## A/C Whistles While in Recirculation Mode

(Supersedes 08-014, dated April 11, 2008, to update the information marked by the black bar)

### SYMPTOM

A whistling noise occurs when recirculation mode is selected while the vehicle is driven above 50 mph.

### PROBABLE CAUSE

The recirculation door is not completely closed, causing an air leak and creating a whistle.

### CORRECTIVE ACTION

Replace the blower unit.

### PARTS INFORMATION

Blower Sub-Assembly: P/N 79305-STX-A02

### WARRANTY CLAIM INFORMATION

**In warranty:** The normal warranty applies.

Operation Number: 612100

Flat Rate Time: 0.7 hour

Failed Part: P/N 79305-STX-A02

Defect Code: 03214

Symptom Code: 04201

Template ID: 08-014A

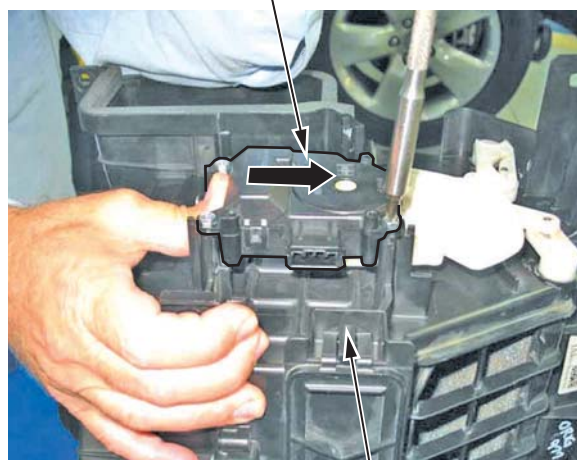

**Out of warranty:** Any repair performed after warranty expiration may be eligible for goodwill consideration by the District Parts and Service Manager or your Zone Office. You must request consideration, and get a decision, before starting work.

### REPAIR PROCEDURE

- Remove the glove box:
  - Refer to page 20-126 of the *07–08 MDX Service Manual*, or
  - Online, enter keywords **GLOVE BOX**, and select **Glove Box Removal/Installation** from the list.
- Remove the blower unit:
  - Refer to page 21-115 of the service manual, or
  - Online, enter keywords **BLOWER REMOVAL** and select **Blower Unit Removal/Installation** from the list.
- Remove the blower motor, the dust and pollen filter, and the recirculation control motor from the old blower unit.
- Install the blower motor, the dust and pollen filter, and the recirculation control motor on the new blower unit.

**NOTE:** Make sure the recirculation control motor is adjusted to the highest point possible by pushing the motor toward the top of the unit, and then tightening the screws.

**RECIRCULATION MOTOR**  
(Push on it while tightening the screws.)

**NEW BLOWER UNIT**

- Install the blower unit in the reverse order of removal.
