Installation and Assembly: In-wall Mount for up to 40" Flat Panel Screens

Models: IM740P, IM740P-S

This product is intended for use with UL Listed products and must be installed by a qualified professional installer.

Maximum UL Load Capacity:
80 lb (36.3 kg)

Note: Read entire instruction sheet before you start installation and assembly.

⚠ WARNING

- Do not begin to install your Peerless product until you have read and understood the instructions and warnings contained in this Installation Sheet. If you have any questions regarding any of the instructions or warnings, please call Peerless customer care at 1-800-865-2112.
- This product should only be installed by someone of good mechanical aptitude, has experience with basic building construction, and fully understands these instructions.
- Make sure that the supporting surface will safely support the combined load of the equipment and all attached hardware and components.
- Never exceed the Maximum UL Load Capacity.
- If mounting to wood wall studs, make sure that mounting screws are anchored into the center of the studs. Use of an "edge to edge" stud finder is highly recommended.
- Always use an assistant or mechanical lifting equipment to safely lift and position equipment.
- Tighten screws firmly, but do not overtighten. Overtightening can damage the items, greatly reducing their holding power.
- This product was designed and intended to be mounted to the following supporting surfaces checked below with the hardware included in this product as specified in the installation sheet. To mount this product to an alternative supporting surface, contact Peerless customer care at 1 800 865-2112.
- This product was designed to be installed on the following wall construction only;

WALL CONSTRUCTION

- Wood Stud
- Wood Beam
- Solid Concrete
- Cinder Block
- Metal Stud
- Brick
- Other or unsure?

ADDITIONAL HARDWARE REQUIRED

- None
- Contact Customer Service (Not Evaluated by UL)

Tools Needed for Assembly

- stud finder ("edge to edge" stud finder is recommended)
- phillips screwdriver
- drill
- 5/32" and 1/8" bit for wood stud wall
- level

Installation to Wood Stud Wall

⚠ WARNING

- Installer must verify that the supporting surface will safely support the combined load of the equipment and all attached hardware and components.
- Tighten wood screws so that wall plate is firmly attached, but do not overtighten. Overtightening can damage the screws, greatly reducing their holding power.
- Never tighten in excess of 80 in. • lb (9 N.M.).
- Make sure that mounting screws are anchored into the center of the stud. The use of an "edge to edge" stud finder is highly recommended.
- Hardware provided is for attachment of mount through standard thickness drywall or plaster into wood studs. Installers are responsible to provide hardware for other types of mounting situations.

1 In-wall box (A) must be installed between two studs 16" on center. Use an edge-to-edge stud finder to locate the edges of the stud. Based on its edges, draw two vertical lines down the inside edges of stud's. Mark desired center of in-wall box. Draw a horizontal line 6-1/8" (150 mm) above center of in-wall box (A). Draw a second horizontal line 12-1/4" (311 mm) below this line to outline wall opening between inside edges of studs. Remove drywall inside cut outline.

NOTE: In-wall box (A) can be installed for left or right side mount orientation as shown in figure 1.2.

Insert in-wall box (A) into cut-out until flange is flush with drywall.

Level in-wall box (A), and mark the position of two mounting holes using holes on mounting tabs. Remove in-wall box (A) and drill 1/8" (3 mm) dia. holes 1-1/2" (38 mm) deep using the locations previously marked. Reinstall and level in-wall box (A). Secure using two #10 X 1-1/2" wood screws (B) as shown in figure 1.3.

Attach two mounting cover plates (C) to in-wall box (A) using four ribbed rivets (D) as shown in figure 1.4.

Installing Articulating Arm to In-wall Box

- 2** Choose hole pattern on interior mounting plate of in-wall box (**A**) which align with hole pattern on the wall plate of PA740 articulating arm (**AA**). Mounting hole alignments may be selected for different height installations.

Note: Consider position of screen center or routing of cables before securing arm to in-wall box.

Drill two 5/32" (4 mm) holes 2.5" (65 mm) deep using interior mounting plate holes of in-wall box (**A**) as a guide. Attach PA740 articulating arm (**AA**) to in-wall box using two #14 x 2-1/2" wood screws (included with PA740).

Installing Screen to Arm

- 3** Refer to instruction included with PA740 for screen installation to articulating arm.

Cable Management

- 4** For optional installation of electrical gang box, access plates located on the bottom or top of in-wall box can be temporarily removed to install electrical gang box as shown in figure 4.1.

SCREEN NOT SHOWN FOR CLARITY

4-1

Insert up to four cable management clips (**F**) into the desired positions in the in-wall box as shown in figure 4.2 for routing cables. Refer to instruction included with PA740 articulating arm (**AA**) for cable management with arm.

Insert cable bushing (**E**) into top or bottom hole of in-wall box for routing cables through in-wall box. Plastic finishing caps (**G**) can be used in holes where cables are not being routed.

NOTE: Make sure cables have enough slack to allow full movement of the arm.

Use cable ties (**H**) to secure cables to cable management clips as shown in figure 4.3.
