

SPERRY INSTRUMENTS

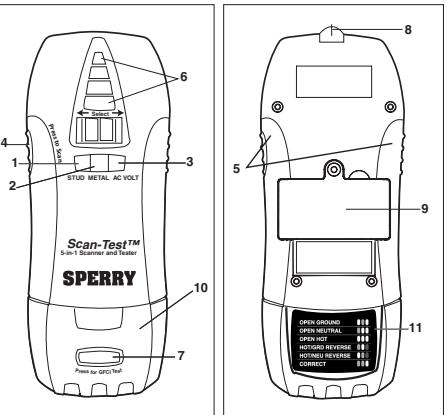

Scan-Test™

5-in-1 Scanner and Tester

- Read this owners manual thoroughly before use and save.

Milwaukee, WI 53209 USA
Phone: 1-800-645-5398
www.sperryinstruments.com

1.0 METER FUNCTIONS

1. Wood and metal stud detection
2. Metal pipe detection
3. AC volt detection (50-600 VAC)
4. Calibration / activation button
5. Over-molded soft grips
6. 4 indication levels indicate stud edge
7. GFCI test button
8. Metal marking tip to mark location of stud edge
9. Operates from 9 Volt battery (included)
10. Removable 3-wire outlet tester
11. Status Chart

2.0 Read First: Important Safety Information

⚠️ Read this operators manual thoroughly before using this tester. This manual is intended to provide basic information regarding this tester and to describe common test procedures which can be made with this unit. Many types of appliance, machinery and other electrical circuit measurements are not addressed in this manual and should be handled by experienced service technicians.

WARNING Use extreme caution when using this tester. Improper use of this tester can result in severe damage to property, severe personal injury or death. Follow all instructions and suggestions in this operators manual as well as observing normal electrical safety precautions. Do not use this tester if you are unfamiliar with electrical circuits and proper test procedures.

SAFETY WARNINGS

This instrument has been designed, manufactured and tested according to IEC61010: Safety requirements for Electronic Measuring apparatus, and delivered in the best condition after passing inspection. This instruction manual contains warnings and safety rules which must be observed by the user to ensure safe operation of the instrument and retain it in safe condition. Therefore, read through these operating instructions before using the instrument. • Read through and understand the instructions contained in this manual before using the instrument.

WARNING Keep the manual at hand to enable quick reference whenever necessary.

- The instrument is to be used only in its intended applications.
- Understand and follow all the safety instructions contained in the manual.
- It is essential that the above instructions are adhered to.
- Failure to follow the above instructions may cause injury, instrument damage and/or damage to equipment under test.

DANGER is reserved for conditions and actions that can cause serious or fatal injury.

CAUTION is reserved for conditions and actions that can cause injury or instrument damage.

DANGER Never make measurement on a circuit in which voltage over AC 600 V exists.

• Do not attempt to make measurement in the presence of flammable gasses. Otherwise, the use of the instrument may cause sparking, which can lead to an explosion.

WARNING Never attempt to use the instrument if its surface or your hand is wet.

• Do not exceed the maximum allowable input of any measuring range.

• Never open the battery cover during a measurement.

• The instrument is to be used only in its intended applications or conditions. Otherwise, safety functions equipped with the instrument don't work, and instrument damage or serious personal injury may be caused.

• Never attempt to make measurement if any abnormal conditions, such as broken case and exposed metal parts are found on the instrument.

• Do not install substitute parts or make any modification to the instrument. For repair or re-calibration, return the instrument to your local distributor from where it was purchased.

• Verify proper operation on a known source before use or taking action as a result of the indication of the instrument.

CAUTION Use appropriate personal protective equipment such as insulating gloves, insulating boots, and safety glasses.

• Set the function switch to an appropriate position before starting measurement.

• Do not expose the instrument to the direct sun, high temperature and humidity or dewfall.

• Altitude 2000m or less. Appropriate operating temperature is within 0 °C and 32 °C.

• This instrument isn't dust and water proofed. Keep away from dust and water.

• When the instrument will not be in use for a long period, place it in storage after removing the battery.

• Cleaning: Use a cloth dipped in water or neutral detergent for cleaning the instrument. Do not use abrasives or solvents otherwise instrument may get damaged, deformed or discolored.

3.0 SPECIFICATIONS

- Stud detection depth and accuracy: 3/4" +/- 1/8".
- Pipe detection depth: 2-1/2" through 1/2" drywall.
- AC volt detection distance/depth: 3-1/2" through 1/2" drywall.
- Operating Range: Non-contact AC Detector: 50-600 V AC 60 Hz; Plug in receptacle tester: 120 V AC 60 Hz
- Indicators: Audible and Visual
- Operating environment: 32 - 104 °F (0 - 32 °C) 80% RH max., 50% RH above 30 °C Altitude up to 2000 meters.
- Indoor use. Pollution degree 2. Accordance with IED-664.
- Battery: operates from one 9 Volt.
- Cleaning: Remove grease and grime with clean, dry cloth.

Marks listed below are used on this instrument.

⚠️ User must refer to the manual.

◻ Instrument with double or reinforced insulation.

⚠️ Indicates that this instrument can touch bare conductors when measuring a voltage corresponding to the applicable measurement, which is marked next to this symbol.

4.0 Operation

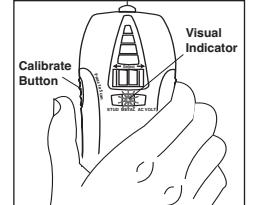

Fig. 1

Combines all the functions necessary to accurately and safely install 3 wire outlets, wall switches and lighting fixtures in 4 easy steps. Detects wood or metal studs, metal pipes and AC voltage hidden behind walls. Includes a 3-wire outlet tester with GFCI test function to verify the outlet has been wired properly.

NOTE: Low battery indicator: Before using, test the unit for good batteries. Press and hold the "scan/calibration" button on the side. If the batteries are low the middle "LED" by the "metal" detection will flash. If low, replace with fresh batteries. (Fig. 1)

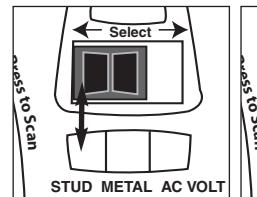

Fig. 2

Fig. 3

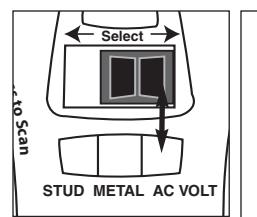

Fig. 4

Fig. 5

4.1 Stud detection (wood and metal)

- Position the select switch in the "Stud" position. (Fig. 2)
- Place the unit flat against the surface to be scanned. (Fig. 6)
- Press the calibrate/activate button located on the side to calibrate the unit. Continue to press and hold this button while sliding the unit across the surface.
- As the unit approaches a stud edge the LEDs will start to illuminate, until they reach the top. This indicates the stud edge.
- Mark the stud edge with the metal marking tip built into the top of the tester.
- To find the middle of the stud, scan again from the opposite direction and mark the stud edge. The center between the two marked points is the center of the stud.

Fig. 6

4.2 Metal Pipe detection

- Position the "select" switch in the "Metal" position. (Fig. 3)
- Place the unit flat against the surface to be scanned.
- Press the calibrate/activate button located on the side to activate the test. Continue to press and hold this button while sliding the unit across the surface.
- As the unit approaches a metal pipe the LEDs will start to illuminate, until they reach the top. This indicates the location of the metal pipe.
- Mark this location with the metal marking tip built into the top of the tester.

4.3 AC Voltage Detection

- Position the select switch in the "AC Volt" position. (Fig. 4)
- Place the unit flat against the surface or position the nose close to the surface to be scanned.
- Press the calibrate/activate button located on the side to activate the test. Continue to press and hold this button while sliding the unit across the surface.
- As the unit approaches a "live" 50 V AC or higher source, such as a wire, the unit will give off both an audible and visual signal indicating the presence of AC voltage.

4.4 Receptacle tester

1. Detach the receptacle tester from the scanner housing.

2. Plug the tester into any 120 Volt standard or GFCI outlet.

3. View the indicators on the tester and match with the chart on the tester. (Fig. 7)

4. If the tester indicates a wiring problem then turn off all power to the outlet and repair wiring. (Consult an electrician if necessary)

5. Restore power to the outlet and repeat steps 1-3.

Indicator	Fault	Reason for Wiring Fault
○ ● ○	Open Ground	Ground contact not connected
○ ○ ●	Open Neutral	Neutral contact not connected
○ ○ ○	Open Hot	Hot contact not connected
● ○ ○	Hot/Ground/Reverse	Hot and ground contacts interchanged
● ○ ○	Hot/Neutral/Reverse	Hot and neutral contacts interchanged
○ ○ ○	Correct	Receptacle is wired correctly

Fig. 7

To test GFCI Protected Outlets:

1. Consult the GFCI manufacturer's installation instructions to determine that the GFCI is installed in accordance with the manufacturer's specifications.
2. Check for correct wiring of receptacle and all remotely connected receptacles on the branch circuit.
3. Operate the test button on the GFCI installed in the circuit. The GFCI must trip. If it doesn't, do not use the circuit and consult an electrician. If the GFCI does trip, reset the GFCI. Then, insert the GFCI tester into the receptacle to be tested.
4. Activate the test button on the GFCI tester for a minimum of 6 seconds when testing the GFCI condition. Visible indication on the GFCI tester must cease when tripped.
5. If the tester fails to trip the GFCI, it suggests:
 - a) a wiring problem with a totally operable GFCI, or
 - b) proper wiring with a faulty GFCI. Consult with an electrician to check the condition of the wiring and GFCI.

When testing GFCIs installed in 2-wire systems (no ground wire available), the tester may give a false indication that the GFCI is not functioning properly. If this occurs, recheck the operation of the GFCI using the test and reset buttons. The GFCI button test function will demonstrate proper operation.

NOTE:

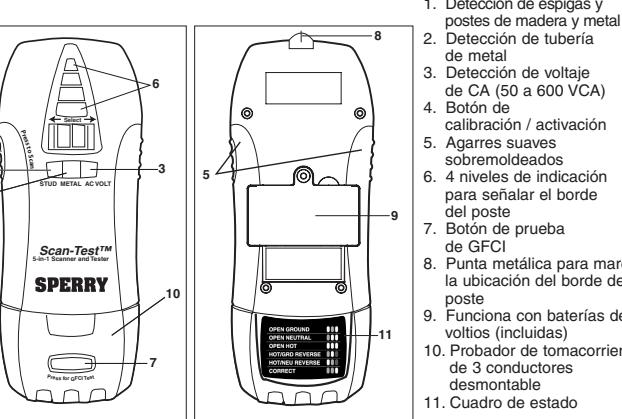

- All appliances or equipment on the circuit being tested should be unplugged to help avoid erroneous readings.
- Not a comprehensive diagnostic instrument but a simple instrument to detect nearly all probable common improper wiring conditions.
- Ref all indicated problems to a qualified electrician.
- Will not indicate quality of ground.
- Will not detect two hot wires in a circuit.
- Will not detect a combination of defects.
- Will not indicate a reversal of grounded and grounding conductors.

5.0 Replacing the batteries.

This unit operates from a standard 9 Volt battery. To replace, remove the battery door cover, located on the back, with a small screwdriver. Replace with new battery and then shut the battery door and replace screw. (Refer to 1.0, Meter Functions)

1.0 FUNCIONES DEL MEDIDOR

- Detección de espigas y postes de madera y metal
- Detección de tubería de metal
- Detección de voltaje de CA (50 a 600 VCA)
- Botón de calibración / activación
- Agarres suaves sobrealmoldados
- 4 niveles de indicación para señalar el borde del poste
- Botón de prueba de GFCI
- Punta metálica para marcar la ubicación del borde del poste
- Funciona con baterías de 9 voltios (incluidas)
- Probador de tomacorriente de 3 conductores desmontable
- Cuadro de estado

2.0 Leer primero: Información de seguridad importante

Lea completamente este manual del operador antes de usar este medidor. Este manual está destinado a dar información básica referente a este medidor y describir procedimientos de prueba comunes que se pueden realizar con esta unidad. Muchos tipos de mediciones de artefactos, maquinaria y otros circuitos eléctricos no se tratan en este manual y deben realizarse los técnicos de servicio experimentados.

Sea precavido al utilizar este medidor. El uso indebido de este medidor puede causar daños materiales severos y lesiones físicas graves o fatales. Siga todas las instrucciones y sugerencias en este manual del operador y también observe las precauciones normales de seguridad eléctrica. No use este medidor si no está familiarizado con circuitos eléctricos y los procedimientos de prueba apropiados.

Este instrumento ha sido diseñado, fabricado y probado conforme a IEC61010: Requisitos de seguridad para aparatos electrónicos de medición, y se entrega en el mejor estado después de pasar la inspección. Este manual de instrucciones contiene advertencias y reglas de seguridad que el usuario debe observar para garantizar el funcionamiento seguro del instrumento y mantener su buen estado sin presentar peligro. Por lo tanto, lea estas instrucciones operativas antes de usar el instrumento.

• Lea totalmente y en detalle las instrucciones contenidas en este manual antes de usar el instrumento.

• Conserve a mano el manual para poder usarlo a modo de referencia rápida siempre que sea necesario.

• El instrumento debe usarse solamente en las aplicaciones contempladas.

• Siga minuciosamente todas las instrucciones de seguridad contenidas en el manual.

• Es esencial que se respeten las instrucciones anteriores.

• Si no se siguen las instrucciones anteriores puede causar lesiones, daño al instrumento y/o daño al equipo a prueba.

se reserva para condiciones y acciones que pueden causar lesiones serias o fatales.

se reserva para condiciones y acciones que pueden causar lesiones o daños al instrumento.

• Nunca tome medidas en un circuito donde exista voltaje sobre 600 V de CA.

• No intente tomar medidas en la presencia de gases inflamables. De lo contrario, el uso del instrumento puede causar chispas, lo cual puede ocasionar una explosión.

• Nunca intente usar el instrumento si está mojada la superficie o la mano.

• No supere la entrada máxima permisible de cualquier rango de medición.

• Nunca abra la tapa de la batería durante una medición.

• El instrumento debe usarse solamente en las aplicaciones o condiciones contempladas. De lo contrario, las funciones de seguridad con las cuales se ha equipado el instrumento quedan inoperantes, y puede causarse daño al instrumento o lesiones físicas serias.

• Nunca intente tomar medidas si se encuentra alguna condición anormal, como con la caja rota o piezas metálicas expuestas en el instrumento.

• No sustituya piezas ni haga modificaciones al instrumento. Para reparar o recalibrar el instrumento, devuélvalo a su distribuidor local donde lo compró.

• Verifique el funcionamiento correcto en una fuente conocida antes de usar o de actuar basándose en lo que indicó el instrumento.

• Use el equipo protector personal adecuado como guantes aisladores, botas aisladoras y anteojos de seguridad.

• Ponga el interruptor de función en una posición adecuada antes de comenzar a medir.

• Inserte firmemente los conductores de prueba.

• No exponga el instrumento al sol directo, a alta temperatura ni humedad o caída de rocío.

• Altitud de 2000 m o menor. La temperatura operativa adecuada está entre 0°C y 40°C.

• Este instrumento no es a prueba de polvo ni agua. Manténgalo alejado del polvo y del agua.

• Confirme que se haya apagado el instrumento después del uso. Cuando el instrumento no va a estar en uso por un tiempo largo, póngalo en almacenamiento después de extraerle las baterías.

• Limpieza: Use un paño sumergido en agua o detergente neutro para limpiar el instrumento. No use abrasivos ni solventes, de lo contrario el instrumento puede dañarse, deformarse o decolorarse.

Sección 3.0 Especificaciones

- Profundidad y precisión de la detección de espigas: 19 mm +/- 3.2 mm.
- Profundidad de detección de tubería: 64 mm a través de panel de yeso de 13 mm.
- Profundidad o distancia de detección de voltaje de CA: 89 mm a través de panel de yeso de 13 mm.
- Rango operativo:
 - Detección de voltaje CA sin contacto 50-600 VCA, 60 Hz; CAT III 600V
 - Receptáculo del probador enchufado: 120 VCA 60 Hz
- Indicadores: Sonoros y visuales
- Ambiente operativo: 0 - 32 °C 80% humedad relativa máx., 50% humedad relativa sobre los 30 °C Altitud hasta 2000 metros. Uso en interiores. Grado de contaminación 2. Conformidad con IED-664.
- Batería: opera con una batería de 9 voltios.
- Limpieza: Retire la grasa y la mugre con un paño seco y limpio.

Se usan las marcas indicadas en la tabla a continuación en este instrumento.

⚠️ El usuario debe consultar el manual.</
