Spare Parts List 10

Notice

Service must be carried out by qualified personnel only. Any tampering carried out by unqualified personnel during the guarantee period will forfeit the right to guarantee.
For a correct operation of the instrument, after having switched off, be careful to wait at least 3 seconds before switching on again.
To improve the device's specifications, the schematic diagrams may be subject to change without prior notice.

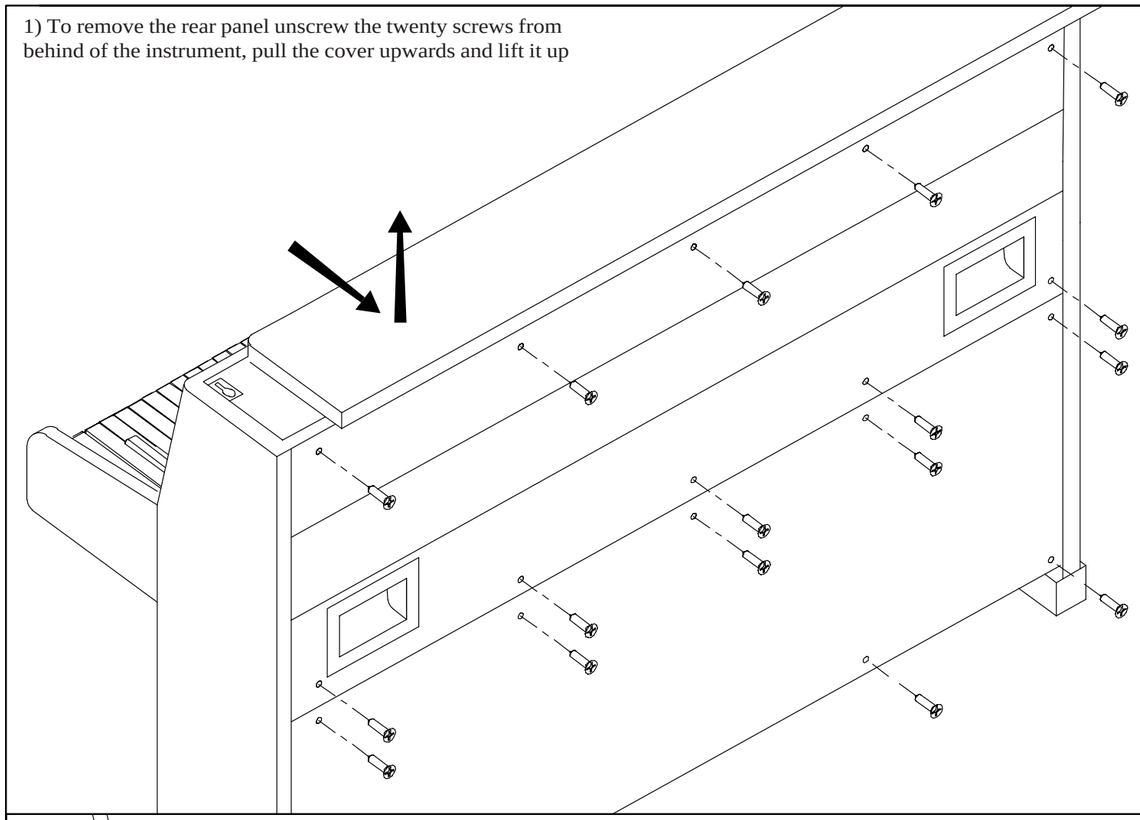
Schematic Notes

⚠ All components marked by this symbol have special safety characteristics, when replacing any of these components use only manufacturer's specified parts.
The (µ) micro symbol of capacitance value is substituted by U. The (Ω) omega symbol of resistance value is substituted by E.
The electrolytic capacitors are 25Vdc rated voltage unless otherwise specified. All resistors are 1/4W unless otherwise specified.
All switches shown in the "OFF" position. All DC voltages measured to ground with a voltmeter 20KOhm/V.

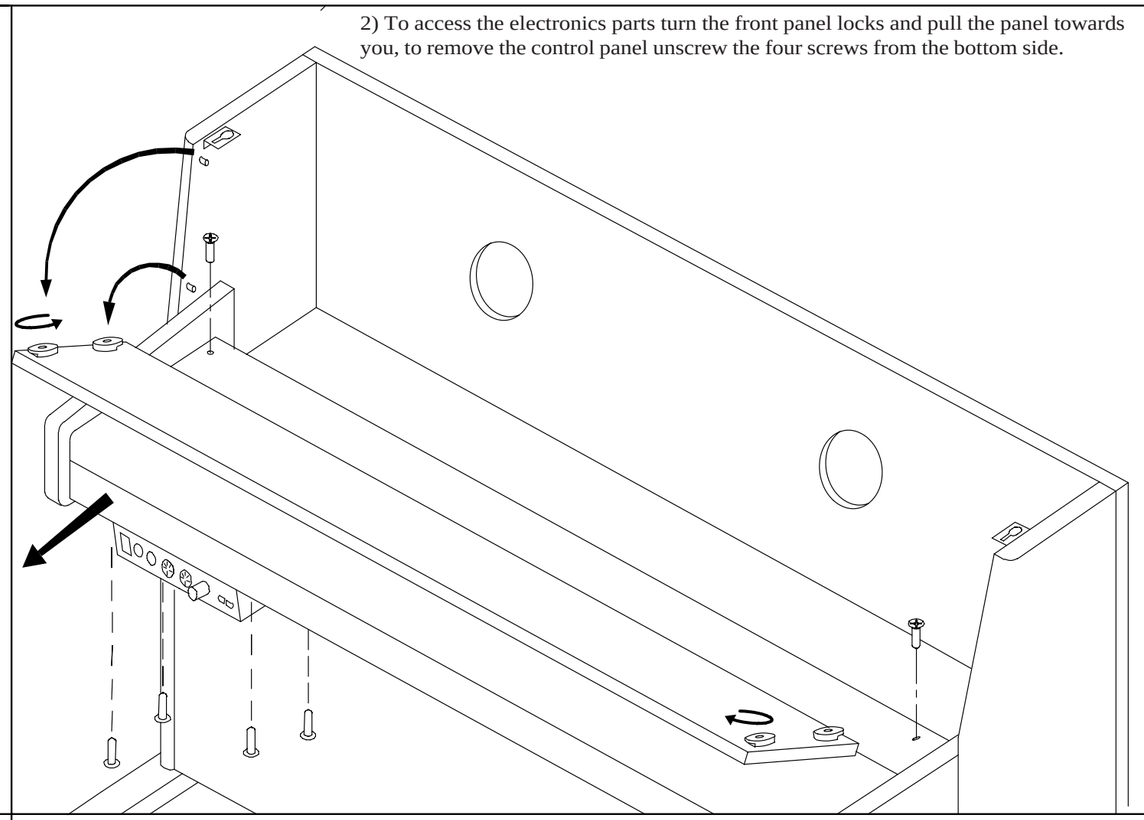
- Soldering point.
- Male connector.
- Female connector.
- M/F faston connector.
- Test point.
- Supply voltage.
- Logic supply ground.
- Analog supply ground.
- Signal ground.
- Chassis ground.
- Flag joined with one or more flags with the same signal name inscribed.

ATTENTION
Observe precautions when handling
electrostatic sensitive devices

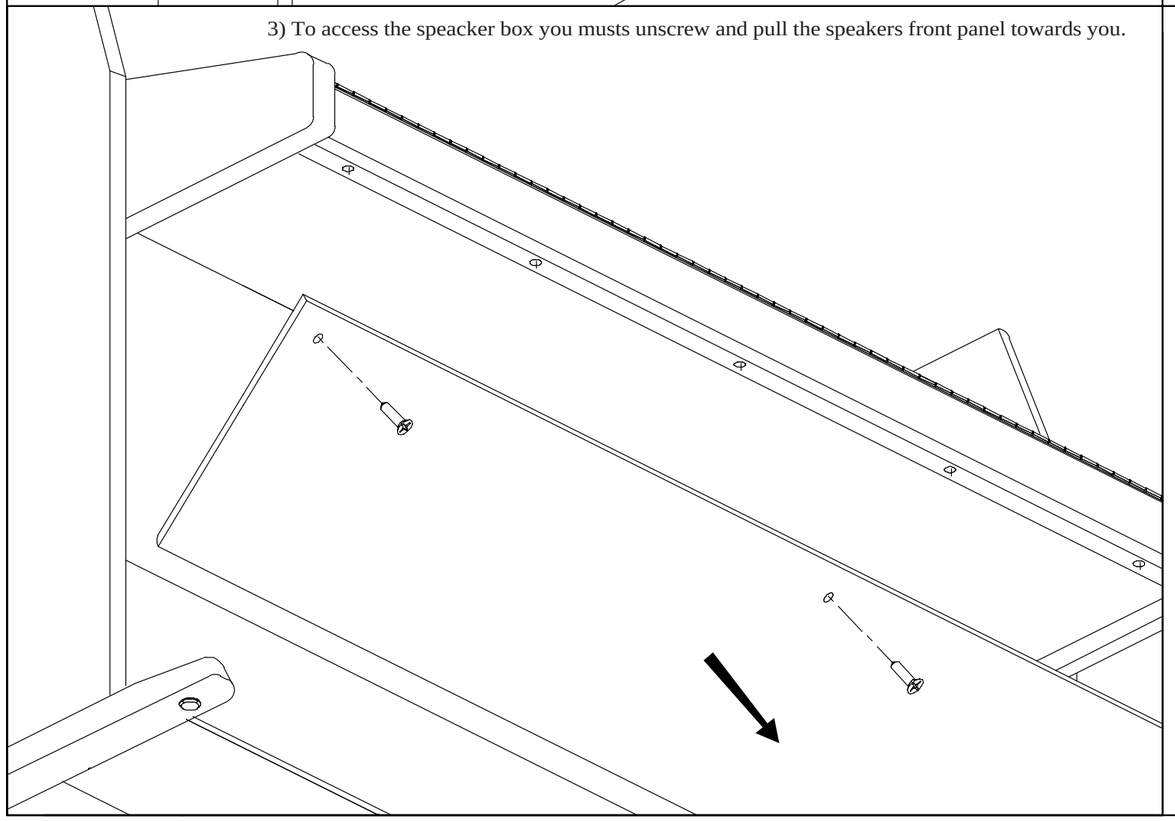
1) To remove the rear panel unscrew the twenty screws from behind of the instrument, pull the cover upwards and lift it up



2) To access the electronics parts turn the front panel locks and pull the panel towards you, to remove the control panel unscrew the four screws from the bottom side.



3) To access the speacker box you musts unscrew and pull the speakers front panel towards you.



Assembled Parts **(RPT114 version)**

1) Key front	19) Hammer "Load"
2) Key top	20) Hammer stop rail
3) Natural, white key	21) Hammer sto rail felt
4) Sharp, black key	22) Hammer center pin
5) Balance rail pin	23) Hammer but spring
6) Bridle wire, tape wire	24) Hammer flange
7) Jack spring	25) Spoon
8) Regulating button	26) Wippen flange
9) Back check wire	27) Jack
10) Regulting rail felt	28) Jack flange
11) Regulating rail	29) Balance rail pin
12) Bridle strap, bridle tape	30) Front rail punching, front washer
13) Back check	31) Front rail pin
14) Back check felt	32) Contacts Rubber Strip
15) Butt heel leather, back stop leather	
16) Butt heel, catcher, back stop	
17) Hammer rest rail	
18) Hammer rest felt, hammer rest baize

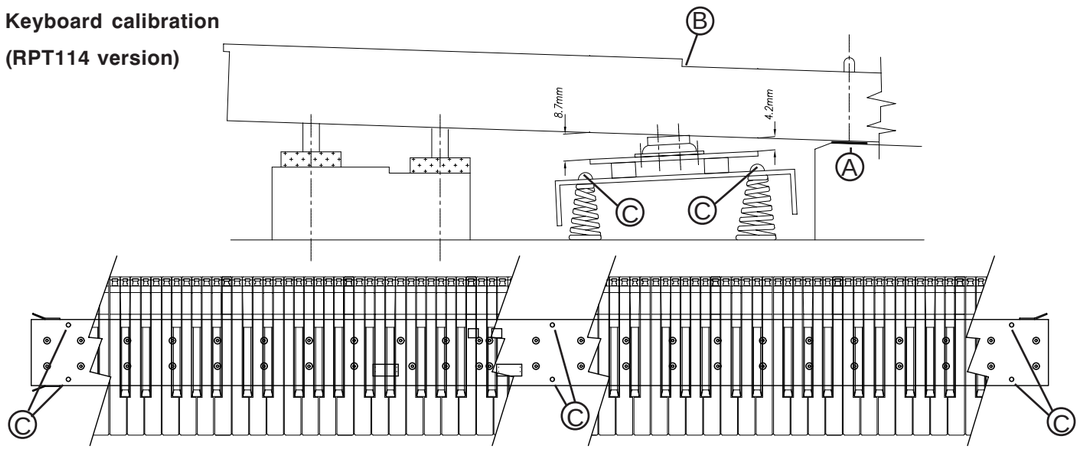
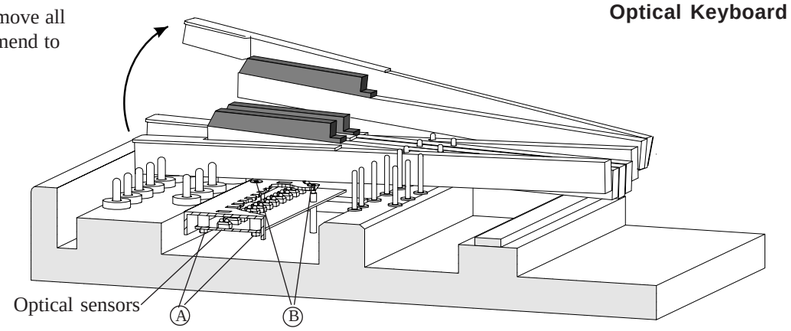
Keyboard calibration
(RPT114 version)



To access to the optical sensors remove all sharp and natural keys, we recommend to dispose the keys in order.

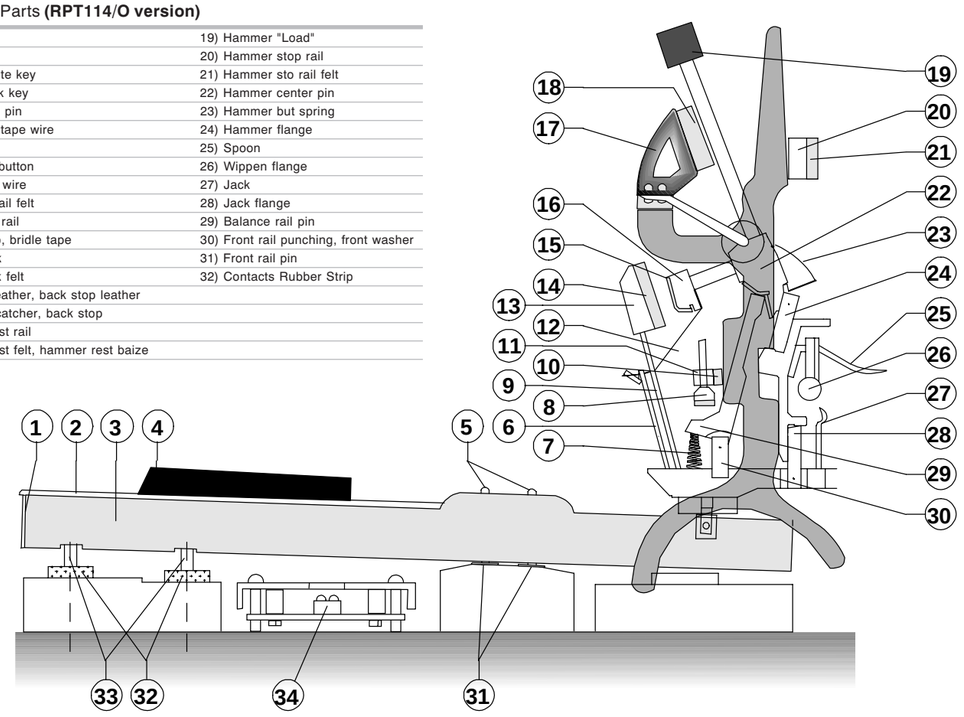
Once removed the keys unscrew the five screws (B) from the front panel of the contacts board and unscrew the fourty-eight nuts (A) from the bottom.

Optical Keyboard



Assembled Parts **(RPT114/O version)**

1) Key front	19) Hammer "Load"
2) Key top	20) Hammer stop rail
3) Natural, white key	21) Hammer sto rail felt
4) Sharp, black key	22) Hammer center pin
5) Balance rail pin	23) Hammer but spring
6) Bridle wire, tape wire	24) Hammer flange
7) Jack spring	25) Spoon
8) Regulating button	26) Wippen flange
9) Back check wire	27) Jack
10) Regulting rail felt	28) Jack flange
11) Regulating rail	29) Balance rail pin
12) Bridle strap, bridle tape	30) Front rail punching, front washer
13) Back check	31) Front rail pin
14) Back check felt	32) Contacts Rubber Strip
15) Butt heel leather, back stop leather	
16) Butt heel, catcher, back stop	
17) Hammer rest rail	
18) Hammer rest felt, hammer rest baize	



RPT114 AUTOTEST CHART

PROCEDURE	OPERATION	EVENT DESCRIPTIONS
Start	Loop the MIDI OUT with the MIDI IN sockets with a single MIDI cable. Apply the volume control to the center position	
	Turn on the instrument and press four times the "+" key within one second.	Three different tones must be sound.
Controls	Active the following controls: • "+" key • "-" key • DAMPER Pedal • SOFT Pedal • volume potentiometer.	At every action the instrument must play a "beep". When all the buttons have been actived at least once time, three different tones must be sound, to mean a successful test end.
	Note: The test must be performed within 20 seconds from the start, if this doesn't happen a sequence of beep are emitted, that meaning:	
	1st tones	"+" key doesn't work or hasn't been activated
	2nd tones	"-" key doesn't work or hasn't been activated
	3th tones	MIDI loop is not present or a MIDI socket don't work properly
	4th tones	DAMPER pedal doesn't work or hasn't been activated.
	5th tones	SOFT pedal doesn't work or hasn't been activated.
	6th tones	Volume potentiometer doesn't work or hasn't been activated.
Note	The autotest operations can be performed only in the sequence specified above. All acousticals signals levels are fixed by the volume potentiometer position when the instrument is turned on. During test all normal keyboard function are disabled.	
Keyboard calibrations.	**To get the right dynamic response is very important to get perfect calibration of the keyboard.**	
	1) Level Keys:	Using standard circular paper spacers (contents in the calibration kit (970320), in position "A" to level: all 88 keys. The difference between all keys must be less than 0,1mm in point "B".
	2) Level Strip:	Turn the six screws "C" to reach the right distance between the keys and rubber printing circuit board that is 4,2mm±0,1 in one side and 8,7mm±0,1from other side, as following showed.

RPT114/O version keyboard sensors calibration

ATTENTION

The following operations serves to callibrate the keyboard sensors.

If this is not required, turn off the instrument at this point, otherwise continue as described below.

Optical sensors auto-calibration	Turn on the instrument and press four times the "-" key within one second.	Three different tones must be sound.
	Press all sharp and natural keys one a time with the descripted precautions:	• Play the keys with ppp (pianissimo) action. • Release the keys slowly to avoid any oscillation. • Be sure that the keys is fully pressed untill the end stroke, but don't apply any extra pressure. • Perform previous operations as uniform as possible for all keys. • During calibration avoid any vibration to the keyboard.
Calibrations and Check		Wait for a few seconds while the instrument momorises permanentely the new calibration of the keyboard.
		Could happen that keys aren't calibrated because: 1) optical sensors are dirty (look at the previous page how to access), 2) optical sensors aren't in the right tollerance range, 3) keys and pedals aren't calibrated in the right way.
		If at least one of previous three events come true, you can hear a sequence of tones (having a gap of 0.5sec). The heard tone belongs to the key not well calibrated. 2 tone -> The upper threshold value is too high. 3 tones -> The lower threshold value is less. 4 tones -> Insufficient threshold span.
End	Press the "-" button again and wait two seconds.	The instrument will re-start. If you didn't hear any sound all calibrations are correctly performed, otherwise you must calibrate the key courresponding to the heard sound.
		Switch-off the instrument.

141013	**	Con V F 10c P=1.27 Mmatch Amp
140872	**	4 Contatcs Hor Male Connector
100919	**	MC33078 Dual LN J-Fet Operational Amp.
090153	**	BC327 TO92 Pnp Transistor
080900	**	OPTOELECT. REFLEX SENSOR TCRT5000
660579	*	Optical Contacts Board Support

Note:

Each spare part is single quantity unless otherwise specified.
Asterisk prefix explanation:
Omitted = First level spare part.
One asterisk = Second level, part of previous listed first level part.
Two asterisk = Third level, part of previous listed second level part.
Three asterisk = ...
Any request for not above mentioned part must encompass specific description including:
1) Model name,
2) Section name,
3) Module code,
4) Reference name,
5) Quantity number.
