

The Invacare® Comet™ pediatric wheelchair's good looks are second only to its adjustability. The chair is designed to fit even the smallest children and grow right along with them, simply and inexpensively. A depth range of 7" to 13" is available on one frame. Or, choose the long frame for a growth range of 9" to 16". The chair's width can be changed just as easily, from 10" to 16" on either the short or long frame. Even the crossmembers can be moved to accommodate almost any seating system. For smaller children, the chair may be set up in a reversed configuration, with the larger wheels in front, and then switched to the conventional configuration when the child is able to reach the rear wheels — all with no additional parts required. These innovations have helped the Comet introduce a new word to the world of pediatric chairs: simplicity.

Highlights

- Swing-under footrest can be operated by the user or an attendant
- Reversible with no need for additional parts
- Available mini-tilt option offers 20° of tilt for children who do not need a full tilt-in-space system
- Wheels can be cambered
- 18" wheels available
- 16" wheels have true pediatric handrims
- Choice of short or long frame
- All rear wheel choices are no charge

The mini-tilt option is a simple and lightweight feature that provides up to 20° of tilt.

The Comet can be reversed with no additional parts required.

Available with swing-under footrest for easier transfers.
