Applications

Material measurement

❏ **85070D** High-Temperature Dielectric Probe Kit
The 85070D allows the measurement of the dielectric properties of materials quickly and conveniently. Measurements made with this probe are nondestructive and require no sample preparation. The dielectric probe is well suited for measurements of liquid, semisolid and flat solid materials. Measurement results can be viewed in a variety of formats (er', e r ", tan d or Cole-Cole). The supplied software can be run in the PNA analyzer or on a PC.

❏ **85071D** Materials Measurement Software
The material software calculates the permittivity and permeability of material samples placed in a coaxial airline or a rectangular waveguide. The measurement technique works well for solid materials that can be machined to fit precisely inside a transmission line. Measurement results can be viewed in a variety of formats (er', e r ", tan d, mr', m r ", tan dm or Cole-Cole). The software can be run in the PNA analyzer or on a PC.

Filter tuning

❏ **N4261A** Filter Tuning Software
This software will significantly reduce filter tuning training times and increase manufacturing through put. Through the graphical user interface, visual training indicators show when the individual resonators and couplers in a filter have been tuned within specifications. The indicators also show the user when and how to tune each filter element, reducing the number of times each element has to be retuned before the filter meets specifications.
