Process Control Instruments

Model GF868 Ultrasonic Flowmeter for Flare Gas

Startup Guide *910-194UB1*

GE Panametrics

Warranty

Each instrument manufactured by GE Panametrics is warranted to be free from defects in material and workmanship. Liability under this warranty is limited to restoring the instrument to normal operation or replacing the instrument, at the sole discretion of GE Panametrics. Fuses and batteries are specifically excluded from any liability. This warranty is effective from the date of delivery to the original purchaser. If GE Panametrics determines that the equipment was defective, the warranty period is:

- one year for general electronic failures of the instrument
- one year for mechanical failures of the transducers

If GE Panametrics determines that the equipment was damaged by misuse, improper installation, the use of unauthorized replacement parts, or operating conditions outside the guidelines specified by GE Panametrics, the repairs are not covered under this warranty.

The warranties set forth herein are exclusive and are in lieu of all other warranties whether statutory, express or implied (including warranties or merchantability and fitness for a particular purpose, and warranties arising from course of dealing or usage or trade).

Return Policy

If a GE Panametrics instrument malfunctions within the warranty period, the following procedure must be completed:

1. Notify GE Panametrics, giving full details of the problem, and provide the model number and serial number of the instrument. If the nature of the problem indicates the need for factory service, GE Panametrics will issue a RETURN AUTHORIZATION number (RA), and shipping instructions for the return of the instrument to a service center will be provided.
2. If GE Panametrics instructs you to send your instrument to a service center, it must be shipped prepaid to the authorized repair station indicated in the shipping instructions.
3. Upon receipt, GE Panametrics will evaluate the instrument to determine the cause of the malfunction.

Then, one of the following courses of action will then be taken:

- If the damage is covered under the terms of the warranty, the instrument will be repaired at no cost to the owner and returned.
- If GE Panametrics determines that the damage is not covered under the terms of the warranty, or if the warranty has expired, an estimate for the cost of the repairs at standard rates will be provided. Upon receipt of the owner's approval to proceed, the instrument will be repaired and returned.

Chapter 1

Installation

Introduction

To ensure safe and reliable operation of the Model GF868 flowmeter for flare gas, the system must be installed in accordance with the guidelines established by GE Panametrics' engineers. This section explains how to install the Model GF868 electronics console and make wiring connections. It covers:

- Unpacking - How to unpack the GF868 system.
- Selecting a suitable site for the electronics console and the flowcell/transducers.
- Installing a flowcell
- Installing temperature and pressure transmitters
- Installing the electronics console
- Wiring the electronics console

!WARNING!
THE MODEL GF868 FLOWMETER CAN MEASURE THE FLOW OF MANY GASES, SOME OF THEM POTENTIALLY HAZARDOUS. WE CANNOT OVEREMPHASIZE THE IMPORTANCE OF SAFETY. BE SURE TO FOLLOW ALL APPLICABLE SAFETY CODES AND REGULATIONS FOR INSTALLING ELECTRICAL EQUIPMENT IN YOUR AREA AND WHEN WORKING WITH PARTICULARLY HAZARDOUS GASES OR FLOW CONDITIONS. CONSULT YOUR COMPANY SAFETY PERSONNEL OR LOCAL SAFETY AUTHORITIES IF YOU ARE UNSURE ABOUT THE SAFETY OF ANY PROCEDURE OR PRACTICE.

ATTENTION EUROPEAN CUSTOMERS!
IN ORDER TO MEET CE MARK REQUIREMENTS, YOU MUST MAKE ALL WIRING CONNECTIONS AS DESCRIBED IN APPENDIX A, *CE MARK COMPLIANCE.*

Unpacking

Remove the electronics console, transducers, and cables from the shipping containers. Check all packing material before discarding it to account for all parts and documentation listed on the packing slip. If anything is missing or damaged, contact the factory immediately for assistance.

Site Considerations

Since the relative physical locations of the flowcell(s) and the GF868 electronics are important, use the guidelines given in this section when planning your GF868 system installation.

Electronics Console Location

Normally, the GF868 electronics enclosure is a NEMA-4X weather-resistant, dust-tight, indoor/outdoor type. (Other enclosure options are described in Appendix C.) Typically, the electronics console is mounted in a meter shed. If it is not, select a location that allows you access to your meter for programming, testing, and servicing.

Note: *For compliance with the European Union's Low Voltage Directive (IEC 1010), this unit requires an external power disconnect device such as a switch or circuit breaker. The disconnect device must be marked as such, clearly visible, directly accessible, and located within 6 ft (1.8 m) of the GF868.*

Flowcell Location

The pipeline flowcell consists of the flowmeter transducers and any pressure and temperature transducers that may be used as part of the flowmeter system. Ideally, the section of pipe chosen as the flowcell should be a pipe section with easy access; for example, a long stretch of pipe that is above ground. However, if the flowcell must be on an underground pipe, dig a pit around the pipe to facilitate the transducer mechanisms.

Transducer Locations

For a given gas and pipe, the Model GF868's accuracy depends primarily on the location and alignment of the transducers on the pipe. In addition to accessibility, when planning for transducer location, consider the following guidelines:

- Locate the transducers so that there are at least 20 pipe diameters of straight, undisturbed flow upstream and 10 pipe diameters of straight, undisturbed flow downstream from the measurement point. To ensure undisturbed flow, avoid: sources of turbulence in the fluid such as valves, flanges, expansions and elbows; swirl; and dips or low spots in which condensed liquid may collect.
- Because condensate or sediment that collects at the bottom of the pipe may cause increased attenuation of the ultrasonic signal, locate the transducers on the side of a horizontal pipe, where possible. If limited pipe access necessitates top-mounted transducers and the sound beam path includes a reflection, shift the transducers to at least 10° off top center. This will minimize the influence of any sediment on the reflected ultrasonic signals.

Cable Lengths

Locate the transducers as close as possible to the electronics console. GE Panametrics can supply transducer cables up to 500 ft (153 m) in length. For longer distances, consult the factory.

Temperature and Pressure Transmitters

When installing temperature and pressure transmitters, locate them downstream of the flowmeter transducers. These transmitters should be positioned no closer to the flowmeter transducers than 2 pipe diameters and no further away from the transducers than 20 pipe diameters.

Transducer Cables

When installing the transducer cables, always observe established standard practices for the installation of electrical cables. Specifically, do not route transducer cables alongside high amperage AC power cables, or any other cables that could cause electrical interference. Also, protect the cables and connections from the weather and corrosive atmospheres.

Note: *If you are using your own cabling to connect the transducers to the electronics console, the cabling must have electrical characteristics identical to the cable supplied by GE Panametrics. Cable must be type RG 62 A/U coaxial cable (93 Ω) and each cable must be the same length (within ± 4 in.).*

Installing a Flowcell

A flowcell is the section of pipe where the transducers are mounted. It can be created either by mounting the transducers on the existing pipeline or on a spoolpiece.A spoolpiece is a separately manufactured pipe section, matched to the existing pipe, which contains ports for mounting the transducers. This approach allows the transducers to be aligned and calibrated before mounting the spoolpiece into the pipeline.

Figure 1-1 on the next page shows a block diagram of a typical Model GF868 system, including optional pressure and temperature transmitters. For detailed instructions on installing the transducers and/or spoolpiece, refer to the supplied drawings and the GE Panametrics *Gas Transducer Installation Guide for Ultrasonic Flowmeters.*

Caution!

The manual insertion mechanism systems are for low pressure applications (80 psig/5.5 bar or less). Use the appropriate safety precautions when inserting or withdrawing the insertion mechanism.

Installing a Flowcell (cont.)

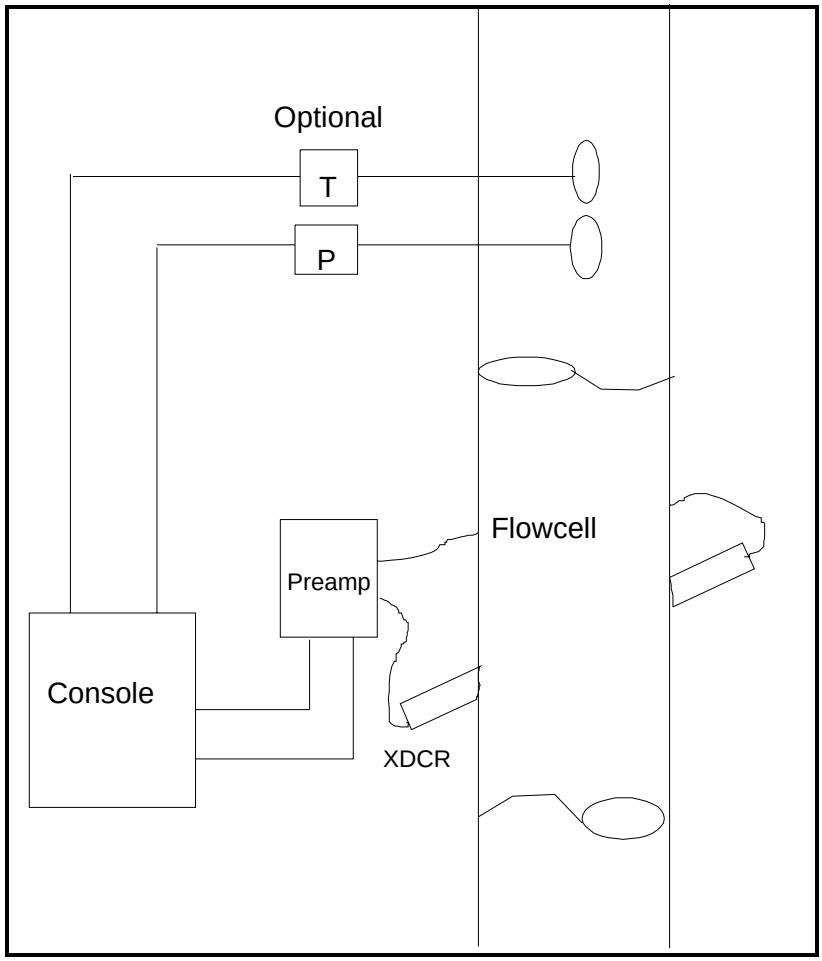

Figure 1-1: Model GF868 Flowmeter System

Installing Temperature and Pressure Transmitters

Temperature and pressure transmitters may be installed as part of the flowcell, near the ultrasonic transducer ports. (Be sure to observe the siting requirements mentioned earlier.) These transmitters must use a 0/4 to 20-mA signal to transmit temperature and pressure values to the GF868 console. The console, in turn, provides 24-VDC power to the transmitter. You can use any desired transmitters or sensors; however, they must have an accuracy of 0.5% of the reading or better.

Note: *Resistive Thermal Devices (RTDs) are typically used to measure temperature.*

Typically, a 1/2" or 3/4" NPT female threaded port is used to mount the transmitters on the flowcell. If the pipeline is insulated, you may need to extend the coupling to provide convenient access. Of course, you may also use other types of mounting ports, including flanged ports, for the transmitters.

The 4 to 20-mA transmitters typically mount directly into the ports as shown in Figure 1-2 below. The temperature sensor should protrude 1/4 to 1/2 way into the pipe.

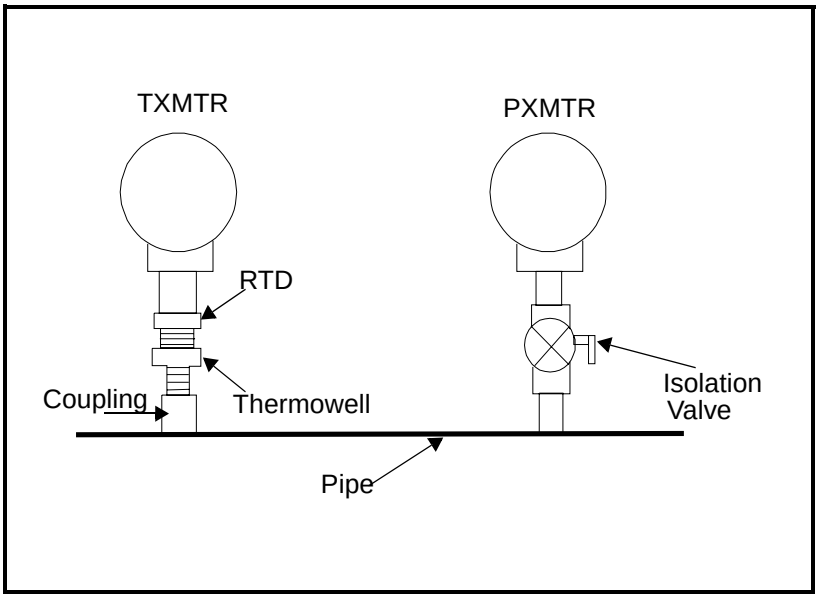

Figure 1-2: Typical Temperature/Pressure Transmitter Mounting

Mounting the GF868 Enclosure

The standard GF868 is housed in a NEMA-4X weather-resistant enclosure. Other enclosure options are available, and are discussed in Appendix C. Refer to Figure 1-6 on page 1-17 for the standard enclosure mounting dimensions. For meters housed in one of the optional enclosures, a dimensional drawing will be shipped with the unit.

Making Electrical Connections

This section contains instructions for making all the necessary electrical connections to the Model GF868 flowmeter. Refer to Figure 1-7 on page 1-18 for a complete wiring diagram.

RACK MOUNT CUSTOMERS:
PLEASE REFER TO APPENDIX C FOR A WIRING DIAGRAM AND INSTALLATION INFORMATION FOR YOUR UNIT.

Except for the power connector, all terminal blocks are stored in their terminal blocks during shipment and are removable for more convenient wiring. Feed all cables through the conduit holes on the bottom of the enclosure, attach the wires to the appropriate connectors, and plug the connectors back into their terminal blocks.

!WARNING!
To ensure the safe operation of the Model GF868, you must install and operate it as described in this manual. In addition, be sure to follow all applicable safety codes and regulations for installing electrical equipment in your area.

ATTENTION EUROPEAN CUSTOMERS!
IN ORDER TO MEET CE MARK REQUIREMENTS, YOU MUST INSTALL CABLES AS DESCRIBED IN APPENDIX A.

Note: *If your unit complies with the European Union's Low Voltage Directive (IEC 1010), it has a transparent plastic cover over the electrical connections. This cover must remain in place except while you are wiring your unit. Reinstall the shroud after the wiring has been completed.*

Once the GF868 is completely wired, proceed to Chapter 2, *Initial Setup,* to configure the unit for operation.

Wiring the Line Power

The Model GF868 may be ordered with power inputs of 100-120 VAC, 220-240 VAC, or 12-28 VDC. The label on the shroud inside the electronics enclosure, just above the TB1 line power terminal block, lists the line voltage setting and fuse rating for your unit. (The fuse rating also appears in Chapter 4, *Specifications.*) Be sure to connect the meter only to the correct line voltage. The allowable line voltages and fuse ratings are shown in Table 1-1 on page 1-9.

Note: *For compliance with the European Union's Low Voltage Directive (IEC 1010), this unit requires an external power disconnect device such as a switch or circuit breaker. The disconnect device must be marked as such, clearly visible, directly accessible, and located within 6 ft (1.8 m) of the GF868.*

Refer to Figure 1-7 on page 1-18 to locate terminal block TB1. Follow these steps to connect the line power:

1. Prepare the line power leads by trimming the line and neutral (or positive and negative) leads to a length 0.5 in. (1 cm) shorter than the ground lead. This ensures that the ground is the last lead to detach if the power cable is forcibly disconnected from the meter.

2. If the unit is so equipped, remove the plastic shroud that covers the terminal blocks. Be sure to reinstall the shroud after all of the wiring has been completed.

3. Strip 1/4 in.of insulation from the end of each of the three line power leads.

4. Connect line power to terminal block TB1 as shown in Figure 1-7 on page 1-18.

!WARNING!
IMPROPER CONNECTION OF LINE POWER MAY DAMAGE YOUR UNIT. IT MAY ALSO RESULT IN HAZARDOUS VOLTAGES AT THE FLOWCELL AND ASSOCIATED PIPING, AND AT THE ELECTRONICS CONSOLE ENCLOSURE.

Wiring the Transducers

Wiring the GF868 ultrasonic flare gas flowmeter system requires interconnection of the following components:

- a pair of transducers mounted in the flowcell
- a preamplifier for each channel
- an optional lightning protector
- the GF868 console.

Use a coaxial cable to make all connections between the console and the transducers. Connect the transducers to terminal block CH1 as shown in Figures 1-7 and 1-8 on pages 1-18 and 1-19 respectively.

!WARNING!
Before connecting the transducers, discharge any static buildup in a safe area, by shorting the center conductor of the transducer cables to the metal shield of the cable connector.

Wiring the 0/4-20 mA Analog Outputs

The standard GF868 comes with two isolated 0/4-20 mA analog outputs (A and B). Use standard twisted-pair wiring to make connections to these outputs. The current loop impedance must not exceed 550 ohms.

Refer to Figure 1-7 on page 1-18 and connect the wires to the terminal block I/O as shown.

Wiring the RS232 Interface

The RS232 communications port provides a serial interface in order to connect the GF868 to a printer, an ANSI terminal or a personal computer.

The RS232 serial interface is wired as Data Terminal Equipment (DTE), and the signals available at the GF868 RS232 terminal block are shown in Table 1-1 below. Refer to Figure 1-7 on page 1-18 to locate terminal block RS232 and complete the following steps to wire the terminal:

1. Use the information in Table 1-1 below to construct a suitable cable for connecting the GF868 to the external device. (If desired, an appropriate cable may be purchased from GE Panametrics.)

Table 1-1: RS232 Connection to DCE or DTE Device

RS232 Pin #	Signal Description	DCE DB25 Pin #	DTE DB25 Pin #	DTE DB9 Pin #
1	RTN (Return)	7	7	5
2	TX (Transmit)	2	3	3
3	RX (Receive)	3	2	2
4	DTR (Data Terminal Ready)	20	20	4
5	CTS (Clear to Send)	5	4	8

2. Wire the flying leads end of the cable to terminal block RS232 and connect the other end of the cable to the printer, ANSI terminal or personal computer.

After the wiring has been completed, consult the User's Manual for the external device to configure it for use with the GF868.

Wiring the RS485 Interface

Although the standard RS232 serial interface included with the Model GF868 is adequate for most applications, GE Panametrics offers an optional RS485 serial interface upgrade for special situations. The Model GF868 is easily modified to provide RS485 communications, and this section describes the wiring and use of the special RS232 to RS485 converter.

IMPORTANT: *This section refers to the PC communications port (labelled "RS232" on the main board). If you have a MODBUS card installed, the terminal block on that card will always be RS485. The MODBUS card only sends MODBUS data and cannot be used to set up the GF868. IDM communication always passes via the RS232 port described here.*

Note: *For compliance with the European Union's Low Voltage Directive (73/23/EEC), this unit requires an external power disconnect device such as a switch or circuit breaker. The disconnect device must be marked as such, clearly visible, directly accessible, and located within 1.8 m (6 ft) of the electronics console.*

Interface Converter Mounting

A special bracket containing the serial interface converter and a three-terminal barrier strip is mounted inside the Model GF868, just below the RS232 terminal block (see Figure 1-3 below). The standard RS232 terminal block is wired to the input of the serial interface converter, and the RS485 output of the serial interface converter is wired to the barrier strip.

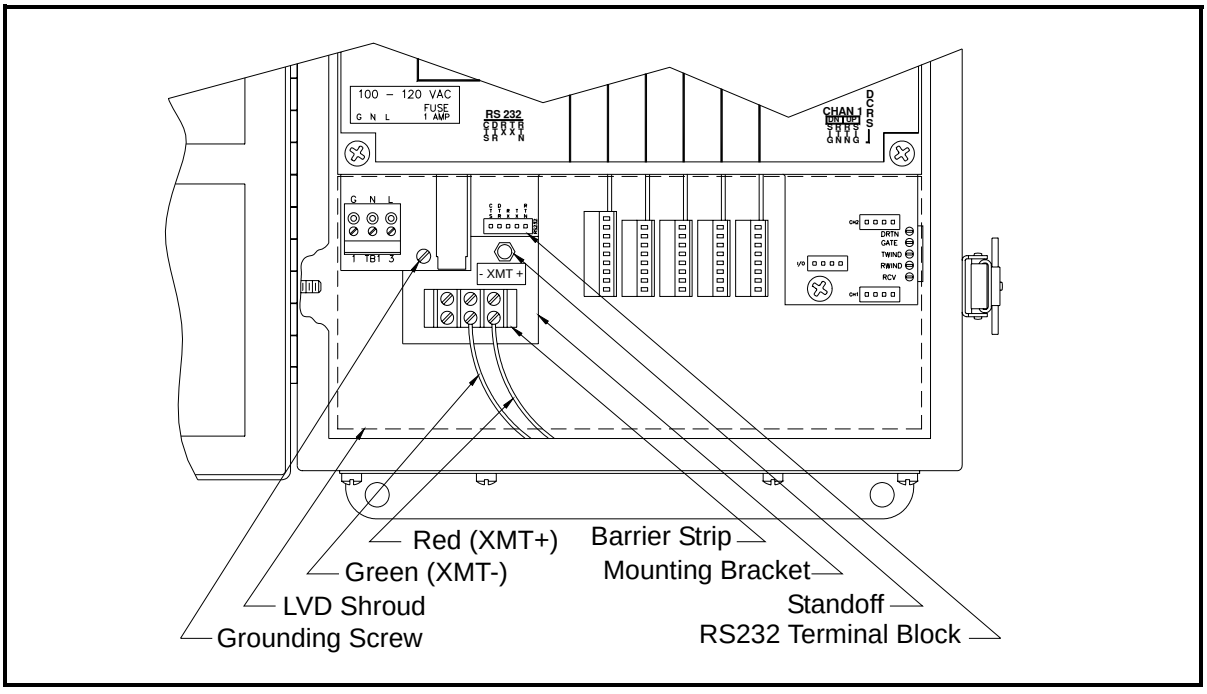

Figure 1-3: Interface Converter Mounting

Point-To-Point Wiring

Standard factory wiring of the RS485 serial interface is configured for point-to-point wiring. That is, a single Model GF868 may be wired directly to a single personal computer. (For information on multipoint wiring, refer to Chapter 6, *Serial Communications*, of the *Programming Manual*.) To connect the RS485 serial interface, refer to Figure 1-3 on the previous page and complete the following steps:

Note: *For compliance with the European Union's Low Voltage Directive (73/23/EEC), a transparent plastic shroud protects the electrical connections. The shroud must remain in place, except while wiring the unit. Reinstall the shroud after the wiring has been completed.*

1. Disconnect the *main power* to the electronics console and open the cover.

!WARNING!
Dangerous voltages exist within the electronics console. Do not perform any wiring operations until the main power to the unit has been disconnected.

2. For units so equipped, remove the clear plastic *shroud* that covers the electrical connectors.

3. Using a *twisted-wire pair*, connect the XMT+ terminal of the barrier strip to the XMT+ terminal of the personal computer and connect the XMT– terminal of the barrier strip to the XMT– terminal of the personal computer.

Note: *The XMT+ terminal on the barrier strip is the screw opposite the red wire connection and the XMT– terminal on the barrier strip is the screw opposite the green wire connection.*

4. Reinstall the clear plastic shroud (for units so equipped), close the cover to the electronics console and reconnect the main power.

The RS485 serial interface is now ready for point-to-point operation. However, the installed version of the Model GF868 software must support RS485 operation for the interface to work properly. If necessary, contact the factory for information about a software upgrade.

Wiring an Alarms Option Card

The GF868 can accommodate 1 to 6 alarm option card(s). Each alarm option card provides three Form C relays (A, B and C).
The alarm relays on the option card are available in two types:

- general-purpose
- hermetically-sealed for Class I, Division 2 hazardous areas.

Chapter 4, *Specifications*, lists the maximum electrical ratings for the relays. Each alarm relay can be wired as *Normally Open* (NO) or *Normally Closed* (NC).

In setting up an alarm relay, it may be wired for either *conventional* or *fail-safe* operation. In fail-safe mode, the alarm relay is constantly energized, except when it is triggered or a power failure or other interruption occurs. See Figure 1-4 below for the operation of a NO alarm relay in both conventional and fail-safe mode.

Connect the two alarm wires required for each relay in accordance with the pin number assignments shown in Figure 1-7 on page 1-18.

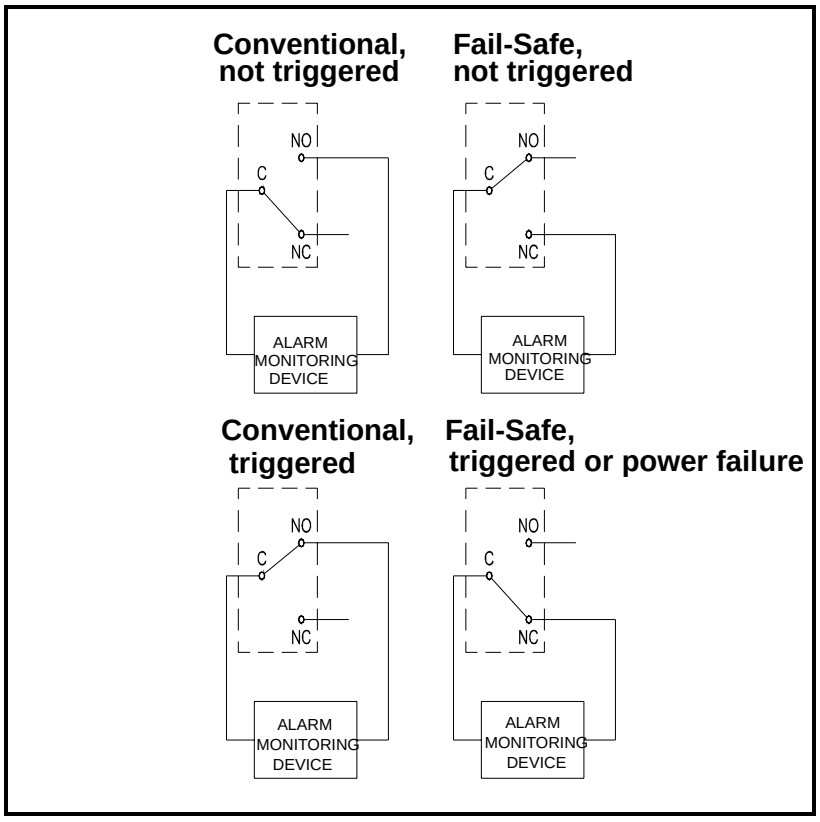

Figure 1-4: Conventional and Fail-Safe Operation

Wiring a 0/4-20 mA Analog Inputs Option Card

To calculate standard volumetric flow and mass flow of Flare Gas, the GF868 must have *temperature* and *pressure* data from the measurement site. Transmitters installed in the flowcell send this information to the analog input card. This card provides two isolated 4-20 mA inputs (A and B) with 24 VDC supply for loop-powered transmitters. You can assign the temperature and pressure inputs to A and B as desired.

Note: *To enter programming data during meter operation, you should know which input is assigned to which process parameter. Enter the connections in Appendix B,* Data Records.

The analog inputs, which have an impedance of 118 ohms, should be connected with standard twisted-pair wiring.Temperature and pressure inputs require two or four wires, depending on whether the GF868 will provide power to the transmitter. If desired, INLO and RTN can use the same wire.

Wire the analog input terminal block in accordance with the pin number assignments shown in Figure 1-7 on page 1-18.

The analog inputs on the option card(s) can be calibrated with the Model GF868's built-in analog outputs. However, be certain that the analog outputs have been calibrated first. See Chapter 1, *Calibration,* in the *Service Manual* for the appropriate procedures.

Wiring the Totalizer/ Frequency Outputs

The GF868 can accommodate 1 to 6 totalizer/frequency outputs option cards. Each totalizer/frequency outputs option card provides four outputs (A, B, C, and D) that can be used as either totalizer or frequency outputs.

Each totalizer/frequency output requires two wires. Wire this terminal block in accordance with the pin number assignments shown in Figure 1-7 on page 1-18. Figure 1-5 below shows sample wiring diagrams for the totalizer/frequency outputs.

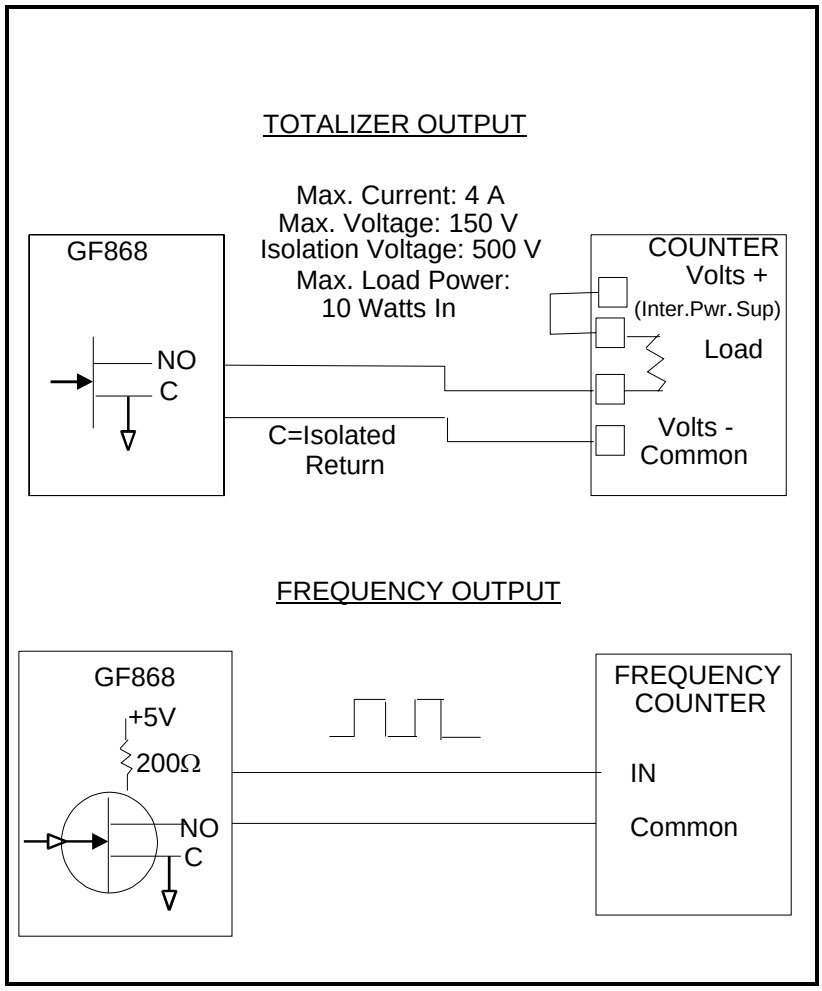

Figure 1-5: Totalizer/Frequency Output Wiring

Wiring the RTD Inputs

The GF868 can accommodate 1 to 6 RTD (Resistance Temperature Device) inputs card(s). Each RTD inputs card provides two direct RTD inputs (A and B).

Each RTD input requires three wires. Feed the wires through one of the conduit holes on the bottom center of the enclosure. Connect the wires to the 8-pin RTD inputs option card terminal block as shown in Figure 1-7 on page 1-18.

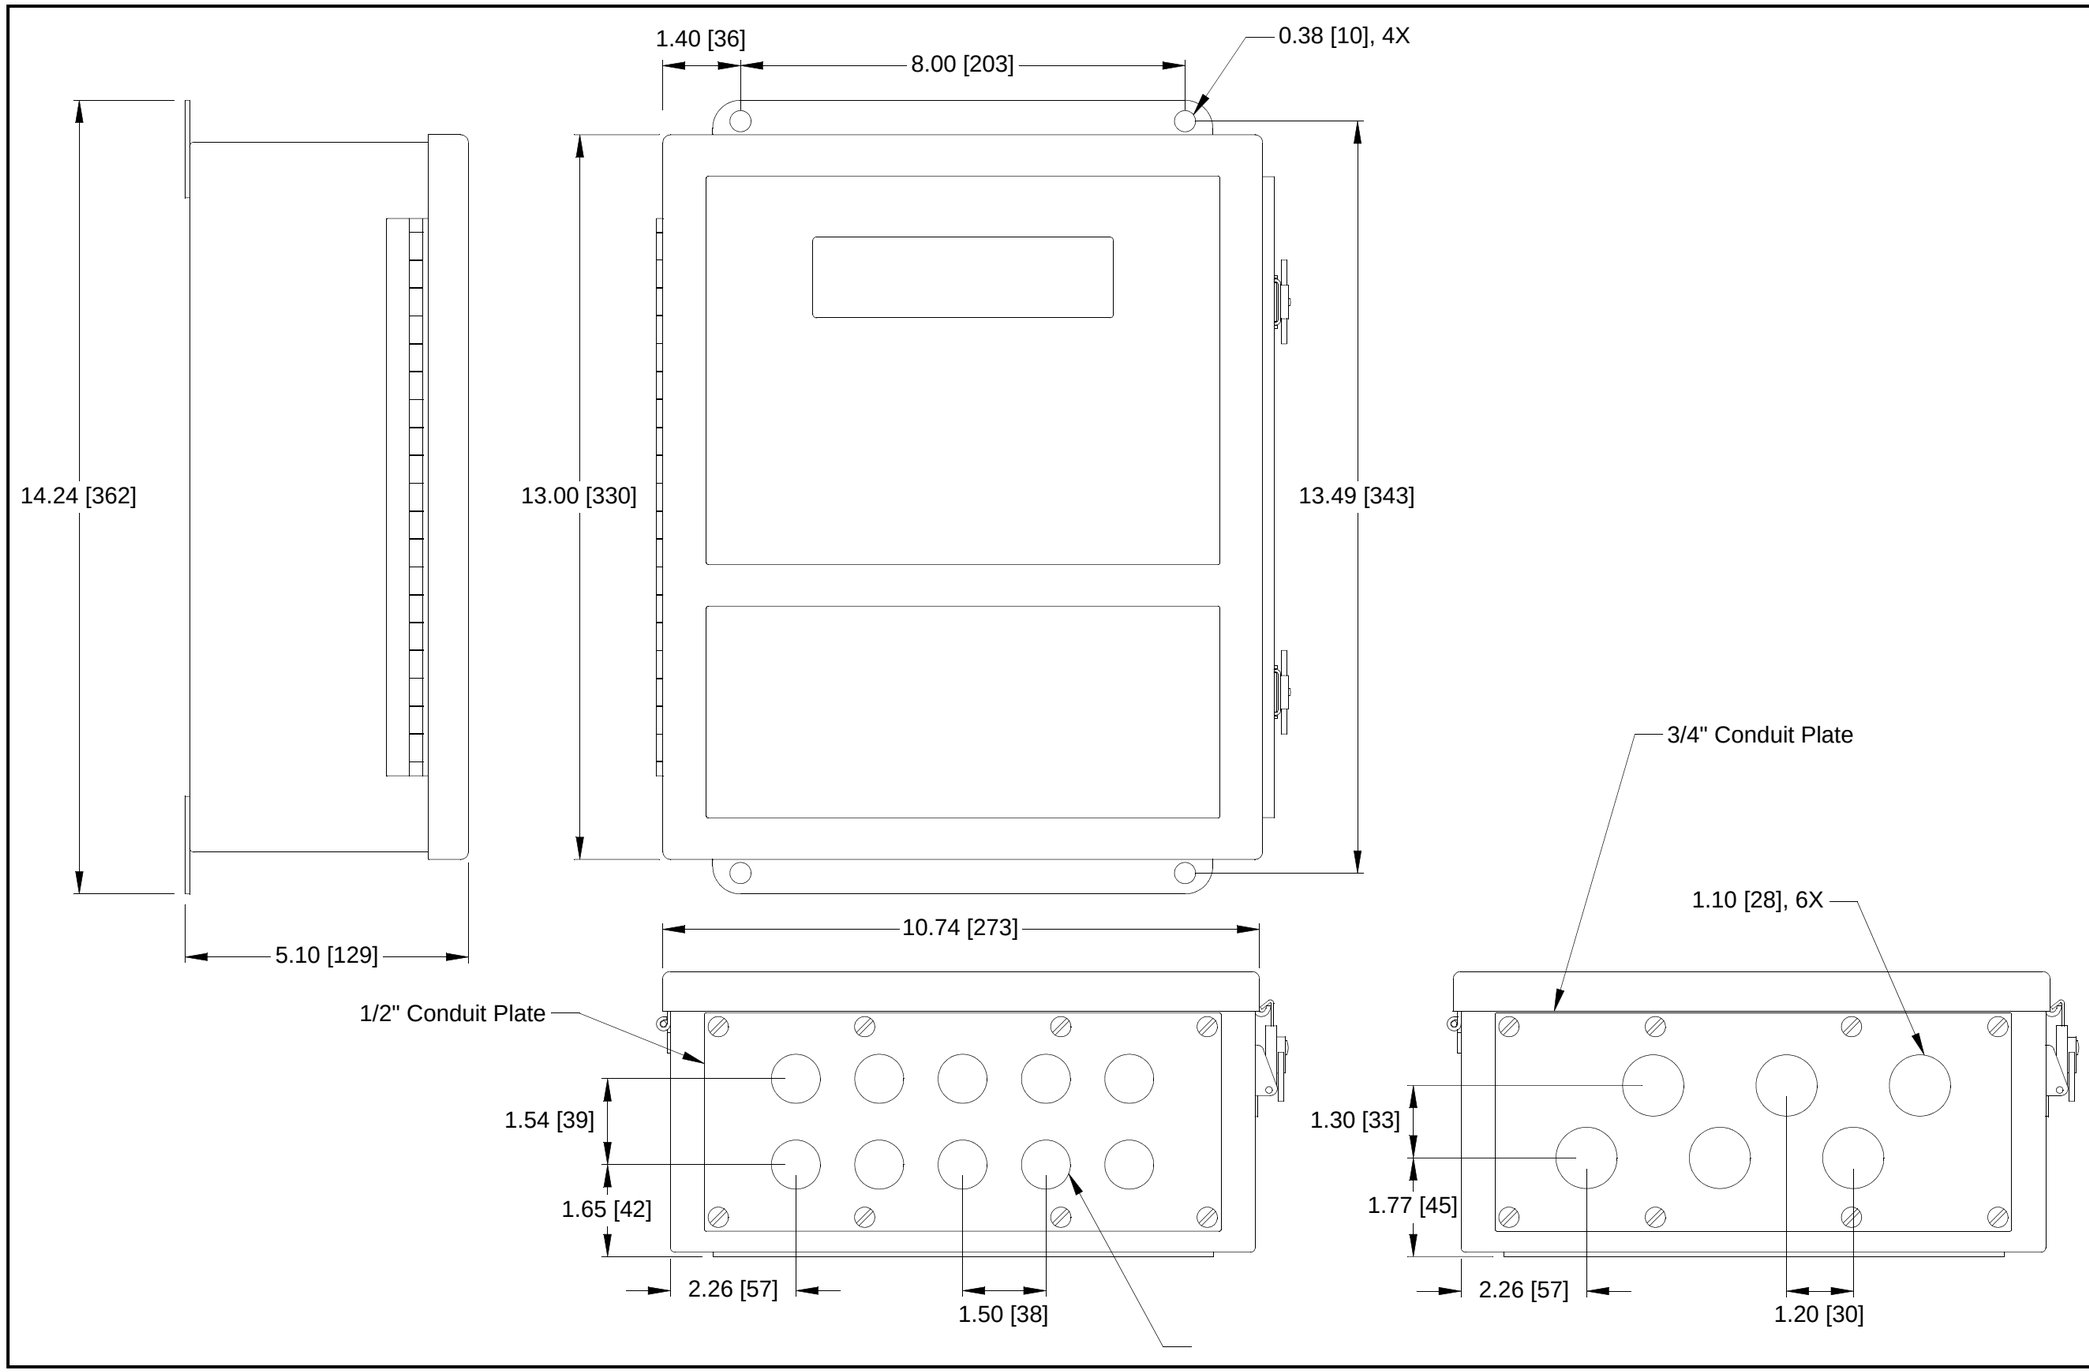

Figure 1-6: NEMA 4X Installation for GF868 Flowmeter

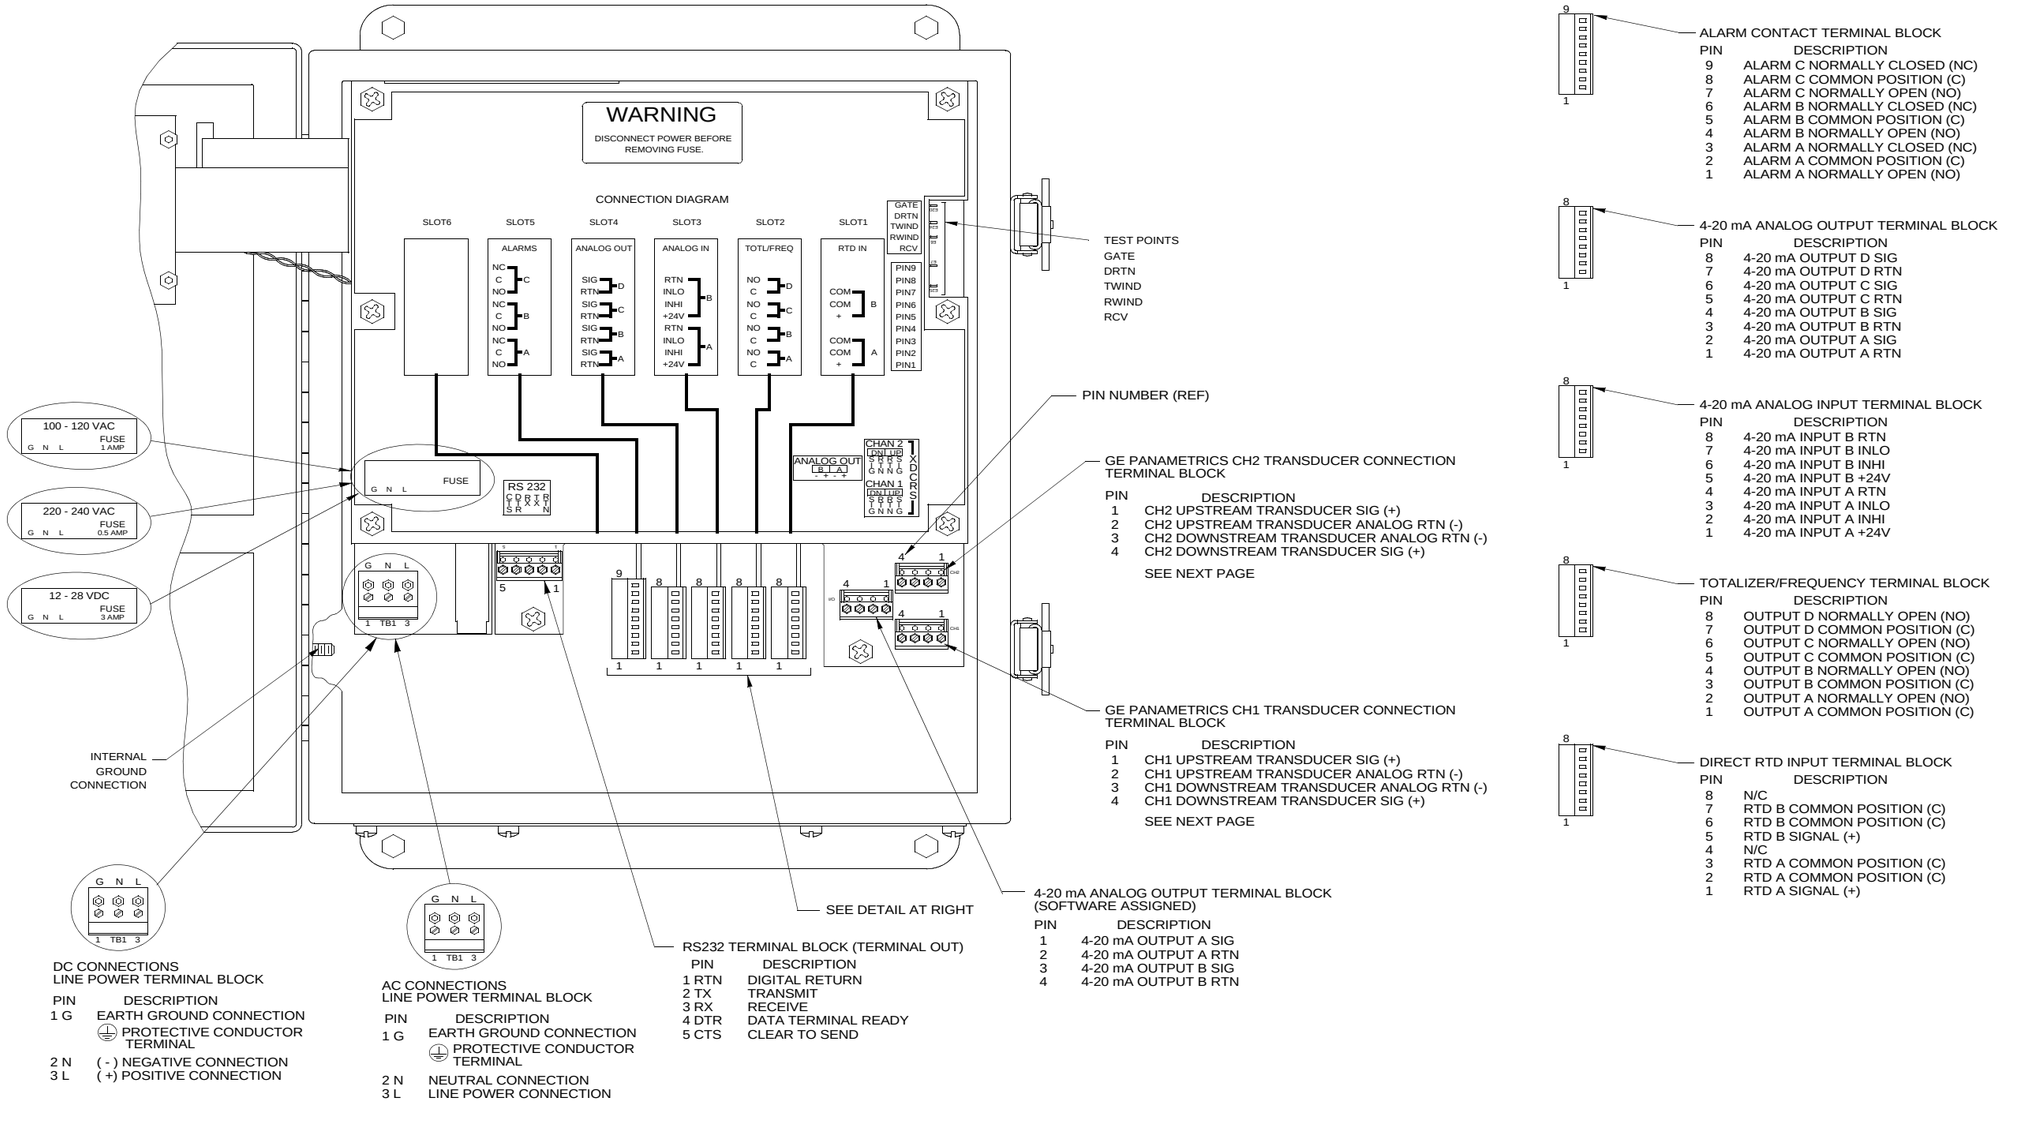

Figure 1-7: Wiring Diagram for GF868 Flowmeter (NEMA 4X Housing)

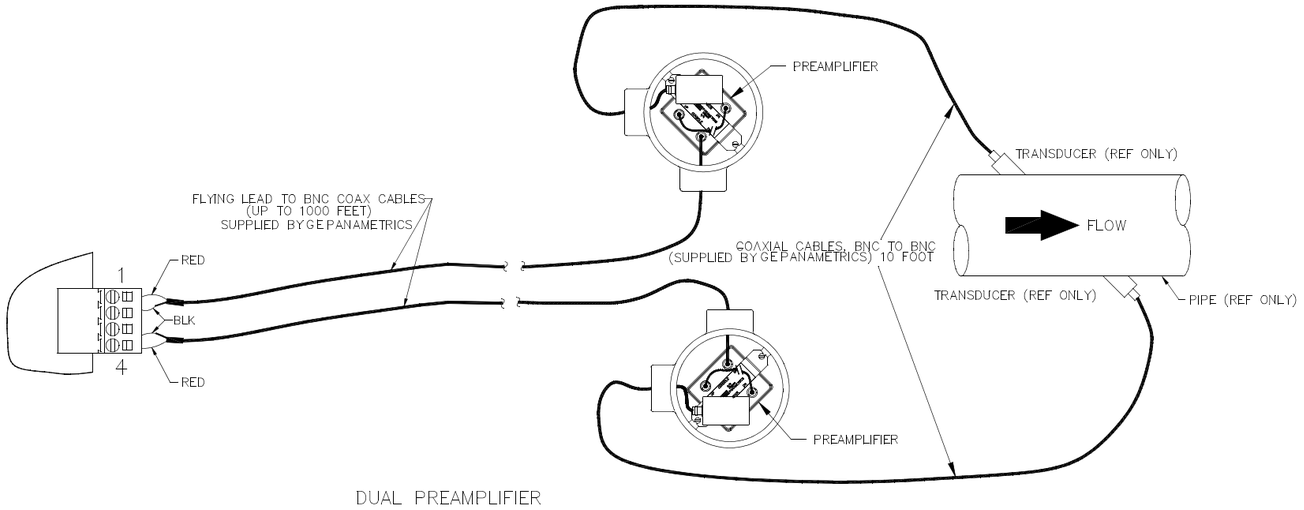
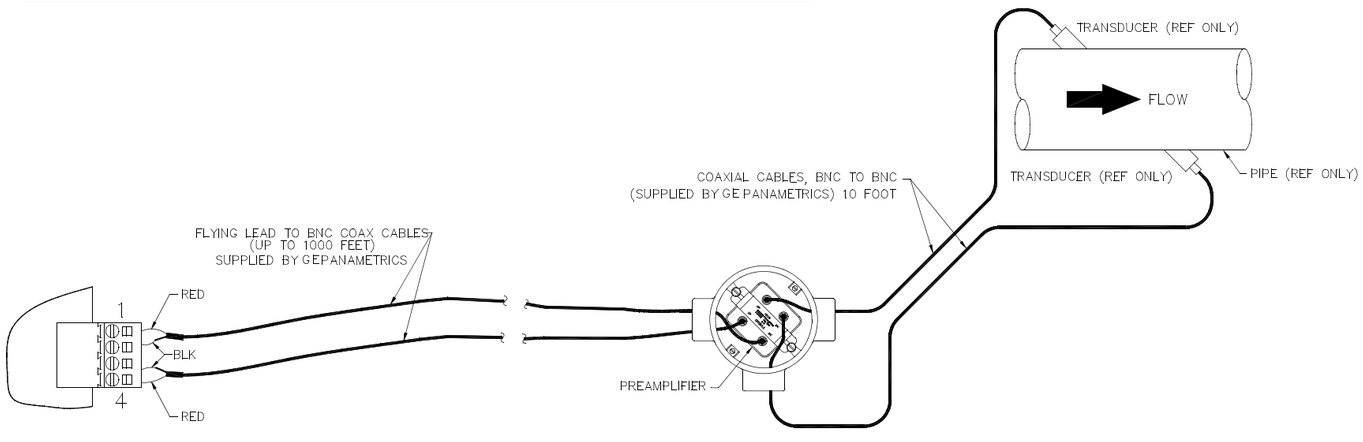


DUAL PREAMPLIFIER

CAUTION!
As part of maintaining the FM/CSA environmental rating (NEMA/TYPE 4) on the remote preamplifier, thread sealant is required on all conduit entries.



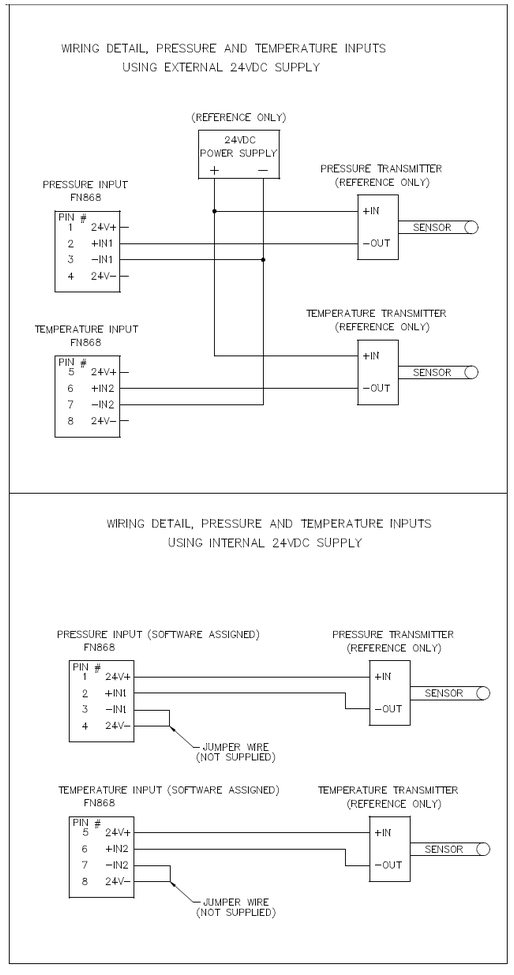


Figure 1-8: Transducer Connections and Wiring Analog Inputs with Internal 24 VDC Power Supply

Chapter 2

Initial Setup

Introduction

This chapter provides instructions for entering the minimum amount of programming data required to place the GF868 flowmeter into operation. Before your GF868 can begin taking measurements, you must enter the necessary information into the System and Pipe submenus. In addition, a 2-Channel meter requires activation of each channel prior to use. The other submenus within the Program Menu enable you to access all the GF868 features; however, this information is not necessary to begin taking measurements.

Note: *See the* Programming Manual *for information on those* User Program *options not covered in this chapter.*

Navigating Through the User Program

To begin using the GF868, you must access three submenus within the *User Program*:

- ACTIV - enables you to select a measurement method.
- SYSTM - prompts you to enter the required system information.
- PIPE - lets you enter the necessary pipe data.

As a guide in following the programming instructions in this chapter, the relevant portions of the GF868 menu map appear in Figure 2-1 on page 2-10.

Note: *There are minor differences at the start of the* ACTIV *and* SYSTEM *submenus for the 1-Channel and 2-Channel models, but the* PIPE *submenus are identical.*

The following discussion assumes that the left screen is active. If the right screen is active, only the function key designations change — [F1] becomes [F5], etc. Be sure to record all programming data in Appendix B, *Data Records.*

Use the keypad, as described in the *Programming Manual*, to navigate through the *User Program.* The menu map may be followed in sequence, or the [↑] and [↓] keys may be used to scroll through the prompt screens. The [←] key may be used to delete the last alphanumeric character that was entered from the keypad.

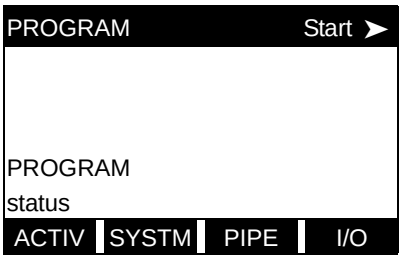
Accessing the User Program

To enter the Program Menu, press the [PROG] key on the keypad.

Note: *If the security feature is active, the GF868 will prompt you for a password. Enter the password and press* [ENT]. *See the* SECUR *submenu section in Chapter 1,* Programming Site Data, *of the* Programming Manual *for more information on the security feature.*

1-Channel Meter

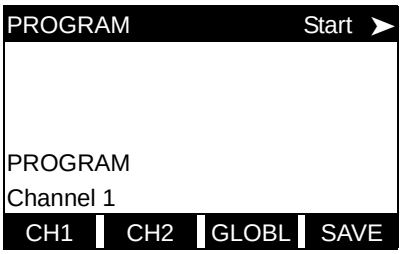
For a 1-Channel Model GF868, the measurement mode screen is replaced by the following initial programming mode screen:



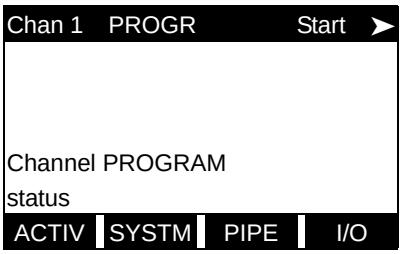
At the *User Program* screen shown, press the [F1] function key and proceed to *"Activating a Channel"* on the next page.

2-Channel Meter

For a 2-Channel Model GF868, the following two-step sequence is required to reach the initial programming screen:



Press [F1] or [F2] to select the submenu for Channel 1 or Channel 2, respectively, from the option bar.



At the *User Program* screen shown, press the [F1] function key and proceed to *"Activating a Channel"* on the next page.

Only the submenus ACTIV, SYSTM and PIPE are discussed in this manual. Refer to the *Programming Manual* for information on the other submenus.

Note: *In this manual, only the programming of Channel 1 will be described. To program Channel 2, simply repeat the same procedures presented for Channel 1.*

Activating a Channel

The ACTIV submenu permits selection of the desired measurement method. In addition, it is used to activate/deactivate one or both of the channels in a 2-Channel Model GF868.

1-Channel Meter

1. Enter the ACTIV submenu by pressing [F1] at the User PROGRAM prompt.

2. Press [F1] to activate the channel in BURST mode.

2-Channel Meter

1. Enter the ACTIV submenu by pressing [F1] at the Channel PROGRAM prompt.

2. Press [F1] (OFF) to deactivate the channel and return to the Channel PROGRAM prompt, or press [F2] to activate the channel in BURST mode.

1 and 2-Channel Meters

3. Press [F1] to select *Skan* mode or [F2] to select *Skan/Measure* mode. The meter will exit the ACTIV submenu and return to the channel menu screen.

As indicated in the above prompt, the Model GF868 flowmeter can take measurements in two different ways

Skan is a low resolution technique for locating the acoustic signal and for high velocity measurements. It is more robust in a noisy environment than the Measure technique.

Measure is a more precise technique best used for low velocity measurements.

If *Skan* is selected at the next prompt, the instrument uses this technique exclusively. However, if *S/M* is selected, the meter uses *Skan* to find the acoustic signal and then tries to use the *Measure* technique for a more precise measurement.

Proceed directly to the next section to program the SYSTM submenu.

Entering System Data for a Channel

Begin the programming of the SYSTM submenu in either the *1-Channel* or *2-Channel* section below.

A 1-Channel Meter

For the 1-Channel Model GF868, the information entered in the SYSTM submenu pertains to the global operation of the flowmeter.

1. At the *User Program* screen, press the [F2] function key to program the SYSTM submenu.

2. Enter a *Site Label* of up to 9 characters and press [ENT]. (While taking measurements, the site label will appear on the locator bar.)

3. Enter a *Site Message* of up to 21 characters. Press [ENT].

4. To select the *System Units*, press [F1] to display parameters and measurements in English units, or press [F2] to display parameters and measurements in Metric units.

5. Use the [F1]-[F4] keys to select the type of *Pressure Units* desired.

The abbreviations and definitions of all the available pressure units are shown in Table 2-1 below. The choices shown on the option bar are determined by the selections made at the previous SYSTEM UNITS prompt.

Table 2-1: Available Pressure Units

English	Metric
PSIa = Pounds per square inch absolute	BARa = bar absolute
PSIg = Pounds per square inch gage	BARg = bar gage
	kPaa = kiloPascals absolute
	kPag - kiloPascals gage

a. If you have entered gage pressure, or the local atmospheric pressure (PSIg, BARg or kPag), use the numeric keys to enter the gage pressure value. Press [ENT].

6. At the *Stopwatch Totalizer* prompt, press [F1] to totalize all liquid flow continuously, or [F2] to measure totals manually with the Stopwatch Timer. (With MNUAL ([F2]), the console key on the keypad is used to start and stop the totalizer. See the *Programming Manual* for details.)

The remainder of the SYSTM submenu is identical for the 1-Channel and 2-Channel versions of the Model GF868. Proceed to the *1- and 2-Channel Meters* section to complete the programming of this submenu.

A 2-Channel Meter

For the 2-Channel Model GF868, the information entered in the SYSTM submenu pertains only to the currently selected channel.

1. At the *User Program* screen shown, press the [F2] function key to program the SYSTM submenu.

2. Enter a *Channel Label* of up to 9 characters. Press [ENT].

3. Enter a *Channel Message* of up to 21 characters. Press [ENT].

Note: *For the 2-Channel Model GF868, the* System Units, Pressure Units *and* Stopwatch Totalizer *prompts, which are not required to make the unit operational, are located in the* GLOBL *submenu. See the* Programming Manual *for details.*

The remainder of the SYSTM submenu is identical for the 1-Channel and 2-Channel versions of the Model GF868. Proceed to the *1- and 2-Channel Meters* section below to complete the programming of this submenu.

1 and 2-Channel Meters

1. Use the [F1]-[F4] and [→] keys to select the desired *Volumetric Units* for the flow rate display.

The abbreviations and definitions of all the available volumetric and totalizer units are shown in Table 2-2 below. The choices shown on the option bar are determined by the selection made at the previous SYSTEM UNITS screen.

Table 2-2: Available Volumetric/Totalizer Units

English	Metric
Actual Units	
ACF = Actual Cubic Feet	ACM = Actual Cubic Meters
KACF = Thousands of ACF	KACM = Thousands of ACM
MMACF = Millions of ACF	MMACM = Millions of ACM
Standard Units	
SCF = Standard Cubic Feet	SCM = Standard Cubic Meters
KSCF = Thousands of SCF	KSCM = Thousands of SCM
MMSCF = Millions of SCF	MMSCM = Millions of SCM

2. Use the [F1]-[F4] keys to select the *Volumetric Time* (units for the volumetric flow rate display).

3. Use the [F1]-[F4] keys to select the *Vol Decimal Digits* (the desired number of digits to the right of the decimal point) in the volumetric flow rate display.

1- and 2-Channel Meters (cont.)

4. Use the [F1]-[F4] and [→] keys to select the *Totalizer Units*.

The abbreviations and definitions of all the available volumetric and totalizer units are shown in Table 2-2 on the previous page. The choices shown on the option bar in the prompt screen above are determined by the selection made at the previous SYSTEM UNITS prompt screen.

5. Use the [F1]-[F4] keys to select the *Total Decimal Digits* (the desired number of digits to the right of the decimal point) in the totalized flow display.

6. Use the [F1]-[F4] keys to select the *Mass Flow* units, listed in Table 2-3 below.

Table 2-3: Available Mass Flow Units

English Mass Flow Units	Metric Mass Flow Units
LB- Pounds	KG - Kilograms
KLB - Thousands of Pounds	
MMLB - Millions of Pounds	
TONS - Tons	Tonnes - Metric Tons

7. Use the [F1]-[F4] keys to select the *Mass Flow Time* units.

8. Use the [F1]-[F4] keys to select the *MDOT DECIMAL DIGITS* (the number of digits to the right of the decimal point) for displaying mass flow.

9. Use the [F1]-[F4] keys to select the *Mass (Totalizer)* units, listed in Table 2-3 above.

10. Use the [F1]-[F4] to specify the *Mass Decimal Digits* (the number of digits to the right of the decimal point) for displaying totalized mass flow. The meter returns to the initial *User* (or *Channel) Program* screen.

Proceed directly to the next section to program the PIPE submenu.

Entering Pipe Data

The PIPE submenu permits entry of the transducer and pipe specifications. To program this menu, complete the following steps:

1. At the *User* (or *Channel) Program* screen, press [F3] to program the PIPE submenu.

Transducer Number

2. Enter the *Transducer Number* (normally engraved on the head of the transducer). Press [ENT]. If there is no engraved number, complete the steps below. Otherwise, proceed to step 3.

IMPORTANT: *Special transducers, which have no engraved number on the head, are rarely used. Examine the transducer head carefully for a number.*

a. Assign a number between 91 and 99 to the *Special Transducer* and press [ENT]. (The meter will only accept values from 1 to 199.)

b. Use the [→] and [F1]-[F4] keys to select the *Frequency* of the special transducer. The meter can not transmit an excitation voltage at the transducer's natural frequency without this data.

c. Enter the special transducer *Time Delay (Tw)* value supplied by GE Panametrics. Press [ENT]. (The meter will only accept values from 0 to 1000 μsec.)

Note: *Tw is the time required for the transducer signal to travel through the transducer and its cable. This time delay must be subtracted from the transit times of the upstream and downstream transducers to ensure an accurate measurement.*

Pipe OD

3. Enter the known *Pipe OD* or circumference and use the [F1]-[F4] keys to select the appropriate units. Press [ENT]. (The meter will only accept values from 1/8 to 648 in.) The option bar choices may appear in English or Metric units.

Obtain the required information by measuring either the pipe outside diameter (OD) or circumference at the transducer installation site. The data may also be obtained from standard pipe size tables. Table 2-4 below lists the available English and metric OD units.

Table 2-4: Available Pipe OD Units

English	Metric
inch = pipe OD in inches	mm = pipe OD in millimeters
feet = pipe OD in feet	m = pipe OD in meters
in/PI = pipe circumference in inches	mm/PI = pipe circumference in millimeters
ft/PI = pipe circumference in feet	m/PI = pipe circumference in meters

Pipe Wall

4. Use the numeric keys to enter the known thickness of the *Pipe Wall*. Press [ENT].

If the pipe wall thickness is not available, look up the value in a table of standard pipe size data or use the Model GF868's on-line *Help Menu* (see the *Programming Manual* for details).

Path Length

5. Press [F1] = inch or [F2] = feet to select the units. Then, enter the *Path Length (P)* of the ultrasonic signal. Press [ENT]. (The meter will only accept values from 1/8 to 900 in.)

Note: *GE Panametrics has calculated both the transducer signal path length* (P) *and the transducer signal axial length* (L)*, based on the exact transducer configuration used for the application. These values are engraved on the flowcell and/or are included in the documentation supplied with the meter.*

Axial Length

6. Press [F1] = inch or [F2] = feet to select the units.Then, enter the *Axial Length (L)* of the ultrasonic signal and press [ENT].

Note: *GE Panametrics has calculated both the transducer signal path length* (P) *and the transducer signal axial length* (L)*, based on the exact transducer configuration used for the application. These values are engraved on the flowcell and/or are included in the documentation supplied with the meter.*

Multi K-Factors

7. Press [F1] = OFF to disable or [F2] = ON to enable *Multiple K-factors*.

- If you press OFF, skip to step 8.
- If you press ON, complete the steps below.

a. Press [F1] = NO to retain the current K-factor table and proceed directly to step 8, or press [F2] = YES to *Edit The K-factor Table.*

Note: *If velocity vs. K-factor data was not provided with the Model GF868, the K-factor table can not be edited.*

b. Enter the *Number of K-factors* to be entered into the table. Press [ENT]. (The meter will only accept values from 2 to 20.)

IMPORTANT: *When editing the K-factor table, the velocities must be entered in increasing order.*

Multi K-Factors (cont.)

c. Enter the *Velocity Value* for K-factor number "x". Press [ENT]. (The meter will only accept values from –30,000 to +30,000 ft/sec.)

d. Enter the *K-factor* corresponding to velocity number "x". Press [ENT].

e. Repeat steps c and d until all of the data points have been entered.

8. Enter a value for the flow *Calibration Factor* and press [ENT]. The default value is 1.00. (The meter will only accept values from 0.5000 to 2.0000.) The meter will exit the PIPE submenu and return to the initial *User* (or *Channel) Program* screen.

What's Next?

After completing the above steps, the meter returns to the User (or Channel) PROGRAM prompt. Continue as follows:

- To continue programming the meter, refer to the menu maps in Appendix A of the *Programming Manual* and navigate to the desired menu. Then, proceed to the appropriate section of the manual for instructions.

- To leave the *User Program* and retain the previous settings, press [EXIT] once (for a 1-channel GF868) or twice (for a 2-channel GF868) and then press [F1] = NO at the *SAVE* prompt. Any programming changes will be discarded and you will be returned to the data display.

- To leave the *User Program* and return to measurement mode, press [EXIT] once (for a 1-channel GF868) or twice (for a 2-channel GF868) and then press [F2] = YES at the *SAVE* prompt. Your programming changes will be entered into the meter's memory, and you will be returned to the data display.

Note: *See the* Programming Manual *for instructions on using the* SAVE *submenu.*

Proceed to Chapter 3, *Operation*, for instructions on taking measurements or refer to the *Programming Manual* for instructions on programming the Model GF868's advanced features.

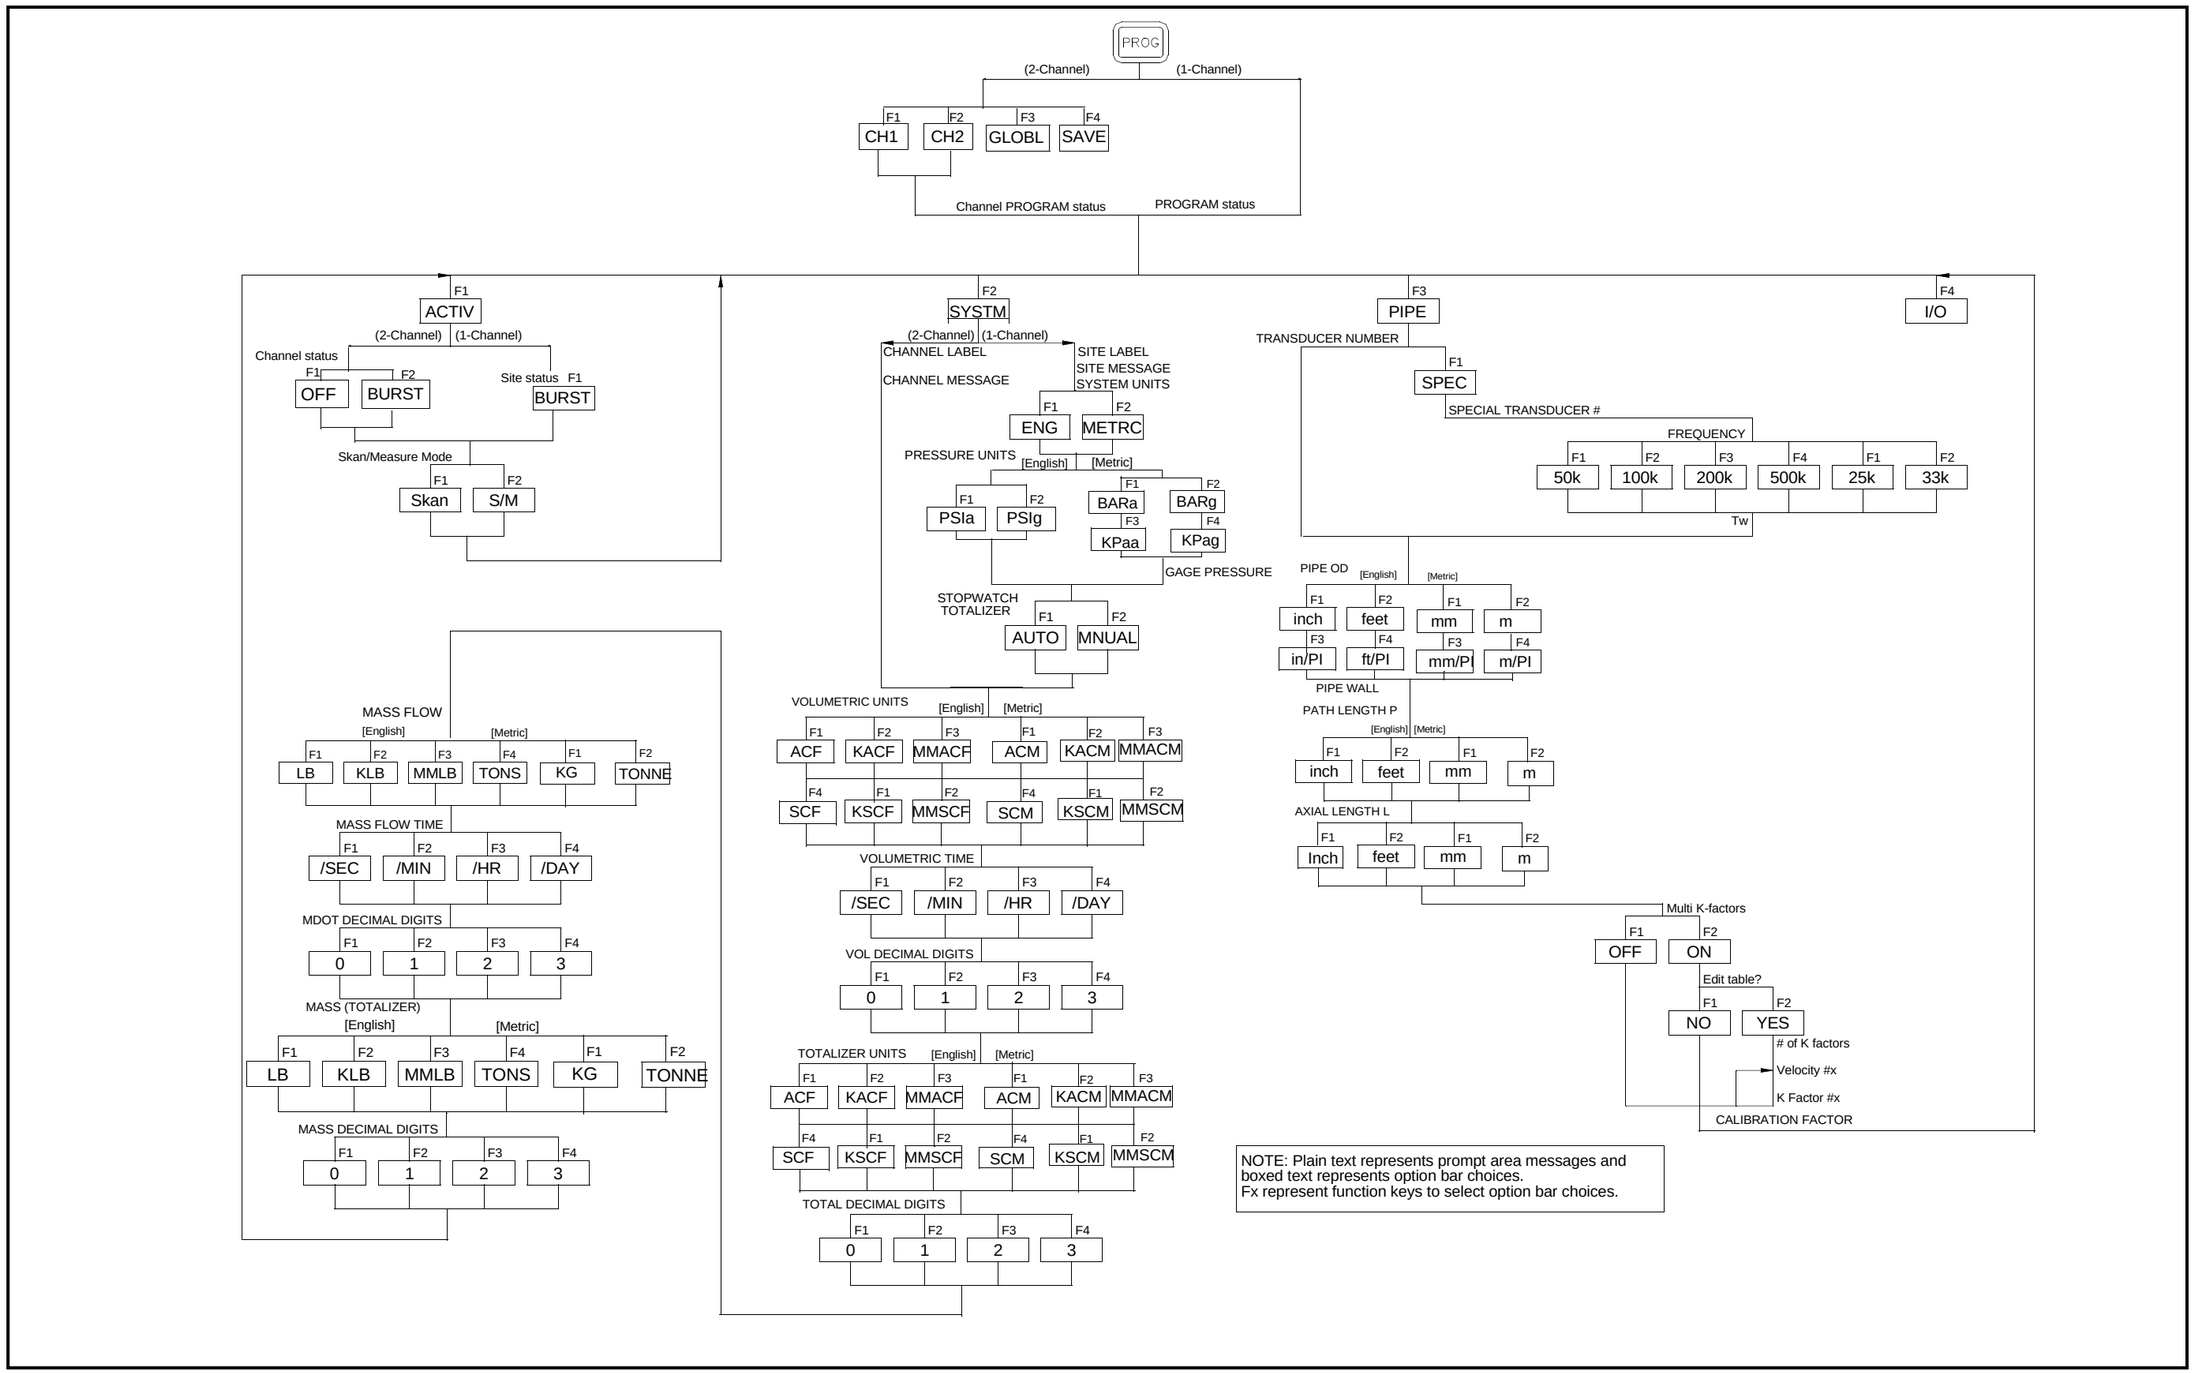


Figure 2-1: Model GF868 Initial Setup Menu Map

Chapter 3

Operation

Introduction

See Chapter 1, *Installation*, and Chapter 2, *Initial Setup*, to prepare the system for operation. When the meter is ready to take measurements, proceed with this chapter. It covers the following topics:

- Powering Up
- Using the Display
- Taking Measurements

!WARNING!
To ensure the safe operation of the Model GF868, you must install and operate it as described in this manual. In addition, be sure to follow all applicable safety codes and regulations for installing electrical equipment in your area.

Powering Up

The Model GF868 does not have an ON/OFF switch and will power up as soon as it is connected to power.

Note: *For compliance with the European Union's Low Voltage Directive (73/23/EEC), this unit requires an external power disconnect device such as a switch or circuit breaker. The disconnect device must be marked as such, clearly visible, directly accessible, and located within 6 ft (1.8 m) of the GF868.*

Immediately upon power up, the GF868 displays the GE Panametrics logo and the software version in the left pane of the display window. The GF868 then performs a series of internal checks, and displays the results in the right pane of the display window.

Note: *If the GF868 fails any of the internal checks, try disconnecting power and then re-powering the unit. If the GF868 continues to fail any of the internal checks, contact the factory for assistance.*

After successfully performing the internal checks, the GF868 will begin taking measurements. The display will appear similar to Figure 3-1 below.

Note: *At a minimum, the system and pipe parameters (for each installed channel of a 2-channel meter) must be entered before the Model GF868 can display valid data. Refer to Chapter 2,* Initial Setup*, for specific instructions.*

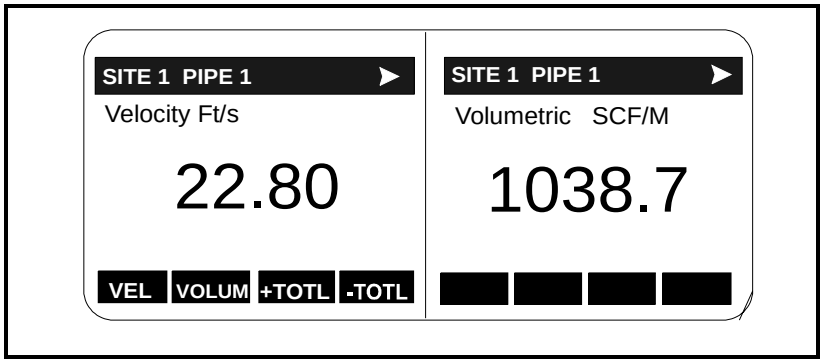

Figure 3-1: A Typical Measurement Display

Proceed to the next section for a description of the components of the GF868 display screen.

Using the Display

The Model GF868 display is divided into a left pane and a right pane. The two screen panes can be set independently to display any of the available measurement or diagnostic parameters. The components of a typical measurement mode screen appear in Figure 3-2 below.

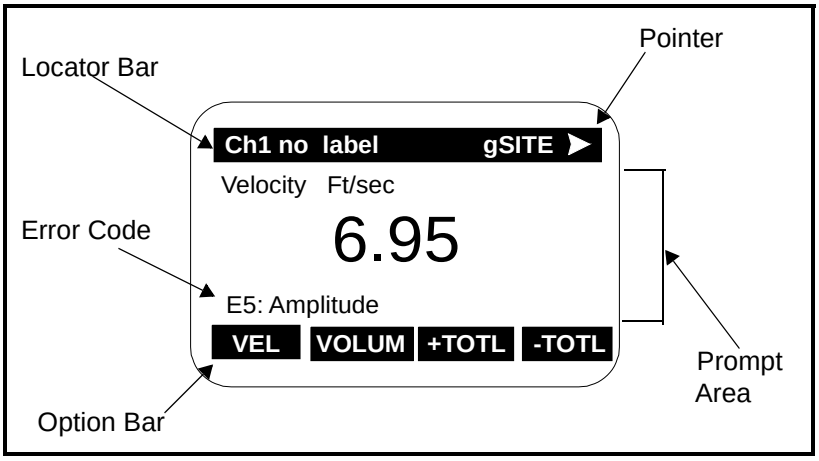

Figure 3-2: Display Screen Components

While both sides of the display update at regular intervals, you can only program or change one screen at a time. To select the desired screen, press the corresponding side of the [SCREEN] key on the keypad. The selected screen will show function names in the option bar (the bottom line of the display), while the other side of the screen will have a blank option bar. See the *Programming Manual* for detailed instructions on using the keypad.

As shown in Figure 3-2, each pane of the display screen is divided into three general areas:

- the locator bar
- the prompt area
- the option bar.

The upper portion of the screen pane is the *locator bar.* While the meter is taking measurements, the locator bar displays the name of the currently selected site file. The locator bar also identifies the task that is currently being performed and the status of that task. For example, when you press the [PROG] key, the locator bar displays “PROGRAM” and “Start” to indicate that you are at the start of the Program Menu.

Using the Display (cont.)

At certain times, the locator bar may also display one or more of four symbols on the far right:

- ➤: The most common symbol, the pointer, indicates that additional option bar entries are available. These options can be accessed using the [←] and [→] keys.

- *: A flashing asterisk indicates that the GF868 is currently logging information. See the *Programming Manual* for instructions on creating a log file.

- S or S_L: This symbol indicates the status of the red [SHIFT] key. "S" indicates that the [SHIFT] key is activated for the next keystroke only, while "S_L" indicates that the [SHIFT] key is locked.

- T: This symbol indicates that the GF868 is currently totalizing data.

The middle area of the screen pane is the *prompt area*. This area displays measurements, graphs, and logs in measurement mode and menu prompts in programming mode. In addition, the prompt area displays error code messages, which are described in detail in the *Service Manual.*

The lower portion of the screen pane is the *option bar.* The option bar displays the functions assigned to the four keys immediately below the option bar ([F1]-[F4] on the left side; [F5]-[F8] on the right side). Pressing the key below a function will select that function. If more than four functions are available, a pointer (➤) will appear in the far right of the locator bar. Press the [←] or [→] keys to display additional functions.

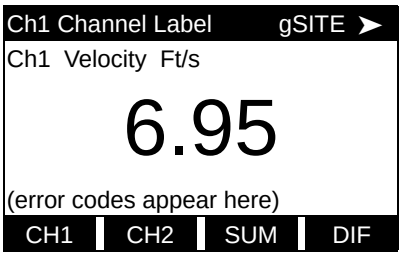
For information about other symbols and text that may appear on the display screen, refer to the *Service Manual.*

Taking Measurements

The Model GF868 is capable of displaying several different variables in a variety of formats. However, this manual will only discuss the basic measurement displays in the default screen format. Refer to the *Programming Manual* for instructions on setting up alternate screen displays and see the *Service Manual* for a discussion of the diagnostic parameters listed under the DIAG option.

Note: *This section assumes that the left pane of the display screen is currently active. However, the same instructions apply equally to the right screen pane, when it is active. Just change the function keys from* [F1]-[F4] *to* [F5]-[F8].

For a 2-channel Model GF868, the following initial screen appears immediately upon completion of the internal checks. As an example, the display shows the measured velocity in ft/sec for Channel 1.

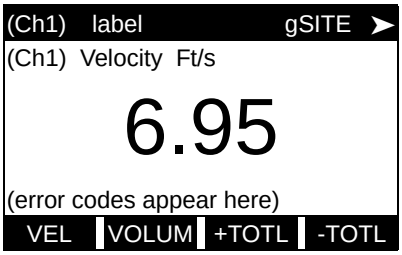


To select a different channel display option, press [F1]-[F4] (or [→] and [F1]). See Table 3-1 below for a complete description of the available options.

Table 3-1: Channel Display Options

Option Bar Choice	Description
[F1] = CH1	Channel 1
[F2] = CH2	Channel 2
[F3] = SUM	(Channel 1) + (Channel 2)
[F4] = DIF	(Channel 1) - (Channel 2)
[→] + [F1] = AVE	[(Channel 1) + (Channel 2)]/2

The following screen appears after selection of the channel mode display option for a 2-channel Model GF868 or immediately after the internal checks for a 1-channel Model GF868.



Use the [F1]-[F4], [←] and [→] keys to select the desired display parameter option. See Table 3-2 on the next page for a complete description of the available options.

Taking Measurements (cont.)

Note: *Ch1 (or Ch2), which is shown in parentheses above, appears only with a 2-Channel Model GF868.*

Table 3-2: Measurement Parameter Options

Option Bar Choice	Description
[F1] = VEL	Flow Velocity
[F2] = VOLUM	Volumetric Flow
[F3] = +TOTL	Forward Totalized Volume Flow
[F4] = -TOTL	Reverse Totalized Volume Flow
[→] + [F1] = TIME	Total Flow Measurement Time
[→] + [F2] = MDOT	Mass Flow
[→] + [F3] = +MASS	Forward Totalized Mass Flow
[→] + [F4] = -MASS	Reverse Totalized Mass Flow
[→] + [→] + [F1] = DIAG	Diagnostic

By following the instructions in this section, the Model GF868 can be set up to display the desired channel option (for a 2-Channel meter) and the desired measurement parameter. To utilize the more advanced display capabilities of the Model GF868, refer to the *Programming Manual* and/or the *Service Manual* for the instrument.

Chapter 4

Specifications

Overall Specifications

Hardware Configuration

Package Options:
Epoxy-coated aluminum (standard).
Stainless steel (optional).
Fiberglass (optional).
Explosion-proof (optional).

Physical: (Epoxy-coated aluminum package)
Size: 14.24 × 11.4 × 5.12 in. (36.2 × 29 × 13 cm).
Weight: 11 lb (5 kg).

Environmental

Operating Temperature:
14° to 130°F (-10° to 55°C).

Storage Temperature:
14° to 158° (-10° to 70°C)

Flow Accuracy (% of reading)

Velocity Accuracy:
1-Path Measurement
±2 to 5% of reading at ±1 to ±275 ft/s (±0.3 to ±85 m/s)

2-Path Measurement
±1.4 to 3.5% of reading at ±1 to ±275 ft/s (±0.3 to ±85 m/s)

Note: *Specifications assume a fully developed flow profile. This is installation-dependent and may require a straight run of pipe 20 diameters upstream and 10 diameters downstream. Accuracy depends on whether measurement is 1- or 2-path.*

Range

Bi-directional:
-275 to -0.1 ft/s (-85 to -0.03 m/s)
+0.1 to +275 ft/s (+0.03 to 85 m/s).

Molecular Weight and Mass Flow Accuracy (% of reading)

Molecular Weight (hydrocarbon mixtures):
MW 2 to 120 g/mol.
1.8%, optimizable for other gas composition

Mass Flow (hydrocarbon mixtures, typical)
1-path: 3 to 7%
2-path: 2.4 to 5%

Note: *Dependent on accuracy of temperature and pressure inputs.*

Rangeability	2750:1.
Repeatability	±1% at 0.5 to 100 ft/s (15 cm/s to 30 m/s)

Electrical Specifications

Power Supply

Input Options:
110 to 120 VAC, 50/60 Hz with 1 A Slo-Blo Fuse
220 to 240 VAC, 50/60 Hz with 0.5A Slo-Blo Fuse
12 to 28 VDC with 3.0 A Slo-Blo Fuse

Power Usage

AC Unit:

20 W maximum

DC Unit:

10 W maximum

Protection

Built-in mains power surge/lightning protection.

European Compliance

This unit complies with EMC Directive 89/336/EEC and 73/23/EEC Low Voltage Directive (Installation Category II, Pollution Degree 2).

Input/Output Specifications

Keypad:
39-key membrane keypad with tactile feedback.

Display:
Two independent, software-configurable 64 x 128-pixel LCD graphic displays.

Printer/Terminal Communications:
One RS-232 port for printer, terminal, PC, SCADA, etc**.**

Standard Inputs
Two isolated 4 to 20 mA inputs (121 Ω load) with integral 24 VDC power supply

Note: *Temperature and pressure inputs required.*

Analog Input Options:
Select up to 2 boards from one of the following types:

1. *Transmitter Input Board* with 2 isolated 4-20 mA inputs and 24-V loop power

2. *RTD Input Board* with 2 isolated 3-wire RTD inputs. Span: -148° to 662°F (-100° to 350°C)

Analog Output Options:
All meters come with two isolated 4-20 mA current outputs (550 Ω maximum load).
Optional selection of up to 3 additional output boards, each with four isolated 4-20 mA outputs (1000 Ω maximum load).

Measurements
(assignable to any output):
Velocity: 0 to 275 ft/s (0 to 85 m/s)
Volumetric flow rate: standard or actual
Molecular weight: 2 to 120 g/mol
Sound speed: 500 to 5000 ft/s (150 to 1500 m/s)
Mass flow rate: 0 to 4,000,000 lb/h (0 to 2,000,000 kg/h)

Digital Outputs
Standard: RS232 serial port
Optional: RS485
RS485 (MODBUS)

Totalizer/Frequency Output Options:

Select up to 3 Totalizer/Frequency Output Boards, each with four outputs per board, 10 kHz max.

All boards allow software-selectable functioning in two modes:

Totalizer Mode: one pulse per defined unit of parameter (e.g., 1 pulse/SCF).
Frequency Mode: 5-volt frequency proportional to magnitude of parameter (e.g., 10 Hz = 1 SCFM).

Alarm Options:

Select up to 2 boards of one of the following types:
Standard Relay Board with 3 non-hermetic Form-C relays.
Hermetic Relay Board with 3 hermetically-sealed Form-C relays.

Operational Specifications

Flow Computer (Built-in)	Programmable from the keypad. Calculates velocity, instantaneous average molecular weight, mass flow rate, and other flow parameters in real time, while simultaneously handling other activities such as programming, logging, calibration, and output of data and diagnostics. New and improved MW algorithm, now based on temperature and pressure correction of sound speed. Gives wider range, higher accuracy, and improved compensation for non-hydrocarbon gases such as CO_2, H_2, N_2, and CO.
Data Logging	Keypad-programmable for setting up log units, update interval, start and stop times.Memory capacity for up to 43,000 data points in a linear or circular log for standard and error logs.
Display Functions	Graphic display shows flow in numeric or graphic format. Also displays logged data and diagnostics.
Printer Signal Output	Supports wide variety of thermal and impact printers. Outputs data in numeric or graphic (“strip-chart”) format.

Transducer/Flowcell Specifications

Transducer Type	Standard GE Panametrics type T1 (swaged assembly of Ti transducer housing to SS tube) or T2* (welded assembly of Ti transducer housing to Ti tube) For agency certifications, contact GE Panametrics.
Temperature Range	Standard: -166° to +300°F (-110° to +150°C). Optional: -166° to +500°F (-110° to +260°C).
Maximum Pressure	1500 psig
Materials	Standard: T1- titanium head, 316 ss T2 - all titanium. Optional: Monel, Hastelloy, and 316 stainless steel.
Connections	**Cable Length:** Up to 1000 ft (300 m) **Housing Options:** Explosion-proof (NEMA-7, Class I, Group C & D, Division I.) Weatherproof (NEMA-4X, IP65) Flameproof (INIEX certified for EEx d II C T6). **Mounting and Installation:** Mechanical insertion mechanisms rated to 500°F and 500 psig.
Installation	**Spoolpiece** Prefabricated spools complete with transducer/mechanism ports: Pipe sizes: 3 to 120 in. Process Connections: Plain end; 150, 300, or 600 lb. RF flanged. Materials: carbon steel, low-carbon steel, stainless steel, or other. **Hot/Cold Tap** Mechanisms installed via hot or cold tap. Full installation jigs, fittings, and documentation provided.
Process Connection	Standard: 3 in., 150 lb flange connection Optional: 2 in., or other Optional: Non-removable flange mounting (consult factory)
Preamplifier with Explosion-proof Housing	Operating Temperature: -40° to +140° (-40° to +60°C)

Appendix A

Installation Instructions for CE Mark Conformity

Installation Instructions for CE Mark Conformity

NOTICE
CE MARK COMPLIANCE IS REQUIRED ONLY FOR UNITS USED IN EEC COUNTRIES.

In order to meet the CE Mark compliance, you must shield and ground the electrical connections with the recommended cable as shown in Table A-1 below.

Note: *If you make the modifications as discussed in this appendix, your unit will comply with the EMC Directive 89/336/EEC.*

Table A-1: Wiring Modifications for CE Compliance

Connection	Cable Type	Termination Modification
Transducer	RG62 a/u	Add metallic cable clamp from braid to chassis ground.
	Armored RG62 a/u or conduit	None. Grounded via cable gland.
Input/Output	22 AWG shielded (e.g., Baystate #78-1197)	Terminate shield to chassis ground.
	or armored/conduit	None. Grounded via cable gland.
Power	14 AWG, 3 conductor, shielded (e.g., Belden #19364)	Terminate shield to chassis ground.
	or armored/conduit	None. Grounded via cable gland.
Shielding	For CE compliance, power and I/O cables must be shielded. Cables to be terminated within cable gland at the GF868. Shielded cable is not required when installations include metal conduit.	

Appendix B

Data Records

Option Cards Installed

Whenever an option card is installed in one of the Model GF868's expansion slots, record the type of card and any additional setup information in the appropriate row of Table B-1 below.

Table B-1: Option Cards Installed

Appendix C

Optional Enclosures

Introduction

Upon request the Model GF868 flowmeter may be supplied in an enclosure other than the standard NEMA-4X enclosure described in Chapter 1, *Installation*, of this manual. Although the standard installation and wiring instructions still apply in general terms, some of the details may vary for different enclosure types. Refer to the appropriate sections of this appendix for the specific type of enclosure provided.

Rack Mount Enclosure

The Model GF868 flowmeter is available in a *rack mount* enclosure for installation in a standard 19" electronics rack. Refer to Figure C-1 on page C-3 for the dimensions of this unit. Simply slide the Model GF868 into the rack at the desired height and fasten the unit securely to the rack with four screws in the locations provided at the sides of the front panel.

After the unit has been physically mounted into the rack, proceed to the next section for instructions on wiring the meter.

Rack Mount Wiring

The rack mount Model GF868 requires exactly the same electrical connections as the standard version. However, the locations and type of connectors used for the various components are different. Refer to Figure C-2 on page C-4 and complete the following steps:

1. Wire the *power input* on the right side of the rear panel as follows:

a. Make sure a *fuse* (item #4 in the Power Input table) of the proper size and type is installed.

b. Connect the female end of the *line cord* provided to the power input receptacle (item #3 in the Power Input table).

c. Connect the *earth ground* screw terminal (item #2 in the Power Input table) to a ground point on the rack.

2. Wire the *transducers* as follows:

a. Connect the pair of cables supplied with the meter to the *Channel 1* upstream and downstream BNC transducer connectors on the left side of the rear panel.

b. For a 2-Channel meter, repeat the above step for the *Channel 2* transducer connectors (if the second channel is to be used).

c. Complete the transducer wiring in accordance with the instructions in Chapter 1, *Installation*, page 1-8 of this manual.

Rack Mount Wiring (cont.)

3. Wire the 0/4-20 mA *analog outputs* at the left side of the rear panel in accordance with the instructions in Chapter 1, *Installation*, page 1-9 of this manual.

4. Wire the *RS232 serial port* by completing the following steps:

   a. Purchase or prepare a suitable serial cable. This cable should have a standard female DB9 connector, wired as shown in Figure C-2 on page C-4, for connection to the rear panel of the Model GF868. The other end should be as required for the external device.

   b. Complete the serial port wiring in accordance with the instructions in Chapter 1, *Installation*, page 1-9 of this manual.

5. Wire any installed *option cards* using the same procedures described in Chapter 1, *Installation*, of this manual and the pin # assignments shown in Figure C-2 on page C-4.

6. Place the *power switch* (item #1 in the Power Input table) in the ON position.

The Model GF868 is now completely wired. Proceed to Chapter 2, *Initial Setup*, of this manual for further instructions.

Rack Mount Front Panel

The keypad and LCD display for the rack mount Model GF868 are located on the front panel. These items are identical in form and function to those used on the standard NEMA-4X enclosure, but the layout is somewhat different.

Refer to Figure C-3 on page C-5 for the front panel layout of the rack mount Model GF868 and follow the standard procedures detailed in the main body of this manual.

Appendix D

Measuring P and L Dimensions

Introduction

When programming the PIPE menu of the Model GF868's *User Program*, the *path length* (P) and the *axial dimension* (L) must be entered. These parameters are determined by measurements on the actual transducer installation, with P equal to the face-to-face distance between the transducers and L equal to the axial distance between the centers of the transducer faces.

The accuracy of the programmed P and L values is critical to precise flow rate measurements. If GE Panametrics supplies the flowcell for the system, the correct values will be included in the documentation supplied with the unit. For transducers installed on an existing pipe (see Figure D-1 on page D-2), P and L must be measured at the site. This appendix provides instructions for properly determining these dimensions.

Measuring P and L

Whenever possible, physically measure the face-to-face distance (P) and the axial distance (L) between the centers of the flat faces of the transducers. Refer to Figure D-1 on page D-2 for an illustration of the proper distances to measure in a typical installation.

In some situations only one of the required distances can be directly measured. When this happens, a knowledge of the installation angle (θ) of the transducers permits the second distance to be calculated from Equation D-1 below:

$$\cos \theta = \frac{L}{P} \qquad \text{(D-1)}$$

As an example, assume that the transducer installation angle is known to be 45° and the L distance is measured to be 10.00 inches. Then, the P distance is calculated to be P = 10.00/0.707 = 14.14 inches.

With a Bias 90° transducer installation, it sometimes happens that the only known parameters are the transducer angle (θ) and the centerline distance between the transducer bodies (CL). In these cases, it is still possible to calculate P and L by combining Equation D-1 above with the additional Equation D-2 below (see Figure D-1 on page D-2):

$$P = CL - 1.2 \qquad \text{(D-2)}$$

Standard GE Panametrics 90° transducers have the face offset from the centerline of the body by 0.6 inches. Thus, a pair of transducers has a total offset of 1.2 inches, as indicated in Equation D-2 above. For example, suppose that the transducer installation angle is 30° and CL is measured to be 12.00 inches. Then, P = 12.00 - 1.2 = 11.80 and L = 11.80 X 0.866 = 10.93 inches.

DECLARATION OF CONFORMITY

We,

GE Panametrics
Shannon Industrial Estate
Shannon, Co. Clare
Ireland

declare under our sole responsibility that the

DF868 Liquid Ultrasonic Flowmeter
GF868 Flare Gas Ultrasonic Flowmeter
GM868 Multi-Purpose Gas Ultrasonic Flowmeter
GN868 Natural Gas Ultrasonic Flowmeter
GS868 Steam Mass Ultrasonic Flowmeter

to which this declaration relates, are in conformity with the following standards:

- EN 61326:1998, Class A, Annex A, Continuous Unmonitored Operation
- EN 61010-1:1993 + A2:1995, Overvoltage Category II, Pollution Degree 2

following the provisions of the 89/336/EEC EMC Directive and the 73/23/EEC Low Voltage Directive.

The *units listed above and any transducers supplied with them (spoolpieces are addressed under a separate declaration of conformity)* do not bear CE marking for the Pressure Equipment Directive, as they are supplied in accordance with Article 3, Section 3 (sound engineering practices and codes of good workmanship) of the Pressure Equipment Directive 97/23/EC for DN<25.

GE Panametrics

DECLARATION DE CONFORMITE

Nous,

GE Panametrics
Shannon Industrial Estate
Shannon, Co. Clare
Ireland

déclarons sous notre propre responsabilité que les

DF868 Liquid Ultrasonic Flowmeter
GF868 Flare Gas Ultrasonic Flowmeter
GM868 Multi-Purpose Gas Ultrasonic Flowmeter
GN868 Natural Gas Ultrasonic Flowmeter
GS868 Steam Mass Ultrasonic Flowmeter

rélatif á cette déclaration, sont en conformité avec les documents suivants:

- EN 61326:1998, Class A, Annex A, Continuous Unmonitored Operation
- EN 61010-1:1993 + A2:1995, Overvoltage Category II, Pollution Degree 2

suivant les régles de la Directive de Compatibilité Electromagnétique 89/336/EEC et de la Directive Basse Tension 73/23/EEC.

Les *matériels listés ci-dessus ainsi que les transducteurs pouvant être livrés avec (les manchettes faisant l'objet d'une déclaration de conformité séparée)* ne portent pas le marquage CE de la directive des équipements sous pression, car ils sont fournis en accord avec la directive 97/23/EC des équipements sous pression pour les DN<25, Article 3, section 3 qui concerne les pratiques et les codes de bonne fabrication pour l'ingénierie du son.

KONFORMITÄTS-ERKLÄRUNG

Wir,

GE Panametrics
Shannon Industrial Estate
Shannon, Co. Clare
Ireland

erklären, in alleiniger Verantwortung, daß die Produkte

DF868 Liquid Ultrasonic Flowmeter
GF868 Flare Gas Ultrasonic Flowmeter
GM868 Multi-Purpose Gas Ultrasonic Flowmeter
GN868 Natural Gas Ultrasonic Flowmeter
GS868 Steam Mass Ultrasonic Flowmeter

folgende Normen erfüllen:

- EN 61326:1998, Class A, Annex A, Continuous Unmonitored Operation
- EN 61010-1:1993 + A2:1995, Overvoltage Category II, Pollution Degree 2

gemäß den Europäischen Richtlinien, Niederspannungsrichtlinie Nr.: 73/23/EG und EMV-Richtlinie Nr.: 89/336/EG.

Die *oben aufgeführten Geräte und zugehörige, mitgelieferte Schallwandler (Messrohre werden in einer separaten Konformitätserklärung behandelt)* tragen keine CE-Kennzeichnung gemäß der Druckgeräte-Richtlinie, da sie in Übereinstimmung mit Artikel 3, Absatz 3 (gute Ingenieurpraxis) der Druckgeräte-Richtlinie 97/23/EG für DN<25 geliefert werden.
