## Menu Functions

See Menu Map

<i>Shortcut</i>	<i>Function</i>	<i>Description</i>
<b>Menu 01</b>	<i>Recent Calls</i>	View and erase automatically stored phone numbers.
<b>Menu 2</b>	<i>Messages</i>	View and send SMS messages. Listen to and send voice messages. SMS settings.
<b>Menu 3</b>	<i>Call Divert</i>	Divert incoming calls to another phone number.
<b>Menu 4</b>	<i>Phone Settings</i>	Select various settings e.g. lights, tones, language.
<b>Menu 5</b>	<i>Security Options</i>	Various security functions, e.g. security level, call barring, change access codes.
<b>Menu 6</b>	<i>Duration and Cost</i>	Call timers, cost counters, cost limit, currency display.
<b>Menu 7</b>	<i>Network Selection</i>	Select desired network manually
<b>Menu 8</b>	<i>Memory Functions</i>	Select memory. View number of free and occupied locations. Copy phone numbers and names between memories. Erase memory contents. View phone number of SIM card.
<b>Menu 9</b>	<i>Personal Reminders</i>	Create a welcome message. Program a countdown timer.
<b>Menu 10</b>	<i>InCall Options</i>	Various call control functions, e.g. Mute / Unmute.
<b>Menu 11</b>	<i>Fax or Data Call</i>	Send and receive data and faxes.
<b>Menu 12</b>	<i>Ringling Options</i>	Set indication for incoming calls.
<b>Menu 13</b>	<i>Number Editor</i>	Edit a stored phone number.

# Electronic User's Guide

THIS ELECTRONIC USER MANUAL HAS BEEN CREATED USING ADOBE'S ACROBAT TECHNOLOGY. IN ORDER TO BE VIEWING THIS FILE YOU MUST ALREADY BE RUNNING A VERSION OF ADOBE ACROBAT SOFTWARE !

## WHAT IT CONTAINS

THIS IS A COMPLETE USER GUIDE FOR THE NOKIA 2110 GSM PHONE IT CONTAINS 102 PAGES WHICH MAY BE PRINTED AS WELL EITHER AS A COMPLETE PAPER MANUAL OR PAGE BY PAGE. IT CONTAINS HYPERTEXT LINKS, HOT SPOTS IN THE DOCUMENT WHICH WHEN CLICKED ON WILL TAKE THE VIEWER TO ANOTHER SECTION OR PAGE IN THE MANUAL.

## LINK CONVENTIONS

THE BASIC CONVENTIONS USED IN THIS PUBLICATION ARE THAT THE COVER SCREEN IS LIVE AND WILL LINK YOU TO PAGE ONE OF THE CONTENTS SECTION (1 OF 3). CLICK ON ANY ENTRY IN THE CONTENTS TO GO TO THAT PAGE. SECTION HEADINGS ARE IN BLUE AND ARE LINKS WHICH WILL TAKE YOU BACK TO THE TO THE CONTENTS. DIRECTIONAL ARROWS AT THE BOTTOM OF PAGES WILL TAKE YOU FORWARD OR BACK

## USING ACROBAT

WE HOPE THAT WHETHER IT IS FOR ASSISTING IN CUSTOMER SUPPORT OR FOR PERSONAL CONVENIENCE YOU FIND THE ELECTRONIC USER MANUAL HELPFUL AND SUGGEST THAT FOR FURTHER TIPS ON USING ACROBAT DOCUMENTS VIEW THE PDF HELP FILES WITHIN YOUR ADOBE ACROBAT READER. ▼

# 1. Important Safety Information

## Traffic Safety

Do not use a hand-held telephone while driving a vehicle. If using a hand-held phone park the vehicle before conversing.

Always secure the phone in its holder; do not place the phone on the passenger seat or where it can break loose in a collision or sudden stop.

The use of an alert device to operate a vehicle's lights or horn on public roads is not permitted.

Remember: road safety always comes first!

## Operating Environment

Remember to follow any special regulations in force in any area and always switch off your phone whenever it is forbidden to use it, or when it may cause interference or danger.

Operation of any radio transmitting equipment, including cellular phones, may interfere with the functionality of inadequately protected medical devices. Consult a physician or the manufacturer of the medical device if you have any questions. Other electronic equipment may also be subject to interference.

As with other mobile radio transmitting equipment, users are advised that for the satisfactory operation of the equipment and for the safety of personnel, it is recommended that the equipment should only be used in the normal operating position.

Users are advised to switch off the phone when at a refuelling point (service station). Users are reminded of the need to observe restrictions on the use of radio equipment in fuel

## *Important Safety Information*

depots (fuel storage and distribution areas), chemical plants or where blasting operations are in progress.

Do not store or carry flammable liquids, gases or explosive materials in the same compartment as the phone, its parts or accessories.

Only qualified personnel should install or service the phone in a vehicle. Faulty installation or service may be dangerous and may invalidate any warranty which apply to the unit.

Electronic fuel injection systems, electronic anti-skid braking systems, electronic cruise control systems and other electronic systems can malfunction due to the lack of protection from radio signals. Check regularly that all cellular phone equipment in your vehicle is mounted and operating properly.

Switch off your cellular phone when in an aircraft. The use of cellular telephones in an aircraft may be dangerous to the operation of the aircraft, disrupt the cellular network and is illegal.

Failure to observe these instructions may lead to suspension or denial of cellular telephone services to the offender, or legal action or both.

## **Emergency Calls**

### **IMPORTANT!**

This phone, like any cellular phone, operates using radio signals, cellular and landline networks as well as user-programmed functions which cannot guarantee connection in all conditions. Therefore you should never rely solely upon any cellular phone for essential communications (e.g. medical emergencies).

Emergency calls can only be made when cellular signal strength is adequate to make calls and may not be possible on all cellular phone networks or when certain network services and/or phone features are in use. Check with your cellular network operator.

Remember, to make or receive any calls the phone must be switched on and in a service area with adequate cellular signal strength. Emergency calls may not be possible on all cellular phone networks or when certain network services and/or phone features are in use. Check with the local cellular service provider.

To make an emergency call:

- ❶ If the phone is not on, switch it on.  
Some networks may require that a valid SIM card is properly inserted in the phone.
- ❷ Press and hold the **C** key for several seconds to make the phone ready for calls.
- ❸ Key in the emergency number for your present location (e.g. 112,000 or other official emergency number).  
Emergency numbers vary by location,
- ❹ Press the  key.

If certain features are in use (Keyguard, Locking, Call Barring etc.), you may first need to turn those features off before you can make an emergency call. Consult this document and your local cellular service provider.

When making an emergency call, remember to give all the necessary information as accurately as possible. Remember that your cellular phone may be the only means of communication at the scene of an accident - do not cut off the call until given permission to do so.

## Using This Guide

The phone described in this guide is approved for use in digital cellular networks.

A number of features included in this guide are called Network Services. They are special services provided by cellular service providers. Before you can take advantage of any of these Network Services, you must subscribe to the service(s) you require from your home service provider. You can then activate these functions as described in this guide.

The manual activation commands for various services are not presented in this guide (e.g. using \* and # characters for activating or deactivating services). The phone nevertheless is capable of handling commands given in that form. For these commands please consult with your service providers.

### **Warning!**

**This apparatus is intended for use when supplied with power from ACH-4, ACP-3, LCH-2, or CHH-2. Other usage will invalidate any approval given to this apparatus and may be dangerous.**

**Use only accessories approved by the phone manufacturer. The use of any other types will invalidate any approval or warranty applying to the telephone, and may be dangerous.**

**When you disconnect the power cord of any accessory, grasp and pull the plug, not the cord.**

## NOTE ABOUT THE SECURITY CODE

You can find the security code of your phone in a red envelope in the sales package. Keep the code in a safe place.

## 2. Keys, Display and Connectors

### KEYS

To operate this phone, keys are pressed one at a time. Two keys are never to be pressed simultaneously. More detailed information on each key is given later in this guide.

Ⓚ

Switches the phone on and off.

### Selection Keys

The function of each key depends on the text shown on the bottom line of the display. For more information, see Selection Keys below.

### ABC

Switches between alpha mode and numeric mode. In the menu facility, this key produces a help text on the current function.

C

Deletes characters and exits the menu facility and memory functions.

▲ ▼

These keys are used to scroll through menus, submenus or settings. They are also used to browse through memory locations.

Dials a phone number and answers a call. With the display clear, this key recalls the most recently dialed number.

Ends a call.

### 0 - 9 wxyz

Number and alpha keys. Pressing and holding the 1<sup>st</sup> key calls your voice mailbox.

### \* #

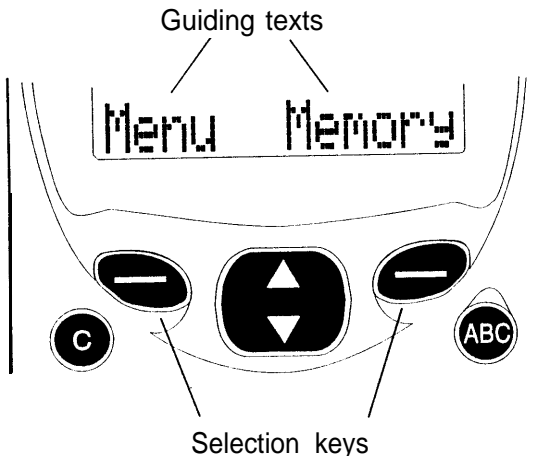

Used for special purposes in certain functions.

### Side Buttons

The upper button increases and the lower button decreases earpiece volume.

## SELECTION KEYS

Below the display there are two keys called 'selection keys'. The functions of these keys vary according to the guiding texts at the bottom of the display.

For example, the **Menu** selection key (key under the text Menu) gains access to the menu functions and the **Memory** selection key (key under the text Memory) to the memory functions.

Assume you want to switch off the phone's lights. The lights can be adjusted in the Phone Settings - Lights submenu (Menu 4 01 ). For more information on menu functions, see chapter Menu Functions.

- ❶ Press the **Menu** selection key to enter the menu facility.
- ❷ Press ▼ four times to reach the *PHONE SETTINGS* menu.
- ❸ Press the **Select** selection key to enter the menu.
- ❹ Press ▼ once to reach the *LIGHTS* submenu.
- ❺ Press the **Select** selection key to enter the submenu.
- ❻ Press ▼ once to select *Off* (lights off).
- ❼ Press the **OK** selection key to store the setting in your phone's memory.

Another example: assume you want to save a name and phone number in the SIM card's or phone's memory.

- ❶ Press the **Memory** selection key.
- ❷ Key in the name.
- ❸ Press the **Save** selection key.
- ❹ Key in the phone number.
- ❺ Press the **Save** selection key.
- ❻ Press the **OK** selection key to save the name and phone number into the memory location suggested by the phone.

## DISPLAY INDICATORS

The phone's display is provided with a series of indicators which inform you about the operation of the phone.

- A or B* Indicates the memory which is selected currently.  
“A” refers to the SIM card memory and “B” to the phone’s internal memory
- D* Indicates that a data call is in progress.
- △* The phone is used in other network than your home network.
- ☎* A call is in progress.
- 📶 and bar* Indicates the current signal strength at your location. The higher the bar, the better the signal. When the antenna is not visible, you are outside the network’s service area.
- 🔋 and bar* Indicates how much charge there is left in the battery. The higher the bar, the more charge in the battery.

**ABC.** Indicates that your phone is in alpha mode (letters as well as digits can be entered).

**Steady:** You have received a short (SMS) message.

**Flashing:** Message memory is full.

Indicates one of the following: memory location, menu, submenu or setting option.

This function is not available.

Indicates that there is a list of options to select from. This pointer also indicates the currently selected option,

## CONNECTORS

- 1 For cigarette lighter adapter and fast travel charger.
- 2 Power connector for desktop charger CHH-2.
- 3 System and data connector for accessories, desktop chargers and HF car kit.
- 4 For external antenna.

## 3. Getting Started

### QUICK START

If you have a fully charged battery and a miniature SIM card at hand, to get the phone ready for use quickly do as follows:

- ① Remove the battery. (See The SIM Card in this chapter.)
- ② Install the SIM card. (See The SIM Card.)
- ③ Install the battery. (See The SIM Card.)
- ④ Switch on the phone by pressing and holding the  key for a second. A tone is heard and the phone backlight will come on.
- ⑤ If the phone requests the PIN code (delivered with the SIM card), key it in and press the left selection key.
- ⑥ Check that the signal strength indicator (and the bar above it) and the operator's name are shown. Pull the antenna fully out for better reception.
- ⑦ Now the phone is ready for your first call:  
You can clear the display by pressing and holding the **C** key.  
Key in the area code and phone number of the person you wish to call.  
Press  to dial the number.  
Wait for the answer, then speak.  
After you have finished your conversation, press  to end the call.
- ⑧ If the texts on the display are not shown in English, do as follows:  
You can clear the display by pressing and holding the **C** key.  
Press the left selection key.

Press **▼** four times.

Press the left selection key.

Press **▲** once.

Press the left selection key.

Move the pointer (**▶**) to *English* with **▼** or **▲**.

Press the left selection key.

Press the **C** key to exit the function.

- ⑨ The phone can be set to show some or all of its menu functions. Do as follows:

Press the **Menu** selection key.

Press **▼** four times (*PHONE SETTINGS* appears).

Press the **Select** selection key.

press **▲** twice (*MENU LIST* appears)

Press the **Select** selection key.

Move the pointer (**▶**) to *Complete* (show all menu functions) or *Short* (show some menu functions) with **▼** or **▲**.

Press the **OK** selection key.

Press the **C** key to exit the function.

Please read the previous chapter Keys, Display Indicators and Connectors carefully.

Pay special attention to the section on the selection keys since the correct use of these keys is essential for the operation of your phone.

For more information on different menu functions, see chapter Menu Functions.

## THE SIM CARD

The phone can only be used with a valid miniature plug-in SIM card. The card is supplied by your network operator or service provider.

**Note:** The network operator or service provider may prevent the use of the phone with any other but the operator's or provider's own SIM cards. If an unacceptable SIM card is inserted, the message *INVALID SIM CARD* will be displayed. Should this happen, contact your dealer or network operator.

The SIM card contains all information (the phone number, etc.) the cellular network needs for identification of the network user.

In addition to the identification information required by the cellular network, the SIM card contains memory space for phone numbers and related names. This memory is called the SIM card memory (memory A). The memory in the phone is called the phone memory (memory B).

You may switch between the SIM card memory and the phone memory within Menu 8 1.

Switch off the phone and wait for a few seconds before removing or inserting the SIM card.

The SIM card and its contacts can be easily damaged by scratches or bending, so be careful when you handle, insert or remove the card.

**Note:** Keep all miniature SIM cards out of small children's reach.

## INSTALLING THE SIM CARD

Before installing the SIM card, switch off the phone (using ①) and remove the battery.

To remove the battery:

Press the catch on the top of the battery (1).  
Next, pull the battery back (2)  
and lift it away from the phone (3).

Open the cover of the SIM card reader by sliding it back (1).

Open the SIM holder by pulling the metal catch in the direction "Open" (2).

Lift the holder into vertical position (3).

Slide the card into the holder. Make sure that the bevelled corner of the card is uppermost (see the picture) and that you can see the gold contacts of the card.

Close the holder by pushing it towards the phone.

## Getting Started

Pull the catch gently in the direction “Lock” (1).

When you are sure that the holder is firmly engaged, slide the cover of the SIM card reader back into place (2).

Replace the battery:

Place the battery onto the rear of the phone (1).

Push the battery towards the catch until it clicks into place (2).

Make sure the battery is properly installed.

## CHARGING A NEW BATTERY

Your phone is powered by a rechargeable battery.

A new battery will provide full performance only after it has completely been charged and discharged two or three times.

To charge a new battery by using the fast travel charger ACH-4:

- 1 Install the battery.
- 2 Connect the lead from the charger to the bottom of your phone.

- ③ Connect the charger to an AC wall outlet. Segments of the battery indicator bar on the right-hand side of the display will start scrolling.
- ④ After the segments stop scrolling and the bar is entirely displayed, the charging is finished and the battery is ready for use.  
The charging time depends on the type of the battery and charger used.
- ⑤ Disconnect the charger from the AC outlet and the phone.

## USING THE BATTERIES

### Charging and Discharging the Battery

- A new battery's full performance is achieved only after two or three complete charge and discharge cycles!
- The battery can be charged and discharged hundreds of times but it will eventually wear out. When the operating time (talk-time and standby time) is noticeably shorter than normal, it is time to buy a new battery.
- Use only batteries approved by the phone manufacturer and recharge your battery only with the chargers approved by the manufacturer.  
When a charger is not in use, disconnect it from the power source.  
Do not leave the battery connected to a charger for longer than a week, since overcharging may shorten its life.  
If left unused a fully charged battery will discharge itself in about a week at room temperature.
- For good operation times, discharge the battery from time to time by leaving your phone switched on until it turns itself off (or by using the battery discharge facility of any approved

## Getting Started

accessory available for your phone). Do not attempt to discharge the battery by any other means.

- Temperature extremes will affect the ability of your battery to charge: it may require cooling or warming first.

### Note:

- Use the battery only for its intended purpose.
- Never use any charger or battery which is damaged or worn out.

- Do not short circuit the battery. Accidental short circuiting can occur when a metallic object (coin, clip or pen) causes direct connection of the + and - terminals of the battery (metal strips on the back of the battery), for example, when you carry a spare battery in your pocket or purse. Short circuiting the terminals may damage the battery or the connecting object.

- Leaving the battery in hot or cold places, such as in a closed car in summer or winter conditions, will reduce the capacity and lifetime of the battery. Always try to keep the battery between 15°C and 25°C (59°F and 77°F). A phone with a hot or cold battery may temporarily not work, even when the battery is fully charged. NiMH batteries performance is particularly limited in temperatures below -10°C (14 F).
- If battery temperature exceeds 40°C the phone will not recharge the battery.
- Dispose of used batteries in accordance with local regulations. Recycle !  
Do not dispose of batteries in a fire !

## Battery Charge Indication

The vertical bar above the  indicator on the right of the phone display shows the charge level of the battery. The higher the bar, the more power left in the battery.

## Recharging a Battery

When the charge is low and only a few minutes of talk time remain, a warning tone will be heard and the message *BATTERY LOW* will be repeated at regular intervals on the display.

When the charge level becomes too low for operation, the *RECHARGE BATTERY* message will be displayed accompanied by a warning tone. If you do not connect the phone to a charger, the phone automatically switches itself off.

**Note:** If the tones have been switched off, only the display messages will appear.

Connect your phone directly to a charger or place it in the charging stand with the phone switched on or off. The *CHARGING* message starts blinking when the phone is switched on.

If the phone is switched off, only a short tone is heard.

If you use any other charger than the fast travel charger ACH-4 or cigarette lighter charger LCH-2 and the phone is provided with a plastic cap protecting the phone's connectors, first remove the cap and then connect the charger. After charging, replace the cap.

In some vehicles the ignition must be on in order to charge the phone with the cigarette lighter adapter.

Whilst charging, the bar indicating the charge level will scroll.

The battery is fully charged when the scrolling stops, the bar appears entirely and the *BATTERY FULL* message is briefly displayed. Note that the message is not shown if the phone has been connected to the charger with the power switched off.

If the *NOT CHARGING* message is displayed, the charging is suspended. Check that the battery has not overheated (over 40°C). Wait for a while, disconnect the charger, connect it again and retry. If charging still fails, contact your dealer.

In all cases, the phone maybe used during charging. However, the charging process will be suspended for the duration of the call.

### **Charging Time**

Typical charging time with all chargers for an empty 550 mAh battery (BBH-I S) is about one hour. For charging times of other batteries, refer to the phone's Accessory documentation.

### **Operation times**

The operation time and the life time of a battery are greatly affected by how you handle it. Take good care of the battery.

Less power is consumed when the phone is used near to the cellular network's base station.

Keeping the antenna fully extended whenever possible will maintain the connection to the network with less power.

The operation times are greatly affected by the signal strength of the cellular network and the parameters set by the network operator.

## SIGNAL STRENGTH

Your phone sends and receives radio signals. As with all radio equipment, the quality of radio reception entirely depends on the strength of the radio signal in your area.

The strength of the cellular signal is shown by the vertical bar above the  indicator on the left-hand side of the display: the higher the bar, the better the signal at your location.

When  is not shown, you are outside the network's service area and cannot make or receive calls with the phone.

If the signal strength is not good, you can try to improve call quality by moving the phone slightly. When using the phone in a building, reception may be better near a window.

## ACCESS CODES

There are several access codes that are used by your phone and its SIM card. These codes allow you to protect against unauthorised use of the phone and the SIM card.

When requested to do so, key in the code (appears as asterisks) and press the **OK** selection key. If you make a keying mistake, you can erase the entered digits one by one by pressing the **C** key repeatedly.

**Note:** Avoid using access codes similar to emergency numbers such as 112 to prevent accidental dialling of the emergency number.

## SECURITY CODE (5 digits)

The security code comes with your phone. The setting of the Security Level function in Menu 5 2 determines whether the code is requested. The security code allows access to all the

phone's memory functions. Keep it, therefore, secret and in a safe place, separate from the phone.

If you key in an incorrect security code (CODE ERROR) five times in succession, the phone will not accept new tries for the next five minutes.

The security code can be changed within Menu 5 6 1.

### **PIN CODE (4 to 8 digits)**

The PIN (Personal Identity Number) code is supplied with the SIM card.

When the PIN code request is enabled within Menu 51 (PIN Code Request), the code is required each time the phone is switched on,

If you enter a wrong PIN code three times in succession, the PIN code is disabled and cannot be used any more.

When you see the prompt *Enter PUK code*, key in the PUK code (see below) and press the **OK** selection key. Next, enter a new PIN code at the prompt *Enter new PIN:* and press the **OK** selection key. Finally, enter the new code again at the prompt *Verify new code:* and press the **OK** selection key.

The PIN code can be changed within Menu 562. The PIN code request must be turned on to change the code.

### **PIN2 CODE (4 to 8 digits)**

The PIN2 code is supplied with some SIM cards.

The PIN2 code is required to access some functions, such as charging unit counters, which must be supported by the SIM card.

If you enter a wrong PIN2 code three times in succession, the PIN2 code is disabled and cannot be used any more. To change the code, follow the same procedure as for the PIN code.

The PIN2 can be changed within Menu 5 6 3.

### **PUK CODE (at least 8 digits)**

The PUK (Personal Unblocking Key) is supplied with the SIM card.

The code is required when you want to change a disabled PIN code.

If you enter a wrong code ten times in succession, you cannot use the SIM card any more. Contact your network operator for a new card.

You cannot change the PUK code. If you lose the code, contact your network operator.

### **PUK2 CODE (at least 8 digits)**

The PUK2 code is supplied with some SIM cards.

The code is required when you want to change a disabled PIN2 code.

If you enter a wrong code ten times in succession, you will not be able to access the functions which require the PIN2 code. To utilise these functions, contact your network operator for a new card.

You cannot change the PUK2 code. If you lose the code, contact your network operator.

### **BARRING PASSWORD (4 digits)**

The barring password is required by the Call Barring network service only. You obtain the code from your network operator when you subscribe to the service.

The password can be changed within Menu 5 6 4.

## 4. General Functions

### SWITCHING ON

- Extend the antenna fully. The phone will not work properly with a partly extended antenna.
- Slide the antenna in when you are not using the phone.
- As with any other radio-transmitting device, avoid unnecessary contact with the antenna when the phone is switched on.

- ❶ Press and hold the **1** key for one second.  
If there is no SIM card fitted in the phone, you will be prompted to insert it. Switch off the phone and insert the card (see *Installing a SIM Card* in the previous chapter).
- ❷ If the *PIN code request is enabled within Menu 5 1*:  
The phone will ask for the PIN code of the SIM card. Key in the code (appears as asterisks) and press the **OK** selection key.  
If the code was correct, the message *CODE ACCEPTED* will appear. (If the code was not correct, see *Access Codes* in the previous chapter).
- ❸ *With a SIM card which has not been used with the phone before, note the following:*  
If the security level is set to *Phone*, the phone will ask for the security code of the phone. Key in the code and press the **OK** selection key.

For more information on different security levels, see *Security Options - Security Level (Menu 5 2)* in chapter *Menu Functions*.

**Note:**

You can find the security code in a red envelope in the sales package of your phone.

- ④ A welcome message will appear, if programmed within Menu 91. If you do not want this message to be displayed next time, delete it by pressing the **Erase** selection key. If you want to retain the message for later use, press the **Keep** selection key.  
For more information on welcome messages, see Welcome Note (Menu 9 1) in chapter Menu Functions.
- ⑤ If you are in the service area of a cellular network which can serve you, the name of the network operator and the **Y** indicator will appear. The phone is now ready for use.

Please read carefully Security Level (Menu 5 2) in chapter Menu Functions and then select the desired security level.

If the phone does not work with the newly inserted SIM card, see The SIM Card in chapter Getting Started.

The phone can make and receive calls only when it is switched on, has a valid SIM card fitted and is located in the service area of the cellular network (**Y** is shown). However, emergency calls to the international emergency number 112 can usually be made without the SIM card. Check with your network operator.

Note; When the phone loses contact with the network, you can try to re-establish the contact by pressing any key of the phone. If this has no effect, enter the menu Network Selection (Menu 7) and perform automatic or manual network selection. See Network Selection (Menu 7) in chapter Menu Functions.

## SWITCHING OFF

- ① Press and hold the@ key for a second.

## MAKING A CALL

- 1 Key in the area code and the phone number of the person you wish to call.
  - If you make a mistake, you can delete the digits one by one by pressing the **C** key repeatedly or clear the whole display by pressing and holding down the **C** key.
- 2 Press the  key to dial the phone number, The  indicator will come on and the text *CALLING* and the dialled number will be displayed.
  - If you want to cancel the call, press .
- 3 When the phone number disappears and the text *CALL 1* is shown, the call is connected. Wait for the answer, then speak.
  - To view the duration of the call, press **Menu 6 1 1**.
  - To alter the volume of the phone's earpiece, use the two buttons on the side of the phone. The upper button increases the volume and the lower button decreases it.
  - To mute the phone's microphone, press and hold the **Menu** selection key for a second, press  or  to move the pointer to *Mute* and press the **OK** selection key. To unmute the microphone, follow the same procedure but select *Unmute* instead.
- 4 End the call by pressing .

### Dialling a phone number by using an associated name

If you have stored a phone number with a name in a standard memory location (see Storing a Phone Number With a Name in chapter Memory Functions) you can dial the phone number by simply keying in the name and pressing .

- 1 Press the **ABC** key to enter alpha mode.

- 2 Key in the name you stored with the phone number that you want to dial. You don't need to key in the whole name if there is only one name beginning with the same letter(s).  
For more information on keying in a name, see Keying in a Name in chapter Memory Operations.

- 3 Press .

If the name keyed in could not be found, the message *NAME NOT FOUND* will appear.

### International Calls

If you insert a + character in front of the country code, you don't need to know the international access code of the country where you are using the phone.

- 1 Press the ★ key twice quickly, A + character will appear.
- 2 Key in the country code, area code and phone number of the person you wish to call.
- 3 Press  to call the number,

### Making a call while you have a call in progress

You may have up to two calls in progress at the same time (network service). Of these two calls, one will be active (the person *you* are calling can hear you) and the other on hold (the person cannot hear you).

One of the calls maybe a conference call where up to five persons may participate at a time.

For subscription to this function, contact your network operator.

- 1 During a call, key in or recall from memory the other phone number that you want to call.

- ② To put the first call on hold, press and hold the **Menu** selection key for a second, move the pointer to *Hold* and press the **OK** selection key.
- ③ Press  to dial the phone number.  
As the call attempt is made (*CALLING* is shown), you may cancel the new call by pressing the **Drop** selection key.
- ④ To make the held call active and to put the active call on hold, press  (with the display clear of characters).  
Alternatively:  
Press and hold the **Menu** selection key for a second, move the pointer to *Swap* and press the **OK** selection key.
- ⑤ To end the active call, press and hold the **Menu** selection key for a second, move the pointer to *Drop call* and press the **OK** selection key. Note pressing  will end both of the calls.
- ⑥ To make the held call active, press and hold the **Menu** selection key for a second, move the pointer to *Unhold* and press the **OK** selection key.  
Alternatively: Press  (with the display clear of characters).

## Making a conference (multiparty) call

A conference call is a call where up to five persons can take part (network service). To create a conference call:

- ① Make a call to the first participant that you wish to take part in the conference call (key in the phone number or name and press ).
- ② Once this person has answered the call, make a call to the second participant in the normal way.  
The first call is automatically put on hold.
- ③ Wait until this second person answers the call.
- ④ To join the first participant in the call, press and hold the **Menu** selection key for a second, move the pointer with

▼ or ▲ to *Join* and press the **OK** selection key.  
Now all the participants can hear each other.

- 5 If you want to include a new person, make a call to this person in the normal way, press and hold the **Menu** selection key for a second, move the pointer to *Join* with ▼ or ▲ and press the **OK** selection key.  
Repeat this operation once more if necessary.

- 6 You can have a private conversation with one of the call participants.

- First, press and hold the **Menu** selection key for a second, move the pointer to *Private* and press the **OK** selection key.

A list of call participants will appear.

- Next, press ▼ or ▲ to move the pointer to the desired person and press the **OK** selection key.  
Now you can talk privately with that person.

The other participants can continue to converse with each other.

- Once you have finished the private conversation, return to the conference call: press and hold the **Menu** selection key for a second, move the pointer to *Join* and press the **OK** selection key. All the participants can now hear each other.

- 7 You can drop individual participants from the conference call.

- First, separate the participant from the call (press and hold the **Menu** selection key for a second, move the pointer to *Private* and press the **OK** selection key).

- Next, press and hold the **Menu** selection key for a second, move the pointer to *Drop call* and press the **OK** selection key.

- Finally, press and hold the **Menu** selection key for a second, move the pointer to *Unhold* and press the **OK** selection key.

⑧ End the conference call by pressing .

## RECEIVING A CALL

When somebody is calling you, the phone will give a ringing tone and the indicator light on the top of the phone and the text *CALL* text on the display will flash.

If the caller can be identified, the caller's phone number (or name if stored in memory) and the text *CALLING* will be displayed instead.

If you have selected *SILENT SERVICE* within Menu 12, only the keypad and display lights will flash.

You can answer the call any time, even while using the memory or menu functions.

### To answer a call:

① Press any key except for ① volume keys or .

② After the conversation end the call by pressing .

If you do not want to answer the call, you can reject it by pressing .

### To answer a call while you have a call in progress

When you have enabled the Call Waiting function in Menu 4 11, the phone will notify you of new incoming calls (this is a network service):

① *if your network allows you to view the caller's phone number:*

The caller's phone number and the text *WAITING* will be displayed. If the phone number is stored in your phone's

memory with a name, the name will be shown instead.

*If your network does not allow you to view the caller's phone number:*

The text *WAITING CALL* will be displayed.

- ② To answer the incoming call, press . Alternatively: *press and hold the **Menu** selection key for a second, move the pointer to *Swap* and press the **OK** selection key.* The old call is automatically put on hold.
- ③ To alternate between the two calls (i.e. put the active call on hold and make the held call active), press . Alternatively: Press and hold the **Menu** selection key for a second, move the pointer to *Swap* and press the **OK** selection key. The text *SWAPPED* is displayed briefly,
- ④ If you want to create a conference call, press and hold the **Menu** selection key for a second, move the pointer to *Join* and press the **OK** selection key.
- ⑤ To end the active call, press and hold the **Menu** selection key for a second, move the pointer to *Drop call* and press the **OK** selection key.  will end both of the calls.
- ⑥ To make the held call active, press and hold the **Menu** selection key for a second, move the pointer to *Unhold* and press the **OK** selection key.

### **To answer a call while you have a conference call in progress:**

- ① Press  to answer the incoming call. Alternatively: Press and hold the **Menu** selection key for a second, move the pointer to *Swap* and press the **OK** selection key. The conference call is automatically put on hold.

- 2 If you want to include the new caller in the conference call, press and hold the **Menu** selection key for a second, move the pointer to *Join* and press the **OK** selection key.
- 3 To end the conference call, press  .

## ADJUSTING THE EARPIECE VOLUME

You can alter the volume of the phone's earpiece by using the keys on the side of the phone, even during a call. The upper key increases the volume and the lower key decreases it.

## SPEED DIALLING

Speed dialling is a handy way to call frequently-used phone numbers.

You can speed dial phone numbers from standard memory locations 1 to 9 of the currently selected memory.

Speed dialling is not possible during a call.

- 1 Key in the number of the memory location where you have stored the phone number.  
If you speed dial from the notepad memory, key in # first and then the notepad location number.
- 2 Press  .  
The phone will recall the phone number from the given location, display it briefly, and then dial it.

If the memory location is empty, the message *LOCATION EMPTY* (in numeric mode) will be displayed.

## LAST NUMBER REDIAL

The phone stores every phone number you dial, i.e. call or attempt to call. However, only the last ten phone numbers (and associated names) can be stored in the phone's memory at a time.

### To redial the last dialed number

- ❶ If there are any characters on the display, clear the display by pressing and holding the C key.
- ❷ Press .
- The last dialed number appears on the display.
- ❸ Press  to dial the number.

### To dial any of the ten last dialed numbers:

- ❶ Press .
- ❷ Scroll the numbers with  or  until the desired number is displayed.
- ❸ To dial the number, press  again.

Also see Recent Calls - Dialed Calls (Menu 01 1) in chapter Menu Functions.

## ONE TOUCH DIALLING

If the One Touch Dialling function in Menu 4 7 is enabled, you can dial a phone number stored in one of the memory locations 2 to 9 by pressing and holding the proper number key.

**Note:** Pressing and holding the 1  key will call your voice mailbox. For more information, see Setting Your Voice Mailbox Number (Menu 2 4 5) in chapter Menu Functions.

For instance, to dial a phone number stored in location 8:

- 1 Press and hold the **8tuv** key for one second.  
The call is initialized (, the text *CALLING* and the dialled phone number will appear on the display).

Also see Phone Settings - One Touch Dialling (Menu 4 7) in chapter Menu Functions.

## KEYPAD LOCK (KEYGUARD)

The keypad lock or 'keyguard' prevents the keys being accidentally pressed when the phone is, for example, in your pocket.

### To lock and unlock the keypad:

- 1 Press the **Menu** selection key and then the **★** key within two seconds.

The keypad can be locked or unlocked even during a call.

When the keypad lock is on:

- Calls may be possible to the emergency number programmed into your phone (e.g. 112 or other official emergency number).  
Key in the number and press  .  
The number will be displayed only after you have keyed in all of its digits,
- To answer a call, press .
- During a call the keypad remains unlocked and the phone can be operated in the normal way.
- To end the call, press .
- After the call the keypad lock is automatically turned on.

- The keypad lock will be automatically turned off when the phone is switched off or when the phone is connected to a car kit.

When the phone is removed from the car kit, without being switched off previously, the keypad will be automatically locked again.

## 5. Memory Functions

Your phone provides numerous memory locations for storing phone numbers and corresponding names.

### STANDARD MEMORY LOCATIONS

The phone utilises either the memory locations on the SIM card (indicated by “A” in the upper left corner of the display) or those built in the phone (indicated by “B”).

You may change between the SIM card memory (A) and the phone memory (B) within Menu 8 1.

### SIM Card Memory

The number of standard memory locations available on SIM cards varies from one card to another. Same applies to the length of names and phone numbers which can be stored in the memory locations,

If the name or phone number you try to store is too long for the SIM card, the message *NUMBER (or NAME) TOO LONG, MAX=nn* will appear, where *nn* is the maximum number of characters that a memory location can hold.

### Phone Memory (locations 1 to 125)

Your phone provides 125 standard ('normal') memory locations numbered from 1 to 125. Each of the locations can hold a name of up to 20 characters and a phone number of up to 30 digits.

### LOCATIONS FOR AUTOMATICALLY STORED PHONE NUMBERS

The phone automatically registers the phone numbers described below.

The phone will also store the name associated with the

phone number if this can be found in one of the standard memory locations.

To delete these phone numbers, see Recent Calls - Erase All Recent Calls (Menu 01 4) in chapter Menu Functions.

### **Last Dialed Numbers (locations L0 to L9)**

The phone stores the last ten phone numbers that you have dialed in memory locations L0 to L9. The location number is shown in the upper right corner of the display.

To review these phone numbers, either:  
press  (with the display clear), use  or  to scroll through the phone numbers. (pressing the **ABC** key will show the associated names, if any available.)

Or: Press **Menu 0 1 1**, press  or  to scroll through the phone numbers.

(Pressing the **ABC** key will show the associated names, if any available.)

### **Last Received Calls (locations A0 to A9)**

The phone can store phone numbers of the last ten callers, providing the function is supported by your network and the calling phones provide their phone numbers.

Note that you can prevent your phone number (and name) from being revealed to the receiver, if your network allows this, in Menu 4 10.

To review the phone numbers:

Press **Menu 0 1 2**, press  or  to scroll through the phone numbers.

(Pressing the **ABC** key will show the associated names, if any available.)

### **Last Missed Calls (locations U0 to U9)**

The phone can store the last ten phone numbers of unsuccessful call attempts, providing the function is supported by

your network and the calling phones provide their phone numbers.

Note that you can prevent your phone number from being revealed to the receiver, if your network allows this, within Menu 4 10.

If you have missed new calls since you last checked the phone numbers:

- ❶ With the number of new unanswered calls on the display, press the **List** selection key to view the phone numbers. If you would rather view the phone numbers later in the Missed Calls submenu, press the **Quit** selection key.
- ❷ Scroll through the phone numbers with **▼** or **▲**.
- ❸ Press the **ABC** key for corresponding names, if available.

To review the phone numbers later:

Press **Menu 0 13**, press **▲** or **▼** to scroll through the phone numbers.

(Pressing the **ABC** key will show the associated names, if any available.)

## **NOTEPAD MEMORY LOCATIONS**

The phone also provides ten 'notepad' memory locations. In these locations you can temporarily store a phone number and a corresponding name, e.g. during a call.

To erase the phone numbers stored in the notepad memory, see Recent Calls - Erase All Recent Calls (Menu 01 4) in chapter Menu Functions.

To store a phone number with a corresponding name into the notepad memory:

- ❶ Press the **Memory** selection key.
- ❷ Key in the name (you are now in alpha mode).

- ③ Press the **Save** selection key.
- ④ Key in the phone number.
- ⑤ Press the **Save** selection key.  
The message *SAVE IN LOCATION* and the number of the first empty memory location will appear.
- ⑥ *To store the name and phone number in this suggested notepad location:* Press the **#** key.

*To store the name and phone number in some other notepad location:*

Press the **#** key followed by the desired notepad location number (the old contents of the location will be overwritten).

- ⑦ Press the **OK** selection key.

To review the contents of the notepad memory:

- ① Press the **#** key.
- ② Scroll through the phone numbers with **▼** or **▲**. Press the **ABC** key for corresponding names.
- ③ With the desired phone number and name on the display, you can store them into a standard memory location in the normal way.

## KEYING IN A NAME

- ① If in numeric mode, press the **ABC** key to select alpha mode.  
The *ABC* indicator is displayed. Now you can key in letters and special characters as well as numbers.
- ② Press the key that has the desired character (see list below). If the character that you want is not the first to be displayed, press the key again within one second (before the cursor appears) to display the next character. Keep pressing the key until the desired character appears.

- If you miss a character, keep pressing the key until it appears again; or first press the **C** key and then start pressing the key again.
  - If you want a lower case character, press and hold a key until the character appears in lower case. All further letters will appear in lower case until a key is pressed and held once again.
  - To enter a space between characters, press the # key.
  - To correct a mistake, press the **C** key.
- ③ Once the desired character is on the display and you want to enter a new character, do either of the following:
- Wait one second if the next required character is located on the same key as the present one. The vertical cursor will appear to the right of the character just pressed. Select the desired character.  
Alternatively: Press the ★ key and select the character.
  - If the next required character is located on some other than the previously pressed key, pressing the new key will move the cursor along to the next position and the first character on the key will appear. Select the desired character.
- ④ To exit alpha mode, press the **ABC** key.
- ⑤ Store the phone number and the name in memory.  
See Storing a Phone Number with a Name in this chapter.

For instance, to key in Ann Fox:

- Press the **2abc** key (for A).
- Press **6mno** twice (for N) and hold the key until the character appears in lower case (n).
- Press the ★ key.
- Press **6mno** twice (for n).

- Press # (for a space).
- Press **3def** three times (for 9 and hold the key until the character appear in upper case (F)).
- Press **6mno** three times (for O) and hold the key until the character appears in lower case (o).
- Press **9wxyz** twice (for x).

The characters available are shown below:

Key	Characters
1 $\infty$	-? !, . : " ' & \$ £ ( ) / % @ 1
2abc	A B C 2 Ä Å À Á Ã Ä Æ Ç
3def	D E F 3 È É Ê Ë
4ghi	G H I 4   Í Î
5jkl	J K L 5
6mno	M N O 6 Ñ Ö Ò Ó Ô Ø
7pqrs	P Q R S 7 ß
8tuv	T U V 8 Ü Ù Ú Û
9wxyz	W X Y Z 9
0	0
#	a space

**Note:**

In alpha mode, the numeric characters available for each key are only for use with names. You cannot use the characters as ordinary phone numbers.

## STORING A PHONE NUMBER WITH A NAME

- ❶ Press the **Memory** selection key.
- ❷ Key in the name (of up to **20** characters) that you want to store with the phone number.  
For details, see Keying in a Name in this chapter.  
**Note:** On some SIM cards the name length is limited to 20 or less characters.
  - If you do not want to store a name with the phone number you can skip this step.
- ❸ Press the **Save** selection key.
- ❹ Key in the country code (if necessary), area code and phone number.
  - If you store a + character (press the **\*** key twice) in front of the country code, you can use the same phone number abroad. The cellular network will automatically add the international access code of the country from which you are trying to call.
- ❺ Press the **Save** selection key.  
The message *SAVE IN LOCATION* and the number of the first empty memory location will appear (in the top right corner of the display).
- ❻ Press the **OK** selection key to accept the suggested memory location.

To store the information in some other location, key in the desired location number and press the **OK** selection key.  
Or: Reach the desired location with **▼** or **▲** and press the **OK** selection key.

Or:

- ❶ Key in the phone number.
- ❷ Press the **ABC** key to select alpha mode.

- ③ Key in the name.
- ④ Press the **Memory** selection key.
- ⑤ Press the **Save** selection key.
- ⑥ Press the **OK** selection key or first key in the desired location number and then press the **OK** selection key.

**Note:** A name can be stored only in one location of the selected memory (SIM card or phone memory). However, you may have the same phone number stored with different names.

### Storing a name and phone number in the first empty memory location

- ① Key in the required phone number.
- ② Press the **ABC** key and key in the corresponding name.
- ③ Press and hold the **Memory** selection key.

### RECALLING A PHONE NUMBER FROM MEMORY

You may retrieve phone numbers and names from memory by the number of the memory location where the information is stored or by the name with which the required phone number was stored.

#### To recall a phone number (and name) by location number

- ① Key in the number of the memory location where the phone number (and name) is stored.
- ② Press the **Memory** selection key.
- ③ Press the **Find** selection key.  
The phone number will be displayed.

Press the ABC key to view the name stored with the phone number.

Or:

- 1 Key in the location number,
- 2 Press the # key.
- 3 Press the **ABC** key to view the associated name.

Alternatively you may scroll the locations:

- 1 Press ▼ or ▲.  
If you want the scrolling to start from a particular location, first key in the location number and then press ▼ or ▲.
- 2 Press the **ABC** key to view the associated name.

#### To recall a phone number by corresponding name:

- 1 Press the **Memory** selection key.
- 2 Key in the name or its first letter(s).
- 3 Press the **Find** selection key. The name closest to the keyed in characters will appear.
- 4 You may continue to scroll through the names with ▼ or ▲ until you reach the desired one.  
To review the phone number stored with the name, press the **ABC** key.  
The location number of the name and phone number is shown in the upper right corner of the display.

Alternatively:

- 1 Press the **ABC** key to enter alpha mode.
- 2 **Key** in the name or its first letter(s).
- 3 Press ▼ or ▲ The name closest to the keyed in characters will appear.
- 4 You may continue to scroll through the names with ▼ or ▲ until you reach the desired one.

To review the phone number stored with the name, press the ABC key.

**Note:** Both the names stored in the SIM card memory (memory A) and those stored in the phone memory (memory B) will be displayed when the security level is set to *None* or *Phone*. The names stored in the phone memory will appear first.

## ERASING THE CONTENTS OF A MEMORY LOCATION

You can erase single memory locations within Menu 8 4 (Memory Erasing Options) or by doing as follows:

- ❶ With the display clear, press the **Memory** selection key.
- ❷ At the prompt *Name:*, press the **Save** selection key.
- ❸ At the prompt *Phone number:*, press the **Save** selection key again.
- ❹ Next, do one of the following:
  - Key in the name which is stored in the memory location that you want to erase.
  - Select the desired name with ▼ or ▲.
  - Press the ABC key and key in the memory location that you want to erase.
  - Press the ABC key and use ▼ or ▲ to reach the memory location that you want to erase.
- ❺ Press the **Erase** selection key.

## 6. Menu Functions

The phone offers a set of functions which allow you to tailor the phone to your particular use. These menu functions are arranged in *menus* and *submenus* which can be accessed through the *menu facility*.

In each menu and submenu, you can check and alter the setting of a particular function.

The menus and submenus can be entered by scrolling (Menu Method) or using appropriate shortcuts (Shortcut Method).

Note that you can access the menu functions even during a call.

**You can** find a list of the menu functions at the back of this guide.

### MENU METHOD

- ❶ Press the **Menu** selection key to enter the menu facility. The display will read *View menu*.
- ❷ Press either **▼** or **▲** to scroll the list of menus until you reach the desired menu. **A** scrolls the list in reverse order.
- ❸ Press the **select** selection key to enter the menu.
- ❹ If the menu contains any submenus, reach the one you want with **▼** or **▲**.
- ❺ Press the **select** selection key. The current setting of the function is indicated by the pointer (**▶**).
- ❻ Press the **▼** or **▲** key to scroll the list of setting options until the pointer points to the desired option.
- ❼ Press the **OK** selection key to select the option. If you don't want to change the setting after all, you can return to the previous menu level by pressing the **Quit** selection key.

Pressing the **C** key or pressing and holding the **Quit** selection key will exit the menu facility.

## SHORTCUT METHOD

All the menus, submenus and settings are numbered. This index number is shown in the upper right corner of the display.

To access a menu function by its shortcut:

- 1 Press the **Menu** selection key.
- 2 Key in the number of the menu function you want to access before the two short lines ( \_ \_ ) in the upper right-hand corner disappear.

To access a submenu function by its shortcut:

- 1 Press the **Menu** selection key.
- 2 Key in the number of the main menu under which the desired submenu is located.
- 3 Key in the number of the submenu where the function can be found before the *View options* text appears.
- 4 Key in the number of the desired setting option before the short line ( \_ ) in front of the current option number disappears.

For instance, to select the ringing volume level 2 (option 2 in Menu 4 2):

Press the **Menu** selection key (to enter the menu facility), 4 (to enter the Phone Settings menu), 2 (to enter the Ringing Volume submenu), 2 (to select ringing level 2).

## HELP TEXTS

Most menu functions are provided with a help text which gives a brief description of the displayed function.

- ❶ Press the **Menu** selection key to enter the menu facility.
- ❷ Scroll the menus with V or A until you reach the desired function.
- ❸ Now you can view the help text of the function in two ways.
  - Either:

Wait for 5 seconds. The first page of the help text will appear. The text is scrolled automatically.  
(If you press the ABC key, you can continue the scrolling manually. Pressing the **Quit** selection key will exit the text.)  
Once all the pages have been scrolled, the name of the function will be displayed again.
  - Or:

Press the **ABC** key. The first page of the help text will appear.  
For additional pages, press the **ABC** key as many times as necessary.  
Once you have read the text, either press the **Select** selection key to enter the function or press the **Quit** selection key (or the **ABC** key if you are on the last page of the text) to return to the title screen.

While reading a help text, you can move to the next or previous menu function by pressing ▼ or ▲ .

## NETWORK SERVICES

Some of the menu functions are network services. These functions can be utilised only if provided by your cellular network.

To make use of a network service, you must first subscribe to it. Note that a network service is specific to the SIM card for which you have subscribed it. If you change the SIM card and have not purchased the service for that card, you will not be able to utilise the service.

For availability and subscription, contact your network operator.

## DESCRIPTIONS OF MENU FUNCTIONS

The following pages explain how to access and operate each menu and submenu function. Note that only a shortcut is given for each function, You can also use the menu method to access the functions.

### RECENT CALLS (Menu 01)

Within this menu you can review and erase the phone numbers stored automatically by the phone.

Note that the Received Calls and Missed Calls functions are network services which work only in networks which allow you to view the caller's phone number.

### DIALLED CALLS (Menu 01 1)

The phone is able to store up to ten phone numbers you have dialled most recently.

Press **Menu 011**, use  $\nabla$  or A to scroll through the phone numbers.

### RECEIVED CALLS (Menu 01 2)

This function allows you to review the ten phone numbers from which you have been called.

Press **Menu 01 2**, use  or  to scroll through the phone numbers.

### **MISSED CALLS (Menu 01 3)**

This function allows you to review the ten phone numbers of people who have tried to reach you with no success. Press **Menu 01 3** and use  or  to scroll through the phone numbers.

**Note:** The phone only registers missed calls when it is switched on and it is used within the network's service area. When you have selected *DIVERT WHEN NOT ANSWERED* in Menu 3, the phone will regard the diverted calls as missed calls and will store the callers' phone numbers in the normal way.

### **ERASE ALL RECENT CALLS (Menu 01 4)**

This function lets you erase all the phone numbers which appear in Menu 01 1, Menu 01 2 and Menu 01 3 as well as those stored in the notepad memory.

To erase the temporarily stored phone numbers:  
Press **Menu 01 4**.

Caution: The phone numbers are erased without warning. You cannot undo the operation.

**Note;** The temporarily stored phone numbers are erased whenever you take into use a SIM card which is not included in the phone's SIM card list. The phone numbers are also erased when you change the security level. For more information, see Security Level (Menu 5 2).

## MESSAGES (Menu 2)

As well as making and receiving voice and data calls, the phone can also be used for recording and listening to messages in voice mailboxes and for sending and receiving short text messages ('SMS messages').

### Voice Messages

The voice mailbox feature may be either regarded as a network service or simply as a remote control for your personal answering machine. The use of a voice mailbox is simple: You make a call to the mailbox and listen to the messages you have received. The submenus specific to voice messages are Menu 2 1 (Listen to Voice Messages) and Menu 2 4 5 (Set Voice Mailbox Number).

### SMS Messages

The SMS (short message service) function is a network service and may not be supported by your network.

Before you can use this function, you must have the phone number of your message service centre available. Contact your network operator for details.

When you send an SMS message from your phone, the network's message centre tries to deliver the message to the receiving phone. If the recipient cannot be reached, the message is temporarily stored, for a pre-determined period of time, in the message centre and delivered to the recipient as soon as the receiving phone is available.

You may also ask the message centre to convert an ordinary SMS message into some other format such as fax or Email.

When your phone receives an SMS message, the message is stored in the area reserved for SMS messages in the phone or SIM card memory, depending on which one is currently selected.

The maximum length of an SMS message is 160 characters, The phone has space for five SMS messages of full length.

The submenus specific to SMS messages are all but Menu 2 1 and Menu 2 4 5 (see Voice Messages above).

### **SMS Message Indicators**

The  indicator at the top of the phone display shows if your phone has received any new messages and if there is any space left for new messages.

*When  is shown continuously:*

You have received new messages. There is still free space in the message memory.

*When  flashes:*

The message memory is full and you cannot receive any new messages. To delete unnecessary messages, see Viewing and Editing SMS Messages in this chapter.

### **CALLING YOUR VOICE MAILBOX (LISTEN TO VOICE MESSAGES - Menu 2 1)**

When you enter this function, the phone dials the phone number stored in Menu 2 4 5.

To check for new messages in your voice mailbox:

- ❶ Either: Press **Menu 2 1**.  
Or: Press and hold the **1∞** key.
- ❷ Key in the password of the mailbox, if required.
- ❸ Listen to the messages,
- ❹ End the call by pressing the  key.

## VIEWING AND EDITING SMS MESSAGES (READ MESSAGES - Menu 2 2)

When you receive an SMS message and there is enough space left in the message memory, the text *MESSAGE RECEIVED* and the  indicator will be displayed and a short tone will sound (if the phone's tones have not been set off within Menu 1 2).

When either of the vibration options (*RING AND VIBRATE* or *VIBRATE*) is selected in Menu 1 2, the phone will vibrate. The vibrating option is available only with a special battery.

### ❶ To read the message immediately:

Press the **Read** selection key.

### To read the message later

Press the **Quit** selection key. When you want to read the message, press **Menu 2 2** to enter this function. The number of new messages accompanied by the text *NEW MESSAGE(S)* will appear (also  is shown).

Press **▼** to view the first message.

- ❷ Scroll through the message with **▼** or **▲**. The messages are shown in the order that they were received or stored into memory.
- An unread message is indicated by the text *NEW*; followed by the date and time of receipt.
  - The text *OLD*: indicates that the message has already been read.
  - The text *OLD: OWN OR EDITED* indicates that the message was created or edited by you.
  - If the sender of the message could be identified, the sender's phone number (and name if stored with the

phone number in memory) will be displayed at the end of the message.

- With a message on the display, you may press a number key and then perform any memory or menu functions in the normal way, e.g. make a call to the sender of the message.

When you delete all characters from the display (press and hold the **C** key), the message will reappear.

- ③ Once you have read the message, you can press the **Option** or **Quit** selection key. The **Option** selection key allows access to a further set of functions. The **Quit** selection key returns to the previous menu level.
- ④ If you pressed the **Option** selection key, reach one of the following functions with **▼** or **▲** and press the **OK** selection key to perform it. The functions available are:

*Read next*

Shows the next message.

*Erase*

Deletes the current message from memory. Instead of using this function, you may first press the **C** key and then the **OK** selection key.

*Reply*

Sends a reply message to the sender of the displayed message. Key in your message. Press the **OK** selection key to send it.

*Cut number*

Copies the phone number from the current message onto the display from which you can then dial it or store it elsewhere. (Instead of using this function, you may press )

while viewing the message.)

You can dial the number or store it elsewhere in the normal way.

### *Edit*

Allows you to make changes in the message ▼ and ▲ move the cursor right and left, respectively, The number of available characters is shown in the upper right-hand corner of the display, You can delete single characters with the **C** key.

To save an edited message, press the **Option** selection key, move the pointer to Save and press the **OK** selection key.

### *Send*

Sends the message to a desired phone number. Key in the recipient's phone number and press the **OK** selection key.

- ⑤ When the last new message has been displayed, the  indicator will extinguish,

## **WRITING AND SENDING A MESSAGE (WRITE MESSAGES - Menu 2 3)**

- ① Press **Menu 2 3** to enter this function.
- ② Key in a message of up to 160 characters. The number of available characters is shown in the upper right corner of the display.
  - To include numbers in the message, press the **ABC** key to enter the numeric mode and key in the numbers. Pressing the **ABC** key again will bring you back to the alpha mode.
  - To delete characters one by one, press the **C** key. To delete all characters, press the **Option** selection

key, move the pointer to *Erase* and press the **OK** selection key.

- To insert a space, press the **#** key (in alpha mode).
  - To move the cursor left or right, press the **▲** or **▼** key. To scroll the message quickly, press and hold down either of these keys.
- ③ Once you have written the message, press the **Option** selection key to access a further set of functions.
  - ④ Select one of the following functions with **▼** or **▲** and press the **OK** selection key to perform the function. The functions available are:

#### *Send*

Sends the message. At the prompt *Phone number:*, key in the phone number of the recipient and press the **OK** selection key. If you have not specified the phone number of the message service centre within Menu 2 4 1, key it in now, and press the **OK** selection key.

#### *Save*

Stores the message in the message memory without sending it. To send the message later, use the Send function in Menu 2 2.

#### *Erase*

Deletes the message from the display. (10 remove a message from the message memory, use the Erase function in Menu 2 2.)

- ⑤ If you selected the *Send* function, the text *MESSAGE SENT* will appear after the message is delivered to the message service centre

## **MESSAGE SETTINGS (Menu 2 4)**

Under this submenu, a number of message options are available.

### **Setting the SMS Centre Number (Menu 2 4 1)**

In order to send SMS messages, the phone must know the phone number of your SMS centre. You can either set the phone number within this submenu or enter it when prompted to do so.

You will obtain the phone number from your network operator upon subscription to the SMS service.

- ❶ Press **Menu 2 4 1** to enter this function.
- ❷ Key in the phone number of the message service centre.
- ❸ Press the **OK** selection key.

### **Sending an SMS Message in Different Formats (MESSAGE SENT AS - Menu 2 4 2)**

The network may be able to convert your text message (Text) into one of the following formats: FAX, X400, *Paging*, *EMail*, *ERMES* or *Voice* (message synthesized from an SMS message).

The selected format will apply to all messages until you change it.

- ❶ Press **Menu 2 4 2** to enter this function.
- ❷ Move the pointer with **▼** or **▲** to the desired format and press the **OK** selection key.

In order to receive a converted message, the recipient must have an appropriate terminal device available. For example, the recipient must have a telefax machine or similar device

connected to the number you provide if you choose the FAX format.

### **Reply Messages At Your Expense (ACCEPT REPLY COST - Menu 2 4 3)**

This network service allows the recipient of your SMS message to send you a reply message at your expense.

The selected option will apply to all messages until you change it.

- ❶ Press **Menu 2 4 3** to enter this function.
- ❷ Move the pointer to Yes (reply at your expense) or No with **▼** or **▲**.
- ❸ Press the **OK** selection key.

### **Storage Time Of Outgoing Messages (MESSAGE VALIDITY - Menu 2 4 4)**

This network service allows you to set the time that the SMS messages, that you send from the phone, will be stored at the message service centre. If the receiving end cannot be reached within this period of time, the message will be deleted.

The selected option will apply to all messages until you change it.

If you wish to know the longest possible storage time (the Max. time setting), contact your network operator.

- ❶ Press **Menu 2 4 4** to enter this function.
- ❷ Move the pointer to the desired setting, e.g. 24 h, with **▼** or **▲** and press the **OK** selection key.

### **Setting the Voice Mailbox Number (Menu 2 4 5)**

Within this submenu you can set the phone number which is dialled when you enter the Listen to Voice Messages function in Menu 21 or press and hold the **1<sup>∞</sup>** key.

- ❶ Press Menu 2 4 5 to enter this function.
- ❷ Key in a new phone number or edit the existing one.
- ❸ Press the **OK** selection key to store the phone number.

**Note:** If your network uses separate phone numbers for listening to and storing messages in the voice mailbox, store here the number reserved for listening to messages. For calling the number reserved for storing messages, see Making a Call in chapter General Functions and Storing a Phone Number with a Name in chapter Memory Functions.

### CALL DIVERT (Menu 3)

The Call Divert network service allows you to direct your incoming calls to another phone number when you do not want to be disturbed, or when the phone is switched off or outside of the network service area.

- ❶ Press **Menu 3** to enter this function.
- ❷ Reach the desired divert mode with **▼** or **▲**.  
The modes available are as follows:

*DIVERT ALL CALLS* (Menu 3 1):  
All incoming calls are diverted.

*DIVERT WHEN BUSY* (Menu 3 2):  
Incoming calls are diverted only when your phone is busy.

*DIVERT WHEN NOT ANSWERED* (Menu 3 3):  
Incoming calls are diverted when you do not answer them.

*DIVERT IF NOT REACHABLE* (Menu 3 4):  
Incoming calls are diverted when your phone is switched off or outside of the network service area.

*CANCEL ALL DIVERTS* (Menu 3 5):

Set all divert modes off.

- ③ Press the **Select** selection key to select the mode.  
**Note:** If you selected *CANCEL ALL DIVERTS*, the steps which follow will not be available.
- ④ Press V or A to move the pointer to *Activate* (set divert mode on), *Cancel* (set divert mode off) or *Status* (shows call types which are being diverted).
- ⑤ Press the **OK** selection key.
- ⑥ Next, do one of the following:
  - If you selected *Activate* in step 4, the phone will ask for the phone number to which you wish the incoming calls to be diverted.

*Voice mail*

Calls will be diverted to the number defined in Menu 2 4 5.

*Other No.*

Calls will be diverted either to the phone number which was on the display when you entered the Call Divert menu or to the number that you enter now.

**Note:** If your network uses separate phone numbers for listening to and storing messages in the voice mailbox, key in here the number reserved for storing messages.

Move the pointer to the desired option with **▼** or **▲** and press the **OK** selection key.

If you selected *Other No.*, either press the **OK** selection key to divert the calls to the displayed phone number; or edit the existing number first, and then press the **OK**

selection key. If no phone number is displayed, key it in now and press the **OK** selection key.

The phone calls the network operator and asks it to activate the selected divert mode (*REQUESTING...*). After receiving a response, the phone will end the call automatically, and the message *DIVERT ACTIVE* will appear.

- If you selected *Cancel in* step 4, the selected divert mode is set off. The phone calls the network operator and requests that the selected divert mode be set off. The message *DIVERT CANCELLED* will appear.
- If you selected *Status* in step 4, the phone will indicate the call types (e.g. voice call, data call, fax call) to which the currently selected divert mode applies or can be applied.  
With the text *View list* on the display, use ▼ or ▲ to select the required call type.

Next, press the **Detail** selection key, Two further options, *To number* and *Delay*, will appear.

The *To number* option shows the phone number to which the calls are currently diverted.

The *Delay* option can be used only when you have selected the mode *Divert When Not Answered*. This option indicates the period of time within which your incoming calls, if left answered, are diverted.

Move the pointer with ▼ or ▲ to either option and press the **OK** selection key.

The phone number and the delay time will remain on the display for awhile so that you can check and write them down.

You can modify the phone number in this menu or by using a manual command string. The delay time can be

modified by a manual command string only (see the note below).

The activated divert mode and the specified phone number (and with the mode *DIVERT WHEN NOT ANSWERED*, the delay time) will apply to voice calls and all other call types. If you want to activate some other mode and set a different phone number (and delay time) for a single call type, you need to use manual command strings (see the note below).

When you make a call and a divert mode is selected (except for *CANCEL ALL DIVERTS*), the phone will display a text reminding you that your incoming calls will be diverted to another phone number. The text will appear only if your network operator supports this feature.

**Note:** Instead of using this menu function, you may set on and off different divert modes by using manual command strings.

In idle mode, key in a command string and press the  key to transmit it to the network. For required command strings, contact your network operator.

## PHONE SETTINGS (Menu 4)

### LIGHTS (Menu 4 01)

The keypad and display of the phone are fitted with lights to make them easy to read.

**When the phone is** used as a handportable phone or is connected to a charged

The setting determines whether the lights remain on for 15 seconds after the last keystroke or an incoming call alert (On) or remain permanently off (Off).

Note that the lights can be switched on by pressing the  key quickly even if Off is selected.

### **When the phone is connected to a handsfree car kit**

The lights always remain on (On) or extinguish after 15 seconds (Off).

Press **Menu** 401, use ▼ or ▲, press the OK selection key.

### **RINGING VOLUME (Menu 42)**

The ringing tone will be heard when you receive a call. There are several volume levels available.

When you have set the phone's tones off within Menu 12, the ringing tone will not be heard.

Press **Menu** 42, use ▼ or ▲ (a sample is sounded), press the **OK** selection key.

### **RINGING TONE (Menu 43)**

You can select from a range of different tone patterns.

When you have set the phone's tones off within Menu 12, the ringing tone will not be heard.

Press **Menu** 43, use ▼ or ▲ (a sample is sounded), press the **OK** selection key.

### **KEYPAD TONES (Menu 44)**

A short tone is sounded each time you press a key. You can select a suitable volume level or set the keypad tones off. When you have set the phone's tones off within Menu 12, the keypad tones will not be heard.

Press **Menu** 44, use ▼ or ▲ (a sample is sounded), press the **OK** selection key.

### **WARNING TONES (Menu 45)**

The phone will sound a warning tone, i.e. error or confirmation tone, for example, when the cellular network is currently too busy to allow new calls or the battery charge is too low. When you have set the phone's tones off within Menu 12, the warning tones will not be heard even if set on.

Press **Menu 4 5**, use  or  press the **OK** selection key.

### **AUTOMATIC REDIAL (Menu 4 6)**

This function comes in handy when your call attempt is cut off for some reason e.g. when the phone you are trying to call is busy.

When this function is set on, your phone will make up to ten attempts to connect with a phone number after an unsuccessful call. Pressing  will end the call attempts.

Press **Menu 4 6**, use  or  press the **OK** selection key.

### **ONE TOUCH DIALLING (Menu 4 7)**

When this function is set on, your phone will allow you to dial phone numbers stored in memory locations 2 to 9 by simply pressing and holding the proper number key.

Press **Menu 4 7**, use  or  press the **OK** selection key.

### **AUTOMATIC ANSWER (Menu 4 8)**

When this function is set on, your phone will automatically receive an incoming call after one ring.

This function can only be used when the phone is connected to an approved handsfree car kit which is equipped with the

ignition sense option. The ignition has to be switched on. Note that this function works with voice calls only.

Press **Menu 48**, use **V** or **A**, press the OK selection key.

### **CELL INFO DISPLAY (Menu 49)**

When this function is set on, the phone will indicate when it is using a network cell based on Micro Cellular Network (MCN) technology.

The service area of a cellular network is divided into elements called cells. The network may use the MCN technology in none, some, or all of its cells.

Press **Menu 49**, use **▼** or **▲**, press the **OK** selection key.

The setting will remain in effect even if the SIM card is changed or the phone is switched off.

**Note:** The phone consumes more power when the MCN indication is set on.

### **OWN NUMBER SENDING (Menu 4 1 0)**

The setting of this function determines whether the phone number of your current SIM card is revealed to the receiving end.

This function works only in cellular networks which allow you to view the caller's phone number.

For subscription to this service, contact your network operator.

The current setting will apply to all outgoing calls until you change it. When you change the SIM card, however, the Preset setting is automatically selected.

- 1 Press **Menu 4 1 0** to enter this function.
- 2 Press **▼** or **▲** to move the pointer to **Reset, On** (number will be revealed) or **Off** (number will not be revealed).

Preset resets the phone to the preferential setting (On or Off) that you have agreed upon with your network operator. For details, contact your network operator.

- 3 Press the **OK** selection key to select the setting.

### **CALL WAITING (Menu 4 1 1)**

When this function is set on, the network will notify you of an new incoming call while you have a call in progress. Contact your network operator for subscription of this function.

- 1 Press **Menu 411** to enter this function.
- 2 press **▼** or **▲** to move the pointer to *Activate* (set call waiting on), *Cancel* (set call waiting off) or *Status* (show call types with which call waiting may be used).
- 3 Press the **OK** selection key.

At this stage the phone calls the network operator and requests that the requested operation be performed. After receiving a response from the network, the phone will end the call automatically.

- If you selected *Activate* or *Cancel*, call waiting is set on or off, respectively.
- If you selected *Status*, the phone will list the call types (e.g. voice call, data call, fax call) to which call waiting applies or can be applied. Press **▼** or **▲** to scroll through the list.

**Note:** Instead of using this menu function, you may set on and off call waiting by using manual command strings. In idle

mode, key in a command string and press the  key to transmit it to the network. For required command strings, contact your network operator.

## RESTORE FACTORY SETTINGS (Menu 4 1 2)

You can reset the settings of the menu functions to their original values.

Note that this function will not affect the following items:

- stored phone numbers and names
- access codes
- earpiece volume setting
- the following SMS message settings:  
Messages Sent As (Menu 2 4 2), Accept Reply Cost (Menu 2 4 3), Message Validity (Menu 2 4 4)
- language (Menu 4 1 4)
- call timers and cost counters (Menu 6)

❶ Press **Menu 4 1 2** to enter this function.

The phone will prompt for the security code.

❷ Key in the five-digit code and press the **OK** selection key.

The menu settings will be reset and the message **SETTINGS RESTORED** will appear.

## MENU LIST (Menu 4 1 3)

If you do not need all of the menu functions frequently, you may hide some of the menus and submenus.

When Complete is selected, the phone will shown all its menu functions.

When Short is selected, only the major functions are shown and can be accessed. The function numbering is not affected - the hidden functions are simply skipped.

Press **Menu 4 1 3**, use **▼** or **▲** to select *Short* or *Complete*, press the **OK** selection key.

## LANGUAGE (Menu 4 1 4)

This function allows you to select which language your phone will use for all of its display texts.

Press **Menu 414**, use **▼** or **▲** to select the desired language, press the **OK** selection key.

## SECURITY OPTIONS (Menu 5)

Your phone is equipped with a versatile security system to prevent unauthorised use or the altering of important settings. Most of the security features grouped under this menu require the five-digit security code.

## PIN CODE REQUEST (Menu 51)

Within this submenu you can set the phone to request a PIN code when your phone is switched on.

Note that some SIM cards do not allow you to turn the PIN code request off.

- ❶ Press **Menu 5 1** to enter this function.
- ❷ At the prompt *Enter PIN code:*, key in the PIN code and press the **OK** selection key.
- ❸ Press **▼** or **▲** to move the pointer to *On* (turn request on) or *Off* (turn request off).
- ❹ Press the **OK** selection key.

## SECURITY LEVEL (Menu 5 2)

The phone is provided with a security system which allows you to prevent unauthorised use of the phone. The system is based on three levels of security: *None*, *Memory* and *Phone*.

The selected level determines whether the security code, supplied with the phone, is required to start up the phone and to access certain memory functions, such as selecting the phone memory (memory B).

The phone keeps a list of the SIM cards which are used with the phone. This list may contain the information on up to five different SIM cards.

When the phone asks for a security code and you enter the correct code, the SIM card's information is added to the SIM card list and the SIM card becomes an 'owner's card'. Besides this information, the phone also memorises which memory - SIM card or phone memory - is selected for use.

Regardless of the selected security level, all temporarily stored phone numbers are erased when a new SIM card is installed. On the other hand, these phone numbers are not erased when a previously used SIM card is inserted, regardless of the selected security level.

**Note:** Whenever you change the security level, all temporarily stored phone numbers will be erased.

- ❶ Press **Menu 5 2** to enter this function.
- ❷ Key in the security code and press the **OK** selection key.
- ❸ Press **▼** or **▲** to move the pointer to *None*, *Memory* or *Phone*.

### *None*

The security code is not required at anytime. When the

inserted SIM card is the same as last time, the previously selected memory is taken into use. When the SIM card is not the same as previously, the SIM card memory is automatically selected.

### *Memory*

The security code is not required to start up the phone. In contrast, the code is always required to select the phone memory, even with an owner's card inserted. When there is no owner's card inserted, the SIM card memory (memory A) is automatically selected.

### *Phone*

When a new SIM card, i.e. not an owner's card, is inserted into the phone, the security code is required to start up the phone.

When an owner's card is inserted, the phone recognises the SIM card, does not require the security code and automatically takes the previously selected memory into use.

- ④ Press the **OK** selection key to select the desired security level.

## **CALL BARRING (Menu 5 3)**

The Call Barring network service allows you to place restrictions on outgoing and incoming calls.

**Note:** When calls are barred, calls maybe possible to certain emergency numbers in some networks (e.g. 112 or other official emergency number).

- ① Press **Menu 5 3** to enter this function.
- ② Reach the desired barring mode with **▼** or **▲**.  
The modes available are as follows:

*OUTGOING CALLS* (Menu 5 3 1)

Calls cannot be made.

*INTERNATIONAL CALLS* (Menu 5 3 2)

Calls cannot be made to foreign countries.

*INTERNATIONAL EXCEPT TO HOME COUNTRY*

(Menu 5 3 3)

When abroad, calls can be made only within the current country and to your home country, i.e. the country where your home network operator is located.

*INCOMING CALLS* (Menu 5 3 4)

Calls cannot be received.

*INCOMING CALLS IF ABROAD* (Menu 5 3 5)

Calls cannot be received outside your home country.

*CANCEL ALL BARRINGS* (Menu 5 3 6)

Switches all call barring settings off. Calls can be made and received in the normal way.

- ③ Press the **OK** selection key.  
**Note:** If you selected *CANCEL ALL BARRINGS*, you can ignore the steps which follow.
- ④ Press **▼** or **▲** to move the pointer to *Activate* (set the selected barring mode on), *Cancel* (set the selected barring mode off) or *Status* (show call types which are or can be barred).
- ⑤ Press the **OK** selection key.  
At this stage the phone calls the network operator and requests that the desired operation be performed. After receiving a response from the network, the phone will end the call automatically.
- ⑥ If you selected *Activate* or *Cancel*, key in the barring password and press the **OK** selection key.

If you selected *Status* in step 4, the phone will list the call types (e.g. voice calls, data calls, fax calls) to which call barring applies or can be applied. Press ▼ or ▲ to scroll through the list.

**Note:** Instead of using this menu function, you may set on and off different barring modes by using manual command strings.

In idle mode, key in a command string, press the  key to transmit it to the network. For required command strings, contact your network operator.

## VIEW FIXED DIAL LIST (Menu 5 4)

Within this submenu you can review the contents of the fixed dialling list that you created within Menu 5 5.

- 1 Press **Menu 5 4** to enter this function,
- 2 Press the ▼ or ▲ to scroll the names included in the list.  
Press the **ABC** key to review the associated phone numbers.
- 3 Press the **Quit** selection key to exit the list.

If you have selected Off within Menu 5 5, the message *ALL NUMBERS ALLOWED* will be displayed.

## FIXED DIALLING (Menu 5 5)

You may restrict your outgoing calls to a pre-determined set of phone numbers. This is called 'fixed dialling'.

This function works only with SIM cards which support it.

When the function is set on, you can only call a phone number which is included in the fixed dialling list or which begins with the same digit(s) as a phone number on the list.

For instance, if you have stored the digits +55 in one of the fixed dialling locations, you can call any phone number beginning with these digits, e.g. +556 789345.

**Note:** When the Fixed Dialling is set on or the fixed dialling list is empty, calls may be possible to certain emergency numbers in some networks (e.g. 112 or other official emergency number).

- ❶ Press **Menu 5 5** to enter this function.
- ❷ Key in the PIN2 code and press the **OK** selection key
- ❸ Press the **▼** or **▲** key to select *On* (set the function on), *Off* (set the function off) or *Numbers* (edit fixed dialling list) and press the **OK** selection key.
- ❹ If you selected *Numbers*, the first name included in the list will be displayed. Scroll the names with **▼** and **▲**. Pressing the **ABC** key will show the associated phone numbers.
  - If you selected *On* or *Off*, you can ignore the steps below.
- ❺ Press the **Option** selection key to access the following functions:

*Erase all*

Removes all names and phone numbers from the list.

*Add*

Adds a name (and a phone number) to the list.

*Remove*

Removes from the list the name (and the associated phone number) which was on the display when you pressed the **Option** selection key.

### *Edit*

Allows you to make changes into the name (and the associated phone number) which was on the display when you pressed the **Option** selection key.

- ⑥ Select the desired option with **▼** or **▲** and press the **OK** selection key.
  - ⑦ Next, do one of the following:
    - If you selected *Add*, key in the desired name at the prompt *Name:*. Next, press the **OK** selection key or the **ABC** key and key in the phone number at the prompt *Number:*. Press the **OK** selection key to store the name and phone number in the list.
    - If you selected *Erase all*, the text *ARE YOU SURE?* will appear. To clear the dialling list, press the **OK** selection key. To return to the previous menu level without clearing the list, press the **Quit** selection key.
- Note:** If you press the **OK** selection key, you lose the contents of the list permanently.
- If you selected *Edit*, first modify the name, then press the **OK** selection key or the **ABC** key and, finally, modify the phone number. Press the **OK** selection key to store the changes.

## **CHANGE ACCESS CODES (Menu 56)**

Within this submenu you can change the following access codes: security code (Menu 5 6 1), PIN code (Menu 5 6 2), PIN2 code (Menu 5 6 3), barring password (Menu 5 6 4).

- ① Press **Menu 5 6** to enter this submenu.
- ② Press **▼** or **▲** to select the access code that you want to change.

- ③ Press the Select selection key.
- ④ Key in the current code and press the OK selection key.
- ⑤ Key in the new code and press the OK selection key.
- ⑥ Key in the new code again and press the OK selection key.

**Note:** The access codes may only include characters 0 to 9. To change the PIN code the PIN code request must be turned on in Menu 5 1.

### **CLOSED USER GROUP (Menu 5 7)**

This network service allows the restriction of outgoing calls to and incoming calls from a selected group of people, called the user group.

This function comes in handy, for instance, when a company lends a SIM card to its employee and wants to restrict the outgoing calls to members of a working team.

**Note;** When calls are limited to Closed User Groups, calls may be possible to certain emergency numbers in some networks (e.g. 112 or other official emergency number).

You may be a member of up to 10 user groups.

For details on creating a user group and activating this service, contact your network operator.

- ① Press **Menu 5 7** to enter this function.
- ② Press **▼** or **▲** to reach one of the following options:

#### *None*

Calls can be made and received in the normal way. You can use this option only if you are entitled to do so. For details, contact your network operator.

### *Preset*

Resets the phone to use a preferential user group that the SIM card owner has agreed upon with the network operator. (For setting up the default group, contact your network operator.)

### *Set*

Sets the phone to use a particular user group. Calls can be made to or received from the members of the selected group only,

- ③ Press the **OK** selection key to select the desired option.
- ④ If you selected *Set*, key in the number of the group you want to use. (You obtain this number from your network operator.)  
If you make a mistake, you can remove a character to the right by pressing the **C** key. After you have entered the correct number, press the **OK** selection key.

When the phone is switched on or the SIM card is changed, the *Preset* option is taken into use.

**Note:** If you accidentally select a wrong group, you may not be able to make any calls except for emergency calls to the number 112 or receive any calls. In that case, re-enter this submenu and enter the correct group number.

## **DURATION AND COST OF CALLS (DURATION AND COST - Menu 6)**

Within this menu you can view the duration and cost of your outgoing and incoming calls, reset the timers and counters, limit the duration of calls and select whether the call costs are shown in charging units or units of currency.

## CALL DURATION (Menu 6 1)

Your phone provides two call timers which help you monitor the duration of your calls. You may also reset the timers.

**Note:** The actual invoice for calls by your service provider may vary, depending upon network features, rounding off for billing, and so forth.

- ❶ Press **Menu 61** to enter this function.
- ❷ Use the **▼** or **▲** key to reach one of the following:

### *LAST CALL DURATION*

Shows the duration of the last, or current, outgoing or incoming call in hours, minutes and seconds, e.g. 00:02:15,

**Note:** The duration of incoming calls is not displayed when you are within your home network.

### *ALL CALLS DURATION*

Provides the total duration of calls made or received with any SIM card that you have used with the phone. The duration is shown in hours, minutes and seconds.

### *CLEAR TIMERS*

Resets all timers.

- ❸ If you selected *CLEAR TIMERS*, press the **OK** selection key. Next, key in the security code and press the **OK** selection key.  
The message *TIMERS CLEARED* will show up to indicate that all timers were reset.

**Note:** There is no way to undo the reset operation.

## CALL COSTS (Menu 6 2)

This network service allows you to check the cost of the last, or current, call or the total cost of all calls that you have made or received since the counters were last reset.

The costs are shown in charging units or units of the currency that you have set within Menu 6 4.

The call cost is shown for each SIM card separately.

**Note:** The actual invoice for calls and services from your service provider may vary, depending upon network features, rounding off for billing, taxes and so forth.

- 1 Press **Menu 6 2** to enter this function.
- 2 Use the **▼** or **▲** key to select one of the following:

### *LAST CALL UNITS*

Shows the cost of the last, or current, call in charging units or the currency set in Menu 64.

### *ALL CALLS UNITS*

Shows the total cost of all calls in charging units or the currency set in Menu 64.

### *CLEAR COUNTERS*

Resets all cost counters.

- 3 If You selected *CLEAR COUNTERS*, press the OK selection key. Next, key in the PIN2 code and press the **OK** selection key.  
The message *COUNTERS CLEARED* will show up to indicate that cost counters were reset.

**Note:** There is no way to undo the reset operation.

## CALL COSTS LIMIT (Menu 6 3)

This function allows you to limit the total costs of outgoing calls to a specified number of charging units or units of the currency that you have set in Menu 6 4.

Emergency calls to the number 112 can be made even if there are no charging units left.

- ❶ Press **Menu 6 3** to enter this function.
- ❷ Key in the PIN2 code and press the OK selection key.
- ❸ Press the ▼ or ▲ key to select *Set* (turn limit on) or *None* (turn limit off) and press the OK selection key.
- ❹ If you selected *Set*, key in the cost limit in charging units or units of the currency. Pressing the # or \* key will insert a decimal point.
- ❺ Press the OK selection key.

If you activated the cost limit, the quantity of remaining charging or currency units will be continuously shown on the display when in idle mode. When all units have been used, no calls can be made except for emergency calls to the number 112.

## SHOW COSTS IN (Menu 6 4)

Within this submenu you may select whether the call cost limits will be displayed in currency or charging units. Contact your network operator for charging unit prices.

- ❶ Press **Menu 6 4** to enter the function.
- ❷ Key in the PIN2 code and press the OK selection key.

- ③ Use ▼ or ▲ to select *Currency* (show limits in currency units) or *Units* (show limits in charging units) and press the **OK** selection key.
- ④ If you selected *Currency*, key in the charging unit price and press the **OK** selection key. Pressing the # or \* key will insert a decimal point.  
If you selected *Units*, call cost limits and the number of remaining cost units will be shown in charging units.
- ⑤ At the prompt *Currency name:*, key in the currency name that you want to use.
- ⑥ Press the **OK** selection key.

## NETWORK SELECTION (Menu 7)

The phone can be set to automatically select one of the cellular networks available in your area, or you may select the desired network manually in this menu.

This function comes in handy when you want to select a particular network, e.g. due to lower call charges.

Normally, i.e. when the *Automatic* option is selected, the phone tries to utilise the network it was last registered on. When the phone is operated in the service area of your home network (i.e. network of the SIM card currently installed in your phone), that network is automatically selected.

Outside of the home network service area, the phone will select one of the networks which have a roaming agreement with the home network. If the phone loses contact with the network it is using, it will automatically try to register on some other 'roaming' network.

When you pick up a network manually from the network list, the phone will attempt to register on that network. If the phone cannot reach or loses contact with the selected net-

work (the message PLEASE SELECT NETWORK will appear), you have to select some other network.

- ❶ Press **Menu 7 to** enter this function.
- ❷ Press **▼** or **▲** to reach *Automatic* or *Manual* and then press the **Select** selection key.
- ❸ If you selected *Manual*, the phone will search for available networks (*SEARCH ACTIVE...* ) and then show all networks in whose service area the phone is currently located,  
Press **▼** or **▲** to reach the desired network and press the OK selection key.  
**Note:** All of the listed networks may not be accessed by your phone.

If you select other than your home network, this ‘visited’ network must have a roaming agreement with your home network. If this is not the case, the message *NO ACCESS* will be displayed.

You cannot change the network during a call.

**Note:** When the phone loses contact with the network, you can try to re-establish the contact by pressing any key of the phone (except for **Ⓛ**). If this has no effect, enter this menu and perform automatic or manual network selection.

## MEMORY FUNCTIONS (Menu 8)

### MEMORY SELECTION (Menu 8 1)

The phone allows you to store phone numbers and names in the SIM card’s memory (known as “memory A”) or the phone’s internal memory (“memory B”).

Within this submenu you can set the phone to use either of these memories.

The currently selected memory is shown in the top left corner of the display.

- 1 Press **Menu** 8 1 to enter this function.
- 2 If the security level is Memory and you are about to switch from the SIM card memory to the phone memory, the phone will prompt for the security code. Key in the code and press the **OK** selection key.
- 3 Press the **▼** or **▲** key to move the pointer to *A:Card* (select card memory) or *B:Phone* (select phone memory).
- 4 Press the **OK** selection key.

### **MEMORY STATUS (Menu 8 2)**

Within this submenu you may review the number of empty and full memory locations within the selected memory.

- 1 Press **Menu** 8 2 to enter this function,
- 2 Press **▼** or **▲** for the number of empty and full memory locations.
- 3 Press the **Quit** selection key to exit the function.

### **COPY BETWEEN MEMORIES (Menu 8 3)**

This function allows you to copy phone numbers (and associated names) between the phone's internal memory and the SIM card memory. You can choose to copy individual locations or all locations.

If a name is too long to fit in the destination memory, it will be shortened. This is often the case when you copy names and phone numbers from the phone memory into a SIM card.

- 1 Press **Menu** 8 3 to enter this function.

- ② If the security level is set to *Memory*, key in the security code at the prompt *Security code:* and press the **OK** selection key.
- ③ Press **▼** or **▲** to reach *FROM PHONE TO CARD* or *FROM CARD TO PHONE*.
- ④ Press the **OK** selection key.
- ⑤ Press **▼** or **▲** to move the pointer to *One by one* (copy individual locations) or *Copy all* (copy all locations).
- ⑥ Press the **OK** selection key.
- ⑦ Do one of the following:
  - If you selected *One by one*, scroll the stored names with **V** or **A** until the desired name appears. Pressing the **ABC** key will display the phone number stored with the name.  
When the desired name or phone number is displayed, press the **Copy** selection key.  
Once you have copied all of the desired locations, press the **Quit** selection key to return to the previous menu level or the **C** key to exit the menu facility.
  - If you selected *Copy all*, press the **OK** selection key at the prompt *START COPYING?* to copy all of the memory locations or the **Quit** selection key to return to the previous menu level.

## MEMORY ERASING OPTIONS (Menu 8 4)

This function allows you to remove phone numbers and names from some or all locations of the currently selected memory (SIM card or phone memory).

**To clear individual locations of the selected memory:**

- ❶ Press **Menu 84** to enter this function.
- ❷ Press **▼** or **▲** to select One by one (only selected locations will be cleared).
- ❸ Press the OK selection key,
- ❹ To select the location(s) that you want to clear, do one of the following:

- At the prompt *Name to be erased:*, key in the name which is stored in the location you want to clear.

Or: press the **ABC** key (to select numeric mode) and key in the number of the location to be cleared at the prompt *Location to be erased:*.

- In number or alpha mode, use **▼** or **▲** to select the phone number or name that you want to erase.
- ❺ Press the **Erase** selection key to remove the name and phone number from memory
  - ❻ If you want to remove several names and phone numbers, select the desired name or number with **▼** or **▲** and press the **Erase** selection key.  
Repeat this as many times as necessary.

Pressing the **Quit** selection key will return you to the previous menu level.

**To clear all of the locations of the selected memory:**

- ❶ Press **Menu 84** to enter this function.
- ❷ Press **▼** or **▲** to select *Erase all* (all locations will be cleared).
- ❸ Press the **OK** selection key.

- ④ At the prompt *ARE YOU SURE?*, press the **OK** selection key to clear the locations.  
Pressing the **Quit** selection key will return you to the previous menu level.
- ⑤ While the phone empties the locations, the message *ERASING MEMORY..* is shown. Once the erasing is completed, the message *MEMORY ERASED* will appear.

**Note:** Once erased, the memory contents are permanently lost.

## SHOW OWN NUMBER (Menu 8 5)

You may view the phone number(s) assigned to the current SIM card.

Some SIM cards do not hold the number and, thus, cannot be shown. Accessing this submenu will result in the message *OWN NUMBER NOT ON SIM CARD*.

- ① Press **Menu 8 5** to enter this function.
- ② If the phone number has an associated name, you may review it by pressing the ABC key.
- ③ When the SIM card is provided with several phone numbers, you may scroll them with **▼** and **▲**.

## PERSONAL REMINDERS (Menu 9)

### WELCOME NOTE (Menu 91)

You can program a welcome or reminder message which will show up on the display when the phone is switched on. The maximum length of the message is 30 characters.

- ① Press **Menu 9 1** to enter this function.  
A blinking cursor, will appear.

**Note:** If you have a previously programmed welcome

message and you pressed the **Keep** selection key when you switched the phone on, the old message will appear.

- ② Key in a new message or edit the existing one.
  - If you want to include numbers in the message, you may press the **ABC** key to select the numeric mode and then key in the number(s). Pressing the **ABC** key again will return you to alpha mode.
  - By pressing the **C** key you can delete characters to the left of the cursor.
  - By pressing **▼** or **▲** you can move the cursor right or left, respectively.
- ③ To save the new, or edited, message, or to erase the existing message, press the Option selection key. Pressing the **Erase** selection key will disregard all changes and return you to the previous menu level.
- ④ If you pressed the option selection key in the previous step, move the pointer to *Save* or *Erase*.

#### *Save*

Stores the new or edited message for later use. The message will be displayed each time you switch the phone on.

#### *Erase*

Removes the message from the display and from the memory. No message will be shown when the phone is switched on next time.

- ⑤ Press the **OK** selection key to perform the desired operation.

Next time you switch the phone on, the stored message will pop upon the display. Once you have read the message, you can either remove it by pressing the **Erase** selection key or keep it by pressing the **Keep** selection key or the **C** key.

With the message on the display, you may press a number key and then perform any memory or menu operation in the normal way, e.g. make or receive a call. When you delete all characters from the display (by pressing and holding the **C** key), the message will be shown again.

## **COUNTDOWN TIMER (Menu 9 2)**

The phone can be programmed to alarm after a specified period of time.

The time will stay in effect only as long as the phone remains switched on. When the phone is switched off or the battery runs out of power, the clock is reset and you have to re-program it.

- ❶ Press **Menu 9 2** to enter this function.
- ❷ At the prompt *Set timer:*, key in the time after which the alarm will be issued. For example, 02h 30min sets the phone to alarm after 2 hours and 30 minutes.
- ❸ Press the **OK** selection key.

Once the given time expires, the phone will play a repeating ringing tone and the message *COUNTDOWN TIME UP* will blink on the display. Press the **OK** selection key to stop the alarm.

If you want to stop the timer before the defined time has expired, enter the function and turn off the timer by keying in a zero (0) four times and pressing the **OK** selection key.

**Note:** When you have switched the ringing tone off in Menu 12, it will not be heard. When either of the vibration options (*RING AND VIBRATE* or *VIBRATE*) has been selected in Menu 12, the phone will also vibrate after the defined time. The vibrating option is available only with a special battery.

## IN-CALL OPTIONS (Menu 10)

Your phone provides a number of control functions that you can use during a call.

You cannot utilise each of these functions at all times. For example, you must have one call active and another call on hold in order to make use of the *Swap* function.

To access the in-call options during a call, simply press and hold the **Menu** selection key for a second.

The in-call options are not numbered. You cannot therefore access them by the shortcut method.

❶ Press **Menu** 10.

❷ Scroll the functions with ▼ or ▲.

If you have a call in progress, move the pointer to the desired function and press the OK selection key to perform it.

The in-call options available are as follows:

### *Mute / Unmute*

Switches off or on the phone's microphone. If the phone is connected to a handsfree car kit, *Mute* turns off the microphone of this accessory.

### *Hold / Unhold*

*Hold* allows you to put a currently active call on hold so that another call can be initiated. Once the new call has been terminated, the original call can be made active again by selecting *Unhold*.

### *Swap*

This function is available when you have one active and one held call. *Swap* makes the held call active and puts the currently active call on hold. In this way you may converse with

one party without ending the other call.

Instead of using this function, you can press  when the display is clear of characters.

### *Drop call*

Ends the currently active call. This function is useful when there is an active call as well as a held call. In such a situation, pressing  would terminate both calls.

### *Send DTMF*

Transmits as Dual Tone Multi-Frequency tones. This function allows you to communicate with answering machines, computerised telephony systems, etc.

### *Join / Private*

*Join* includes a new participant in a conference call. During a conference call, *Private* allows you to converse privately with a selected call participant.

## **FAX OR DATA CALL (Menu 1 1)**

Your phone supports the sending and receiving of data via an optional data adapter which connects to the base of your phone.

If there is no data adapter connected to the phone when you enter this menu, the message *CONNECT TERMINAL* will appear. Check that the data adapter is properly set up.

The phone will automatically recognise the type of the connected terminal.

### **To create a data or fax connection:**

- ❶ Press **Menu 11** to enter this function.
- ❷ When prompted to do so, key in the phone number of the receiving end and press the **OK** selection key.
- ❸ After the transmission, end the call by pressing .

Or:

- ❶ In idle mode, key in the phone number.
- ❷ Press **Menu 11** to call the number.
- ❸ After the transmission, end the call by pressing .

During a transmission, the message *DATA CALL* or *FAX CALL* and the *D* indicator are displayed.

For more information, refer to any documentation or instructions which may be supplied with your data adapter, data application or fax application

## **RINGING OPTIONS (Menu 12)**

You can select the indication mode for incoming calls from the following options:

### *RING AND VIBRATE*

The phone will sound a ringing tone, flash its lights and vibrate.

The lights will not flash when the Lights function in Menu 4 01 is set to *Off*.

**Note:** The vibrating option is available only with a special battery. Consult with your dealer.

### *RING*

The phone will sound a ringing tone and flash its lights.

### *BEEP*

The phone will sound a short beep and flash its lights.

### *VIBRATE*

The phone will vibrate and flash its lights.

**Note:** This option takes effect only with a special battery.

### *SILENT SERVICE*

The phone will flash its lights only. No tones will be heard, including keypad, warning and countdown timer tones.

- ❶ Press **Menu 12** to enter this function.
- ❷ Press **▼** or **▲** to select the option that you want,
- ❸ Press the **OK** selection key.

When **BEEP**, **VIBRATE** or **SILENT SERVICE** is selected, the text **SILENT** will be shown on the display in idle mode.

**Note:** When the phone is connected to a handsfree car kit, the indication mode is set individually for this accessory. With this accessory, **RING AND VIBRATE** and **VIBRATE** are not available.

### NUMBER EDITOR (Menu 13)

The phone provides a simple editor which allows you to add new digits, e.g. a + character to substitute for international access codes, in front of a phone number, or to edit the existing digits of a phone number.

- ❶ Recall a phone number from memory (see *Recalling a Phone Number from Memory* in chapter *Memory Functions*).
- ❷ Press **Menu 13** to activate this function. The first digit of the phone number and the cursor will start blinking.
- ❸ To insert a new digit, press the corresponding key.
  - **▼** and **▲** move the cursor right and left, respectively.
  - To change an existing digit, delete it first by pressing the **C** key and then key in the desired digit.
- ❹ To exit the function, press the **OK** selection key or wait for 10 seconds.
- ❺ Store the phone number in memory in the normal way (see *Storing a Phone Number with a Name* in chapter *Memory Functions*).

## 7. Sending DTMF Tones

The Dual Tone Multi Frequency (DTMF) tones allow you to communicate with answering machines, computerised telephony systems, etc, DTMF tones can be transmitted even when the keypad tones are set off.

### (I) Manual Transmission

- 1 Make a call to the desired phone number.
- 2 Key in the digits you want to be sent as DTMF tones. The digits are sent one by one to the network
- 3 Press  to end the call.

### (II) Automatic Transmission

- 1 Make a call to the desired phone number
- 2 Press and hold the **Menu** selection key for a second
- 3 Move the pointer with  or  to Send DTMF and press the **OK** selection key.
- 4 Key in the number of the memory location where the DTMF digits are stored and press the **Find** selection key.  
The digits are recalled from the given location and sent to the network.  
The **Quit** selection key will terminate the transmission but not the call.
- 5 Press the  key to end the call.

### Linking two memory locations together

A memory location may hold up to 30 characters. You may, however, link two locations together if you want to store the phone number of the receiving device and the DTMF digit

sequence together, for instance. To link two locations (only in phone memory):

- ❶ Key in or recall from memory the phone number (e.g. 123 456) that you want to link with a DTMF sequence.
- ❷ Press the \* key twice quickly. This adds a + character to the end of the phone number.
- ❸ Key in the memory location where you will store the DTMF sequence.  
For example, if the DTMF sequence is to be stored in location 33, the display should read 123456+33.
  - If you use different DTMF sequences in combination with the same phone number, you can skip this step. (If there is no location number after the + character, the phone will prompt for it.)
- ❹ Store the phone number including the + character (and, optionally, the location of DTMF digits) into memory.
- ❺ Key in and store the DTMF digit sequence in the given location (location 33 in this case).
  - You can skip this step if you have not stored a location number after the + character in step 3.

To send a linked sequence:

- ❶ Key in the number of the memory location where the first part of the linked sequence is stored,
  - ❷ Press .
- If you have not specified a location number after the + character, the phone will ask for it after the call has been connected. At the prompt *Location number:*, key in the location and press the **Find** selection key.

### **Placing p and w characters between DTMF digits**

You may insert a pause of 2.5 seconds or a wait in front of, or between DTMF digits.

For a pause, press the ★ key three times quickly so that a *p* is displayed. All digits following the pause will be sent as DTMF tones.

For a wait character, press the ★ key four times quickly so that a *w* is displayed.

To send a DTMF sequence which contains wait characters:

- ❶ Make a DTMF call in the normal way.
- ❷ Wait for answer. Press the **DTMF** selection key as many times as there are wait characters.  
All digits following these characters will be sent as DTMF tones.

**Note:** Some SIM cards do not allow pause or wait characters. If your SIM card rejects the characters, first select the phone memory and then store the sequence.

## 8. Care and Maintenance

Your phone is a product of superior design and craftsmanship and should be treated with care. The suggestions below will help you to fulfill the warranty obligations and to enjoy this product for many years.

Keep the phone and all its parts and accessories out of small children's reach.

Keep the phone dry. Precipitation, humidity and liquids contain minerals that will corrode electronic circuits.

Do not use or store the phone in dusty, dirty areas. Its moving parts can be damaged.

Do not store the phone in hot areas. High temperatures can shorten the life of electronic devices, damage batteries, and warp or melt certain plastics.

Do not store the phone in cold areas. When the phone warms up (to its normal temperature), moisture can form inside the phone, which may damage electronic circuit boards.

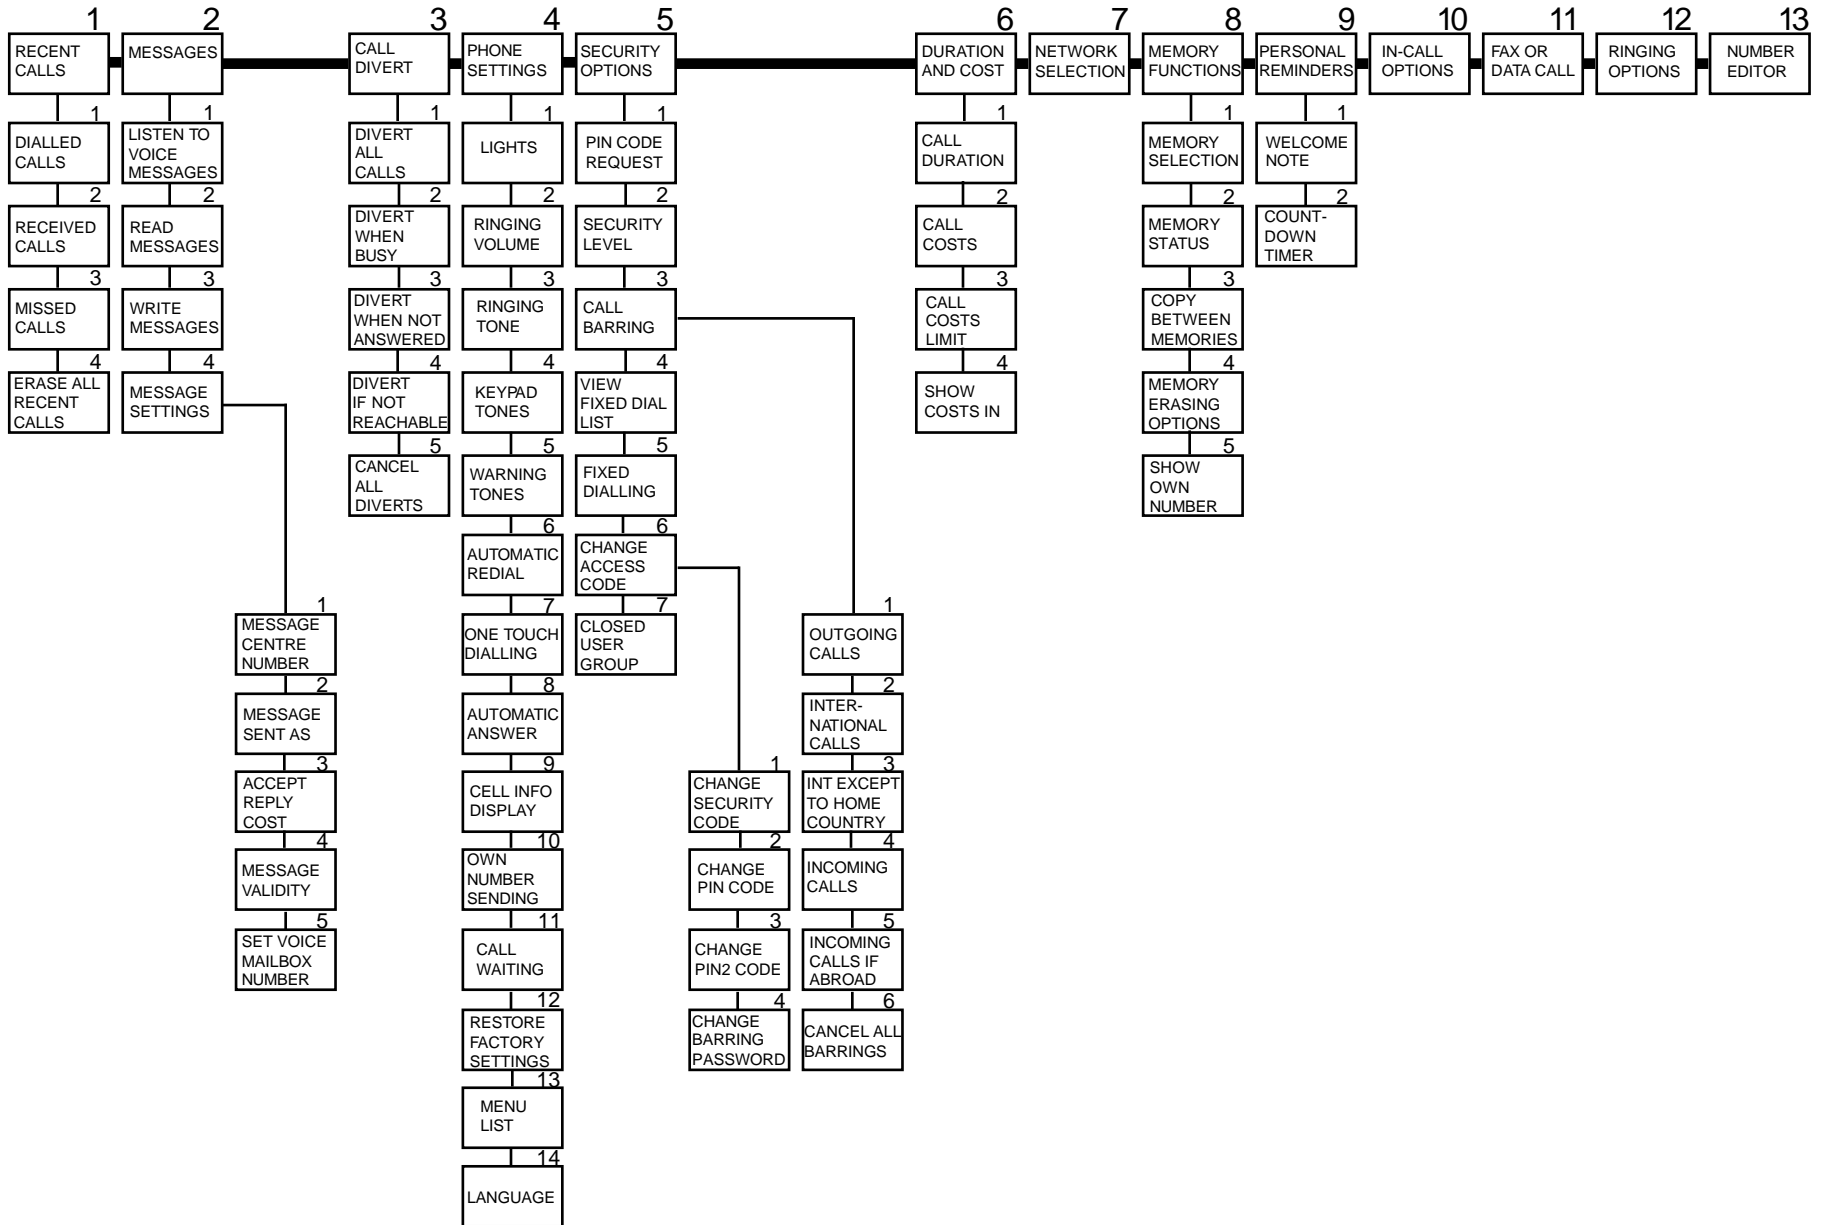

Do not attempt to open the phone. Non-expert handling of the phone may damage it.

Do not drop, knock or shake the phone. Rough handling can break internal circuit boards.

Do not use harsh chemicals, cleaning solvents, or strong detergents to clean the phone. Wipe it with a soft cloth slightly dampened in a mild soap-and-water solution.

If the phone or any of its accessories are not working properly, take them to your nearest qualified service facility. The personnel there will assist you, and if necessary, arrange for service.
