MXZ-8B160VA

MXZ-8B140YA

MXZ-8B160YA

[Service Ref.]

**MXZ-8B140VA**
**MXZ-8B160VA**
**MXZ-8B140YA**
**MXZ-8B160YA**

Revision:

- Errors in "3. SPECIFICATIONS" have been corrected in REVISED EDITION-A.
- Some descriptions have been modified.

- Please void OCH480.

**NOTE:**

- This service manual describes technical data of outdoor unit. As for indoor units and branch box(OCH508), refer to its service manual.
- RoHS compliant products have <G> mark on the spec name plate.

INDOOR UNITS COMBINATION SHEETS

PARTS CATALOG (OCB480)

### 1-1. ALWAYS OBSERVE FOR SAFETY

**Before obtaining access to terminal, all supply circuit must be disconnected.**

### 1-2. CAUTIONS RELATED TO NEW REFRIGERANT

Cautions for units utilizing refrigerant R410A

**Use new refrigerant pipes.**

**Make sure that the inside and outside of refrigerant piping is clean and it has no contaminants such as sulfur, oxides, dirt, shaving particles, etc, which are hazard to refrigerant cycle. In addition, use pipes with specified thickness.**

Contamination inside refrigerant piping can cause deterioration of refrigerant oil etc.

**Store the piping to be used indoors during installation, and both ends of the piping sealed until just before brazing. (Leave elbow joints, etc. in their packaging.)**

If dirt, dust or moisture enters into refrigerant cycle, that can cause deterioration of refrigerant oil or malfunction of compressor.

**The refrigerant oil applied to flare and flange connections must be ester oil, ether oil or alkylbenzene oil in a small amount.**

If large amount of mineral oil enters, that can cause deterioration of refrigerant oil etc.

**Charge refrigerant from liquid phase of gas cylinder.**

If the refrigerant is charged from gas phase, composition change may occur in refrigerant and the efficiency will be lowered.

**Do not use refrigerant other than R410A.**

If other refrigerant (R22 etc.) is used, chlorine in refrigerant can cause deterioration of refrigerant oil etc.

**Use a vacuum pump with a reverse flow check valve.**

Vacuum pump oil may flow back into refrigerant cycle and that can cause deterioration of refrigerant oil etc.

**Use the following tools specifically designed for use with R410A refrigerant.**

The following tools are necessary to use R410A refrigerant.

| Tools for R410A   |                                       |
|-------------------|---------------------------------------|
| Gauge manifold    | Flare tool                            |
| Charge hose       | Size adjustment gauge                 |
| Gas leak detector | Vacuum pump adaptor                   |
| Torque wrench     | Electronic refrigerant charging scale |

**Handle tools with care.**

If dirt, dust or moisture enters into refrigerant cycle, that can cause deterioration of refrigerant oil or malfunction of compressor.

**Do not use a charging cylinder.**

If a charging cylinder is used, the composition of refrigerant will change and the efficiency will be lowered.

**Use the specified refrigerant only.**

**Never use any refrigerant other than that specified.**

Doing so may cause a burst, an explosion, or fire when the unit is being used, serviced, or disposed of.

Correct refrigerant is specified in the manuals and on the spec labels provided with our products.

We will not be held responsible for mechanical failure, system malfunction, unit breakdown or accidents caused by failure to follow the instructions.

**Ventilate the room if refrigerant leaks during operation. If refrigerant comes into contact with a flame, poisonous gases will be released.**

## [1] Cautions for service

- (1) Perform service after recovering the refrigerant left in unit completely.
- (2) Do not release refrigerant in the air.
- (3) After completing service, charge the cycle with specified amount of refrigerant.
- (4) When performing service, install a filter drier simultaneously.  
Be sure to use a filter drier for new refrigerant.

## [2] Additional refrigerant charge

### When charging directly from cylinder

- Check that cylinder for R410A on the market is syphon type.
- Charging should be performed with the cylinder of syphon stood vertically. (Refrigerant is charged from liquid phase.)

## [3] Service tools

(1) Use the below service tools as exclusive tools for R410A refrigerant.

| No. | Tool name                      | Specifications                                        |
|-----|--------------------------------|-------------------------------------------------------|
| ①   | Gauge manifold                 | · Only for R410A                                      |
|     |                                | · Use the existing fitting specifications. (UNF1/2)   |
|     |                                | · Use high-tension side pressure of 5.3MPa-G or over. |
| ②   | Charge hose                    | · Only for R410A                                      |
|     |                                | · Use pressure performance of 5.09MPa-G or over.      |
| ③   | Electronic scale               | —                                                     |
| ④   | Gas leak detector              | · Use the detector for R134a, R407C or R410A.         |
| ⑤   | Adaptor for reverse flow check | · Attach on vacuum pump.                              |
| ⑥   | Refrigerant charge base        | —                                                     |
| ⑦   | Refrigerant cylinder           | · Only for R410A      · Top of cylinder (Pink)        |
|     |                                | · Cylinder with syphon                                |
| ⑧   | Refrigerant recovery equipment | —                                                     |

## (2) Cautions for refrigerant piping work

New refrigerant R410A is adopted for replacement inverter series. Although the refrigerant piping work for R410A is same as for R22, exclusive tools are necessary so as not to mix with different kind of refrigerant. Furthermore as the working pressure of R410A is 1.6 times higher than that of R22, their sizes of flared sections and flare nuts are different.

### ① Thickness of pipes

Because the working pressure of R410A is higher compared to R22, be sure to use refrigerant piping with thickness shown below. (Never use pipes of 0.7 mm or below.)

Diagram below: Piping diameter and thickness

| Nominal dimensions(inch) | Outside diameter (mm) | Thickness (mm) |     |
|--------------------------|-----------------------|----------------|-----|
|                          |                       | R410A          | R22 |
| 1/4                      | 6.35                  | 0.8            | 0.8 |
| 3/8                      | 9.52                  | 0.8            | 0.8 |
| 1/2                      | 12.70                 | 0.8            | 0.8 |
| 5/8                      | 15.88                 | 1.0            | 1.0 |
| 3/4                      | 19.05                 | —              | 1.0 |

### ② Dimensions of flare cutting and flare nut

The component molecules in HFC refrigerant are smaller compared to conventional refrigerants. In addition to that, R410A is a refrigerant, which has higher risk of leakage because of its working pressure higher than that of other refrigerants. Therefore, to enhance airtightness and intensity, flare cutting dimension of copper pipe for R410A has been specified separately from the dimensions for other refrigerants as shown below. The dimension B of flare nut for R410A also has partly been changed to increase intensity as shown below. Set copper pipe correctly referring to copper pipe flaring dimensions for R410A below. For 1/2" and 5/8", the dimension B changes. Use torque wrench corresponding to each dimension.

Flare cutting dimensions (mm)

| Nominal dimensions(inch) | Outside diameter | Dimension A (mm) |      |
|--------------------------|------------------|------------------|------|
|                          |                  | R410A            | R22  |
| 1/4                      | 6.35             | 9.1              | 9.0  |
| 3/8                      | 9.52             | 13.2             | 13.0 |
| 1/2                      | 12.70            | 16.6             | 16.2 |
| 5/8                      | 15.88            | 19.7             | 19.4 |
| 3/4                      | 19.05            | —                | 23.3 |

Flare nut dimensions (mm)

| Nominal dimensions(inch) | Outside diameter | Dimension B (mm) |      |
|--------------------------|------------------|------------------|------|
|                          |                  | R410A            | R22  |
| 1/4                      | 6.35             | 17.0             | 17.0 |
| 3/8                      | 9.52             | 22.0             | 22.0 |
| 1/2                      | 12.70            | 26.0             | 24.0 |
| 5/8                      | 15.88            | 29.0             | 27.0 |
| 3/4                      | 19.05            | —                | 36.0 |

### ③ Tools for R410A (The following table shows whether conventional tools can be used or not.)

| Tools and materials                                      | Use                                                                                                             | R410A tools                                                                              | Can R22 tools be used?                               | Can R407C tools be used?                             |
|----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|------------------------------------------------------|------------------------------------------------------|
| Gauge manifold                                           | Air purge, refrigerant charge and operation check                                                               | Tool exclusive for R410A                                                                 | ×                                                    | ×                                                    |
| Charge hose                                              |                                                                                                                 | Tool exclusive for R410A                                                                 | ×                                                    | ×                                                    |
| Gas leak detector                                        | Gas leak check                                                                                                  | Tool for HFC refrigerant                                                                 | ×                                                    | ○                                                    |

## 2-2. SYSTEM OUTLINE

The additional connection of the Branch Box together with employment of the compact trunk-looking outdoor unit can successfully realize a long distance piping for big houses. Equipped with a microprocessor, the Branch Box can translate the transmission signal of indoor units to achieve the optimum control.

### 2-2-1. System example

### 2-2-2. Method for identifying

#### ■ Outdoor unit

#### ■ Branch box

## 2-3. TYPICAL COMBINATION EXAMPLE

Branch box is located INSIDE of condominium

### ■ System example of 5 indoor units

### ■ Verification

The rated capacity should be determined by observing the table below. The unit's quantities are limited in 2 to 8 units. For the next step, make sure that the selected total rated capacity is in a range as shown below.

The total indoor unit capacity should be within the outdoor units.

Combination of excessive indoor units and an outdoor unit may reduce the capacity of each indoor unit.

The rated indoor capacity is as the table below.

•MXZ-8B140 3.0 ~ 18.5 kW

•MXZ-8B160 3.0 ~ 20.2 kW

Example: MXZ-8B140

|        |       |                                                     |
|--------|-------|-----------------------------------------------------|
| SEZ-60 | = 6.0 | } Total rated capacity<br>$18.0 \leq 18.5\text{kW}$ |
| +      |       |                                                     |
| MSZ-35 | = 3.5 |                                                     |
| +      |       |                                                     |
| MSZ-35 | = 3.5 |                                                     |

## 2-4. INSTALLATION

### 2-4-1. Outdoor unit installation location

For best performance, select proper position.

- Avoid places where combustible gas may be generated or leak.
- Avoid direct sunlight or other sources of heat.
- Install sunshade to protect the outdoor unit if direct sunlight hits the unit.
- Install the outdoor unit with enough distance between neighbours as operation noise may disturb the neighbours.
- Avoid the position that the unit is covered by snow or snow blows directly against the air outlet. The snow block or blow will reduce the airflow of the outdoor unit.

In the areas of heavy snow, special countermeasures must be taken at installation to protect the outdoor unit from malfunction caused by snow.

- Select a location permitting easy wiring and pipe access to the power source and indoor unit.
- Drain water must be drained freely during operation. Check for draining.

### 2-4-2. Ventilation and service space

#### (1) Windy location installation

When installing the outdoor unit on a rooftop or other location unprotected from the wind, situate the air outlet of the unit so that it is not directly exposed to strong winds. Strong wind entering the air outlet may impede the normal airflow and a malfunction may result.

The following shows 3 examples of precautions against strong winds.

- Face the air outlet towards the nearest available wall about 50 cm away from the wall. (Fig. 2-1)
- Install an optional air guide if the unit is installed in a location where strong winds from a typhoon, etc. may directly enter the air outlet. (Fig. 2-2)

Ⓐ Air guide

- Position the unit so that the air outlet blows perpendicularly to the seasonal wind direction, if possible. (Fig. 2-3)

Ⓑ Wind direction

Fig. 2-1

Fig. 2-2

Fig. 2-3

## (2) When installing a single outdoor unit

Minimum dimensions are as follows, except for Max., meaning Maximum dimensions, indicated.

Refer to the figures for each case.

- Obstacles at rear only (Fig. 2-4)
- Obstacles at rear and above only (Fig. 2-5)
  - Do not install the optional air outlet guides for upward airflow.
- Obstacles at rear and sides only (Fig. 2-6)
- Obstacles at front only (Fig. 2-7)
  - \* When using an optional air outlet guide, the clearance is 500 mm or more.
- Obstacles at front and rear only (Fig. 2-8)
  - \* When using an optional air outlet guide, the clearance is 500 mm or more.
- Obstacles at rear, sides, and above only (Fig. 2-9)
  - Do not install the optional air outlet guides for upward airflow.

unit : mm

Fig. 2-4

Fig. 2-5

Fig. 2-6

Fig. 2-7

Fig. 2-8

Fig. 2-9

### (3) When installing multiple outdoor units

Leave 10 mm space or more between the units.

- Obstacles at rear only (Fig. 2-10)
- Obstacles at rear and above only (Fig. 2-11)
  - No more than 3 units must be installed side by side. In addition, leave space as shown.
  - Do not install the optional air outlet guide for upward airflow.
- Obstacles at front only (Fig. 2-12)
  - ※ When using an optional air outlet guide, the clearance is 1000 mm or more.
- Obstacles at front and rear only (Fig. 2-13)
  - ※ When using an optional air outlet guide, the clearance is 500 mm or more.
- Single parallel unit arrangement (Fig. 2-14)
  - ※ When using an optional air outlet guide installed for upward airflow, the clearance is 1000 mm or more.
- Multiple parallel unit arrangement (Fig. 2-15)
  - ※ When using an optional air outlet guide installed for upward airflow, the clearance is 1500 mm or more.
- Stacked unit arrangement (Fig. 2-16)
  - The units can be stacked up to 2 units high.
  - No more than 2 stacked units must be installed side by side. In addition, leave space as shown.

## 2-5. SIMPLIFIED PIPING SYSTEM

### Piping connection size

|        |      | A      | B                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Liquid | (mm) | φ9.52  | The piping connection size differs according to the type and capacity of indoor units. Match the piping connection size of branch box with indoor unit.<br>If the piping connection size of branch box does not match the piping connection size of indoor unit, use optional different-diameter (deformed) joints to the branch box side.<br>(Connect deformed joint directly to the branch box side.) |
| Gas    | (mm) | φ15.88 |                                                                                                                                                                                                                                                                                                                                                                                                         |

For P100 indoor units, the individual Y-shape connection pipes use 2 ports on the branch box as shown below.

To connect a single P100 indoor unit, use port A and port B on the branch box.

To connect two P100 indoor units, use port A and port B, and port C and port D on the branch box.

Flare connection employed. (No brazing!)

- In case of using 1-branch box  
Flare connection employed (No brazing)

- In case of using 2-branch boxes

- Installation procedure (2 branch pipe (joint))  
Refer to the installation manuals of MSDD-50AR-E and MSDD-50BR-E.

※1 Electrical data is only for outdoor unit.

#### Conversion formula

|          |          |          |          |          |
|----------|----------|----------|----------|----------|
| φ6.35mm  | φ9.52mm  | φ12.7mm  | φ15.88mm | φ19.05mm |
| 1/4 inch | 3/8 inch | 1/2 inch | 5/8 inch | 3/4 inch |

#### Notes1. Rating Conditions (ISO T1)

Cooling : Indoor : D.B. 27°C (80°F), W.B. 19°C (66°F) Outdoor : D.B. 35°C (95°F), W.B. 24°C (75°F)  
 Heating : Indoor : D.B. 20°C (68°F) Outdoor : D.B. 7°C (45°F), W.B. 6°C (43°F)  
 Refrigerant piping length (one way) : Main Piping (From outdoor unit to branch box) : 5m  
 Branch Piping (From branch box to each indoor units) : each 3m

#### 2. Guaranteed operating range

|         |             | Indoor                 |                      | Outdoor                |
|---------|-------------|------------------------|----------------------|------------------------|
|         |             | P-series               | M-series, S-series   |                        |
| Cooling | Upper limit | D.B. 35°C, W.B. 22.5°C | D.B. 32°C, W.B. 23°C | D.B. 46°C              |
|         | Lower limit | D.B. 19°C, W.B. 15°C   | D.B. 21°C, W.B. 15°C | D.B. -5°C              |
| Heating | Upper limit | D.B. 28°C              | D.B. 27°C            | D.B. 21°C, W.B. 15°C   |
|         | Lower limit | D.B. 17°C              | D.B. 20°C            | D.B. -15°C, W.B. -15°C |

#### 3. Guaranteed voltage

MXZ-8B140/160VA: 198~264V, 50Hz  
 MXZ-8B140/160YA: 342~456V, 50Hz

#### 4. Above data are based on the indicated voltage.

MXZ-8B140/160VA: Single, 50Hz, 220/230/240V  
 MXZ-8B140/160YA: 3-phase, 50Hz, 380/400/415V

#### 5. Refer to the service manual of indoor unit for the indoor unit's specifications.

## 4-1. CORRECTING COOLING AND HEATING CAPACITY

### 4-1-1. Correcting Changes in Air Conditions

(1) The performance curve charts (Figure 4-1, 4-2, 4-3, 4-4) show the change ratio of capacity and input (power consumption) according to the indoor and outdoor temperature condition when define the rated capacity (total capacity) and rated input under the standard condition in standard piping length (5 m) as "1.0".

• Standard conditions:

|                        |                                                      |
|------------------------|------------------------------------------------------|
| Rated cooling capacity | Indoor D.B. 27 °C / W.B. 19 °C<br>Outdoor D.B. 35 °C |
| Rated heating capacity | Indoor D.B. 20 °C<br>Outdoor D.B. 7 °C / W.B. 6 °C   |

- Use the rated capacity and rated power values given in the characteristics table for each indoor unit.
- The capacity is the single value on the side of the outdoor unit;  
The capacity on the sides of each indoor unit must be added to obtain the total capacity.

(2) The capacity of each indoor unit may be obtained by multiplying the total capacity obtained in (1) by the ratio between the individual capacity at the rated time and the total capacity at the rated time.

$$\text{Individual capacity under stated conditions} = \text{Total capacity under the stated conditions} \times \frac{\text{Individual capacity at the rated time}}{\text{Total capacity at the rated time}}$$

(3) Capacity correction factor curve

Fig. 4-1  
Cooling capacity

Fig. 4-2  
Cooling input

Fig. 4-3  
Heating capacity

Fig. 4-4  
Heating input

**Note :** These diagrams show the case where the operation frequency of a compressor is fixed.

#### 4-1-2. Correcting Capacity for Changes in the Length of Refrigerant Piping

To obtain the ratio (and the corrected piping length) of the outdoor units rated capacity and the total in-use indoor capacity, first find the capacity ratio corresponding to the standard piping length from Fig. 4-5, Fig. 4-6 and then multiply by the capacity from Fig. 4-1, 4-2, Fig. 4-3, 4-4 to obtain the actual capacity.

##### (1) Capacity correction factor

**Fig. 4-5 Cooling capacity correction curve**

**MXZ-8B140VA, MXZ-8B140YA**

**MXZ-8B160VA, MXZ-8B160YA**

**Fig. 4-6 Heating capacity correction curve**

**MXZ-8B140VA, MXZ-8B140YA, MXZ-8B160VA, MXZ-8B160YA**

##### (2) Method for Obtaining the Corrected Piping Length

Corrected piping length = (Actual piping length between outdoor unit and the farthest indoor unit) + (0.30 × number of bends in the piping) (m)

4-2. NOISE CRITERION CURVES

**MXZ-8B140VA**  
**MXZ-8B140YA**

| MODE    | SPL(dB) | LINE |
|---------|---------|------|
| COOLING | 50      |      |
| HEATING | 52      |      |

**MXZ-8B160VA**  
**MXZ-8B160YA**

| MODE    | SPL(dB) | LINE |
|---------|---------|------|
| COOLING | 51      |      |
| HEATING | 54      |      |

## MXZ-8B140VA MXZ-8B160VA

| 160V  | ON OFF 1 2 3 4 5 6 7 8 |

## Operation / Inspection Display

LED on the controller board display the operation and inspection status as follows.  
If LED does not light, it indicates that no power is supplied to the board:

| Details                                                                                                     | Code                                     | Details                                                                                                   | Code |

## Cautions when Servicing

- ⚠WARNING: When the main supply is turned off, the voltage [340 V] in the main capacitor will drop to 20 V in approx. 2 minutes (input voltage : 240 V). when servicing, make sure that LED on the outdoor circuit board goes out, and then wait for at least 1 minute.
- Components other than the outdoor board may be faulty : Check and take corrective action, referring to the service manual. Do not replace the outdoor board without checking.

Operation / Inspection Display

LED on the controller board display the operation and inspection status as follows.  
If LED does not light, it indicates that no power is supplied to the board:

|                          | Details                                                                                                    | Code                                     |  | Details                                                                                             | Code |

Cautions when Servicing

- ⚠ WARNING: When the main supply is turned off, the voltage [540 V] in the main capacitor will drop to 20 V in approx. 5 minutes (input voltage : 380 V). when servicing, make sure that LED on the outdoor circuit board goes out, and then wait for at least 5 minute.
- Components other than the outdoor board may be faulty : Check and take corrective action, referring to the service manual.
- Do not replace the outdoor board without checking.

## Piping connection size

|             | A            | B                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Liquid (mm) | $\phi 9.52$  | The pipe connection size differs according to the type and capacity of indoor units. Match the piping connection size of branch box with indoor unit.<br>If the piping connection size of branch box does not match the piping connection size of indoor unit, use optional different-diameter (deformed) joints to the branch box side. (Connect deformed joint directly to the branch box side.) |
| Gas (mm)    | $\phi 15.88$ |                                                                                                                                                                                                                                                                                                                                                                                                    |

- In case of using 1-branch box  
Flare connection employed (No brazing)

- In case of using 2-branch boxes

- installation procedure (2 branch pipe (joint))  
Refer to the installation manuals of MSDD-50AR-E and MSDD-50BR-E.

■ Pipe size (Branch box-Indoor unit) \*Case of M series or S series Indoor unit

| Indoor unit type | (kW)   | 15    | 20    | 22    | 25    | 35    | 42    | 50    | 60       | 71     | 80     |
|------------------|--------|-------|-------|-------|-------|-------|-------|-------|----------|--------|--------|
| Pipe size (mm)   | Liquid | φ6.35 | φ6.35 | φ6.35 | φ6.35 | φ6.35 | φ6.35 | φ6.35 | φ6.35    | φ9.52  | φ9.52  |
|                  | Gas    | φ9.52 | φ9.52 | φ9.52 | φ9.52 | φ9.52 | φ9.52 | φ12.7 | φ15.88 * | φ15.88 | φ15.88 |

**When using 60 type indoor unit of MEXZ series, use the flare nut in the indoor unit accessory for the gas side connecting of indoor unit.**

**Do not use the flare nut (gas side) attached to the indoor unit. If it is used, a gas leakage or even a pipe extraction may occur.**

■ Pipe size (Branch box-Indoor unit) \*Case of P series Indoor unit

| Indoor unit type | (kW)   | 35    | 50    | 60     | 71     | 100*   |
|------------------|--------|-------|-------|--------|--------|--------|
| Pipe size (mm)   | Liquid | φ6.35 | φ6.35 | φ9.52  | φ9.52  | φ9.52  |
|                  | Gas    | φ12.7 | φ12.7 | φ15.88 | φ15.88 | φ15.88 |

**When using 35, 50 type indoor unit of P series, use the flare nut (for R410A) attached to the indoor unit.**

**Do not use the flare nut (for R407C) in the indoor unit accessory. If it is used, a gas leakage or even a pipe extraction may occur.**

**\* For the connection of P100 indoor unit(s), use the refrigerant pipes specified in the table below.**

| Distance between branch box and Y-shape connection pipe (=a) | Liquid |       | Gas      |        |
|--------------------------------------------------------------|--------|-------|----------|--------|
|                                                              | a      | b     | a        | b      |
| 1 to 10 [m]                                                  | φ6.35  | φ9.52 | φ9.52    | φ15.88 |
| 10 [m] or more                                               | φ6.35  | φ9.52 | φ12.7 ※1 | φ15.88 |

※1 To connect a φ12.7 gas pipe, use a joint pipe (MAC-A454JP)

(1) Valve size for outdoor unit

|            |           |
|------------|-----------|
| For liquid | φ9.52 mm  |
| For gas    | φ15.88 mm |

(2) Valve size for branch unit

|            |             |          |
|------------|-------------|----------|
| * [A] UNIT | Liquid pipe | φ6.35 mm |
|            | Gas pipe    | φ9.52 mm |
| * [B] UNIT | Liquid pipe | φ6.35 mm |
|            | Gas pipe    | φ9.52 mm |
| * [C] UNIT | Liquid pipe | φ6.35 mm |
|            | Gas pipe    | φ9.52 mm |
| [D] UNIT   | Liquid pipe | φ6.35 mm |
|            | Gas pipe    | φ9.52 mm |
| [E] UNIT   | Liquid pipe | φ6.35 mm |
|            | Gas pipe    | φ12.7 mm |

※ 3- branch type is only for [A], [B], and [C] unit.

**Different-diameter joint (optional parts) (Fig.7-1)**

| Model name   | Connected pipes diameter | Diameter A | Diameter B |
|--------------|--------------------------|------------|------------|
|              | mm                       | mm         | mm         |
| MAC-A454JP   | φ9.52 → φ12.7            | φ9.52      | φ12.7      |

### 8-1. TROUBLESHOOTING

#### <Error code display by self-diagnosis and actions to be taken for service (summary)>

Present and past error codes are logged and displayed on the wired remote controller and control board of outdoor unit.

Actions to be taken for service, which depends on whether or not the trouble is reoccurring at service, are summarized in the table below. Check the contents below before investigating details.

| Unit conditions at service      | Error code    | Actions to be taken for service (summary)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| The trouble is reoccurring.     | Displayed     | Judge what is wrong and take a corrective action according to "8-3. SELF-DIAGNOSIS ACTION TABLE".                                                                                                                                                                                                                                                                                                                                                                                                                            |
|                                 | Not displayed | Conduct trouble shooting and ascertain the cause of the trouble according to "8-4. TROUBLESHOOTING BY INFERIOR PHENOMENA".                                                                                                                                                                                                                                                                                                                                                                                                   |
| The trouble is not reoccurring. | Logged        | ①Consider the temporary defects such as the work of protection devices in the refrigerant circuit including compressor, poor connection of wiring, noise and etc. Re-check the symptom, and check the installation environment, refrigerant amount, weather when the trouble occurred, matters related to wiring and etc.<br>②Reset error code logs and restart the unit after finishing service.<br>③There is no abnormality concerning of parts such as electrical component, controller board, remote controller and etc. |
|                                 | Not logged    | ①Re-check the abnormal symptom.<br>②Conduct trouble shooting and ascertain the cause of the trouble according to "8-4. TROUBLESHOOTING BY INFERIOR PHENOMENA".<br>③Continue to operate unit for the time being if the cause is not ascertained.<br>④There is no abnormality concerning of parts such as electrical component, controller board, remote controller and etc.                                                                                                                                                   |

## 8-2. CHECK POINTS FOR TEST RUN

### 8-2-1. Before test run

- Turn on the main power switch more than 12 hours before starting operation. Starting operation just after turning on the power switch can severely damage the internal parts. Keep the main power switch turned on during the operation season.
  - After completing installation and the wiring and piping of the indoor and outdoor units, check for refrigerant leakage, looseness in the power supply or control wiring, wrong polarity, and no disconnection of one phase in the supply.
  - Use a 500-volt M-ohm tester to check that the resistance between the power supply terminals and ground is at least 1 MΩ.
  - Do not carry out this test on the control wiring (low voltage circuit) terminals.
- ⚠ **Warning: Do not use the air conditioner if the insulation resistance is less than 1 MΩ.**

#### Insulation resistance

After installation or after the power source to the unit has been cut for an extended period, the insulation resistance will drop below 1 MΩ due to refrigerant accumulating in the compressor. This is not a malfunction. Perform the following procedures.

1. Remove the wires from the compressor and measure the insulation resistance of the compressor.
2. If the insulation resistance is below 1 MΩ, the compressor is faulty or the resistance dropped due to the accumulation of refrigerant in the compressor.
3. After connecting the wires to the compressor, the compressor will start to warm up after power is supplied. After supplying power for the times indicated below, measure the insulation resistance again.
  - The insulation resistance drops due to accumulation of refrigerant in the compressor. The resistance will rise above 1MΩ after the compressor is warmed up for 4 hours. (The time necessary to warm up the compressor varies according to atmospheric conditions and refrigerant accumulation.)
  - To operate the compressor with refrigerant accumulated in the compressor, the compressor must be warmed up at least 12 hours to prevent breakdown.
4. If the insulation resistance rises above 1 MΩ, the compressor is not faulty.

#### ⚠ Caution:

- **The compressor will not operate unless the power supply phase connection is correct.**
- **Turn on the power at least 12 hours before starting operation.**  
Starting operation immediately after turning on the main power switch can result in severe damage to internal parts. Keep the power switch turned on during the operational season.
- **The followings must be checked as well.**
  - The outdoor unit is not faulty. LED on the control board of the outdoor unit flashes when the outdoor unit is faulty.
  - Both the gas and liquid stop valves are completely open.

### 8-2-2. Test run

(1) Using remote controller

Refer to the indoor unit installation manual.

- Be sure to perform the test run for each indoor unit. Make sure each indoor unit operates properly following the installation manual attached to the unit.
- If you perform the test run for all indoor units at once, you cannot detect any erroneous connection, if any, of the refrigerant pipes and the connecting wires.
  - \* The compressor operation is not available for 3 minutes at least after the power is supplied.
- The compressor can emit noise just after turn on the power supply or in case of low outside air temperature.

#### About the restart protective mechanism

Once the compressor stops, the restart preventive device operates so the compressor will not operate for 3 minutes to protect the air conditioner.

## (2) Using SW4 in outdoor unit

**In case of the test run from outdoor unit, all indoor units operate. Therefore, you cannot detect any erroneous connection of refrigerant pipes and the connecting wires. If it aims at detection of any erroneous connection, be sure to carry out the test run from remote controller with reference to "(1) Using remote controller."**

|       |     |                   |
|-------|-----|-------------------|
| SW4-1 | ON  | Cooling operation |
| SW4-2 | OFF |                   |
| SW4-1 | ON  | Heating operation |
| SW4-2 | ON  |                   |

※ After performing the test run, set SW4-1 to OFF.

- A few seconds after the compressor starts, a clanging noise may be heard from the inside of the outdoor unit. The noise is coming from the check valve due to the small difference in pressure in the pipes. The unit is not faulty.

**The test run operation mode cannot be changed by DIP switch SW4-2 during the test run. To change the test run operation mode during the test run, stop the test run by DIP switch SW4-1. After changing the test run operation mode, resume the test run by switch SW4-1.**

**When a test run is started by "Using SW4 in outdoor unit", even if it carries out stop instructions by remote controller, outdoor unit does not stop. A test run is not ended. In this case, please set SW4 in outdoor unit to off.**

- After power is supplied or after an operation stop for a while, a small clicking noise may be heard from the inside of the branch box. The electronic expansion valve is opening and closing. The unit is not faulty.

NOTE: Be sure to wait at least 3 minutes after turning on the power supply before setting SW4-1 and SW4-2.  
If the DIP switches are set before 3 minutes have elapsed, the test run may not start.

### 8-2-3. Test run by outdoor unit SW4

The setting of test run (ON/OFF) and its operation mode (cooling/heating) can be set by SW4 on the controller board of outdoor unit.

- ① Set operation mode (cooling or heating) by SW4-2.
- ② Start test run by setting SW4-1 to ON ( ⤴ ) with the indicated operation mode of SW4-2.
- ③ Finish test run by setting SW4-1 to OFF ( ⤵ ).
  - Operation mode cannot be changed by SW4-2 during test run.
  - Stop test run to change operation mode by SW4-1, and restart test run by SW4-1 after the mode is changed.
  - Test run automatically stops 2 hours later by 2-hour OFF timer function.
  - Test run can be performed by the remote controller.
  - The remote controller display of test run by outdoor unit is the same as that of test run by remote controller.
  - If test run is set with the outdoor unit, the test run is performed for all indoor units.
  - The remote controller operation becomes unavailable once the test run is set with the outdoor unit.

During the test run set with the outdoor unit, operation on/off or operation mode change cannot be performed by the remote controller, and the operation relating to the test run which is made with the outdoor unit will be prior to any other commands from the remote controller. Set the SW4-1 to OFF ( ⤵ ) to finish test run.  
Emergency operation is not available for this model.

### 8-3. SELF-DIAGNOSIS ACTION TABLE

<Abnormalities detected when the power is put on>

(Note 1) Refer to indoor unit section for code P and code E.

| Error Code   | Abnormal point and detection method                                                                                                                                                                  | Case                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Judgment and action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

## 8-5. SPECIAL FUNCTIONS

### 8-5-1. Low noise mode (on-site modification) (Fig. 8-1)

By performing the following modification, operation noise of the outdoor unit can be reduced by about 3-4 dB.

The low noise mode will be activated when a commercially available timer or the contact input of an ON/OFF switch is added to the CNDM connector (optional parts) on the control board of the outdoor unit.

- The capacity may be insufficient according to the outdoor temperature and conditions, etc.

- ① Complete the circuit as shown when using the external input adapter (PAC-SC36NA). (Optional parts)

Fig. 8-1

### 8-5-2. Demand function (on-site modification) (Fig. 8-2)

- It is possible to reduce electricity consumption within a range from 0 to 100 % by performing the following on-site installation. The demand function can be enabled by adding a commercially available input contact point ON/OFF switch to the CNDM connector (the contact point demand input, optional parts).

- ① Incorporate the "Adapter for external input (PAC-SC36NA)" into the circuit as shown in the diagram below.
- ② By switching SW7-1 on the control circuit board for the outdoor unit, the following power consumption restrictions (compared to rated power) can be set.

| SW7-1 | Power consumption when SW2 is on |
|-------|----------------------------------|
| OFF   | 0% (Forced compressor stop)      |
| ON    | 50%                              |

Fig. 8-2

### 8-5-3. Error and compressor operation monitoring function (CN51)

Fig. 8-3

### 8-5-4. Auto change over - Operation mode locking function by external signal (CN3S)

- \* The indoor unit, which is operating in the mode different from the one determined by external signal (CN3S), will be a state of standby.
- \* The setting becomes effective when the outdoor unit is under stop.
- \* The operation mode specified by test run will be prior to the mode of this function.

Fig. 8-4

## Check method of DC fan motor (fan motor / outdoor controller circuit board)

### ① Notes

- High voltage is applied to the connector (CNF1, 2) for the fan motor. Pay attention to the service.
- Do not pull out the connector (CNF1, 2) for the motor with the power supply on.  
(It causes trouble of the outdoor controller circuit board and fan motor.)

### ② Self check

Symptom : The outdoor fan cannot turn around.

## <Thermistor feature chart>

### Low temperature thermistors

Pipe temperature thermistor <Liquid> (TH3)

Pipe temperature thermistor <Cond.> (TH6)

Outdoor temperature thermistor (TH7)

Gas pipe temperature thermistor (TH-A ~ TH-E).... Branch box

Thermistor R0 = 15kΩ ± 3%

B constant = 3480 ± 2%

$$R_t = 15 \exp \left\{ 3480 \left( \frac{1}{273+t} - \frac{1}{273} \right) \right\}$$

0°C 15kΩ 30°C 4.3kΩ

10°C 9.6kΩ 40°C 3.0kΩ

20°C 6.3kΩ

25°C 5.4kΩ

### Medium temperature thermistor

Heatsink temperature thermistor (TH8)

Thermistor R50 = 17kΩ ± 2%

B constant = 4170 ± 3%

$$R_t = 17 \exp \left\{ 4170 \left( \frac{1}{273+t} - \frac{1}{323} \right) \right\}$$

0°C 180kΩ

25°C 50kΩ

50°C 17kΩ

70°C 8kΩ

90°C 4kΩ

### High temperature thermistor

Compressor temperature thermistor (TH4)

Thermistor R120 = 7.465kΩ ± 2%

B constant = 4057 ± 2%

$$R_t = 7.465 \exp \left\{ 4057 \left( \frac{1}{273+t} - \frac{1}{393} \right) \right\}$$

20°C 250kΩ 70°C 34kΩ

30°C 160kΩ 80°C 24kΩ

40°C 104kΩ 90°C 17.5kΩ

50°C 70kΩ 100°C 13.0kΩ

60°C 48kΩ 110°C 9.8kΩ

## <HIGH PRESSURE SENSOR>

③-① : 5V (DC)

②-① : Output Vout (DC)

## 8-7. TEST POINT DIAGRAM

### 8-7-1. Outdoor controller circuit board

**Brief Check of POWER MODULE**

※ Usually, they are in a state of being short-circuited if they are broken. Measure the resistance in the following points (connectors, etc.). If they are short-circuited, it means that they are broken.

**1. Check of POWER MODULE**

①. Check of DIODE circuit

**L1** - **P1**, **L2** - **P1**, **L3** - **P1**, **L1** - **N1**, **L2** - **N1**, **L3** - **N1**

②. Check of IGBT circuit

**P2** - **U**, **P2** - **V**, **P2** - **W**, **N2** - **U**, **N2** - **V**, **N2** - **W**

Note: The marks, **L1**, **L2**, **L3**, **N1**, **N2**, **P1**, **P2**, **U**, **V** and **W** shown in the diagram are not actually printed on the board.

Forced defrost should be done as follows.

① Change the DIP SW1-1 on the outdoor controller board from OFF to ON.

② Forced defrost will start by the above operation ① if these conditions written below are satisfied.

- Heat mode setting
- 10 minutes have passed since compressor started operating or previous forced defrost finished.
- Pipe temperature is less than or equal to 8°C.

③ Forced defrost will finish if certain conditions are satisfied.

\*Forced defrost can be done if above conditions are satisfied when DIP SW1-1 is changed from OFF to ON.

After DIP SW1-1 is changed from OFF to ON, there is no problem if DIP SW1-1 is left ON or changed to OFF again. This depends on the service conditions.

The black square (■) indicates a switch position.

## (2) Function of connector

| Types     | Connector | Function                           | Action by Pin short operation |               | Effective timing     |
|-----------|-----------|------------------------------------|-------------------------------|---------------|----------------------|
|           |           |                                    | Pin 1-2 Short                 | Pin 2-3 Short |                      |
| Connector | CN31      | LEV opening function (at start-up) | Open a little bit             | Normal        | When power supply ON |

### <Outdoor unit operation monitor function>

Digital indicator LED3 displays 2 digit number or code to inform operation condition and the meaning of error code by controlling DIP SW2 on outdoor controller.

Operation indicator SW2 : Indicator change of self diagnosis

| SW2 setting | Display detail | Explanation for display | Unit |
|-------------|----------------|-------------------------|------|
|-------------|----------------|-------------------------|------|

#### <Digital indicator LED3 working details>

(Be sure that 1 to 6 in the SW2 are set to OFF.)

- Display when the power supply is ON.  
When the power supply is ON, blinking displays by turns. Wait for 4 minutes at the longest.
- When the display lights (Normal operation)
  - Operation mode display

LED3

(Lighting)

## 8-9. SELECTING FUNCTIONS USING THE REMOTE CONTROLLER

Each function can be set according to necessity using the remote controller. The setting of function for each unit can only be done by the remote controller. Select function available from the table 1.

(1) Functions available when setting the unit number to 00

※1 The functions table below are available only when P-series indoor unit and the wired remote controller is used.

※2 After the power supply returns, the indoor unit does not operate for 3 minutes (Some kind of indoor units operate for 30 seconds, after that, it stops for 3 minutes).

Above operation is normal.

<Table 1> Function selections

| Function                         | Settings                                                            | Mode No. | Setting No. | ● : Initial setting<br>(when sent from the factory) | Remarks                                                                 |
|----------------------------------|---------------------------------------------------------------------|----------|-------------|-----------------------------------------------------|-------------------------------------------------------------------------|
| Power failure automatic recovery | OFF                                                                 | 01       | 1           |                                                     | The setting is applied to all the units in the same refrigerant system. |

### 9-1. External wiring procedure (Fig. 9-1)

⑤ Power supply: 140/160V Single 220/230/240, 50 Hz 220V, 60Hz,  
140/160Y 3-phase 380/440/415V, 50Hz  
Max. Permissive system Impedance : 0.22(Ω)

Note:

- ① Power supply input: Outdoor unit only. Connect the lines (C), (D) in accordance with the terminal block names to ensure correct polarity.
- ② As for lines (C), S1 and S2 are for connecting the power source. And S2 and S3 are for signals. S2 is a common cable for the power source and signal.

| Model    | Wire diameter       |                     |                                                     |                                                   | Breaker              |                                     |
|----------|---------------------|---------------------|-----------------------------------------------------|---------------------------------------------------|----------------------|-------------------------------------|
|          | (A) Main power line | (B) Earth line      | (C) Signal line/<br>Earth line                      | (D) Signal line/<br>Earth line                    | Interrupting current | Performance characteristic          |
| 140/160V | 6.0 mm <sup>2</sup> | 6.0 mm <sup>2</sup> | 1.5 mm <sup>2</sup> *1/<br>Min. 1.5 mm <sup>2</sup> | 1.5 mm <sup>2</sup> /<br>Min. 1.5 mm <sup>2</sup> | 40 A                 | 40 A, 30 mA<br>for 0.1 sec. or less |
| 140/160Y | 1.5 mm <sup>2</sup> | 1.5 mm <sup>2</sup> | 1.5 mm <sup>2</sup> *1/<br>Min. 1.5 mm <sup>2</sup> | 1.5 mm <sup>2</sup> /<br>Min. 1.5 mm <sup>2</sup> | 25 A                 | 25 A, 30 mA<br>for 0.1 sec. or less |

When using twisted wire for the wiring, the use of round terminal is required.

\*1 Max 45 m ("Outdoor unit-Branch box #1" plus "branch box #1-Branch box #2"). If 2.5 mm<sup>2</sup> used, Max 55 m.

Notes: 1. Wiring size must comply with the applicable local and national code.

2. Power supply cords and Indoor unit/Branch box/Outdoor unit connecting cords shall not be lighter than polychloroprene sheathed flexible cord. (Design 60245 IEC 57)
3. Install an earth line longer than power cables.

**⚠ Warning:**

There is high voltage potential on the S3 terminal caused by electrical circuit design that has no electrical insulation between power line and communication signal line. Therefore, please turn off the main power supply when servicing. And do not touch the S1, S2, S3 terminals when the power is energized. If isolator should be used between indoor unit, branch box and outdoor unit, please use 3-pole type.

<Example 1>

(In case of 2- branch boxes)

**⚠ Warning:**

Be sure to connect the power supply cords and connecting wires for the indoor units, outdoor units, branch boxes directly to the units (no intermediate connections). Intermediate connections can lead to communication errors in the cords or wires and causes insufficient insulation to ground or a poor electrical contact at the intermediate connection point.

(If an intermediate connection is necessary, be sure to take measures to prevent water from entering the cords and wires.)

## IMPORTANT

**Make sure that the current leakage breaker is one compatible with higher harmonics.**

**Always use a current leakage breaker that is compatible with higher harmonics as this unit is equipped with an inverter.**

The use of an inadequate breaker can cause the incorrect operation of inverter.

**Fig. 9-1**

### <Example 2>

(in case of wiring to P100 indoor unit(s))

Fig. 9-2

### 9-2. Wiring to P100 indoor units (Fig. 9-2)

- When wiring P100 indoor unit(s), only use PAC-AK52BC branch box.
- When wiring a single P100 indoor unit, use TB3A.

#### Notes:

- When wiring a single P100 indoor unit, **ONLY** use TB3A. If a single P100 indoor unit is wired to the other terminal block, an alarm will be activated, and the indoor unit will not operate.
- When a single P100 indoor unit is wired to TB3A, do not wire any indoor unit to TB3B. Otherwise, an alarm will be activated, and the indoor unit will not operate.
- TB3C, TB3D, and TB3E are available for wiring of indoor units that are not P100.
- When wiring two P100 indoor units, use TB3A and TB3C.

#### Notes:

- When wiring two P100 indoor units, **ONLY** use TB3A and TB3C. If two P100 indoor units are wired to the other terminal blocks, an alarm will be activated, and the indoor units will not operate.
- When two P100 indoor units are wired to TB3A and TB3C respectively, do not wire any indoor unit to TB3B or TB3D. Otherwise, an alarm will be activated, and the indoor unit will not operate.

**⚠ Warning:**

In case of A-control wiring, there is high voltage potential on the S3 terminal caused by electrical circuit design that has no electrical insulation between power line and communication signal line. Therefore, please turn off the main power supply when servicing. And do not touch the S1, S2, S3 terminals when the power is energized. If isolator should be used between outdoor unit and branch box / indoor units and branch box, please use 3-pole type.

**<CAUTION>**

After using isolator, be sure to turn off and on the main power supply to reset the system.  
Otherwise, outdoor unit may not be able to detect the branch box(es) or indoor units.

**WIRING SPECIFICATIONS**

| Cross section of cable                                                                    | Wire size (mm <sup>2</sup> ) | Number of wires | Polarity                                                                | L (m) * 6             |
|-------------------------------------------------------------------------------------------|------------------------------|-----------------|-------------------------------------------------------------------------|-----------------------|
| Round  | 2.5                          | 3               | Clockwise : S1-S2-S3<br>* Pay attention to stripe of yellow and green.  | (50)<br>* 2           |
| Flat   | 2.5                          | 3               | Not applicable<br>(Because center wire has no cover finish)             | Not applicable<br>* 5 |
| Flat   | 1.5                          | 4               | From left to right : S1-Open-S2-S3                                      | (45)<br>* 3           |
| Round  | 2.5                          | 4               | Clockwise : S1-S2-S3-Open<br>* Connect S1 and S3 to the opposite angle. | (55)<br>* 4           |

\* 1 : Power supply cords of appliances shall not be lighter than design 60245 IEC or 60227 IEC.

\* 2 : In case that cable with stripe of yellow and green is available.

\* 3 : In case of regular polarity connection (S1-S2-S3), wire size is 1.5 mm<sup>2</sup>.

\* 4 : In case of regular polarity connection (S1-S2-S3).

\* 5 : In the flat cables are connected as this picture, they can be used up to 55 m.

\* 6 : Mentioned cable length is just a reference value.

It may be different depending on the condition of installation, humidity or materials, etc.

Be sure to connect the outdoor-branch box / indoor units-branch box connecting cables directly to the units (no intermediate connections).

Intermediate connections can lead to communication errors if water enters the cables and causes insufficient insulation to ground or a poor electrical contact at the intermediate connection point.

(If an intermediate connection is necessary, be sure to take measures to prevent water from entering the cables.)

## 11-1. BASIC SYSTEMS

## 11-2. STANDARD SYSTEMS

## 11-2-1. Only 3-branch type

## 11-2-2. Only 5-branch type

## 11-2-3. 2-branch boxes (3-branch type)

## 11-2-4. 2-branch boxes (5-branch type, maximum 8 indoor units)

1. Up to 2 branch boxes can be connected to a single outdoor unit.
2. Up to 8 indoor units can be connected to the system.

## 11-3. INCORRECT SYSTEMS

### 11-3-1. Group operation by single remote controller

- Plural indoor units cannot be operated by a single remote controller.

### 11-3-2. Group operation between different refrigerant systems

- Different refrigerant systems cannot be connected together.

### 11-3-3. Connection of M-NET adapter to outdoor unit

- A M-NET adapter cannot be connected to an outdoor unit.

## 12-1. ADDITIONAL REFRIGERANT CHARGE

|                                         |                                                           |                                                                                                                                                                       |

|                                         | Piping length between outdoor unit and branch boxes       | $b1 + b2 \leq 55\text{m}$                                                                                                                                             |
|                                         | Farthest piping length after branch box (l)               | $a8 \leq 15\text{m}$                                                                                                                                                  |
|                                         | Total piping length between branch boxes and indoor units | $a1 + a2 + a3 + a4 + a5 + a6 + a7 + a8 \leq 60\text{m}$                                                                                                               |
| Permissible height difference (one-way) | In indoor / outdoor section (H) *2                        | $H \leq 30\text{m}$ (In case of that outdoor unit is set higher than indoor unit)<br>$H \leq 20\text{m}$ (In case of that outdoor unit is set lower than indoor unit) |
|                                         | In branch box / indoor unit section (h1)                  | $h1 + h2 \leq 15\text{m}$                                                                                                                                             |
|                                         | In each branch unit (h2)                                  | $h2 \leq 15\text{m}$                                                                                                                                                  |
|                                         | In each indoor unit (h3)                                  | $h3 \leq 12\text{m}$                                                                                                                                                  |
| Number of bends                         |                                                           | $ b1 + a1 ,  b1 + a2 ,  b1 + a3 ,  b1 + a4 ,  b1 + a5 ,  b2 + a6 ,  b2 + a7 ,  b2 + a8  \leq 15$                                                                      |

\*2 Branch box should be placed with in the level between the outdoor unit and indoor units.

- Additional charging is not necessary for this unit if the total pipe length ( $b1 + b2 + a1 + a2 + a3 + a4 + a5 + a6 + a7 + a8$ ) does not exceed 40 m.
- If the total pipe length exceeds 40 m, charge the unit with additional R410A refrigerant according to the permitted pipe lengths in the chart on the next page.

After charging the unit with refrigerant, note the added refrigerant amount on the service label (attached to the unit).

Refer to the "installation manual" for more information.

<Table 1>

| Total piping length<br>(b1+ b2 + a1+ a2 + a3 + a4 + a5 + a6 + a7 + a8)         | 40m or less        | 41 – 50m             | 51 – 70m             | 71 – 90m              | 91 – 115m             |
|--------------------------------------------------------------------------------|--------------------|----------------------|----------------------|-----------------------|-----------------------|
| Additional refrigerant charging amount                                         | 0kg (no need)      | 0.6kg                | 1.4kg                | 2.2kg                 | 3.2kg                 |
| <b>* Reference (for service)</b><br>The amount of refilling refrigerant charge | 8.5kg<br>(8.5 + 0) | 9.1kg<br>(8.5 + 0.6) | 9.9kg<br>(8.5 + 1.4) | 10.7kg<br>(8.5 + 2.2) | 11.7kg<br>(8.5 + 3.2) |

If connecting an indoor unit with  $\phi 9.52$  liquid pipes (model number 71 or more for M-and S-series and model number 60 or more for P-series), the additional refrigerant charging amount in Table 1 must be corrected (add the following R value from the value given in Table 1).

Additional refrigerant charging correction amount

$R = 0.01 \text{ [kg/m]} \times \phi 9.52 \text{ branch pipe (liquid pipe) total length [m]}$

Example) b1 = 20m, b2 = 25m

|               |                         |          |
|---------------|-------------------------|----------|
| Indoor unit A | $\phi 9.52$ liquid pipe | a1 = 12m |
| Indoor unit B | $\phi 6.35$ liquid pipe | a2 = 11m |
| Indoor unit C | $\phi 6.35$ liquid pipe | a6 = 14m |
| Indoor unit D | $\phi 9.52$ liquid pipe | a7 = 13m |

Total piping length : b1 + b2 + a1 + a2 + a6 + a7 = 95m

→ According to Table 1, the additional refrigerant charging amount is 3.2kg.

Because indoor units with  $\phi 9.52$  liquid pipes are connected (indoor units A and D in this example), the additional refrigerant charging amount must be corrected.

Additional refrigerant charging correction amount

$R = 0.01 \text{ [kg/m]} \times \phi 9.52 \text{ branch pipe (liquid pipe) total length (a1 + a7)}$

=  $0.01 \times (12 + 13\text{m})$

= 0.25kg

Therefore, the additional refrigerant charging amount is  $3.2\text{kg} + 0.25\text{kg} = 3.45\text{kg}$ .

\* Reference

The refilling amount of refrigerant at servicing

Example)  $3.45 + 8.5 = 11.95\text{kg}$

The amount of refrigerant of initial charge (8.5kg) is added.

\* Although two  $\phi 6.35$  liquid pipes are used between the branch box and the Y-shape connection pipe when connecting the P100 indoor unit, calculate the additional refrigerant charging amount assuming only one  $\phi 9.52$  liquid pipe is used.

#### Refrigerant collection when relocating the indoor and outdoor units (Pump down)

- ① Connect gauge manifold valve (pressure gauge included) to the service port near the gas stop valve of the outdoor unit so that the refrigerant pressure can be measured.
- ② Turn on the power supply (circuit breaker).
- ③ Close the liquid stop valve, and then perform the test run for cooling operation (SW4-1 : ON and SW4-2 : OFF).  
NOTE: Be sure to wait at least 3 minutes after turning on the power supply before setting SW4-1 and SW4-2.  
If the DIP switches are set before 3 minutes has elapsed, the test run may not start.
- ④ Fully close the gas stop valve when the pressure reading on the gauge drops to 0.05–0.00MPa \* (approximately 0.5–0.0 kg/cm<sup>2</sup>)  
\* If too much refrigerant has been added to the air conditioner system, the pressure may not drop to 0.5 kg/cm<sup>2</sup>. If this occurs, use a refrigerant collecting device to collect all of the refrigerant in the system, and then recharge the system with the correct amount of refrigerant after the indoor and outdoor units have been relocated.
- ⑤ Stop the air conditioner operation (SW4-1 : OFF and SW4-2 : OFF).
- ⑥ Turn off the power supply (circuit breaker).

## 12-2. PRECAUTIONS AGAINST REFRIGERANT LEAKAGE

### 12-2-1. Introduction

R410A refrigerant of this air conditioner is non-toxic and non-flammable but leaking of large amount from an indoor unit into the room where the unit is installed may be deleterious.

To prevent possible injury, the rooms should be large enough to keep the R410A concentration specified by KHK: (a high pressure gas safety association) installation guidelines S0010 as follows.

Maximum concentration  
Maximum refrigerant concentration of R410A of a room is  $0.3 \text{ kg/m}^3$  accordance with the installation guidelines. To facilitate calculation, the maximum concentration is expressed in units of  $\text{kg/m}^3$  ( kg of R410A per  $\text{m}^3$  )

Maximum concentration of R410A:  $0.3 \text{ kg/m}^3$   
(KHK installation guidelines S0010)

### 12-2-2. Confirming procedure of R410A concentration

Follow (1) to (3) to confirm the R410A concentration and take appropriate treatment, if necessary.

#### (1) Calculate total refrigerant amount by each refrigerant system.

Total refrigerant amount is precharged refrigerant at ex-factory plus additional charged amount at field installation.

Note:  
When single refrigeration system consists of several independent refrigeration circuit, figure out the total refrigerant amount by each independent refrigerant circuit.

#### (2) Calculate room volumes ( $\text{m}^3$ ) and find the room with the smallest volume

The part with    represents the room with the smallest volume.

##### (a) Situation in which there are no partitions

##### (b) There are partitions, but there are openings that allow the effective mixing of air.

##### (c) If the smallest room has mechanical ventilation apparatus that is linked to a household gas detection and alarm device, the calculations should be performed for the second smallest room.

#### (3) Use the results of calculations (1) and (2) to calculate the refrigerant concentration:

$$\frac{\text{Total refrigerant in the refrigerating unit (kg)}}{\text{The smallest room in which an indoor unit has been installed (m}^3\text{)}} \leq \text{Maximum concentration (kg/m}^3\text{)}$$

Maximum concentration of R410A:  $0.3 \text{ kg/m}^3$

If the calculation results do not exceed the maximum concentration, perform the same calculations for the larger second and third room, etc., until it has been determined that the maximum concentration does not exceed in each room.

(See Photo 5.)</li><li>(4) Pull out the thermistor &lt;Outdoor pipe&gt; (TH3) and thermistor &lt;Compressor&gt; (TH4) from the sensor holder.</li></ol>                                                                                                                                                                                                | <p><b>Photo 7</b></p>  |

## OPERATING PROCEDURE

### 7. Removing the solenoid valve coil <4-way valve> (21S4)

- (1) Remove the service panel. (See Photo 1.)
- (2) Remove the top panel. (See Photo 1.)

#### [Removing the solenoid valve coil <4-way valve>]

- (3) Remove 4-way valve solenoid coil fixing screw (M5 × 6).
- (4) Remove the solenoid valve coil <4-way valve> by sliding the coil toward you.
- (5) Disconnect the connector 21S4 (green) on the controller circuit board in the electrical parts box.

### 8. Removing the 4-way valve

- (1) Remove the service panel. (See Photo 1.)
  - (2) Remove the top panel. (See Photo 1.)
  - (3) Remove 3 valve bed fixing screws (4 × 10) and 4 ball valve and stop valve fixing screws (5 × 16) and then remove the valve bed.
  - (4) Remove 4 right side panel fixing screws (5 × 12) in the rear of the unit and then remove the right side panel.
  - (5) Remove the solenoid valve coil <4-way valve>. (See Photo 8.)
  - (6) Recover refrigerant.
  - (7) Remove the welded part of 4-way valve.
- Note 1: Recover refrigerant without spreading it in the air.
- Note 2: The welded part can be removed easily by removing the right side panel.
- Note 3: When installing the 4-way valve, cover it with a wet cloth to prevent it from heating (120°C or more), then braze the pipes so that the inside of pipes are not oxidized.

### 9. Removing solenoid valve coil <Bypass valve> (SV1) and bypass valve

- (1) Remove the service panel. (See Photo 1.)
- (2) Remove the top panel. (See Photo 1.)
- (3) Remove the electrical parts box. (See Photo 5.)
- (4) Remove 3 right side panel fixing screws (5 × 12) in the rear of the unit and remove the right side panel.
- (5) Remove the bypass valve coil fixing screw (M4 × 6).
- (6) Remove the solenoid valve coil <Bypass valve> (SV1) by sliding the coil upward.
- (7) Recover refrigerant.
- (8) Remove the welded part of bypass valve.

- Note 1: Recover refrigerant without spreading it in the air.
- Note 2: The welded part can be removed easily by removing the right side panel.

### 10. Removing solenoid valve coil (Returning oil bypass) <Bypass valve> (SV2) and bypass valve

- (1) Remove the service panel. (See Photo 1.)
- (2) Remove the top panel. (See Photo 1.)
- (3) Remove the electrical parts box. (See Photo 5.)
- (4) Remove 3 right side panel fixing screws (5 × 12) in the rear of the unit and remove the right side panel.
- (5) Remove the bypass valve coil fixing screw (M5 × 6).
- (6) Remove the solenoid valve coil (Returning oil bypass) <Bypass valve> (SV2) by sliding the coil upward.
- (7) Recover refrigerant.
- (8) Remove the welded part of bypass valve.

- Note 1: Recover refrigerant without spreading it in the air.
- Note 2: The welded part can be removed easily by removing the right side panel.

## OPERATING PROCEDURE

### 11. Removing the high pressure switch (63H) and low pressure switch (63L)

- (1) Remove the service panel. (See Photo 1.)
- (2) Remove the top panel. (See Photo 1.)
- (3) Remove the electrical parts box. (See Photo 5.)
- (4) Remove 3 right side panel fixing screws (5 × 12) in the rear of the unit and remove the right side panel.
- (5) Pull out the lead wire of high pressure switch and low pressure switch.
- (6) Recover refrigerant.
- (7) Remove the welded part of high pressure switch and low pressure switch.

Note 1: Recover refrigerant without spreading it in the air.

Note 2: The welded part can be removed easily by removing the right side panel.

Note 3: When installing the high pressure switch and low pressure switch, cover them with a wet cloth to prevent them from heating (100 °C or more), then braze the pipes so that the inside of pipes are not oxidized.

### 12. Removing the high pressure sensor (63HS)

- (1) Remove the service panel. (See Photo 1.)
- (2) Remove the top panel. (See Photo 1.)
- (3) Remove the electrical parts box. (See Photo 5.)
- (4) Remove 3 right side panel fixing screws (5 × 12) in the rear of the unit and remove the right side panel.
- (5) Pull out the lead wire of high pressure sensor.
- (6) Recover refrigerant.
- (7) Remove the welded part of high pressure sensor.

Note 1: Recover refrigerant without spreading it in the air.

Note 2: The welded part can be removed easily by removing the right side panel.

Note 3: When installing the high pressure sensor, cover it with a wet cloth to prevent it from heating (100°C or more), then braze the pipes so that the inside of pipes are not oxidized.
