm (1 1/8 inch) high downflow supply/return openings to provide an added water integrity precaution, if the condensate drain backs up. The base of the unit shall have provisions for forklift and crane lifting, with forklift capabilities on three sides of the unit.

Unit Top

The top cover shall be one piece construction or, where seams exist, it shall be double-hemmed and gasket-sealed. The ribbed top adds extra strength and prevents water from pooling on unit top.

Filters

25 mm (1 inch), throwaway filters shall be standard on all 5 ton units.. The filter rack can be converted to two inch capability. 50 mm (2 inch) filters shall be factory supplied on all 6-10 ton units. Optional two inch pleated filters shall be available.

Compressors

All units shall have direct-drive, hermetic, scroll type compressors with centrifugal type oil pumps. Motor shall be suction gas-cooled and shall have a voltage utilization range of plus or minus 10 percent of unit nameplate voltage. Internal overloads shall be provided with the scroll compressors. Low and high pressure switches shall be standard.

Refrigerant Circuits

Service pressure ports, and refrigerant line filter driers shall be factory-installed as standard. An area shall be provided for replacement suction line driers.

Evaporator And Condenser Coils

Internally finned, 8 mm (5/16") copper tubes mechanically bonded to a configured aluminum plate fin shall be standard. Coils shall be leak tested at the factory to ensure pressure integrity. The evaporator coil and condenser coil shall be leak tested to 1375 kPa (200 psig) and pressure tested to 3100 kPa (450 psig). The condensate coil shall have a patent pending 1+1+1hybrid design with slight gaps for ease of cleaning. A removable, reversible, double-sloped condensate drain pan is standard. Provision for through the base condensate drain is standard.

Gas Heating Section

The heating section shall have a progressive tubular heat exchanger design using stainless steel burners and corrosion resistant steel throughout. An induced draft combustion blower shall be used to pull the combustion products through the firing tubes. The heater shall use a direct spark ignition (DSI) system. On initial call for heat, the combustor blower shall purge the heat exchanger for 20 seconds before ignition. After three unsuccessful ignition attempts, the entire heating system shall be locked out until manually reset at the thermostat/zone sensor. Units shall be suitable for use with natural gas or propane (field-installed kit).

Outdoor Fans

The outdoor fans shall be direct-drive, statically and dynamically balanced, draw-through in the vertical discharge position. The fan motor shall be permanently lubricated and shall have built-in thermal overload protection.

Mechanical Specifications

Indoor Fan

All units shall have belt drive motors. Units with belt drive motors shall have an adjustable idler-arm assembly for quick-adjustment to fan belts and motor sheaves. All motors shall be thermally protected. Oversized motors shall be available for high static operations.

Controls

Unit shall be completely factory wired with necessary controls and contactor pressure lugs or terminal block for power wiring. Unit shall have single point power entry as standard. Units shall provide an external location for mounting a fused disconnect device.

Microprocessor controls provide for all 24 volt control functions. With the microprocessor controls, the resident control algorithms shall make all heating, cooling, and/or ventilating decisions in response to electronic signals from sensors measuring indoor and outdoor temperatures. The control algorithm maintains accurate temperature control, minimizes drift from set point, and provides better building comfort. A centralized Microprocessor shall provide anti-short cycle timing and time delay between compressors to provide a higher level of machine protection.

Accessories/Options

Roof Curb

The roof curb shall be designed to mate with the unit's downflow supply and return openings and provide support and a watertight installation when installed properly. The roof curb design shall allow field-fabricated rectangular supply/return ductwork to be connected directly to the curb. Curb shall be shipped knocked down for field assembly and shall include wood nailer strips.

Economizer

This accessory shall be either field or factory-installed and is available with or without barometric relief. The assembly includes fully modulating 0-100 percent motor and dampers, minimum position setting, preset linkage, wiring harness with plug, spring return actuators and fixed dry bulb control. Optional solid state enthalpy and differential enthalpy control shall be either factory or field-installed. The factory-installed economizer arrives in the shipping position and shall be moved to the operating position by the installing contractor.

Phase Monitor

Phase monitor shall provide 100% protection for motors and compressors against problems caused by phase loss, phase imbalance, and phase reversal. Phase monitor is equipped with an LED that provides an ON or FAULT indicator.

Remote Potentiometer

Field-installed, the minimum position setting of economizer shall be adjusted with this accessory.

Motorized Outside Air Dampers

Factory or field-installed manually set outdoor air dampers shall provide up to 50 percent outside air. Once set, outdoor air dampers shall open to set position when indoor fan starts. The damper shall close to the full closed position when indoor fan shuts down.

Manual Outside Air Damper

Factory or field-installed rain hood and screen shall provide up to 50 percent outside air.

Oversized Motors

Factory or field-installed oversized motors shall be available for high static applications.

Discharge Air Sensing

This factory or field option provides true discharge air sensing in heating models. This sensor is a status indicator readable through Tracer™ or Tracker™.

Coil Guards

Hail protection quality coil guards shall be either factory or field-installed for condenser coil protection.

Fan Failure/Clogged Filter Switches

These factory or field-installed options allow for individual fan failure and dirty filter indication. The fan failure switch will disable all unit functions and "flash" the Service LED on the zone sensor. The dirty filter switch will light the Service LED on the zone sensor and will allow continued unit operation.

High Pressure Cutout

All units have High Pressure cutout as standard.

Hinged Access Doors

Sheet metal hinges are available factory-installed on the Filter/Evaporator Access Door, Indoor Fan/Heat Exchanger Door, and the Compressor/Control Access Door.

Black Epoxy Coated Condenser Coil

The coil provides corrosion protection to condenser coils for seacoast application. The protection is a factory applied thermoset vinyl coating, bonded to normal aluminum fin stock. The uniform thickness of the bonded vinyl layer exhibits excellent corrosion protection in salt spray tests.

Mechanical Specifications

Control Options

Comm-3/4 Trane Communication Interface

This factory or field-installed option shall be provided to interface microprocessor controlled units with the Trane Integrated Comfort™ systems.

Comm-5 LonTalk Communication Interface

This factory or field-installed option shall be provided to allow the unit to communicate as a Trane Comm-5 device or directly with generic LonTalk Network Building Automation System Controls.

Zone Sensor

Field-installed, this accessory shall be provided to interface with the Micro equipped units and shall be available in either manual, automatic programmable with night setback, with system malfunction lights or remote sensor options.

Thermostats

Two stage heating and cooling operation or one stage heating and cooling shall be available, for field installation, in either manual or automatic changeover.

Automatic programmable electronic with night set back shall also be available.

Reference Enthalpy Control

Replaces the dry bulb control with a wet bulb changeover controller which has a fully adjustable setpoint. Enthalpy control offers a higher level of comfort control, along with energy savings potential, than the standard dry bulb control. This is due to the additional wet bulb sensing capability. This option shall be available for all units. It can be field-installed or factory-installed with the factory-installed economizer.

Differential Enthalpy Control

Replaces the standard dry bulb control with two enthalpy sensors that compare total heat content of the indoor air and outdoor air to determine the most efficient air source. This control option offers the highest level of comfort control, plus energy efficiency, available. This option shall be available for all units. It can be field-installed or factory-installed with the factory-installed economizer.

Low Ambient Cooling

All microprocessor units shall have cooling capabilities down to -18°C (0°F) as standard.
