

WASHING AND DRYING SYSTEMS

- Custom designed to meet your specific washing and drying requirements
- Engineered for outstanding function, performance and unsurpassed reliability.

STANDARD FEATURES

THE "ULTIMATE" WASHING SYSTEM

- Stainless steel 304 construction
- Adjustable to all container sizes
- Easy access to internal components through removable top panels
- Automatic water level controls and tank filling valves

Stainless steel header assemblies remove easily from tanks. Headers are equipped with stainless steel, high pressure spray nozzles.

Fast and efficient tank cleaning via internal flushing headers and clean-out doors.

Wash and rinse tanks contain side filtration tanks and slide-out solution screens. Wash tanks contain a removable waste catch basket. In-line filters equipped with stainless steel screens protect against nozzle plugging.

Specially designed stainless steel chain with pusher tabs for total container separation. Variable frequency drive on all chain conveyor motors with electronic over torque detection.

All machines are totally wired to a centralized control panel equipped with a PLC and all necessary selector switches and control lights. An audible alarm system and pilot lights indicate any malfunction with the equipment.

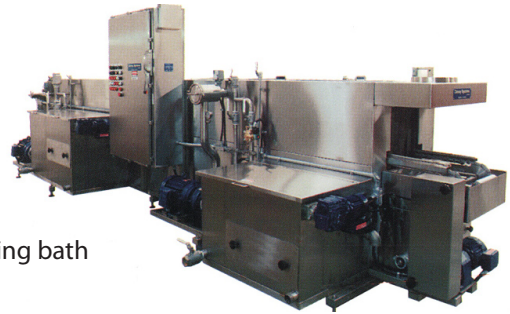

WASHING AND DRYING SYSTEMS

STANDARD FEATURES

THE TURBO CONTAINER WASHING SYSTEM

- All stainless steel construction
- Stainless steel pumps
- Premium efficiency motors
- NEMA 4X control panels complete with PLC
- Internal flushing system permits easy interior cleaning
- Factory wired and tested
- Designed to clean the dirtiest baskets utilizing immersion and turbulating bath
- Washer and Dryer systems also available as separate components

STANDARD FEATURES

THE "ULTIMATE" PALLET WASHING SYSTEM

- All stainless steel construction
- Stainless steel pumps
- Premium efficiency motors
- NEMA 4X control panels complete with PLC
- Internal flushing system permits easy interior cleaning
- Factory wired and tested
- Washer and Dryer systems also available as separate components

STANDARD FEATURES

DRYING SYSTEMS

- Unique blow drying modules feature stainless steel moisture eliminators which maintain the dryness of the recirculated air
- Blow drying modules can be attached or remotely located
- Depending on requirements, up to 99% degree of dryness can be obtained
- "Insulated" blow drying modules are also available

Dryer Model RRB-2

WASHER & DRYER OPTIONS

- Stainless steel exhaust system (complete with roof extractor fan)
- Manual infeed and discharge conveyor
- Noise insulated blower module
- Automatic rotary drum filtration system
- Heating medium (steam, gas or electric)
- Custom made machine available
