### Cabinet Assembly

**Step 1** - Slide side panels onto base.

**Step 2** - Place support angles under the side panels.

**Step 3** - Screw legs into the base (through support angles & side panels).

**Step 4** - Place brace panels on the inside of the frame, engaging the hook flanges of the brace to the rectangular slots on the side panels.

**Step 5** - Place the top panel with the rubber grommets along open sides.

**Step 6** - Install ½ of the security bracket to stand.

**WARNING**

This stand must be secured to a wall to prevent tipping.

**Step 7** - Install top cover onto stand.

**Step 8** - Install rear panel.

**Step 9** - Move into position and level front to back and side to side.

**Step 10** - Locate studs in wall and mark bracket screw locations (2 studs must be used).

**Step 11** – Provide screws suitable for your building material and mount second ½ of bracket to wall.

**Step 12** - Move stand into position and secure 2 bracket halves with provided bolts, washers and nuts.

**Step 13** - Secure stand top to stand with provided screws through the rear of the stand.

**Step 14** - Place ice machine on stand.

**Step 15** - Secure the ice machine to the stand with provided bolts and washers (access thru front door to align holes).

**Step 16** - Refer to Installation Use and Care Manual and install ice machine. Water, drain and electrical connections can be made out the back or through the bottom of the ice machine.

**Step 17** - Install removable front panel.
