

Erasing a memory location

- 1 Display the name and phone number you want to erase by doing steps 1 and 2 in "Making calls from the Phone Directory" below.
- 2 Press **[SELECT]**.
- 3 Make "ERASE" flash using the Jog lever, then press **[SELECT]**.
- 4 Make "YES" flash using the Jog lever, then press **[SELECT]**. You hear a long confirmation beep and the memory location is erased.

Making calls from the Phone Directory

- 1 Raise the Jog lever. "DIRECTORY" appears.
- 2 Display the name and phone number you want to call. To search in alphabetical order: Raise or lower the Jog lever. To search by entering the initial character: Press the dialing key of the desired character, then lower the Jog lever.
- 3 Press **[SELECT]**. The phone number will be dialed.
- 4 Press **[SELECT]** again.

Tip
You may press **[TALK]** to make a call instead of doing steps 3 and 4.

About the search order
The names appear in the following order when you raise or lower the Jog lever.

- Alphabetical order: ABC...XYZ ←→ symbols ←→ * ←→ # ←→ 0 - 9
- Initial character: To search for "SONY" for example, press **[S]** and then lower the Jog lever to search through the names starting with S.

Setting the ringer type

- You can select a ringer type of the handset from four type.
- 1 Press **[PGM]**.
 - 2 Display "RINGER" using the Jog lever. The current ringer type appears.
 - 3 Press **[SELECT]**.
 - 4 Select a ringer type ("1" to "4") using the Jog lever.
 - 5 Press **[PGM]**. You will hear the corresponding ringer tone.

Tip
You may press **[SELECT]** instead of doing step 5.

Turning off the ringer of the handset

- 1 Perform steps 1 to 3 in "Setting the ringer type".
- 2 Select "OFF" using the Jog lever.

- 3 Press **[PGM]**. You will hear a long confirmation beep.
- Tip**
You may press **[SELECT]** instead of doing step 3.
- When "RINGER" is set to "RINGER OFF"**
The handset won't ring. You can still make calls, and also receive calls if another telephone connected to the same line rings to inform you on incoming calls.

To turn the ringer on again
Follow the instructions described in "Setting the ringer type".

Locating the handset

You can page the handset from the base unit.
Note that you cannot page if the handset is in use.

Tip
You can page the handset even when "RINGER" is set to "RINGER OFF".

Understanding the Caller ID service

Caller ID allows the caller's phone number to be shown on the display before the call is answered. In order to use this feature, you must first subscribe to the Caller ID service. The name of this service may vary depending on your telephone company.

When you receive a call
The phone number appears on the display with the date and time as shown in the following example.
If your Caller ID service includes the caller name service, the caller's name also appears on the display (up to 15 letters).

Caller's name	SMITH JOHN
Caller's phone number	1-201-123-4567
The date and time received	7:04 4:53m

When you answer the call, the Caller ID display changes to the "TALK" display.
Note
If the call is from an office which uses multiple lines, the displayed phone number may not match the number you use to call the extension.

Tip
Even if the ringer of the handset is set to "RINGER OFF", you can receive Caller ID data.

Looking at the Caller ID list

The phone stores the data of the last 50 calls received. It keeps track of all calls received; even if they were not answered.

NEW 00 OLD 05
7:04 4:53m

Viewing the Caller ID list
You can look through the Caller ID list to check the phone number and/or name of the calls received.
While the handset is not in use the display shows the number of "NEW" (calls which you have not viewed) and "OLD" (calls which you have viewed) calls. If there is a "NEW" data, the NEW CALL lamp of the base unit flashes.

- 1 Lower the Jog lever. Data for the newest call appears for 20 seconds.
- 2 Lower the Jog lever to display older data or raise to display newer data.

Note
If a 51st call is received, the oldest data is automatically erased.

About the "*" mark
"*" appears if there are two or more calls in a row from the same phone number. The older data will be replaced by the new data, so the calls are counted as only one call.

SMITH JOHN *
1-201-123-4567
7:04 4:53m

Erasing data from the Caller ID list
Old data will be erased automatically when a 51st call comes in, but you can also manually erase unnecessary data one by one or erase the entire list.

- To erase the phone number one by one**
- 1 Display the phone number you want to erase from the Caller ID list (see "Viewing the Caller ID list").
 - 2 Press **[SELECT]**.
 - 3 Make "ERASE" flash using the Jog lever, then press **[SELECT]**.
 - 4 Make "YES" flash using the Jog lever, then press **[SELECT]**. You will hear a long confirmation beep and the data is erased.

To erase the entire list at once
You can erase the entire list at once only when all the data has become "OLD" data. If there is any "NEW" data, you cannot erase the entire list.

- 1 Display any Caller ID data.
- 2 Press **[SELECT]**.
- 3 Make "ERASE" flash using the Jog lever, then press **[SELECT]**.
- 4 Make "ALL" flash using the Jog lever, then press **[SELECT]**.
- 5 Make "YES" flash using the Jog lever, then press **[SELECT]**. You will hear a long confirmation beep and the entire list is erased.

Using the Caller ID list

By using the Caller ID list, you can call back a phone number from the Caller ID list easily, or store numbers from the Caller ID list into the Phone Directory.

- Calling back a number from the Caller ID list**
- 1 Display the phone number you want to call from the Caller ID list (see "Viewing the Caller ID list").
 - 2 Confirm the number and press **[SELECT]**.
 - 3 Make "DIAL" flash using the Jog lever, then press **[SELECT]**. The phone automatically dials the displayed number.

Notes

- If the number displayed in step 1 is not the one you should call back, you can change the number of digits of the phone number (see "To change the number of digits of the phone number").
- If the phone is connected to a Private Branch Exchange (PBX), you may not be able to call back from the Caller ID list because an outside line access digit is necessary.

Tip
You may press **[TALK]** to make a call instead of doing steps 2 and 3.

Storing a number of the Caller ID list into the Phone Directory

- 1 Display the name and phone number you want to store from the Caller ID list (see "Viewing the Caller ID list").
- 2 Confirm the number and press **[SELECT]**.
- 3 Make "PGM" flash using the Jog lever, then press **[SELECT]**. The cursor flashes at the end of the name. Enter or change the name, if necessary (see "Changing a stored name and/or phone number").
- 4 Press **[SELECT]**. The cursor flashes at the right of the phone number. Enter or change the phone number, if necessary (see "Changing a stored name and/or phone number").
- 5 Press **[SELECT]** again. You will hear a long confirmation beep and the name and number are stored.

Notes

- Do not allow more than 20 seconds to elapse between each step of the procedure.
- If the number displayed in step 1 is not the one you should call back, you can change the number of digits of the phone number (See "To change the number of digits of the phone number").
- If the phone is connected to a Private Branch Exchange (PBX), you may need to add an outside line access digit.

To change the number of digits of the phone number

If the number of digits of the phone number in the Caller ID list is different from the actual phone number, you need to adjust the number of digits of the phone number to call back or store into the Phone Directory.

1 While the phone number from the Caller ID list is displayed, press **[#]** repeatedly until the phone number with the correct number of digits appears on the display. Each time you press **[#]**, the number of digits changes as follows.

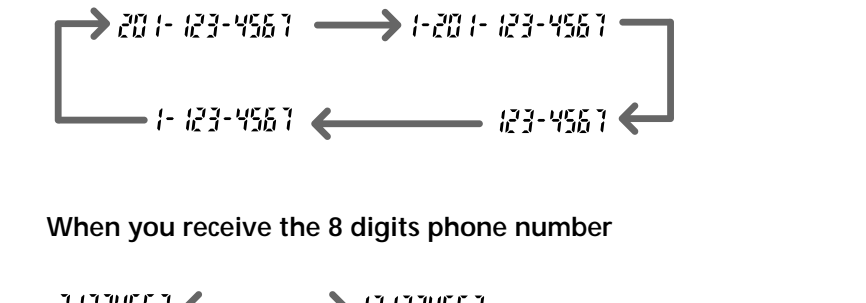

When you receive the 10 digits phone number

```

201-123-4567 → 1-201-123-4567
1-123-4567 ← 123-4567

```

- 2 Continue the operation to call or store the phone number with the correct number of digits (see "Call back a number from the Caller ID list" and "Storing a number of the Caller ID list into the Phone Directory").
- Notes**
- The number of digits of the phone number does not change even if you press **[#]** when you receive the phone number of 6 digits or less.
 - You need to adjust the number of digits each time you call back from the Caller ID list as the changes to the Caller ID data is not stored in memory.
 - You may not be able to change the number of digits depending on the Caller ID data.

Using "Caller ID with call waiting" service

This telephone is compatible with the "Caller ID with call waiting" service. Make sure that your telephone company offers this service.

Like the basic Caller ID service, you need to subscribe to "Caller ID with call waiting" in order to use this service.

Even though you may have already subscribed to "Caller ID" and "call waiting" as two separate services, you need to request a subscription to "Caller ID with call waiting" as a single service.
This is a new service that combines the two services.
Even though you now have a "Caller ID with call waiting" compatible phone, unless you subscribe to the combined "Caller ID with call waiting" service, you will not be able to see the name and number of the second caller.

When a new call comes in while you are talking, you hear two short beeps. The caller's name and/or phone number of the new call appears on the display for about 20 seconds.

- To switch to another caller**
- 1 To switch to the new caller, press **[FLASH]**.
 - 2 To switch back to the first caller, press **[FLASH]** again.

Using voice mail service

- If you subscribe to your telephone company's message service which includes this feature, the display will show that you have messages waiting to be retrieved.
- If you have messages**
- "MESSAGES WAITING" will appear on the display, and the VOICE MAIL lamp on the base unit flashes.
The display and the VOICE MAIL lamp will go off when you retrieve your messages.
- Note**
You cannot use this feature, if you have not subscribed to your telephone company's message service. For details on the availability of this service, please ask your telephone company.

If the VOICE MAIL lamp remains flashing
If this lamp does not go off (e.g. When you retrieve your messages with other phones), you can go off the lamp manually.

To go off the VOICE MAIL lamp

- 1 Press **[PGM]** on the handset.
- 2 Display "MESSAGES WAITING" using the Jog lever, then press **[SELECT]**.
- 3 Make "YES" flash using the Jog lever, then press **[PGM]**. The VOICE MAIL lamp on the base unit goes off, and you will hear a long confirmation beep.

Note
You cannot use this feature, if you have not subscribed to your telephone company's message service. For details on the availability of this service, please ask your telephone company.

Tip
You may press **[SELECT]** instead of pressing **[PGM]** in step 3.

If you move or change your telephone company
If you turn off the base unit, it is reset and either FSK or stutter dial tone is automatically selected according to the voice mail service you are using.

Mounting the base unit on a wall

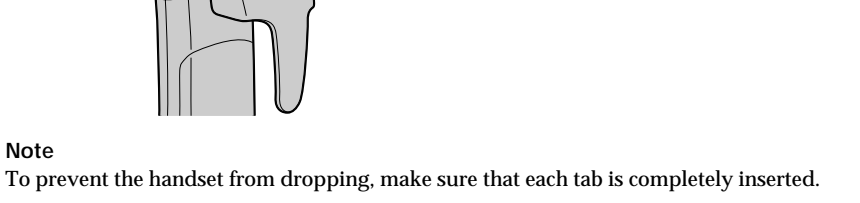

- 1 Raise the hang-up tab.
- 2 Plug the telephone line cord to the LINE jack and the AC power adaptor to the DC IN 9V jack, and hook the cords.
- 3 Attach the wall bracket to the center of the base unit. Align the Δ marks of the wall bracket with those of the base unit.
- 4 Plug the telephone line cord to the telephone outlet, and hook the base unit to the wall plate.
- 5 Plug the AC power adaptor to an AC outlet. Then raise the antenna so that it points towards the ceiling.

Tip
To remove the wall bracket, press the lower tabs.

Carrying the handset by the belt clip

- You can hang the handset on the belt by attaching the belt clip to the handset.
- Attaching the belt clip**
- Press the belt clip to the handset. Make sure that the side tabs click and go into the holes on the sides of the handset.

Note
To prevent the handset from dropping, make sure that each tab is completely inserted.

- Detaching the belt clip**
- While pressing the back of the belt clip, pull the sides one by one until the tabs come off from the holes.

Note
Remove the belt clip carefully to avoid breaking your fingernails.

Using the headset
You can talk on the cordless handset without using your hands by connecting a headset (optional) to the Ⓞ (HEADSET) jack on the handset.

Notes on power sources

- On battery pack**
- Store the battery pack at a temperature between 41°F (5°C) and 95°F (35°C) for best performance.
 - If you do not use the handset for a long period of time, remove the battery pack after charging for more than 10 hours. This maintains battery life.
- On power failure**
- During a power interruption, you cannot make or receive calls.

For the customers in the USA
RECYCLING NICKEL-CADMIUM BATTERIES
Nickel-Cadmium batteries are recyclable. You can help preserve our environment by returning your unwanted batteries to your nearest point for collection, recycling or proper disposal.
Note: In some areas the disposal of nickel-cadmium batteries in household or business trash may be prohibited.

RBRC (Rechargeable Battery Recycling Corporation) advises you about spent battery collection by the following phone number.

Recycling logo: RBRC 1-800-627-2671

Call toll free number: 1-800-822-8837 (United States and Canada only)
Caution: Do not handle damaged or leaking nickel-cadmium batteries.

Maintenance

- Clean the cabinets with a soft cloth slightly moistened with water or a mild detergent solution. Do not use any type of abrasive pad, scouring powder or solvent such as alcohol or benzine as they may damage the finish of the cabinet.
- If the charge terminals of the base unit and handset are soiled, wipe them with a soft cloth.

If you have any questions or problems concerning your phone, please consult your nearest Sony dealer.

Troubleshooting

If you've experienced any of the following difficulties while using your phone, use this troubleshooting guide to help you remedy the problem. Should any problem persist, consult your nearest Sony dealer.

Symptom	Remedy
You hear five short error beeps when you press [TALK] .	• Make sure you have set up the base unit correctly. • Move the handset closer to the base unit.
You hear no dial tone.	• Make sure the telephone line cord is securely connected to the telephone outlet. • Make sure the battery is fully charged.
The phone does not connect at all, even though the number you dial is correct.	• Make sure the dialing mode is set correctly.
The phone does not redial correctly.	• Make sure the last dialed number is really the one you want to dial.
You hear five short error beeps when you try to redial.	• The number you last dialed exceeds 32 digits (including the tone and pause digits if used). • The number you last dialed is erased.
You cannot perform the redial operations (redialing, checking and erasing the phone number), and "NO CONNECT" appears on the display.	• Move the handset closer to the base unit and perform the redial operations again.
The handset does not ring.	• Make sure the ringer is turned on. • The battery may be weak. Charge the battery for more than 12 hours. • Make sure you have set up the base unit correctly. • Move the handset closer to the base unit.
"NO LINE" appears on the display.	• This is the out-of-range alarm. Move the handset closer to the base unit within one minute.
You hear interference during conversation.	• Place the base unit away from noise sources.
Your conversation is muted and "NO CONNECT" appear on the display.	• This is the out-of-range alarm. Move the handset closer to the base unit within one minute.
You hear a beep every three seconds and "BATTERY LOW" appears on the display.	• The battery is weak. Charge the battery for more than 12 hours.
You hear five short error beeps and cannot store a number in the Phone Directory.	• Make sure you follow the procedure for storing the number correctly. • Make sure the number (including the tone and pause digits) does not exceed 16 digits.
Phone Directory dialing is incorrect.	• Store the correct number.
The caller's name and/or phone number does not appear on the display.	• Make sure you have subscribed to Caller ID service. • Caller ID service may not work when the phone is connected to a Private Branch Exchange (PBX). • You have answered the call while "RINGING" was displayed. Be sure to answer after the Caller ID data is displayed.
The caller's name and/or phone number does not appear on the display during call waiting.	• Make sure you have subscribed to "Caller ID with call waiting" service. • Make sure nobody is talking with another phone on the same telephone line.
You cannot dial the number from the Caller ID list.	• You may need to change the number of digits of the phone number. • This function may not work when the phone is connected to a Private Branch Exchange (PBX).
You cannot use voice mail service.	• Make sure you have subscribed to voice mail service. • If you move or change your telephone company, reset this phone.
The CHARGE lamp does not light up when you place the handset to charge.	• Wipe the charge terminals of the base unit and the handset with a soft cloth for better contact of the charge terminals. • Make sure the handset is placed on the base unit properly.
The CHARGE lamp flashes.	• The battery is empty. Charge the battery for more than 12 hours.
The battery duration is short.	• The battery pack was charged less than 12 hours (due to power failure, etc.). • The usage life of the battery has expired and needs replacement.

Specification

General	902 - 928 MHz
