WORK INSTRUCTIONS:

1.0 Recommended tools for replacing the belly pan assembly. See equipment table above for the details.

A power drill with a 5/16 Allen bit can be helpful, but is not required.

Pad the area next to the T3 unit to protect the bodywork from any potential damage when you turn it on its side. A foam pad as shown works well, but several layers of blankets or other similar padding will work.

2.0

3.0 There are thirteen 5/16 Allen head fasteners holding the belly pan on.

3.1 Use the Allen wrench of your choice to remove the thirteen fasteners.

3.2 Sometimes the washers stay attached to the belly pan; sometimes they come off with the fastener. If they stick to the pan, just pull them off by hand, or with a flat screwdriver if needed.

3.3 Remove the old belly pan.

3.4 The vehicle with no pan. Now is a good time for a quick visual inspection.

4.0 This is a new belly pan.

T3MOTION PROPRIETARY INFORMATION Use or disclosure of data contained on this sheet is subject to the restriction on the cover or title page of this document. Document No 040-00061 Revision 1 Sheet 6

4.1 Apply the LocTite to the threads of all thirteen of the fasteners.

4.2 Hold the Belly pan up to the bottom of the T3 unit and start one of the fasteners. A wrench can be helpful for the first one.

4.3 It may be necessary to center the mounting clips with the holes. This can easily be accomplished by putting an Allen wrench through the holes and aligning the clips to the holes before inserting a fastener.

4.4 Hand thread all the fasteners into the belly pan. Do not tighten any of them until all are in place or it may be difficult to start some of them. Once all are in, use the wrench to tighten them down. Do not over tighten them.

5.0 Carefully lift the T3 unit back up on its wheels. Lifting it while the brake is set makes this more manageable. Again, a second person is helpful for this.

For addition information, contact T3 Motion at: (714)-619-3600.
