Introduction

Weigh-Tronix bench scales are divided into three types:

- Diamond series bench scale analog bases
- Torsion series bench scale analog bases
- 3600 series bench scale Quartzell bases
- 3700 series bench scale analog bases

This manual is divided into major sections dealing with each of these bench scale base types. There is some information which applies to all of the bases. This information is given below.

Weigh-Tronix bench scale bases are available in stainless steel for use in sanitary or hostile environments and in painted carbon steel for use at less demanding sites. The Weigh-Tronix weight sensor is potted to provide corrosion resistance and to permit cleaning. A built-in bubble level and adjustable feet provide convenience in leveling the scale.

Place the scale on a flat, rigid, vibration-free surface. For the diamond series or torsion series bench scales, lift the scale platform straight up, removing it from the frame. Figure 1 shows the diamond series scale. Figure 2 shows the torsion series bench scale. See Figure 3 for the 3600 series and Figure 4 for the 3700 series. Loosen each leveling-foot lock nut, as required. Adjust the leveling feet until the bubble level shows that the frame is level. All leveling feet must be in firm contact with the mounting surface. Make sure that the weight sensor signal cable is routed properly and will not interfere with platform movement. Tighten each leveling foot lock nut as required.

Diamond Base Bench Scales

Diamond Base Specs

Table 1
Diamond Base Specifications

Platform Dimensions		Capacity		Weigh Bar
Inches	Centimeters	lb	kg	Output (mV/V)
14 x 14	35.56 x 35.56	30	13.61	0.6
18 x 18	45.72 x 45.72	50	22.68	1.0
18 x 24	45.72 x 60.96	100/200	50/100	1.0
20 x 20	50.80 x 50.80	100	45.35	1.0
24 x 24	60.96 x 60.96	200	90.70	1.0

Torque spec is 55 ft lbs for the mounting bolts

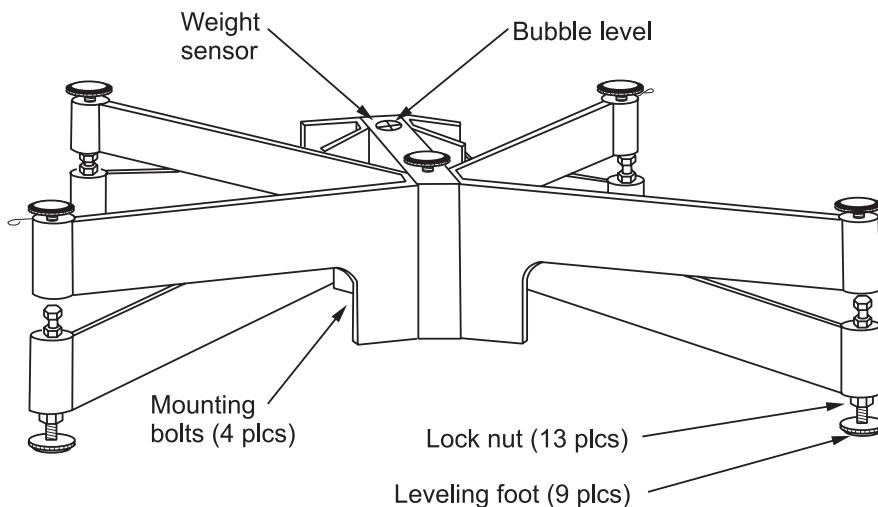

Figure 1
Platform Leveling Adjustments

Signal Cable Connections

Table 2: Signal Cable Connections

Terminal (NEMA IV)	Wire Color	Description	Desktop Connections
1	GRN	+Excitation	B
2	YEL*	+Sense	F
3	WHT	+Output	C
4	WHT/ORN	Shield (Gnd)	G
5	RED	-Output	A
6	BLU*	-Sense	E
7	BLK	-Excitation	D

*Note

Pins 1 and 2, and 6 and 7 are jumpered together when connected to a single cell analog base.

Scale Setup

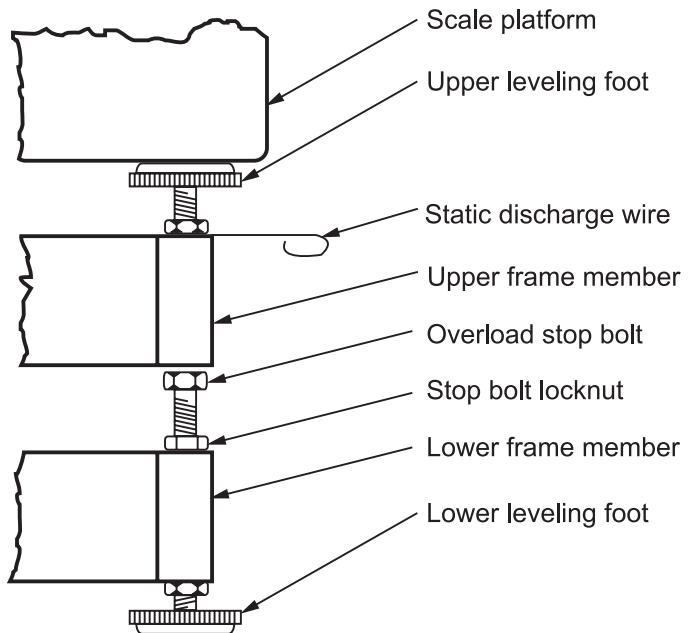

Figure 2
Overload stop adjustments

Overload stop adjustment

The overload stop bolts must be readjusted if either the weight sensor or any of the frame members are replaced. To adjust the overload stop bolts, refer to Figure 2 and proceed as follows:

- I. Lift the scale platform straight up off the frame, then replace it upside down on the five upper leveling feet. Adjust the height of the outer four to evenly support the platform. Adjust the center foot so there is a small gap (about the thickness of a sheet of paper) between it and the platform. Tighten all five lock nuts when adjustments are complete

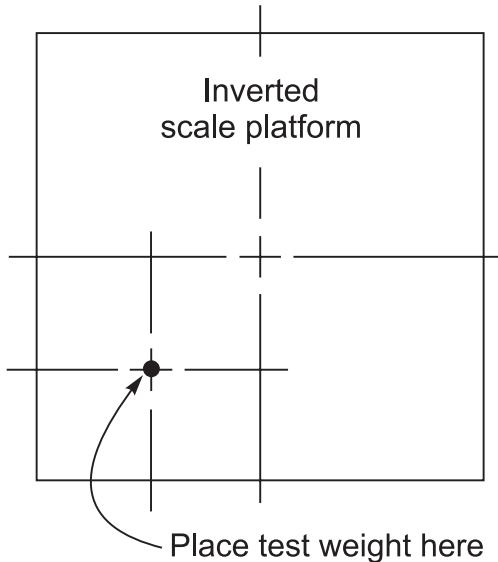

Figure 3
Test weight placement for overload
stop bolt adjustment

2. Refer to Figure 3 and place a test weight 102% of capacity in the center of one quadrant of the inverted platform. The weight indicator should display a reading above capacity.
3. Refer to Figure 2 and loosen the stop bolt lock nut corresponding to the quadrant supporting the test weight. Adjust the overload stop bolt so that it contacts the upper frame member and the weight indicator reads less than the applied test weight. Tighten the stop bolt lock nut.
4. Repeat steps 2 and 3 for each of the remaining corners of the scale.
5. Remove the test weight and place the scale platform upright on the upper leveling feet. Be sure that the two static discharge wires extend straight out from the upper frame members. These static discharge wires must contact the inside corners of the platform when it is in place.
6. Place 100% of capacity on the scale to verify correct operation in each corner and center of the platform.

Cleaning Instructions

Lift the platform straight up off the frame. Thoroughly clean the frame but do NOT apply steam or high-pressure hot water directly to the Weigh Bar. Ensure no debris remains in the overload stop gaps. Thoroughly clean the platform and then place it back onto the frame.

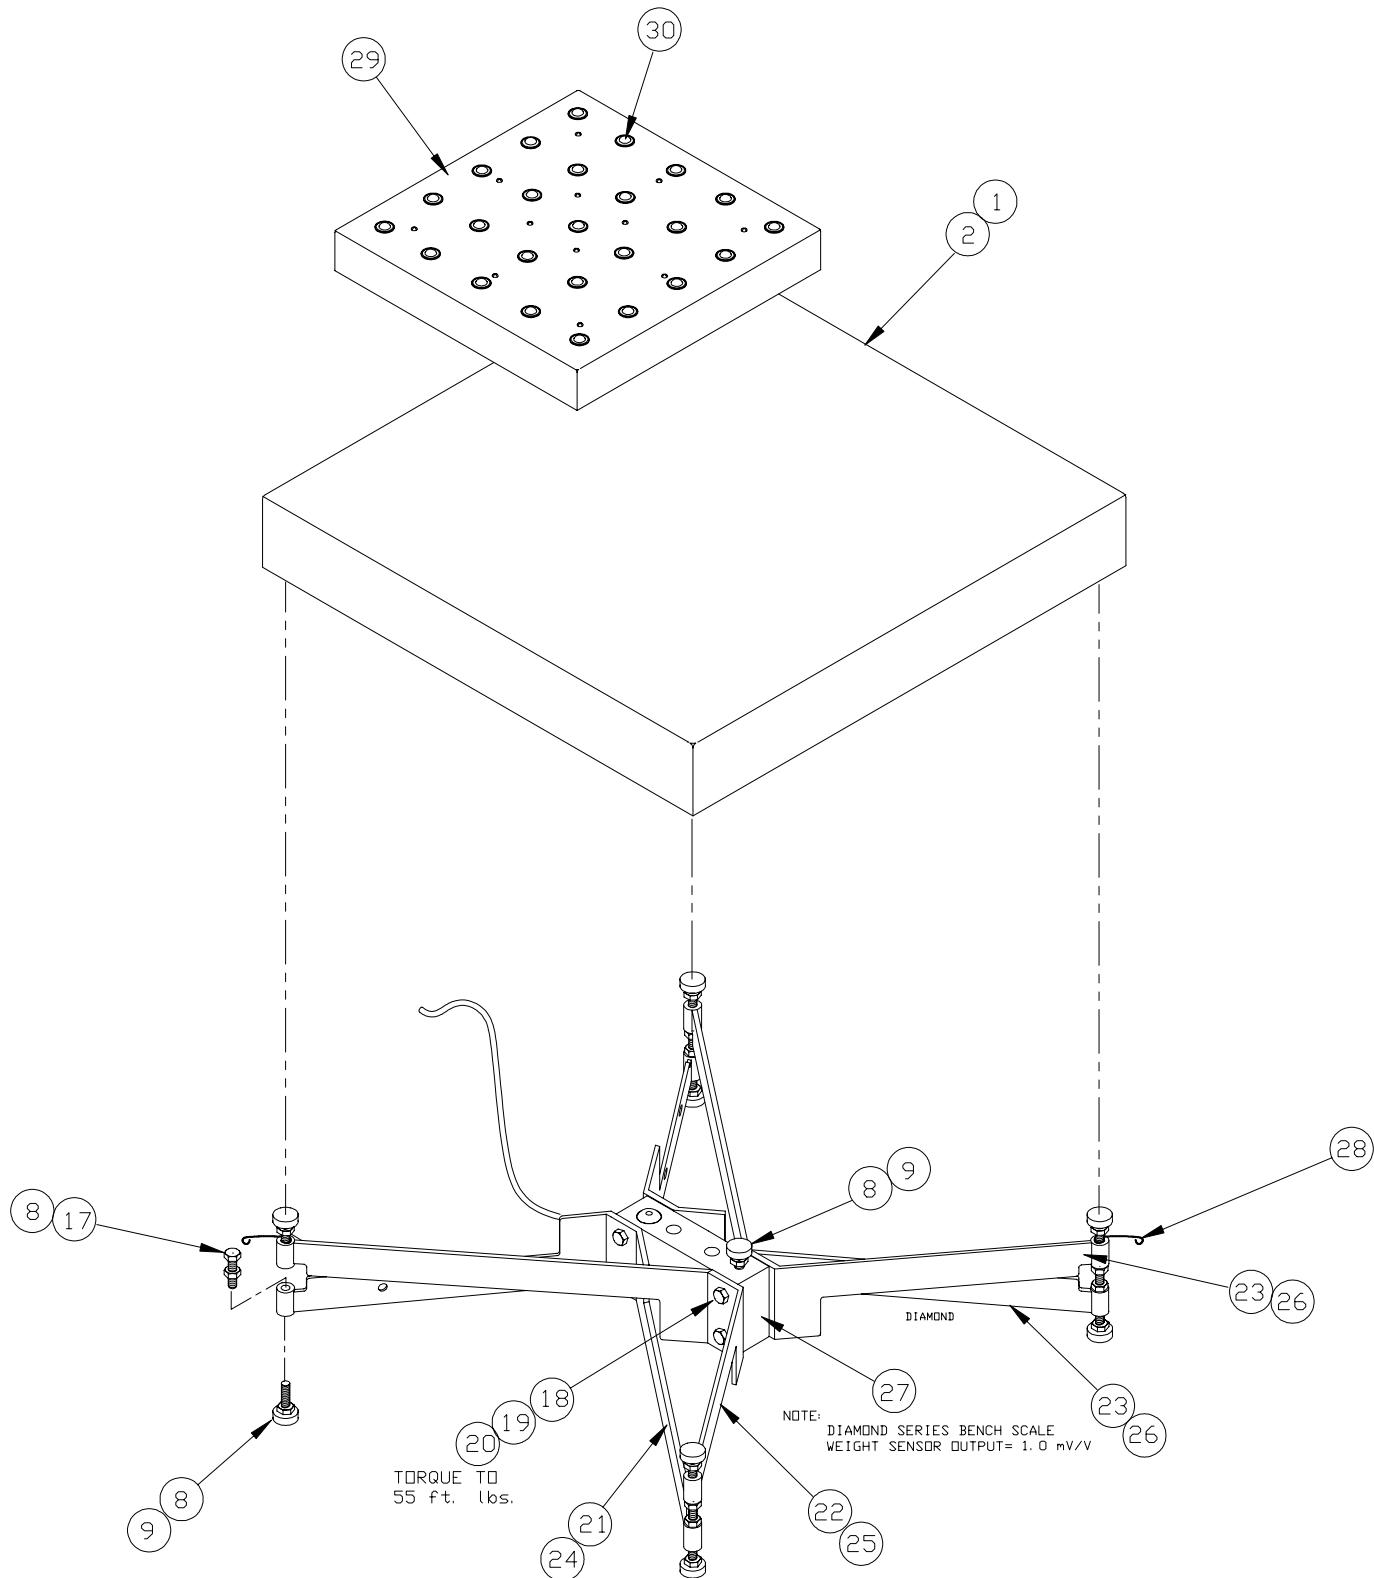

Torque Specification

The torque specification for the weight sensor mounting bolts is 55 ft lbs.

Torsion Bases

Torsion Base Specs

Table 3		
Platform Dimensions inches(cm)	Capacity	
	lb	kg
8.75 x 8.75 (22.23 x 22.23)	6	3
8.75 x 8.75 (22.23 x 22.23)	12	6
12 x 14 (30.5 x 35.6)	30	15
12 x 14 (30.5 x 35.6)	60	30
12 x 14 (30.5 x 35.6)	100	45

Torque spec is 80 in. lbs for the loadcell mounting bolts

Leveling the scale

Use the leveling feet and the level bubble to level the scale platform. When the scale is level, tighten the jam nuts up against the scale base.

Signal Cable Connections

Table 4: Signal Cable Connections

Terminal	Wire Color	Description
1	Red	+Excitation
2	Red/White	+Sense
3	Green	+Output
4	Green/Yellow	Shield (Gnd)
5	White	-Output
6	Black/White	-Sense
7	Black	-Excitation

Overload Stop Adjustment

The overload stop adjustment comes preset from the factory. No field adjustment is required.

Torque Specs

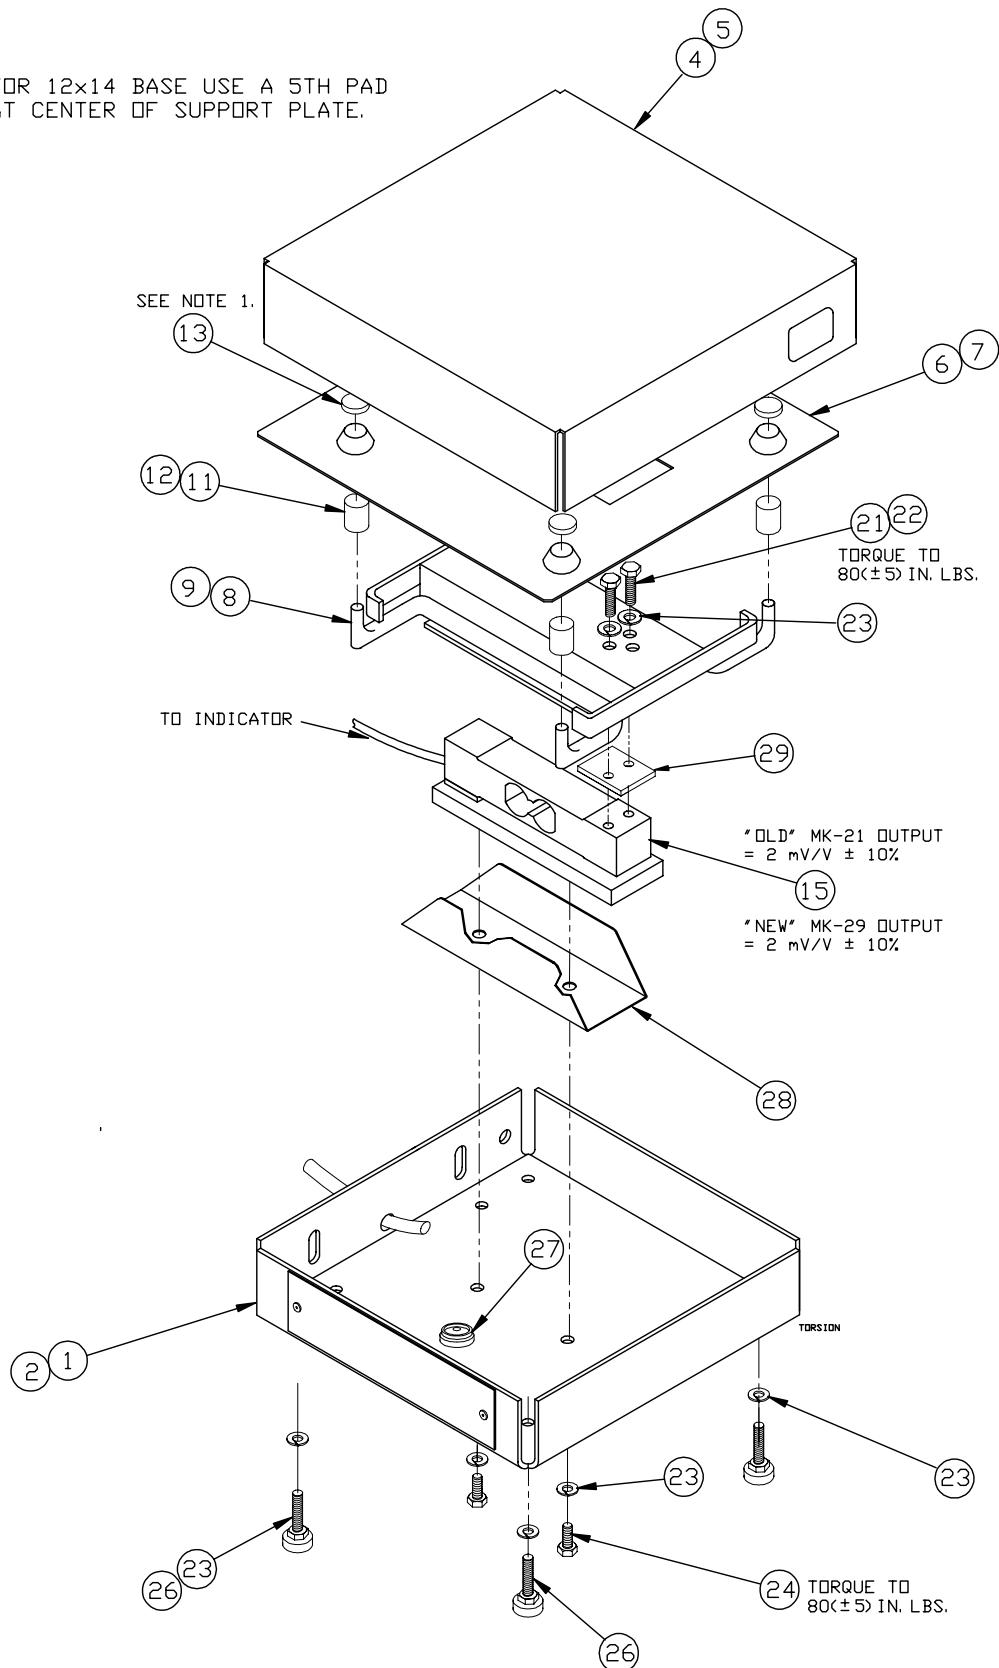

Weigh-Tronix specifies a torque of 80 (± 5) in. lbs. on the loadcell mounting bolts.

TORSION BASES STAINLESS

6 lb, 12 lb / 9" x 9" BASE
30 lb, 60 lb, 100 lb / 12" x 14" BASE
ASSEMBLY

NOTES:

1. FOR 12×14 BASE USE A 5TH PAD AT CENTER OF SUPPORT PLATE.

3600 Series QDT Bases

3600 Base Specs

Table 5 3600 Base Specifications			
Platform Dimensions		Capacity	
Inches	Centimeters	lb	kg
12 x 14*	30.5 x 35.6	10	5
12 x 14*	30.5 x 35.6	50	25
12 x 14*	30.5 x 35.6	100	50
12 x 14*	30.5 x 35.6	150	80
18 x 18	45.7 x 45.7	200	110
18 x 18	45.7 x 45.7	300	160

*Torque spec is 90 in. lbs for the Quartzell® mounting bolts. All others are 40 ft. lbs.

Leveling the scale

Use the leveling feet to level the scale platform. When the scale is level, tighten the jam nuts up against the scale base.

Signal Cable Connections

Table 6: Signal Cable Connections		
Terminal (NEMA IV)	W-T Wire Color	Description
1	Red	7.5 volts
2	Blue	REC B
3	Yellow	XMT B
4	—	NOT USED
5	Black	GRND
6	—	NOT USED
7	Green	XMT A
8	White	REC A
Shell	Drain wire	SHIELD

Replacing the Quartzell®

1. Remove the scale shroud and load bridge pad.
2. Place your hand on the load bridge, near the two flat head screws or 9/16" bolts that hold the load bridge to the Quartzell®. Gently loosen the two screws or bolts with a torque wrench. **DO NOT USE A "T" HANDLE ALLEN WRENCH.** Doing so may cause damage to the crystals in the Quartzell®. This damage is not covered by warranty. Remove the screws or bolts, remove the load bridge and the Quartzell® spacer.

3. Set the scale on its side and remove the screws or bolts holding the Quartzell® to the scale base.
4. Unplug the Quartzell® and reinstall the new Quartzell®.
5. Install the bottom bolts or screws and torque them to 90 in. lbs. (± 5) for the screws and 40 ft. lbs for the bolts. Set the scale on its feet. Reassemble the spacer and the load bridge. Torque the screws to 90 in. lbs. (± 5) and the bolts to 40 ft. lbs.
6. Put the load bridge pad and shroud back on the scale.

Overload Stop Adjustments

1. Place 102% of full scale capacity over each of the corners of the scale, one at a time.
2. Adjust each screw until the displayed weight starts to go down. Do this for all corners. The center stop is normally preset at the factory. No field adjustment is required.
3. Recalibrate the scale. Refer to the indicator Service Manual.

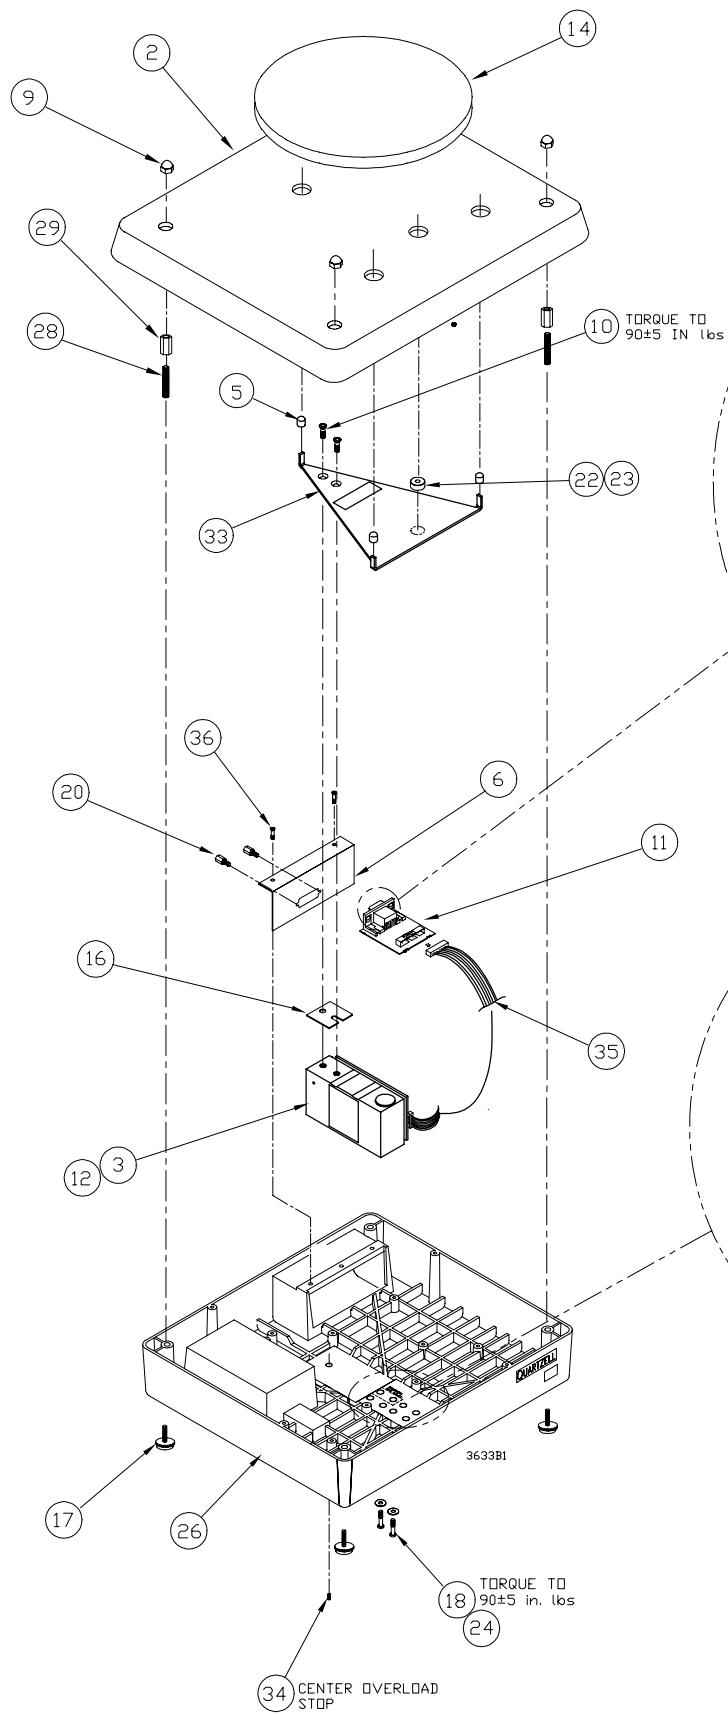

Torque Specs

Weigh-Tronix specifies a torque of 90 (± 5) in. lbs. on the Quartzell mounting bolts of the 10 lb capacity base and 40 ft. lbs. on the other capacities.

3700 Series Bases

3700 Base Specs

Table 7
3700 Base Specifications

Platform Dimensions		Capacity	
Inches	Centimeters	lb	kg
10 x 10*	25.4 x 25.4	10	5
12 x 14	30.5 x 35.6	25	12
12 x 14	30.5 x 35.6	50	25
12 x 14	30.5 x 35.6	100	50
18 x 18**	45.7 x 45.7	300	160

* Torque spec is 90 in. lbs for the loadcell mounting bolts.

** Torque spec is 40 ft. lbs.

All others are 95 in. lbs.

Leveling the scale

Use the leveling feet to level the scale platform. When the scale is level, tighten the jam nuts up against the scale base.

Signal Cable Connections

Table 8: Signal Cable Connections

Terminal (NEMA IV)	Wire Color	Description
1	Green	+Excitation
2	—	+Sense
3	White	+Output
4	Drain wire	Shield (Gnd)
5	Red	-Output
6	—	-Sense
7	Black	-Excitation

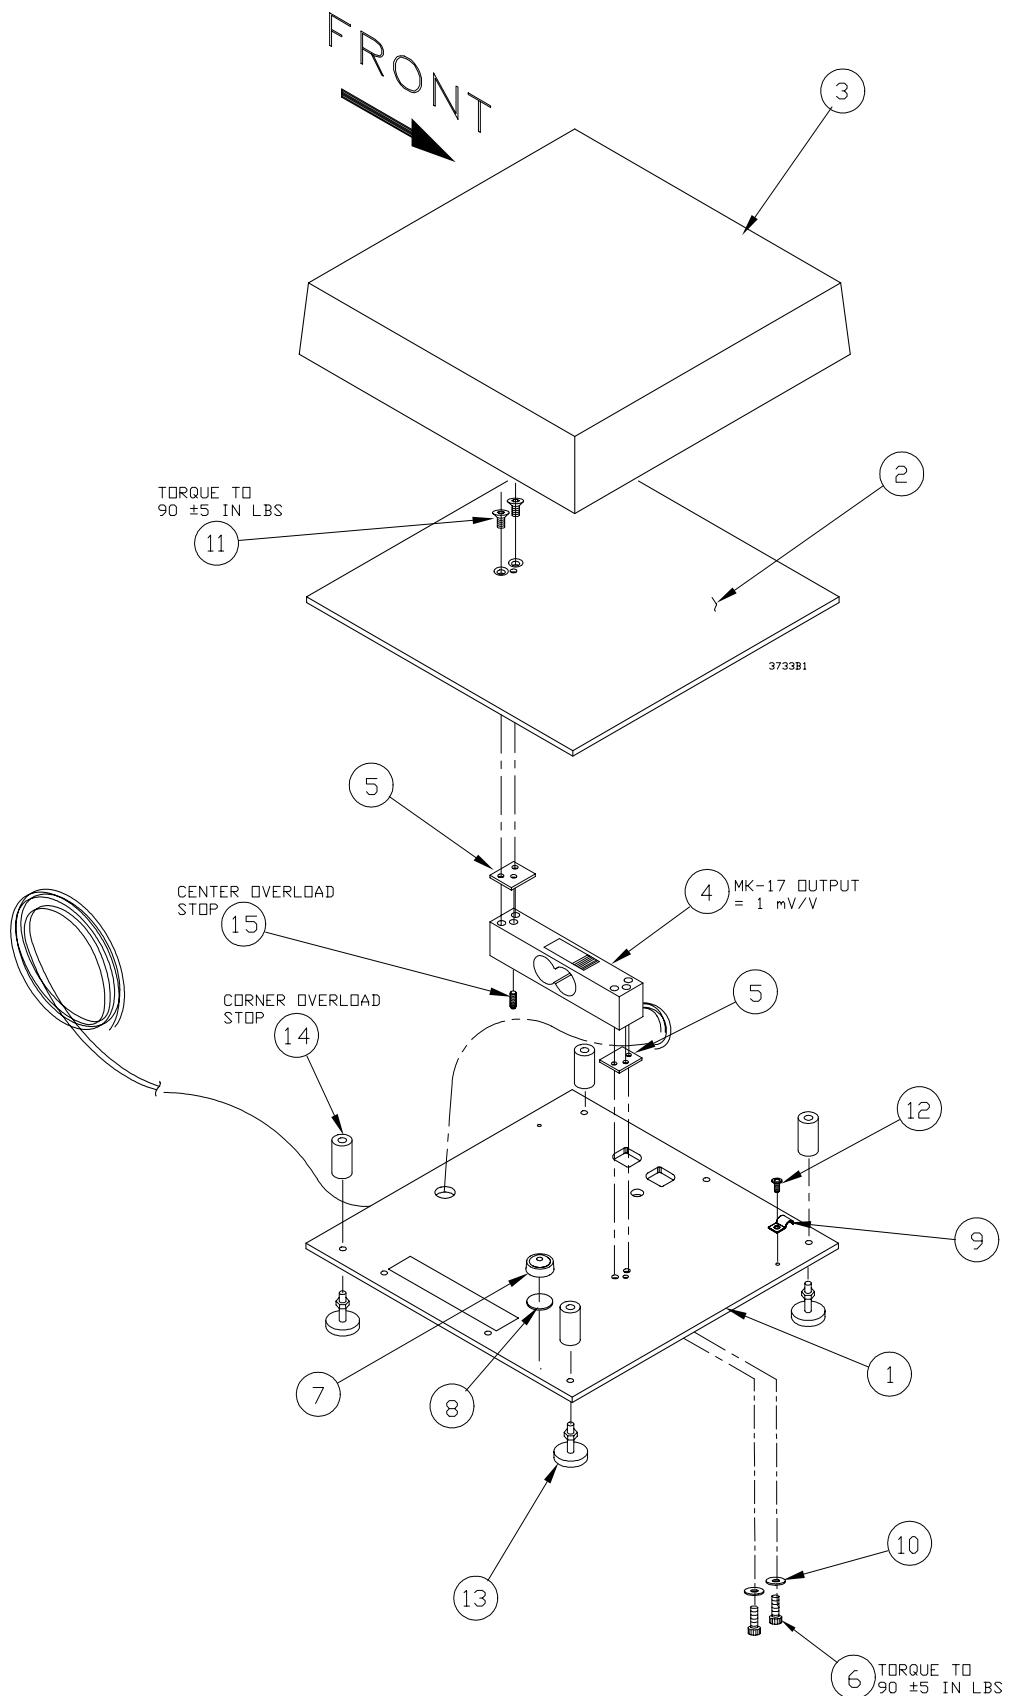

Overload Stop Adjustments

1. Place 102% of full scale capacity over one of the corners of the scale.
2. Adjust each screw until the displayed weight starts to go down. Do this for all four corners and the center stop.
3. Recalibrate the scale. Refer to the indicator Service Manual.

Torque Specs

Weigh-Tronix specifies a torque of 90 (± 5) in. lbs. on the loadcell mounting bolts.
