Introduction

Your Nokia E61 includes drivers for certain Hewlett-Packard printers, allowing you to print to compatible Hewlett-Packard printers. Printing to other Hewlett-Packard printer models, and printers of other manufacturers may not be possible.

You can use your Nokia E61 to print different kinds of items, such as documents, messages, images, and Web pages. This document shows how to print files through Bluetooth, infrared, and wireless LAN (WLAN) connections. Some files cannot be printed.

HP printer settings

To optimize the printer settings of your HP printer, you can change the printer settings of your Nokia E61. For example, if you want to print high-quality photographs, you must set the quality mode and media type accordingly, and make sure that you use high-quality paper in your printer.

Note: These printer settings only apply when you use the HP Mobile Printing driver for printing.

To change the printer settings:

- 1 Select **Menu** → **Tools** → **HP printer**.

- 2 Change any of the following:
 - **Quality mode** – Specifies the quality of the print. For fast printing with limited color reproduction, select **Draft**. For balance between printing speed and color quality, select **Normal**. For additional color quality,

select **Best**. For printing images, use **Best**. To increase the quality of the printed images, also use high quality paper. Selecting **Best** increases the printing time significantly.

- **Media type** – Specifies the type of paper. To print images, use high-quality paper, and set the value to **Photo**.
- **Colour mode** – Specifies whether the print is in color or grayscale.
- **Printer model** – Specifies the Hewlett-Packard printer model. If your printer model is not listed, select a similar model.

- 3 To save your changes, press **Back**.

Printing through a Bluetooth connection

Your Nokia E61 comes with a built-in Bluetooth adapter. If your printer includes a compatible Bluetooth adapter, you can use a Bluetooth connection to print items from your Nokia E61.

To print an item through a Bluetooth connection:

- 1 If necessary, activate a Bluetooth connection on your printer. For details, refer to your printer documentation.
 - 2 Activate a Bluetooth connection on your Nokia E61 by selecting **Menu**→ *Connect*→ *Bluetooth* and selecting *Bluetooth*→ *On*.
 - 3 Make sure that your Nokia E61 is visible to all other devices with Bluetooth connectivity by selecting *My phone's visibility*→ *Shown to all*.
 - 4 On your device, open the item that you want to print.
 - 5 If you haven't already added a Bluetooth printer to your device, do it now by selecting *Options*→ *Printing options*→ *Printers*→ *Options*→ *Add* and defining the following settings:
 - *Printer* – Give a name to the printer.
 - *Driver* – There are two types of printer driver:
 - *HP Mobile Printing* – HP Mobile Printing driver for printing to Hewlett-Packard printers. The settings for this driver are explained in "HP printer settings" on page 4.
 - *General* – General printer driver with limited font support that may allow you to print text to other printers.
- 6 Select *Options*→ *Printing options*→ *Print*. You are asked to define the following print job settings:
 - *Printer* – Select your Bluetooth printer.
 - *Print* – Select whether to print all pages, or only odd or even pages.
 - *Print range* – Select from *All pages in range*, *Current page*, and *Defined pages*.
 - *Number of copies* – Enter the number of copies you want to print.
 - *Print to file* – Select whether to print to a file instead of paper.
 - 7 Select *Options*→ *Print* to print the file.
 - *Bearer* – Select *Bluetooth*.
 - *Orientation* – Select whether to use portrait or landscape printing.
 - *Paper size* – Select the desired paper size.
 Press *Back* twice to save your printer settings and return to the item you want to print.

Printing through an infrared connection

If your printer includes an infrared port, you can print items from your Nokia E61 by using an infrared connection.

To print an item through an infrared connection:

- 1 If necessary, activate infrared on your printer. For details, refer to your printer documentation.
- 2 Activate infrared on your device by selecting **Menu**→*Connect*→*Infrared*.
- 3 Make sure that the infrared port of your device faces the infrared port of the printer.
- 4 On your device, open the item that you want to print.
- 5 If you haven't already added an infrared printer to your device, do it now by selecting *Options*→*Printing options*→*Printers*→*Options*→*Add* and defining the following settings:
 - *Printer* – Give a name to the printer.
 - *Driver* – There are two types of printer driver:
 - *HP Mobile Printing* – HP Mobile Printing driver for printing to Hewlett-Packard printers. The settings for this driver are explained in "HP printer settings" on page 4.
 - *General* – General printer driver with limited font support that may allow you to print text to other printers.
 - *Bearer* – Select *Infrared*.
 - *Orientation* – Select whether to use portrait or landscape printing.

- *Paper size* – Select the desired paper size. Press *Back* twice to save your printer settings and return to the item you want to print.
- 6 Select *Options*→*Printing options*→*Print*. You are asked to define the following print job settings:
 - *Printer* – Select your infrared printer.
 - *Print* – Select whether to print all pages, or only odd or even pages.
 - *Print range* – Select from *All pages in range*, *Current page*, and *Defined pages*.
 - *Number of copies* – Enter the number of copies you want to print.
 - *Print to file* – Select whether to print to a file instead of paper.
 - 7 Select *Options*→*Print* to print the file.

Printing through a wireless LAN connection

If you have access to a wireless LAN (WLAN) with a print server or a network printer that is accessible through your wireless connection, you can print items through a wireless connection.

Your Nokia E61 supports the LPR print protocol. For details on the protocols, refer to your printer documentation.

To use the LPR protocol, you need to know the following before printing:

- The IP address or DNS name of the printer.
- The user name. This is only needed if the printer requires it.
- The queue name.

Refer to your printer documentation or contact your IT support for the necessary information. You can also print a configuration page from your printer, if your printer supports that option.

To print an item through a WLAN connection:

- 1 On your device, open the item that you want to print.
- 2 If you haven't already added a WLAN printer to your device, do it now by selecting *Options*→*Printing options*→*Printers*→*Options*→*Add* and defining the following settings:
 - *Printer* – Give a name to the printer.
 - *Driver* – There are two types of printer driver:

- *HP Mobile Printing* – HP Mobile Printing driver for printing to Hewlett-Packard printers. The settings for this driver are explained in "HP printer settings" on page 4.
 - *General* – General printer driver with limited font support that may allow you to print text to other printers.
 - *Bearer* – Select *LPR*.
 - *Access point* – Select *Easy WLAN* or an access point you have created for your WLAN.
 - *Host* – Enter IP address or DNS name of the printer.
 - *User* – Enter the user name for the printer.
 - *Queue* – Enter the queue name for the printer.
 - *Orientation* – Select whether to use portrait or landscape printing.
 - *Paper size* – Select the desired paper size.
- Press *Back* twice to save your printer settings and return to the item you want to print.
- 3 Select *Options*→*Printing options*→*Print*. You are asked to define the following print job settings:
 - *Printer* – Select your WLAN printer.
 - *Print* – Select whether to print all pages, or only odd or even pages.
 - *Print range* – Select from *All pages in range*, *Current page*, and *Defined pages*.
 - *Number of copies* – Enter the number of copies you want to print.

- *Print to file* – Select whether to print to a file instead of paper.
- 4 Select *Options* → *Print* to print the file.

Troubleshooting

General

If printing is interrupted or does not succeed:

- Check that you are still within the range of the device.
- Check that the number of simultaneous connections to the printer is not too high.

Printing with Bluetooth technology

If the search for devices with Bluetooth connectivity does not find the printer:

- Make sure that the printer supports Bluetooth wireless technology.
- Check that Bluetooth wireless technology is enabled on the printer.
- Check that the printer supports the Serial Port Profile (SSP).

If you cannot print through a Bluetooth connection:

- Check whether the printer requires pairing.
- Check whether the printer requires a password.

Printing with wireless LAN technology

If you cannot find the printer with an ad-hoc search:

- Check that the printer supports ad-hoc connections.

If you cannot print through LPR:

- Check that the printer supports the protocol that you want to use.
- Check that the connection from your device to the network is allowed.
- Check whether VPN is required.
