# Safety Information

## Explanation of Safety Messages

Precautionary statements ("DANGER," "WARNING," and "CAUTION"), followed by specific instructions, are found in this manual and on machine decals. These precautions are intended for the personal safety of the operator, user, servicer, and those maintaining the machine.

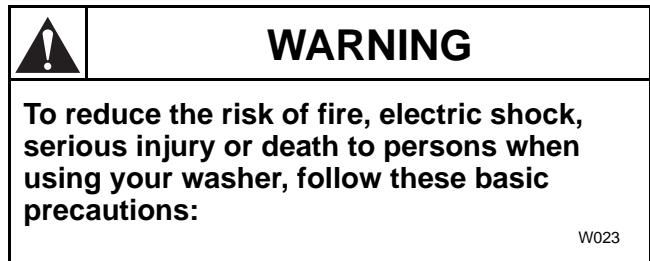

Additional precautionary statements ("IMPORTANT" and "NOTE") are followed by specific instructions.

**IMPORTANT:** The word "IMPORTANT" is used to inform the reader of specific procedures where minor machine damage will occur if the procedure is not followed.

**NOTE:** The word "NOTE" is used to communicate installation, operation, maintenance or servicing information that is important but not hazard related.

## Important Safety Instructions

W023

1. Read all instructions before using the washer.
2. Refer to the GROUNDING INSTRUCTIONS in the INSTALLATION manual for the proper grounding of the washer.
3. Do not wash textiles that have been previously cleaned in, washed in, soaked in, or spotted with gasoline, kerosene, waxes, cooking oils, dry-cleaning solvents, or other flammable or explosive substances as they give off vapors that could ignite or explode.
4. Do not add gasoline, dry-cleaning solvents, or other flammable or explosive substances to the wash water. These substances give off vapors that could ignite or explode.
5. Under certain conditions, hydrogen gas may be produced in a hot water system that has not been used for two weeks or more. HYDROGEN GAS IS EXPLOSIVE. If the hot water system has not been used for such a period, before using a washing machine or combination washer-dryer, turn on all hot water faucets and let the water flow from each for several minutes. This will release any accumulated hydrogen gas. The gas is flammable, do not smoke or use an open flame during this time.
6. Do not allow children to play on or in the washer. Close supervision of children is necessary when the washer is used near children. This is a safety rule for all appliances.
7. Before the washer is removed from service or discarded, remove the door to the washing compartment.
8. Do not reach into the washer if the wash drum is moving.

9. Do not install or store the washer where it will be exposed to water and/or weather.
10. Do not tamper with the controls.
11. Do not repair or replace any part of the washer, or attempt any servicing unless specifically recommended in the user-maintenance instructions or in published user-repair instructions that the user understands and has the skills to carry out.
12. To reduce the risk of an electric shock or fire, DO NOT use an extension cord or an adapter to connect the washer to the electrical power source.
13. Use washer only for its intended purpose, washing textiles.
14. Never wash machine parts or automotive parts in the machine. This could result in serious damage to the basket.
15. ALWAYS disconnect the washer from electrical supply before attempting any service. Disconnect the power cord by grasping the plug, not the cord.
16. Install the washer according to the **INSTALLATION INSTRUCTIONS**. All connections for water, drain, electrical power and grounding must comply with local codes and be made by licensed personnel when required.
17. To reduce the risk of fire, textiles which have traces of any flammable substances such as vegetable oil, cooking oil, machine oil, flammable chemicals, thinner, etc., or anything containing wax or chemicals such as in mops and cleaning cloths, must not be put into the washer. These flammable substances may cause the fabric to catch on fire by itself.
18. Do not use fabric softeners or products to eliminate static unless recommended by the manufacturer of the fabric softener or product.
19. Keep washer in good condition. Bumping or dropping the washer can damage safety features. If this occurs, have washer checked by a qualified service person.
20. If the supply cord is damaged, it must be replaced by a special cord or assembly available from the manufacturer or its service agent.
21. Be sure water connections have a shut-off valve and that fill hose connections are tight. CLOSE the shut-off valves at the end of each wash day.
22. Loading door MUST BE CLOSED any time the washer is to fill, tumble or spin. DO NOT bypass the loading door switch by permitting the washer to operate with the loading door open.
23. Always read and follow manufacturer's instructions on packages of laundry and cleaning aids. Heed all warnings or precautions. To reduce the risk of poisoning or chemical burns, keep them out of the reach of children at all times (preferably in a locked cabinet).
24. Always follow the fabric care instructions supplied by the textile manufacturer.
25. Never operate the washer with any guards and/or panels removed.
26. DO NOT operate the washer with missing or broken parts.
27. DO NOT bypass any safety devices.
28. Failure to install, maintain, and/or operate this washer according to the manufacturer's instructions may result in conditions which can produce bodily injury and/or property damage.

**NOTE: The WARNINGS and IMPORTANT SAFETY INSTRUCTIONS appearing in this manual are not meant to cover all possible conditions and situations that may occur. Common sense, caution and care must be exercised when installing, maintaining, or operating the washer.**

Any problems or conditions not understood should be reported to the dealer, distributor, service agent or the manufacturer.

## Safety Information

	<b>WARNING</b>
	<p>This machine must be installed, adjusted, and serviced by qualified electrical maintenance personnel familiar with the construction and operation of this type of machinery. They must also be familiar with the potential hazards involved. Failure to observe this warning may result in personal injury and/or equipment damage, and may void the warranty.</p>
	SW004
	<b>IMPORTANT:</b> Ensure that the recommended clearances for inspection and maintenance are provided. Never allow the inspection and maintenance space to be blocked.
	<b>WARNING</b>
	<p>Install the machine on a level floor of sufficient strength. Failure to do so may result in conditions which can produce serious injury, death and/or property damage.</p>
	W703

	<b>CAUTION</b>
	<p>Be careful around the open door, particularly when loading from a level below the door. Impact with door edges can cause personal injury.</p>
	SW025

	<b>WARNING</b>
	<p>Never touch internal or external steam pipes, connections, or components. These surfaces can be extremely hot and will cause severe burns. The steam must be turned off and the pipe, connections, and components allowed to cool before the pipe can be touched.</p>
	SW014

## Safety Decals

Safety decals appear at crucial locations on the machine. Failure to maintain legible safety decals could result in injury to the operator or service technician.

To provide personal safety and keep the machine in proper working order, follow all maintenance and safety procedures presented in this manual. If questions regarding safety arise, contact the manufacturer immediately.

Use manufacturer-authorized spare parts to avoid safety hazards.

## Operator Safety

### WARNING

**NEVER insert hands or objects into basket until it has completely stopped. Doing so could result in serious injury.**

SW012

To ensure the safety of machine operators, the following maintenance checks must be performed daily:

1. Prior to operating the machine, verify that all warning signs are present and legible. Missing or illegible signs must be replaced immediately. Make certain that spares are available.
2. Check door interlock before starting operation of the machine:
  - a. Attempt to start the machine with the door open. The machine should not start with the door open.
  - b. Close the door without locking it and attempt to start the machine. The machine should not start with the door unlocked.
  - c. Close and lock the door and start a cycle. Attempt to open the door while the cycle is in progress. The door should not open.
 If the door lock and interlock are not functioning properly, call a service technician.
3. Do not attempt to operate the machine if any of the following conditions are present:
  - a. The door does not remain securely locked during the entire cycle.
  - b. Excessively high water level is evident.
  - c. Machine is not connected to a properly grounded circuit.

Do not bypass any safety devices in the machine.

### WARNING

**Never operate the machine with a bypassed or disconnected balance system. Operating the machine with severe out-of-balance loads could result in personal injury and serious equipment damage.**

SW039

## Introduction

### Nameplate Location

The nameplate is located at the rear of the machine. Always provide the machine's serial number and model number when ordering parts or when seeking technical assistance.

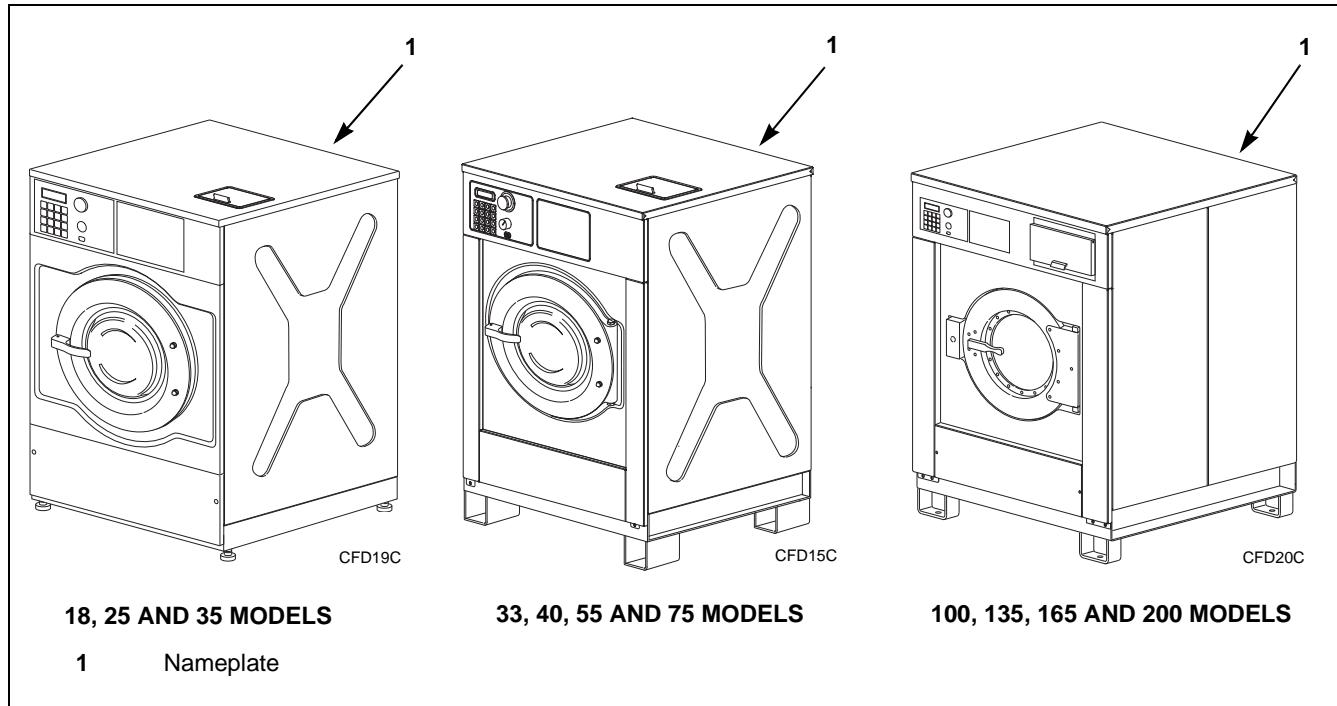

Figure 1

### Replacement Parts

If literature or replacement parts are required, contact the source from which the machine was purchased or contact Alliance Laundry Systems at (920) 748-3950 for the name and address of the nearest authorized parts distributor.

### Customer Service

For technical assistance, call (920) 748-3121.

## Dimensional Clearances

*Table 1* shows recommended minimum clearances on all sides of the washer-extractor.

Model	Recommended Minimum Clearances										
	18	25	33	35	40	55	75	100	135	165	200
Minimum rear clearance	24 in. (600 mm)	24 in. (600 mm)	24 in. (600 mm)	24 in. (600 mm)	24 in. (600 mm)	24 in. (600 mm)	24 in. (600 mm)	24 in. (600 mm)	24 in. (600 mm)	24 in. (600 mm)	24 in. (600 mm)
Minimum clearance between machine and wall	6 in. (150 mm)	6 in. (150 mm)	6 in. (150 mm)	6 in. (150 mm)	6 in. (150 mm)	6 in. (150 mm)	6 in. (150 mm)	6 in. (150 mm)	6 in. (150 mm)	6 in. (150 mm)	6 in. (150 mm)
Minimum clearance between machines (side)	1.2 in. (30 mm)	1.2 in. (30 mm)	1.2 in. (30 mm)	1.2 in. (30 mm)	1.2 in. (30 mm)	1.2 in. (30 mm)	1.2 in. (30 mm)	1.2 in. (30 mm)	1.2 in. (30 mm)	1.2 in. (30 mm)	1.2 in. (30 mm)
Minimum front clearance (door swing)	16.5 in. (419 mm)	16.5 in. (419 mm)	21 in. (533 mm)	16.5 in. (419 mm)	21 in. (533 mm)	21 in. (533 mm)	21 in. (533 mm)	26 in. (660 mm)	26 in. (660 mm)	26 in. (660 mm)	26 in. (660 mm)

Table 1

## Installation

### Machine Foundation

Thoroughness of detail must be stressed with all foundation work to ensure a stable unit installation, eliminating possibilities of excessive vibration during extract.

	<b>CAUTION</b>
<p><b>Ensure that the machine is installed on a level floor of sufficient strength and that the recommended clearances for inspection and maintenance are provided. Never allow the inspection and maintenance space to be blocked.</b></p>	

W488

The washer-extractor must be placed on a smooth level surface so that the entire base of the machine is supported and rests on the mounting surface.

The standard installation does not require anchoring unless mandated by state or local codes.

Static and dynamic loads on the floor or foundation are shown in *Table 2*.

*Table 2* can be used as a reference when designing floors and foundations.

**IMPORTANT:** Mounting bolts MUST be used for installation on the 18, 25 and 35 models equipped with steam heat and models installed on metal base frames. Refer to Mounting Bolt Installation.

Floor Load Data											
Model	18	25	33	35	40	55	75	100	135	165	200

## Mounting Bolt Installation (If Required)

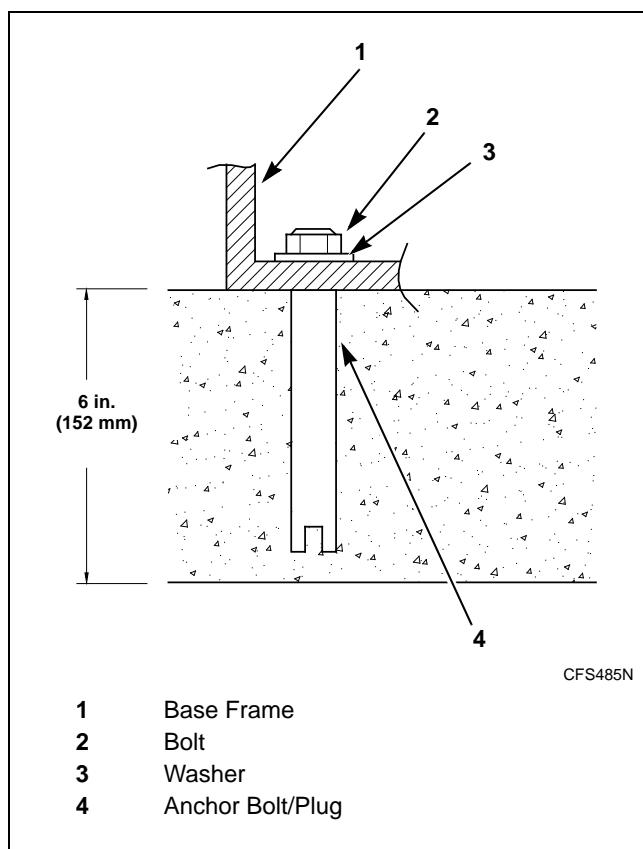

Figure 28

After the concrete has cured and the anchors are installed, proceed as follows:

1. Place the washer-extractor adjacent to the foundation. Do not attempt to move it by pushing on the sides. Always insert a pry bar or other device under the bottom of the frame of the washer-extractor to move it.
2. Place the washer-extractor carefully over the anchors.

3. Put bolts through the machine in the anchors and fasten them. (For the 18, 25, and 35 models, the diameter of the bolt must be minimum 1/2-13 or 12 mm; for the 33, 40, 55, 75, 100, 135, 165 and 200 models, the diameter of the bolt must be minimum 5/8-11 or 16 mm.)
4. To level machine, fill the spaces between the machine base and floor with machinery grout. Grout completely under all frame members. Remove front and rear panels to gain access to all frame members. Force grout under the machine base until all voids are filled.
5. Remove the spacers carefully, allowing the machine to settle into the wet grout.
6. Position washers and locknuts on machinery anchor bolts and finger-tighten to machine base.
7. After the grout is completely dry, tighten the locknuts by even increments – one after the other – until all are tightened evenly and the machine is fastened securely to the floor.
8. Remove the four red transport brackets which secure the moving components of the machine during shipping. Refer to *Figures 29, 31 and 32* for typical transport bracket locations.

## Removing the Transport Brackets

To prevent damage during transportation, the machine has been equipped with four red transport brackets (refer to *Figure 29* for 18, 25 and 35 models; refer to *Figure 30* for 33 and 40 models; refer to *Figure 31* for 55 and 75 models [depending on model number]; refer to *Figure 32* for 100, 135, 165 and 200 models) to eliminate every possible movement of the tub.

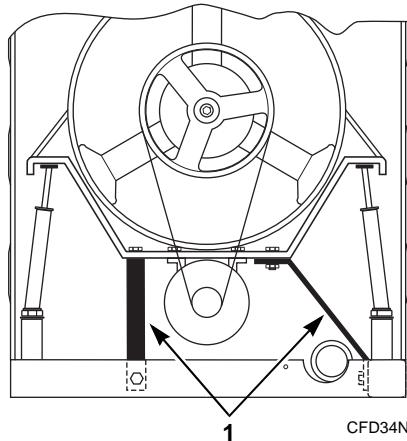

After the machine has been placed level, take off the service panels and the back panel to remove these transport brackets.

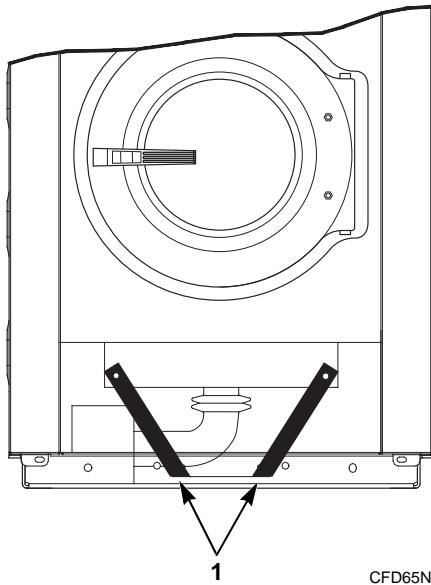

### WARNING

The machine must never be activated before removing these transport brackets.

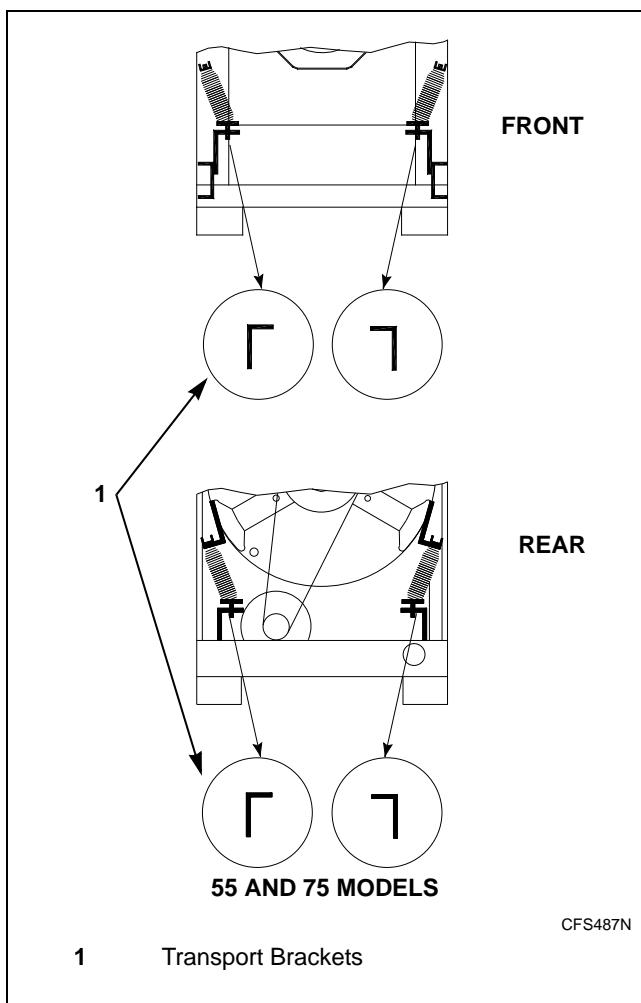

Figure 31

## Installation

### Drain Connection

A drain system of adequate capacity is essential to washer-extractor performance.

Ideally, the water should empty through a vented pipe directly into a sump or floor drain.

*Figure 33* shows drain line and drain trough configurations.

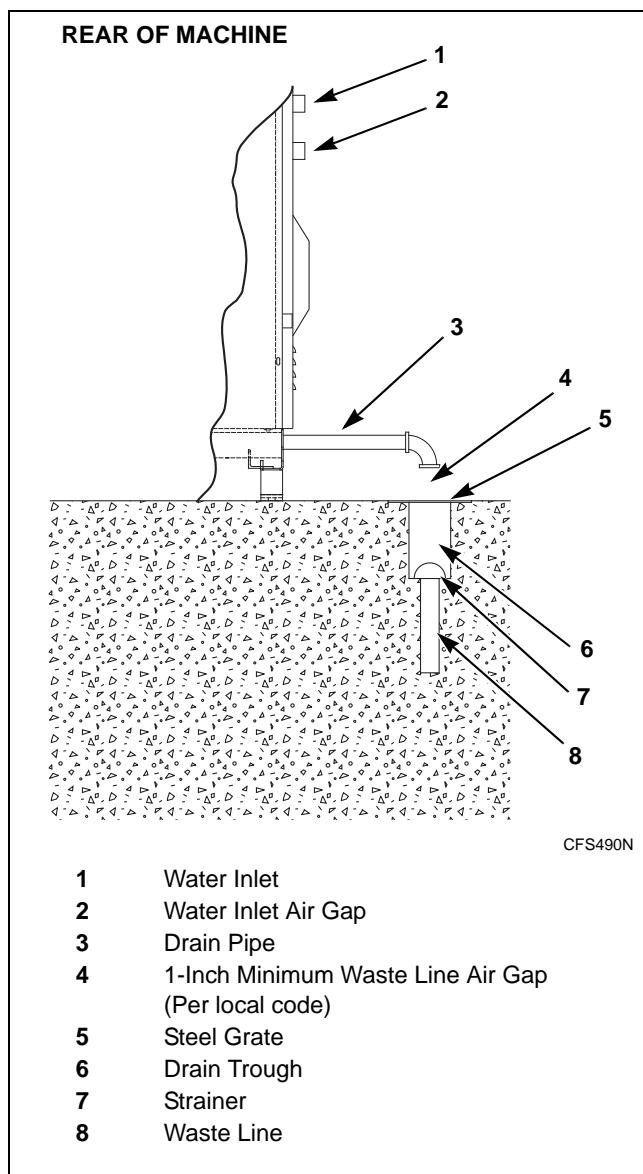

Figure 33

A flexible connection must be made to a vented or air gap drain system to prevent an air lock and to prevent siphoning. If proper drain size is not available or practical, a surge tank is required. A surge tank in conjunction with a sump pump should be used when gravity drainage is not possible, such as in below-ground-level installations.

Before any deviation from specified installation procedures is attempted, the customer or installer should contact the distributor.

Increasing the drain hose length, installing elbows, or causing bends will impair washer-extractor performance.

Refer to *Table 3* for capacity-specific drain information.

Installation of additional washer-extractors will require proportionately larger drain connections. Refer to *Table 4*.

Drain Information											
Model	18	25	33	35	40	55	75	100	135	165	200
Drain connection size, ID	2 in. (51 mm)	2 in. (51 mm)	2 in. (50 mm)	2 in. (51 mm)	2 in. (50 mm)	3 in. (76.2 mm)	3 in. (76.2 mm)	3 in. (76.2 mm)	3 in. (76.2 mm)	3 in. (76.2 mm)	3 in. (76.2 mm)

Table 4

## Installation

### Water Connection

	<b>WARNING</b>
<b>To avoid personal injury, recommended inlet water temperature should be no higher than 125° Fahrenheit (51° Celsius).</b>	

W709

The 18-135 models are delivered with hoses with 3/4 inch hose connectors. The 165 model is delivered with 3 x 1 inch and 1 x 3/4 inch hose connectors. These hoses fit the water inlet valves of the machine and the main water inlet taps. To ensure the optimal functioning of the water inlet valves, the water pressure on the inlet should be between 30-85 psi (2-5.7 bar). If the pressure is too low, the cycle time will increase considerably. In case of boiler fed machines, a maximum of hot water of 194°F (90°C) should be available:

Connections should be supplied by a hot and a cold water line per national and local codes.

To connect water service to machine with rubber hoses, use the following procedure:

1. Before installing hoses, flush the water system for at least two minutes.
2. Check filters in the washer-extractor's inlet hoses for proper fit and cleanliness before connecting.
3. Hang the hoses in a large loop, do not allow them to kink.

If additional hose length is needed use flexible hoses with screen filters. Each hose should have a screen filter installed to keep rust and other foreign particles out of the water inlet valves.

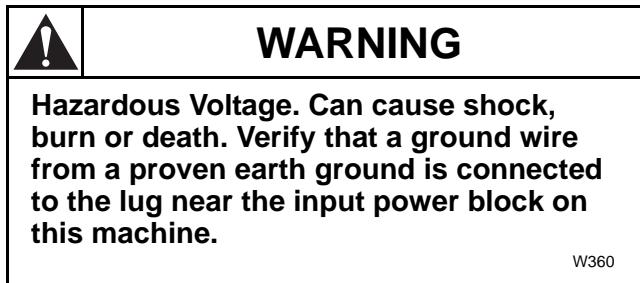

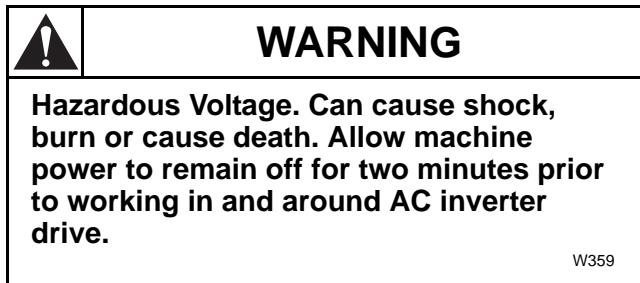

Pressure of 30-85 psi (2-5.7 bar) provides best performance. Although the washer-extractor will function at lower pressures, increased fill times will occur with some loss of supply flushing.

Suitable air cushions should be installed in supply lines to prevent "hammering."

Water Supply Information											
Model	18	25	33	35	40	55	75	100	135	165	200
Water inlet connection size	0.75 in. (19 mm)	0.75 in. (19 mm)	0.75 in. (19 mm)	0.75 in. (19 mm)	0.75 in. (19 mm)	1.0 in. (25 mm)	0.75 and 1.0 in. (19 and 25 mm)				
Number of water inlets (standard)	3	3	3	3	3	3	3	4	4	4	4
Recommended pressure	30-85 psi (2-5.7 bar)	30-85 psi (2-5.7 bar)	30-85 psi (2-5.7 bar)	30-85 psi (2-5.7 bar)	30-85 psi (2-5.7 bar)	30-85 psi (2-5.7 bar)	30-85 psi (2-5.7 bar)				
Inlet flow capacity	5.3 gal/ min (20 l/ min)	12 gal/ min (45 l/ min)	12 gal/ min (45 l/ min)	12 gal/ min (45 l/ min)	12 gal/ min (45 l/ min)	25 gal/ min (95 l/ min)	25 gal/ min (95 l/ min)				

Table 5

## Electrical Installation

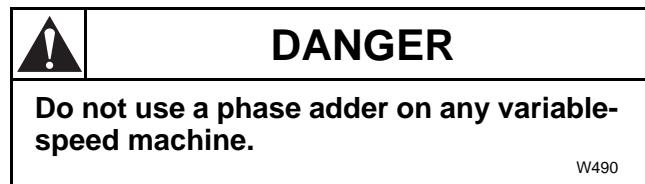

The AC inverter drive requires a clean power supply free from voltage spikes and surges. A voltage monitor should be used to check incoming power. The customer's local power company may provide such a monitor.

If input voltage measures above 240V for a 220V drive or above 480V for a 400V drive, ask the power company to lower the voltage. As an alternative, a step-down transformer kit is available from the distributor.

The AC drive provides overload protection for the drive motor. However, a separate single or three phase circuit breaker must be installed for complete electrical overload protection. This prevents damage to the motor by disconnecting all legs if one should be lost accidentally. Check the data plate on the back of the washer-extractor or consult *Table 6* for circuit breaker requirements.

**IMPORTANT: Do NOT use fuses in place of a circuit breaker.**

The washer-extractor should be connected to an individual branch circuit not shared with lighting or other equipment.

The connection should be shielded in a liquid tight or approved flexible conduit with proper conductors of correct size installed in accordance with the National Electric Code or other applicable codes. The connection must be made by a qualified electrician using the wiring diagram provided with the washer-extractor, or according to accepted European standards for CE-approved equipment.

Use wire sizes indicated in *Table 6* for runs up to 50 feet.

Use next larger size for runs of 50 to 100 feet. Use two sizes larger for runs greater than 100 feet.

For personal safety and proper operation, the washer-extractor must be grounded in accordance with state and local codes. If such codes are not available, grounding must conform with the National Electric Code, article 250-95. The ground connection must be made to a proven earth ground, not to conduit or water pipes.

**IMPORTANT: Alliance Laundry Systems  
Warranty does not cover components that fail as a result of improper input voltage.**

## Installation

Table 6

## Electrical Connection

Remove the cover plate at the back of the machine. Using copper conductors only, connect the power cable to the connectors. Refer to the instructions listed on the machine's decal on how to connect the machine.

After electrical installation is complete, run the machine through a test cycle and check for clockwise basket rotation during the extract step. If rotation is not clockwise, disconnect the power from the machine and have a qualified electrician reverse any 2 motor leads at the AC drive terminal block.

## Remote Liquid Supply Connection

### Chemical Injection Supply System

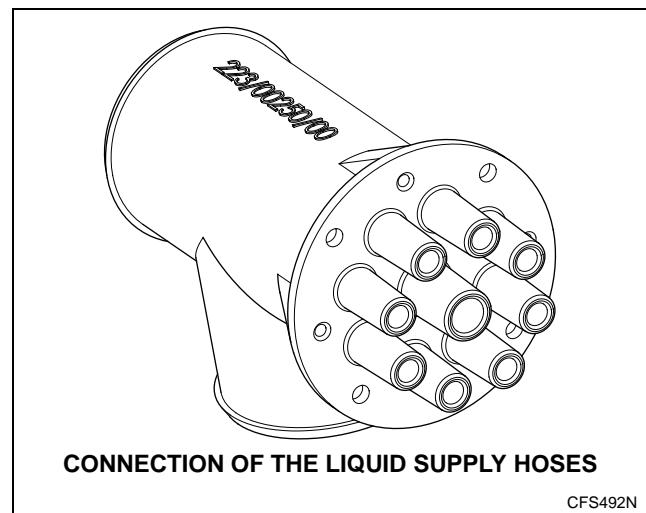

#### WARNING

**Dangerous Chemicals. May damage eyes and skin. Wear eye and hand protection when handling chemicals; always avoid direct contact with raw chemicals. Read the manufacturer's directions for accidental contact before handling chemicals. Ensure an eye-rinse facility and an emergency shower are within easy reach. Check at regular intervals for chemical leaks.**

W363

Undiluted chemical dripping can damage the machine. Therefore, all chemical supply dispenser pumps should be mounted below the washer's injection point. All dispenser tubing should also run below the injection point. Loops do not prevent drips if these instructions are not followed. Failure to follow these instructions could damage the machine and void the warranty.

CFS492N

Figure 34

A connection has been placed at the back of the machine. There are nine holes in this connection, through each of which a liquid supply hose can be connected.

#### CAUTION

**Drill out plugs and nipples before making supply hose connection. Failure to do so can cause buildup of pressure and risk a tubing rupture.**

W491

## Steam Requirements (Steam Heat Option Only)

	<b>WARNING</b>
<p><b>Never touch internal or external steam pipes, connections, or components. These surfaces can be extremely hot and will cause severe burns. The steam must be turned off and the pipe, connections, and components allowed to cool before the pipe can be touched.</b></p>	

SW014

For washer-extractors equipped with optional steam heat, install piping in accordance with approved commercial steam practices. Steam requirements are shown in *Table 7*.

Steam inlet connection, in (mm)	3/8 (10)	1/2 (13)	3/4 (19)
Number of steam inlets	1	1	1
Recommended pressure, psi (bar)	30 – 80 (2.0 – 5.5)	30 – 80 (2.0 – 5.5)	30 – 80 (2.0 – 5.5)
Maximum pressure, psi (bar)	80 (5.5)	80 (5.5)	80 (5.5)

Table 7

## Installation

### Supply Programming Table

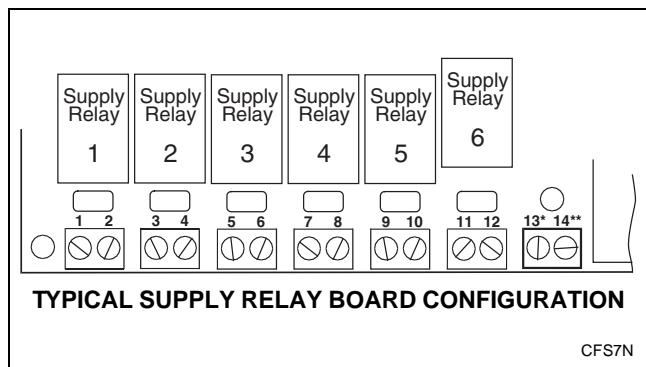

When programming a supply step on the WE-8, choose between 9 different supply steps. Refer to *Table 8*.

Supply 1	Turns on the water valve in compartment A of the supply box.
Supply 2	Turns on the water valve in compartment B of the supply box.
Supply 3	Turns on the water valve in compartment C of the supply box.
Supply 4	Activates supply relay 1.
Supply 5	Activates supply relay 2.
Supply 6	Activates supply relay 3.
Supply 7	Activates supply relay 4.
Supply 8	Activates supply relay 5.
Supply 9	Activates supply relay 6.

Table 8

**NOTE: The Supply button is button 6.**

### Supply Relay Configuration (No Wiring)

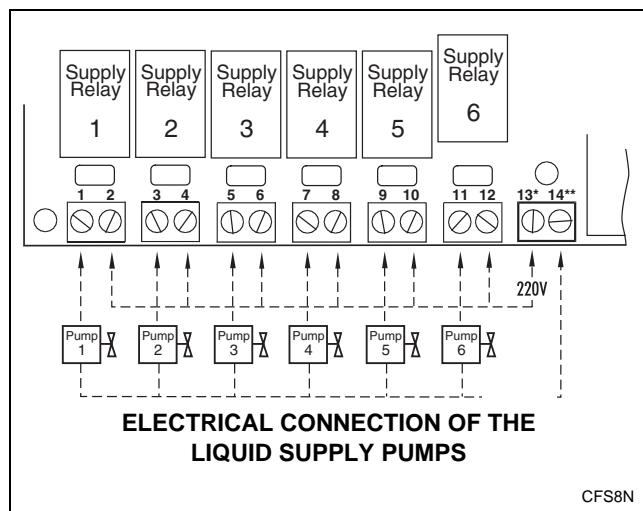

- \* L1 (220 VAC) wire or terminal for remote liquid supply connection.
- \*\* L2 common wire (220 VAC) or terminal for remote liquid supply connection.

Figure 35

The supply relay board is set up to give NO Voltage AC output to the respective terminals. It is a dry contact closure of the relay. The voltage applied must be supplied with the jumper configurations. Refer to *Figure 36*.

### Primary 220 Volt Remote Liquid Supply Connection

**IMPORTANT:** When programming a supply step, supplies 1, 2 and 3 DO NOT control the relays shown on *Figure 36*. Programming supply 1, 2 or 3 ONLY activates water in compartment A, B or C. Programming supply 4 activates relay 1. Programming supply 5 on the WE-8 will activate supply relay 2, etc. Programming supply 4-9 on the WE-8 will activate supply relay 1-6 on the board, respectively. Refer to *Table 8*.

\* L1 (220 VAC) wire or terminal for remote liquid supply connection.

\*\* L2 common wire (220 VAC) or terminal for remote liquid supply connection.

Figure 36

Supply relay 1 controls terminals 1 and 2. *Figure 36* shows the jumper wire from terminal 13 (L1 220 VAC) to all other even pins (i.e., 2, 4, 6...). This applies L1 (220 VAC) to terminal 2. When supply 4 on the WE-8 is programmed, this will close supply relay 1 and apply L1 (220 VAC) through pin 2 to pin 1. This signal is used from the terminal to the chemical supply vendors first pump.

**IMPORTANT:** Supply 4 must be programmed on the WE-8 to create the signal on terminal 1. The chemical vendor will always use terminal 14 as the common terminal for all pumps. This will apply for the remainder of the 220 VAC circuit for each of the pump signals. For the remainder of the relays, supply relay 2 will control terminals 3 and 4; supply relay 3 will control terminals 5 and 6; etc.

**IMPORTANT:** The WE-8 must be programmed for supply 4-9 to energize the supply relays 1-6 respectively.

## Primary 220 Volt Remote Liquid Supply Connection (Continued)

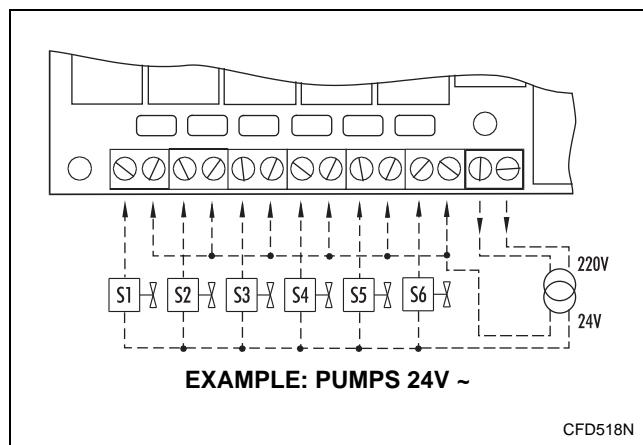

Figure 37

The 220V can be transformed to other values to drive other type supply pumps.

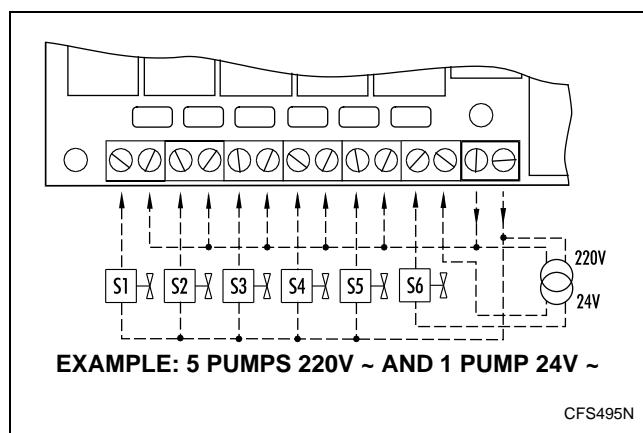

Figure 38

Also, pumps with different operating voltage requirements can be combined.

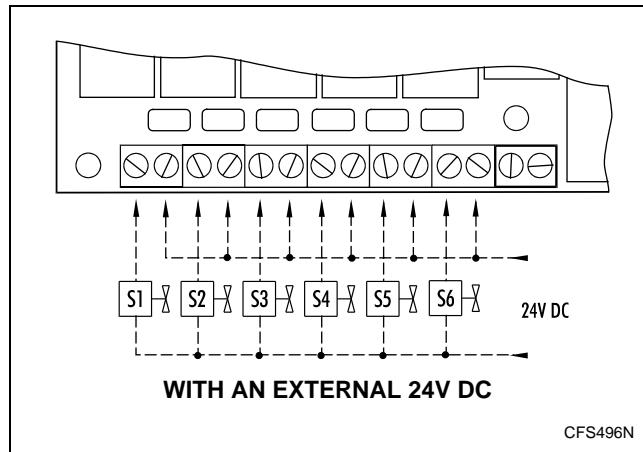

Figure 39

## Out-of-Balance Switch

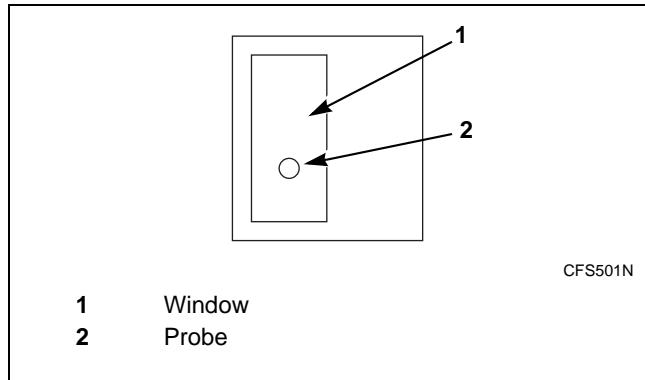

Figure 40

The out-of-balance switch is mounted on the upper right side on the back of the control panel. There is a window around the probe of the switch that is mounted on the movable part of the machine.

When the machine goes out of balance by overloading or uneven distribution of the linen, the out-of-balance switch will interrupt this action to prevent damage to the machine.

**IMPORTANT: To guarantee good functioning, the probe should be centered horizontally and vertically at 1/3 from the bottom of the tilt window (when machine drum is empty).**

## Automatic Lubricator

Only for 75-200 Models

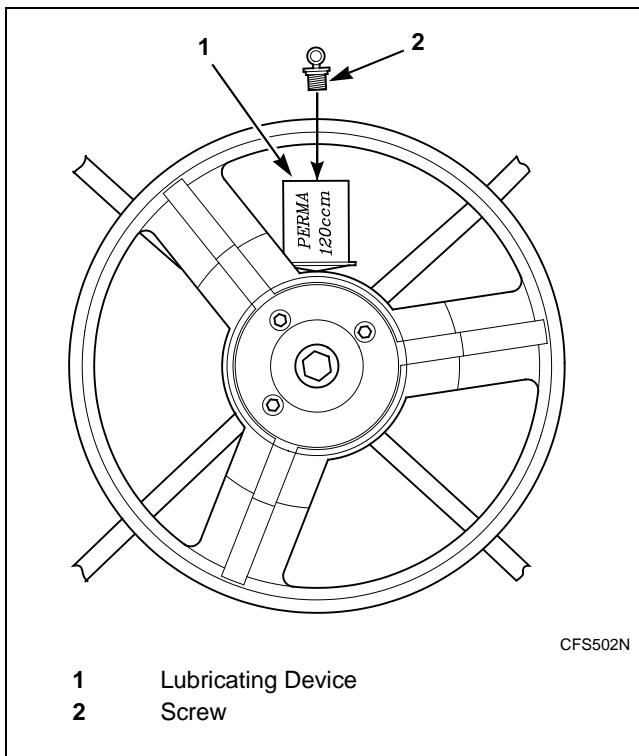

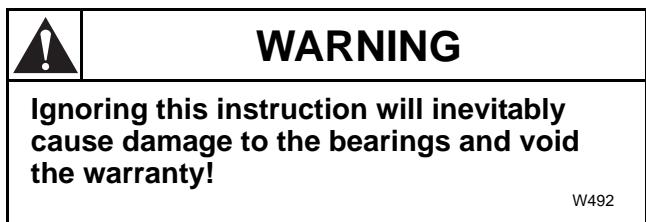

Figure 41

The bearing house of the machine is equipped with a lubricating device (1) which automatically lubricates the bearing during one year. Upon delivery of the machine, this lubricator has been brought into use. When replacing, please put on the matching screw (2) in the foreseen opening of the lubricator to activate.

Refer to the machine's Parts Manual for lubricating device parts information.

## Control Function Test

The washer-extractor should be cleaned after the installation is complete. A function test should then be executed on the unloaded machine:

1. Verify that power supply voltage and phase are correct in accordance with the washer-extractor's requirements.
2. Open manual shut-off valves to the washer-extractor.
3. Press the Emergency Stop button.
4. Apply power to the washer-extractor.
5. Release the Emergency Stop button.
6. Check the door interlock before starting operation:
  - a. Attempt to start the washer with the door open. The washer-extractor should not start with the door open.

b. Close the door without locking it and attempt to start the washer. The washer should not start with the door unlocked.

c. Close and lock the door and start a cycle. Attempt to open the door while the cycle is in progress. The door should not open.

If the door lock and interlock are not functioning properly, call a service technician.

7. For standard processing, select Cycle 01 by pressing key 0 and key 1 on the keypad. Then press the Start key (or run factory test cycle 39 by pressing key 3, key 9 and Start key).

Run a complete cycle, checking operation of water inlet valves, drain, and extract functions.

8. Cylinder rotation must be clockwise in an extract step for all models. If rotation is not correct, disconnect power. A qualified electrician must reverse any two leads between the AC drive and the main drive motor. Refer to *Figure 42*.

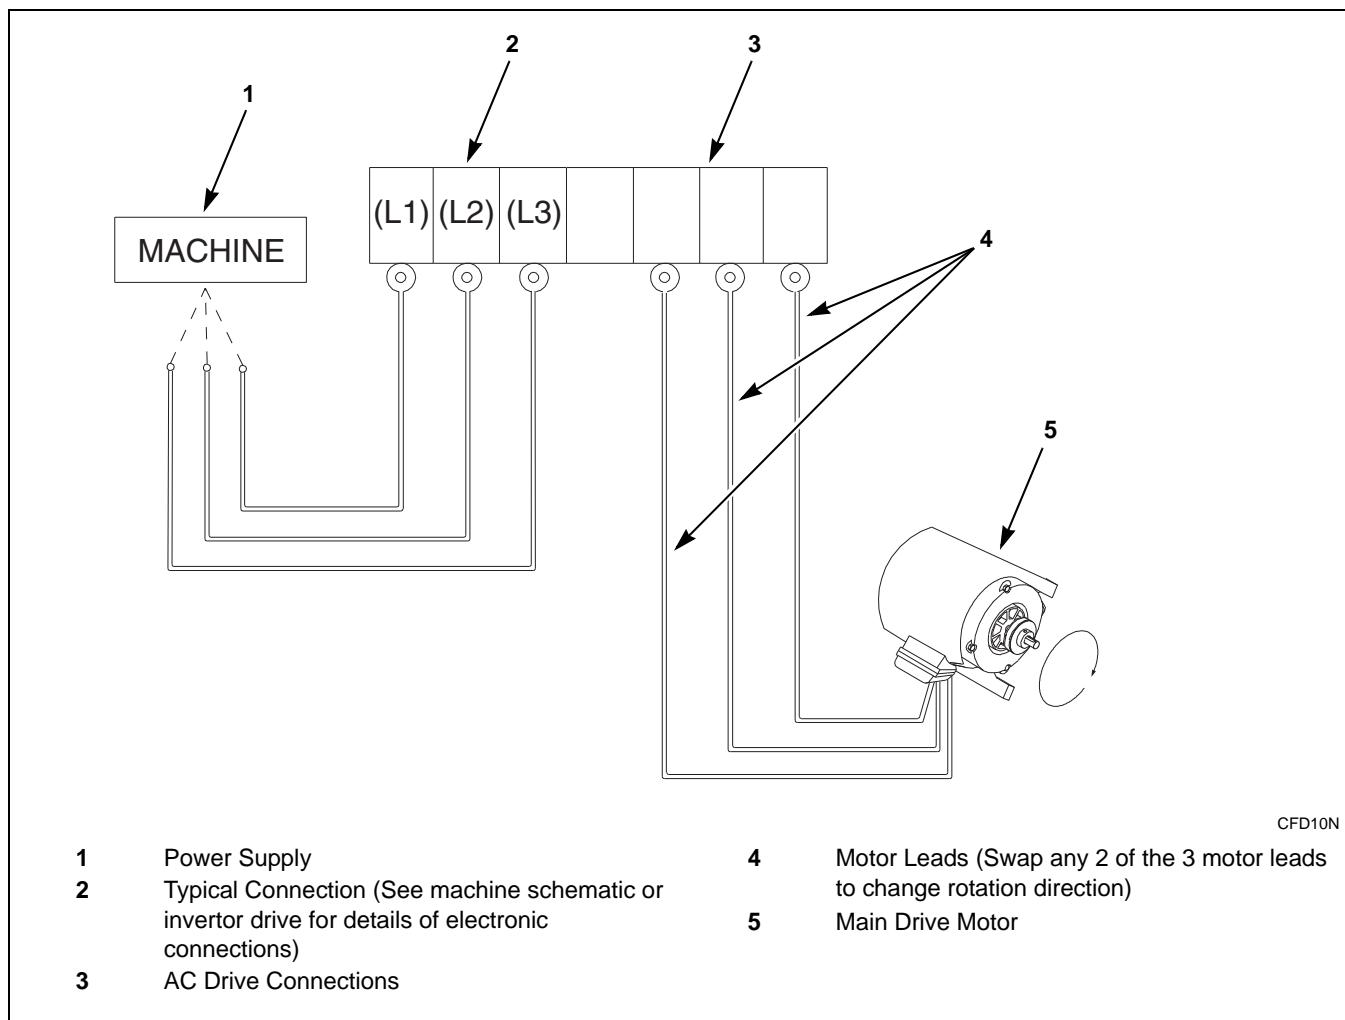

Figure 42
