## SELF DIAGNOSIS FUNCTION

The units in this manual contain a self-diagnosis function. If an error occurs, the STANDBY (⏻) indicator will automatically begin to flash. A description of the self-diagnosis function is explained in the instruction manual.

The number of times the STANDBY (⏻) indicator flashes translates to a probable source of the problem. If an error symptom cannot be reproduced, the remote commander can be used to review the failure occurrence data stored in memory to reveal past problems and how often these problems occur.

### 1. DIAGNOSIS TEST INDICATORS

When an errors occurs, the STANDBY (⏻) indicator will flash a set number of times to indicate the possible cause of the problem. If there is more than one error, the indicator will identify the first of the problem areas.

Result for all of the following diagnosis items are displayed on screen. No error has occurred if the screen displays a "0".

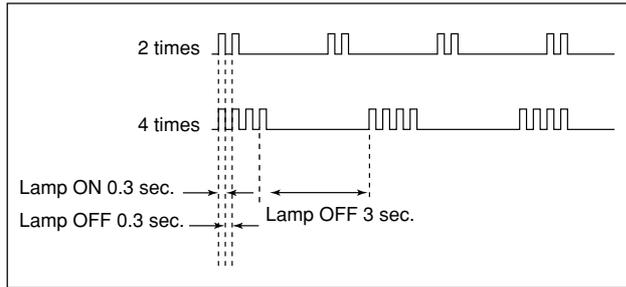

Diagnosis Item Description	No. of times STANDBY (⏻) indicator flashes	Self-diagnostic display/Diagnosis result	Probable Cause Location	Detected Symptoms
• Power does not turn on	Does not light	—	<ul style="list-style-type: none"> <li>• Power cord is not plugged in.</li> <li>• Fuse is burned out F600 (F)</li> </ul>	<ul style="list-style-type: none"> <li>• Power does not come on.</li> <li>• No power is supplied to the TV.</li> <li>• AC power supply is faulty.</li> </ul>
<ul style="list-style-type: none"> <li>• +B overcurrent (OCP)</li> <li>• Horizontal deflection overdrive</li> </ul>	2 times	002:000 or 002:001~255	<ul style="list-style-type: none"> <li>• H.OUT Q801 is shorted. (A board)</li> </ul>	<ul style="list-style-type: none"> <li>• Power does not come on.</li> <li>• Load on power line is shorted.</li> <li>• Has entered standby state after horizontal raster.</li> <li>• Power line is shorted or power supply is stopped.</li> </ul>
<ul style="list-style-type: none"> <li>• White balance failure (no PICTURE)</li> <li>• Vertical deflection stopped</li> </ul>	4 times	004:000 or 004:001~225	<ul style="list-style-type: none"> <li>• -13V is not supplied. (A board)</li> <li>• IC 551 faulty (A board)</li> </ul>	<ul style="list-style-type: none"> <li>• Vertical deflection pulse is stopped</li> </ul>
• Micro reset	—	101:00 or 101:001~225	<ul style="list-style-type: none"> <li>• Discharge CRT (C Board)</li> <li>• Static discharge</li> <li>• External noise</li> </ul>	<ul style="list-style-type: none"> <li>• Power is shut down shortly, after this return back to normal.</li> <li>• Detect Micro latch up.</li> </ul>

Note 1: If a + B overcurrent is detected, stoppage of the vertical deflection is detected simultaneously.

The symptom that is diagnosed first by the microcontroller is displayed on the screen.

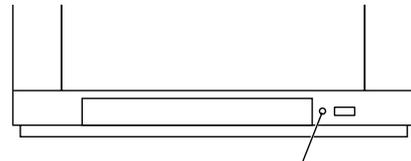

Note 2: Refer to screen (G2) Adjustment in section 3-4 of this manual.

## 2. DISPLAY OF STANDBY (⏻) INDICATOR FLASH COUNT

Diagnosis Item	Flash Count*
+B overcurrent/overvoltage	2 times
Vertical deflection stopped	4 times

\* One flash count is not used for self-diagnosis.

STANDBY (⏻) indicator

## 3. STOPPING THE STANDBY (⏻) INDICATOR FLASH

Turn off the power switch on the TV main unit or unplug the power cord from the outlet to stop the STANDBY (⏻) indicator from flashing.

## 4. SELF-DIAGNOSTIC SCREEN DISPLAY

For errors with symptoms such as “power sometimes shuts off” or “screen sometimes goes out” that cannot be confirmed, it is possible to bring up past occurrences of failure for confirmation on the screen:

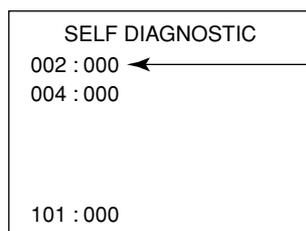

### [To Bring Up Screen Test]

In standby mode, press buttons on the remote commander sequentially in rapid succession as shown below:

Screen display → channel [5] → Sound volume [-] → Power ON  
↑

Note that this differs from entering the service mode (volume [+]).

### Self-Diagnostic screen display

Numeral "0" means that no fault has been detected.

## 5. HANDLING OF SELF-DIAGNOSTIC SCREEN DISPLAY

Since the diagnosis results displayed on the screen are not automatically cleared, always check the self-diagnostic screen during repairs. When you have completed the repairs, clear the result display to "0".

Unless the result display is cleared to "0", the self-diagnosis function will not be able to detect subsequent faults after completion of the repairs.

### [Clearing the result display]

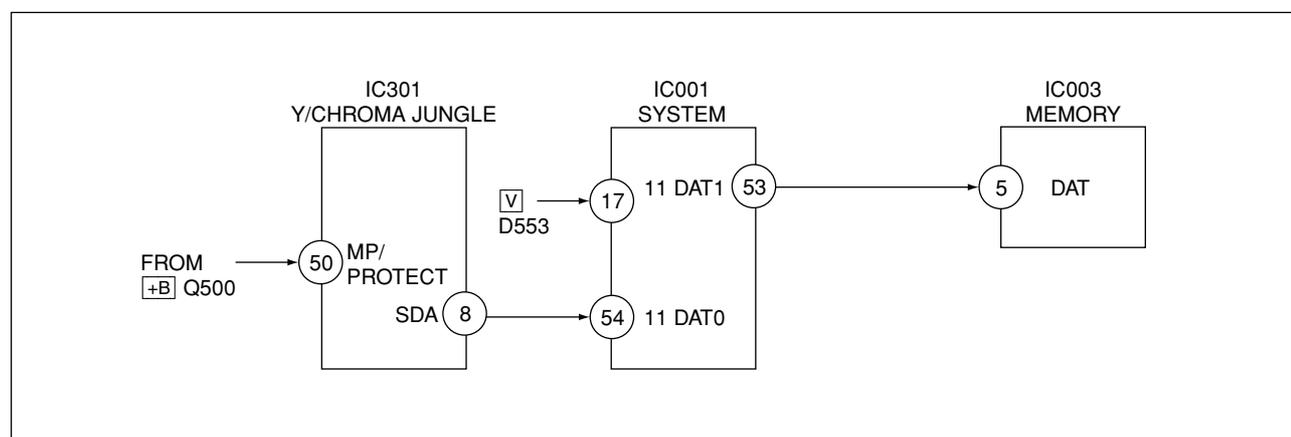

To clear the result display to "0", press buttons on the remote commander sequentially as shown below when the self-diagnostic screen is being displayed.

Channel [8] → 0

### [Quitting Self-diagnostic screen]

To quit the entire self-diagnostic screen, turn off the power switch on the remote commander or the main unit.

## 6. SELF-DIAGNOSIS CIRCUIT

### [+B overcurrent OCP ]

Occurs when an overcurrent on the +B(135) line is detected by Q500. If Q500 go to ON and the voltage to pin 50 of IC301 more than 3.5V when V.SYNC is more than seven verticals in a period, the unit will automatically turn off.

### [Vertical deflection stopped]

Occurs when an absence of the vertical deflection pulse is detected by Pin 17 and IC001 shut down the power supply.

### [White balance failure]

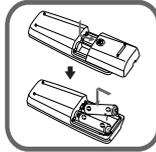

If the RGB levels\* do not balance or become low level within 5 seconds, this error will be detected by IC301. TV will stay on, but there will be no picture.

\* (Refers to the RGB levels of the AKB detection Ref pulse that detects IK.)

The operating instruction mentioned here are partial abstracts from the Operating Instruction Manual. The page numbers of the Operating Instruction Manual remain as in the manual.

## SECTION 1 GENERAL

## SECTION 2 DISASSEMBLY

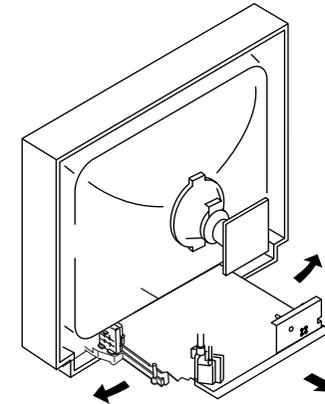

### 2-1. REAR COVER REMOVAL

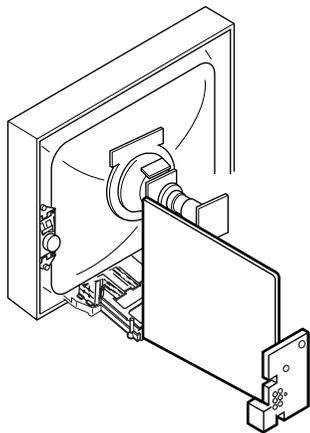

### 2-2. SPEAKER REMOVAL

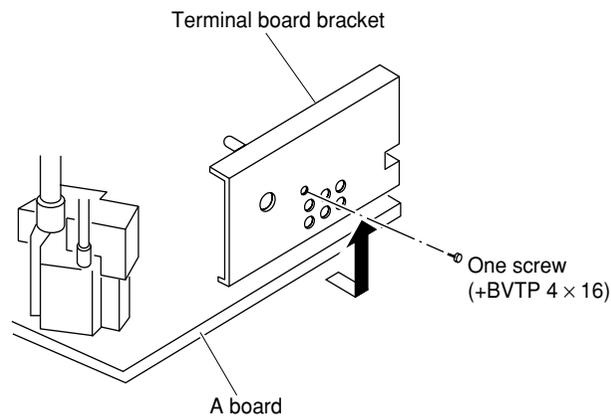

### 2-3. CHASSIS ASSY REMOVAL

### 2-4. SERVICE POSITION

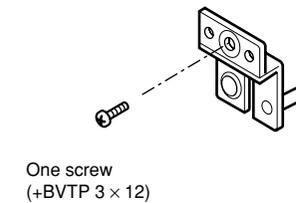

### 2-5. TERMINAL BRACKET REMOVAL

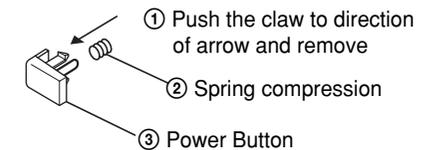

### 2-6. REPLACEMENT OF PARTS

For replacements of light guide, unscrew them, exchange with new parts and fix them with screws respectively.

#### 2-6-1. Replacement of Light Guide

#### 2-6-2. Replacement of Power Button

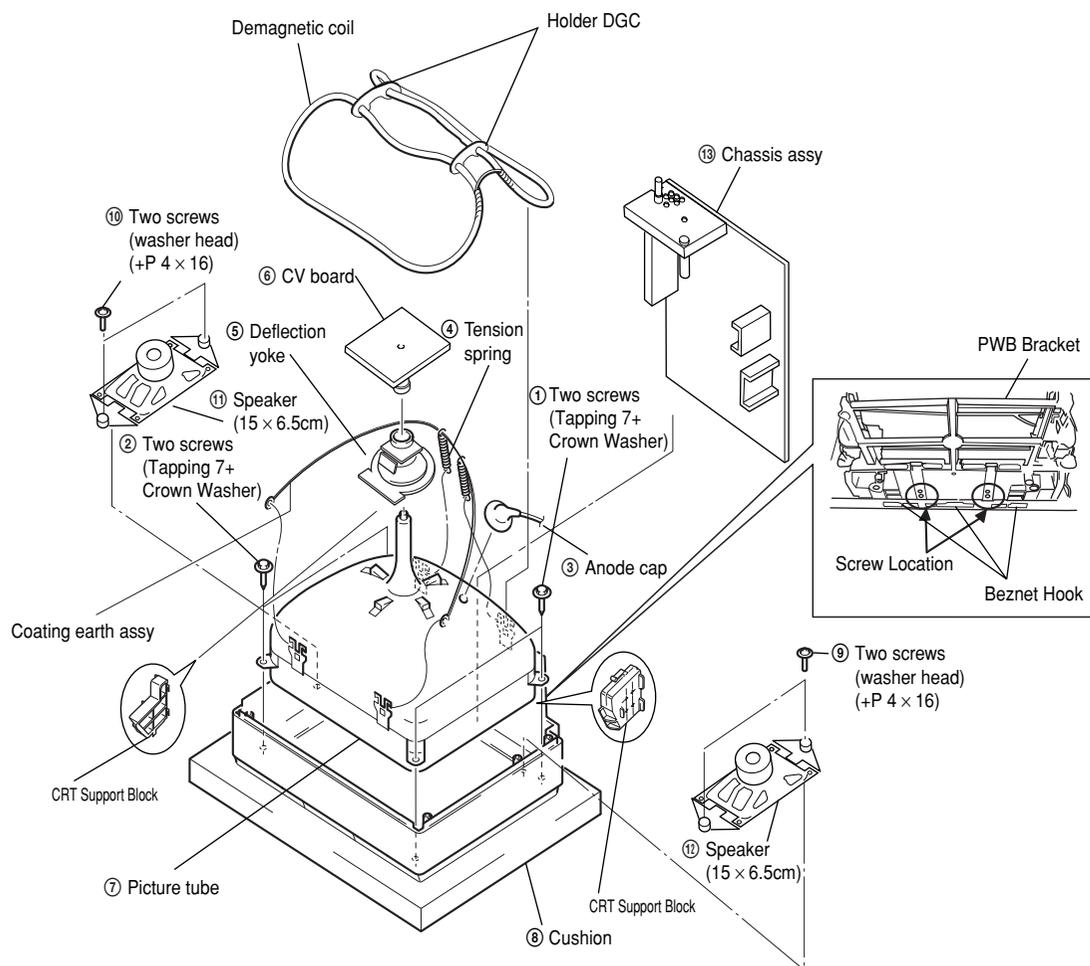

**Caution:** Do not take out CRT support block while TV set in standing position.

**Note:** Undress necessary wires that creates tension while placing the chassis into Service Position.

## 2-7. PICTURE TUBE REMOVAL

### Note:

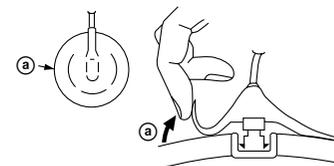

- Please make sure the TV set is not in standing position before removing necessary CRT support located on bottom right and left.

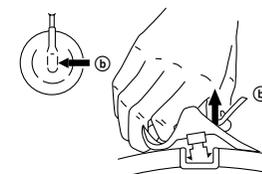

## • REMOVAL OF ANODE-CAP

NOTE : After removing the anode, short circuit the anode of the picture tube and the anode cap to the metal chassis, CRT shield or carbon paint on the CRT.

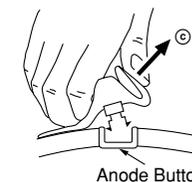

## • REMOVING PROCEDURES

- Turn up one side of the rubber cap in the direction indicated by the arrow (a).

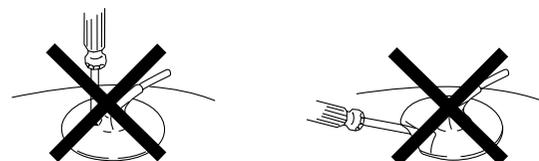

- Using a thumb pull up the rubber cap firmly in the direction indicated by the arrow (b).

- When one side of the rubber cap is separated from the anode button, the anode-cap can be removed by turning up the rubber cap and pulling it up in the direction of the arrow (c).

## • HOW TO HANDLE AN ANODE-CAP

- Do not damage the surface of anode-caps with sharp shaped objects.
- Do not press the rubber too hard so as not to damage the inside of anode-cap. A metal fitting called the shatter-hook terminal is built into the rubber.
- Do not turn the foot of rubber over too hard. The shatter-hook terminal will stick out or damage the rubber.

## SECTION 3 SET-UP ADJUSTMENTS

The following adjustments should be made when a complete realignment is required or a new picture tube is installed. These adjustments should be performed with rated power supply voltage unless otherwise noted.

Perform the adjustments in the following order :

1. Beam Landing
2. Convergence
3. Focus
4. White Balance

Controls and switches should be set as follows unless otherwise noted:

PICTURE control ..... normal  
BRIGHTNESS control ..... normal

**Note :** Test Equipment Required.

1. Pattern Generator
2. Degausser
3. Oscilloscope

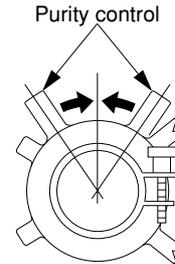

**Preparation :**

In order to reduce the influence of geomagnetism on the set's picture tube, face it east or west.  
Switch on the set's power and degauss with the degausser.

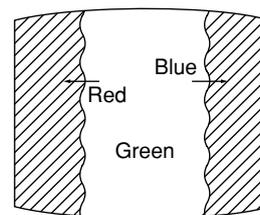

**3-1. BEAM LANDING**

1. Input a white signal with the pattern generator.  

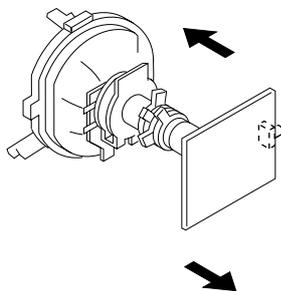

Contrast	}	normal
Brightness		
2. Set the pattern generator raster signal to a green raster.
3. Move the deflection yoke to the rear and adjust with the purity control so that the green is at the center and the blue and the red take up equally sized areas on each side. (See Figures 3-1 through 3-4.)
4. Move the deflection yoke forward and adjust so that the entire screen is green. (See Figure 3-1.)
5. Switch the raster signal to blue, then to red and verify the condition.
6. When the position of the deflection yoke has been decided, fasten the deflection yoke with the screws and DY spacers.
7. If the beam does not land correctly in all the corners, use a magnet to adjust it. (See Figure 3-4.)

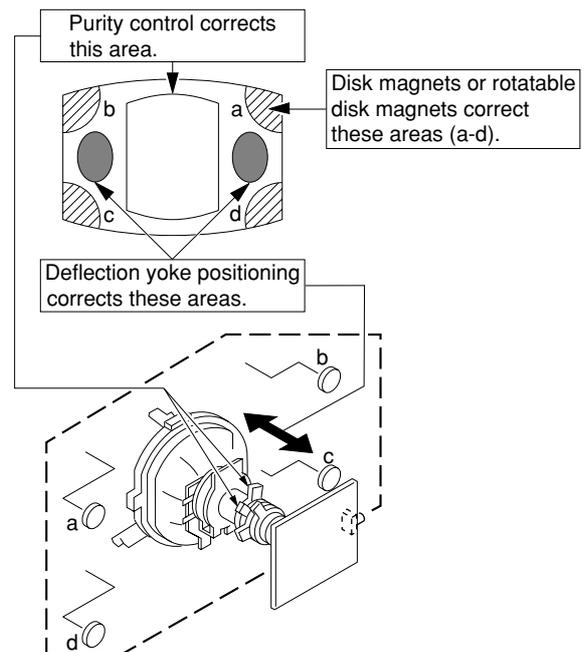

**Fig. 3-2**

**Fig. 3-3**

**Fig. 3-1**

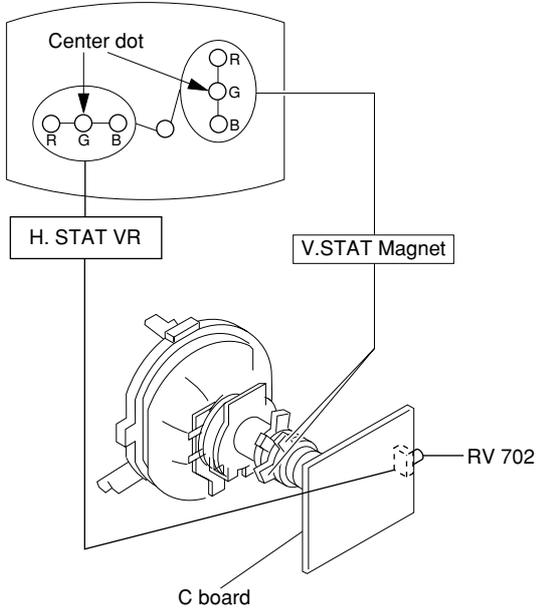

**Fig. 3-4**

### 3-2. CONVERGENCE

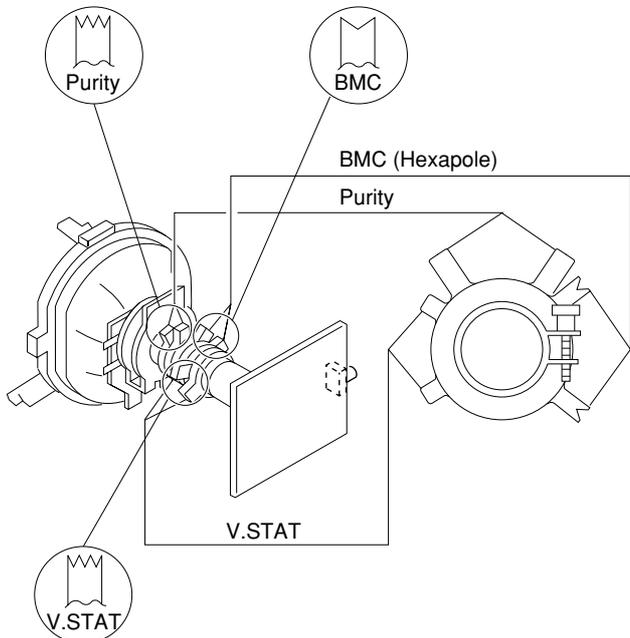

**Preparation :**

- Before starting this adjustment, adjust the focus, horizontal size and vertical size.
- Receive dot/hatch signal.
- Pic mode: Soft.

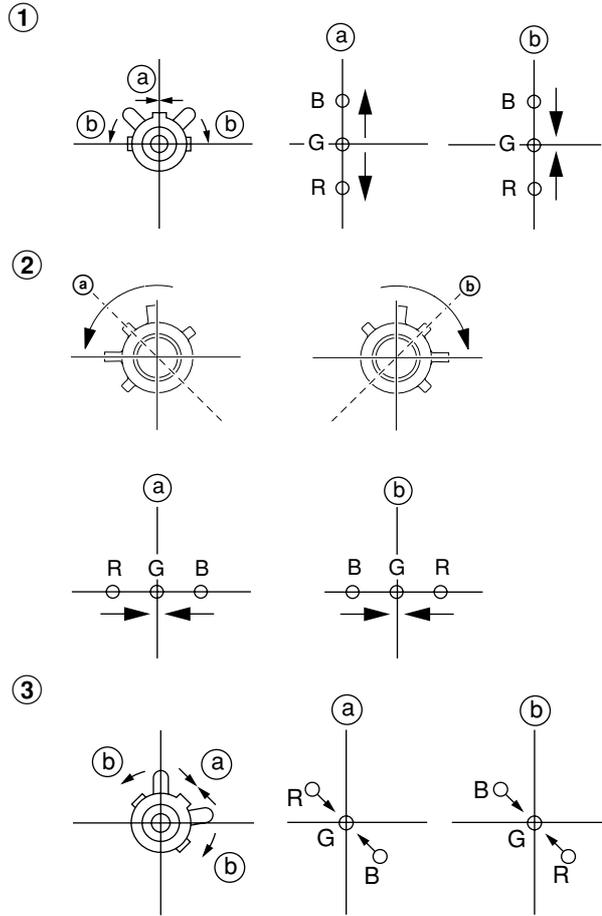

**(1) Horizontal and Vertical Static Convergence**

1. (Moving vertically), adjust the V.STAT magnet so that the red, green and blue dots are on top of each other at the center of the screen.
2. (Moving horizontally), adjust the H.STAT VR control so that the red, green and blue dots are on top of each other at the center of the screen.
3. If the H.STAT variable resistor cannot bring the red, green and blue dots together at the center of the screen, adjust the horizontal convergence with the H.STAT variable resistor and the V.STAT magnet in the manner given below. (In this case, the H.STAT variable resistor and the V.STAT magnet influence each other, so be sure to perform adjustments while tracking.)

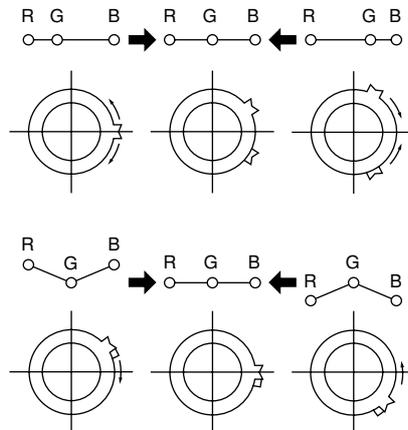

- Operation of V. Stat magnet  
If the V. Stat magnet is moved in the "a" and "b" arrows, the red, green and blue dots move as shown below.

| [MUTE], [0] | Write 50Hz adjustment data to 60Hz or vice versa.         |

### 4-2. ADJUSTMENT METHOD

Item Number 00 HPS

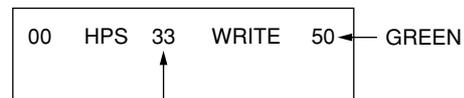

This explanation uses H Shift as an example.

1. Select "00 HPS" with the [1] and [4] buttons.
2. Raise/lower the data with the [3] and [6] buttons.
3. Select the optimum state. (The standard is 1F for PAL reception.)
4. Write with the [MUTING] button. (The display changes to WRITE.)
5. Execute the writing with the [0] button. (The WRITE display will be changed to red color while executing, and back to SERVICE.)

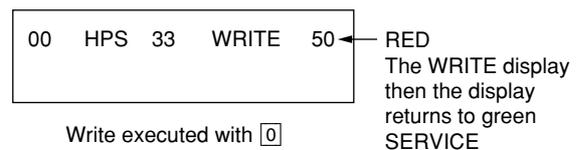

Example on screen display :-

Adjusted with [3] and [6] buttons.

Write with [MUTING]

Write executed with [0]

Use the same method for all Items. Use [1] and [4] to select the adjustment item, use [3] and [6] to adjust, write with [MUTING], then execute the write with [0].

- Note :**
1. In [WRITE], the data for all items are written into memory together.
  2. For adjustment items that have different standard data between 50Hz or 60Hz, be sure to use the respective input signal after adjustment.
