

Bushnell®

TROPHY

CONGRATULATIONS,

you have one of the lightest and versatile spotting/field telescopes in the world. the Trophy has a 50mm. diameter objective lens and has magnesium fluoride coated optics for an exceptionally clear and crisp view. the amber coating helps improve contrast in low light.

FOCUSING:

The focusing system is easy and accurate. Rotate the Focusing Knob until the image seems to be in sharp, crisp focus. This is all there is to it. There is no need to overshoot or hunt for the correct focus. Once the image appears sharp, stop focusing – the image is in the best focus with minimum eye strain.

SIGHTING:

Your Trophy spotting scope is equipped with a Sighting Line above the eyepiece. Simply aim the line at the object and look through the eyepiece – **there it is!**

ZOOM EYEPIECE

The Trophy comes with a zoom eyepiece which gives a magnification range of 20 to 50 power. To change Magnification, grasp and rotate the “rubber” Knurled Ring in the middle of the eyepiece. The magnification will be indicated on the scale next to the index dot. It may be necessary to refocus the telescope after changing magnification.

TRIPOD ATTACHMENT:

To attach your Trophy spotting scope to the tripod, simply tighten the hand attachment screw on the tripod into the integral Tripod Mount hole on the base of the scope.

MAINTENANCE:

Your Trophy does not require any maintenance beyond the occasional cleaning. With a cloth, brush off the outside of the telescope to remove any dirt or dust. You can use a mild household cleaner – **sparingly** – to remove any stubborn dirt. Keep the optics clean; do not allow dust or water to stay on the glass. We recommend using a lens cleaner kit for camera lens to clean the outside of the objective lens, the eyepiece window, or the eyepiece lenses. Follow the directions with the kit.

Do not disassemble the telescope. Unauthorized disassembly not only voids the warranty but may cause damage from the lack of special tools and techniques.
