

SISTEMA DI SICUREZZA BUS

SYSTEME DE SECURITE BUS

BUS SAFETY SYSTEM

SISTEMA DE SEGURIDAD BUS

TOUCH BUS LINK EN12978
cod. ACG8618

BUS CONTROLLER
cod. ACG8615

TX **RX**
FIT SLIM BUS
cod. ACG8033

Il SISTEMA DI SICUREZZA BUS è conforme alla norma EN13849-1:2007 e congiuntamente ad un quadro elettronico RIB è un dispositivo di Classe 2.

Come indicato dal nome, il SISTEMA DI SICUREZZA BUS consente il collegamento continuo di tutte le coste di sicurezza (meccaniche o elettriche tramite schedino TOUCH BUS LINK EN12978) e di tutte le fotocellule (FIT SLIM BUS) senza dover stendere cavi per ogni singolo componente con conseguente semplificazione dell'impianto elettrico e risparmio di materiali e tempo di installazione.

Il SISTEMA DI SICUREZZA BUS si basa su di un esclusivo protocollo RIB con controllo di errore che avviene tramite una interfaccia differenziale RS485 a 56 Kbit/s.

Tecnologicamente all'avanguardia, soddisfa completamente l'esigenza di una sicurezza attiva su tutti i tipi di aperture automatiche.

È indicato per applicazioni su vecchie e nuove automazioni rendendole sicure nel loro funzionamento e permette di ottemperare alle Norme e

Direttive attualmente in vigore.

Utilizzando i quadri elettronici RIB è possibile eseguire l'autotest del sistema.

RIFERIMENTI NORMATIVI PER PORTE E CANCELLI AUTOMATICI

L'installatore deve assicurarsi che il SISTEMA DI SICUREZZA BUS sia collegato come specificato nella norma EN12453 al punto 5.1.1.6 (punti e ed f) ad una centrale elettronica in grado di effettuare un controllo del funzionamento prima di effettuare il movimento di chiusura (AUTOTEST).

Una volta ultimata l'installazione della macchina, il tecnico si deve sincerare che sia conforme alla norma EN13241-1.

RIB non può considerarsi responsabile per eventuali danni causati da un uso improprio, erraneo o irragionevole del prodotto.

A - CONNESSIONI

Il SISTEMA BUS è composto da:

BUS CONTROLLER (cod. ACG8615)

Riceve i segnali dei dispositivi ad essa collegati e li trasmette al quadro elettronico dell'automazione.

BUS CONTROLLER consente il collegamento fino ad un massimo di 7 coppie di fotocellule FIT SLIM BUS e fino ad un massimo di 8 schede TOUCH BUS LINK EN12978 per gestione coste.

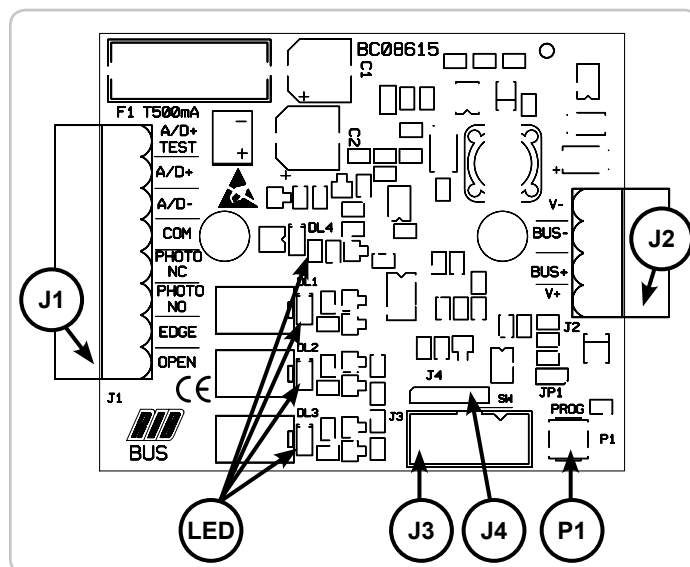

MORSETTIERA PER COLLEGAMENTI ALLA CENTRALE RIB

J1	A/D+ TEST	Positivo per alimentazione autotest 12/24 Vac/dc
	A/D+	Positivo per alimentazione accessori a 12/24 Vac/dc
	A/D-	Negativo per alimentazione accessori a 12/24 Vac/dc
	COM	Comune dei contatti

 - se lampeggia una volta seguito da 3 secondi di spento, la scheda è alimentata ma non memorizzata
 - se lampeggia continuamente, la scheda è memorizzata
 - se acceso fisso, il contatto della costa risulta essere impegnato, oppure mancante
- SW1** Dip switch di codifica dispositivo
- JP1** JUMPER Non cortocircuitare (dedicato a test in fabbrica)

B - POSSIBILITÀ DI INSTALLAZIONE

Il SISTEMA DI SICUREZZA BUS può essere installato su diverse tipologie di automazione. Di seguito indichiamo alcune possibilità.

C - MONTAGGIO

Fissare BUS CONTROLLER nelle immediate vicinanze del quadro elettronico RIB.

Fissare le fotocellule FIT SLIM BUS su pilastri o su colonne posizionandole ogni 60-70 cm in altezza in modo da coprire l'altezza del cancello (massimo 2,5 m. Oltre tale misura non è necessario applicare altri dispositivi).

Consigliamo di applicare la prima fotocellula a 20 cm dal suolo e ad una distanza massima di 10 cm dalla zona di convogliamento o schiacciamento o subito dopo l'ingombro dato da un'eventuale costa.

Installate il ricevitore della fotocellula in ombra o in una posizione in cui il sole non possa battere orizzontalmente.

In ogni caso si consiglia di posizionare le coppie di fotocellule alla stessa

altezza e allineate tra loro.

Fissare il contenitore del dispositivo TOUCH BUS LINK EN12978 nelle immediate vicinanze della Costa meccanica o elettrica (con contatto NC oppure NO) che si desidera monitorare.

ATTENZIONE: È obbligatorio applicare la resistenza da da 8,2 K Ω ed 1/4 di Watt (in dotazione) in serie se viene utilizzato un contatto NC, oppure in parallelo se viene utilizzato un contatto NO (vedi esempi sottostanti).

Se la resistenza da 8,2 K Ω ed 1/4 di Watt non viene collegata il sistema non funziona ed entra in allarme.

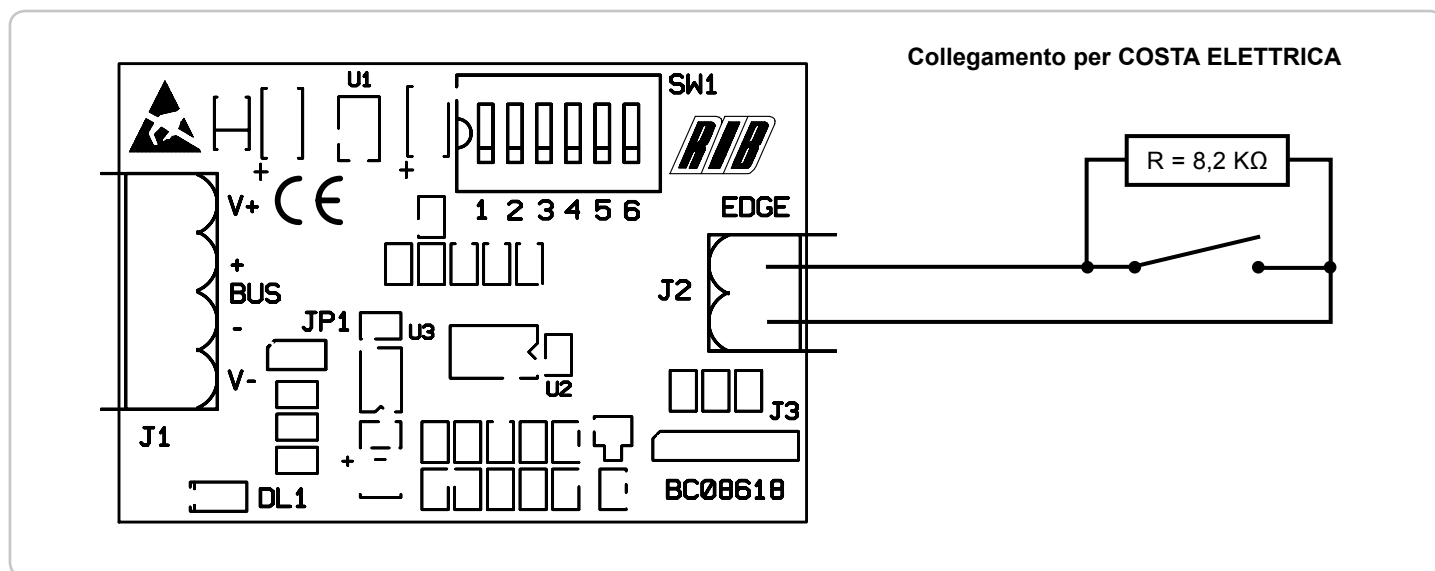

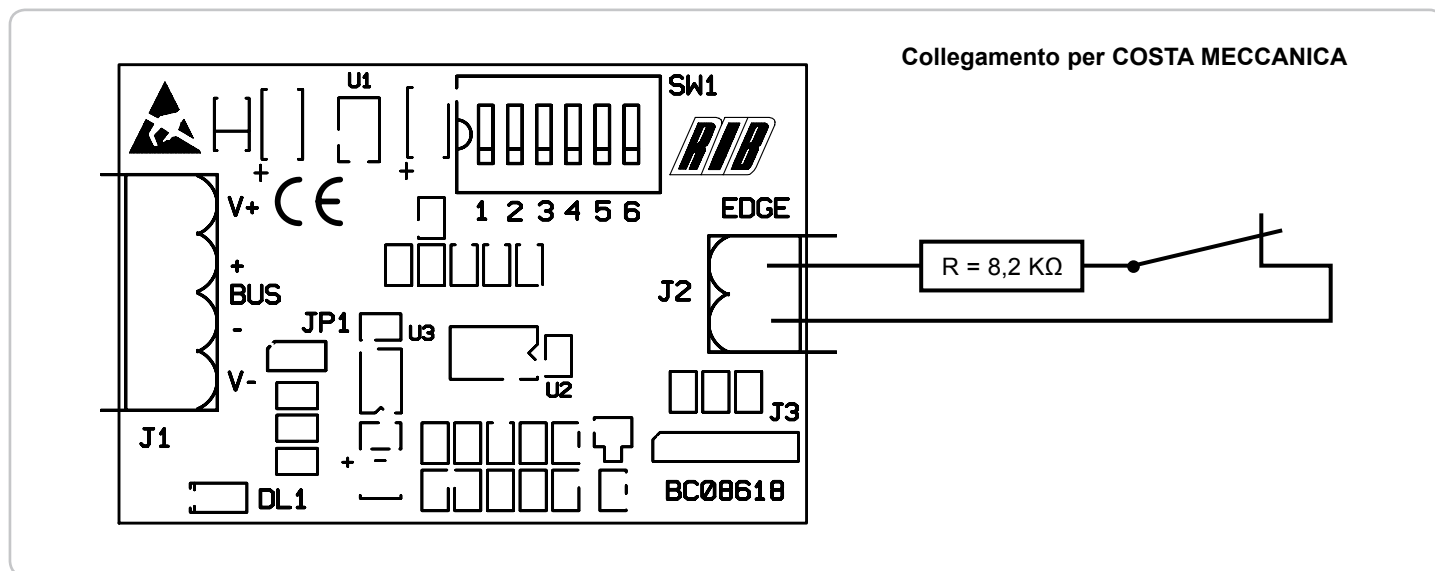

TABELLA QUADRI ELETTRONICI RIB ABILITATI AL CONTROLLO AUTOTEST

E - ALIMENTAZIONE DEL SISTEMA BUS

Dopo avere eseguito tutti i collegamenti alimentare la scheda BUS CONTROLLER.

Lo stato di corretta alimentazione della BUS CONTROLLER e dei dispositivi ad essa collegati sarà il seguente:
il led DL4 (giallo) a bordo della BUS CONTROLLER e i led di segnalazione

a bordo delle fotocellule FIT SLIM BUS (tx e rx) e delle schede TOUCH BUS LINK EN12978 (costa) eseguiranno un lampeggio seguito da 3 secondi di spento.

Se questa segnalazione non viene eseguita, controllare i collegamenti e quindi riprovare ad alimentare il sistema.

F - CODIFICA DEI DISPOSITIVI

Ogni fotocellula FIT SLIM BUS (tx e rx) e ogni scheda TOUCH BUS LINK EN12978 (costa) deve essere codificata tramite il dip switch a 6 vie presente sul dispositivo.

ATTENZIONE: Solo i primi 5 dip switch sono attivi mentre il 6° è una previsione per implementazioni future.

CODIFICA DEI DISPOSITIVI

Ogni coppia di fotocellule FIT SLIM BUS deve essere identificata con un codice uguale tra trasmettitore e ricevitore che sia però sempre diverso dalle altre coppie di fotocellule.

Non devono essere presenti 2 dispositivi (costa o fotocellule) con

lo stesso codice.

PER AIUTARVI NELLA CODIFICA SEGUITE LA TABELLA 1.

NOTA: non è necessario che le codifiche eseguite siano progressive.

CODIFICA DELLA SCHEDA TOUCH BUS LINK EN12978 (costa)

Ogni scheda TOUCH BUS LINK EN12978 deve essere identificata con un codice diverso dalle altre.

Non devono essere presenti 2 dispositivi (costa o fotocellule) con lo stesso codice.

PER AIUTARVI NELLA CODIFICA SEGUITE LA TABELLA 1.

NOTA: non è necessario che le codifiche eseguite siano progressive.

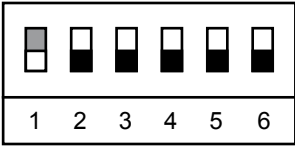

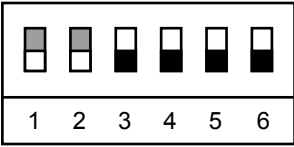

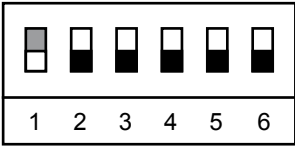

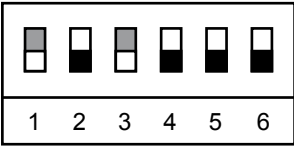

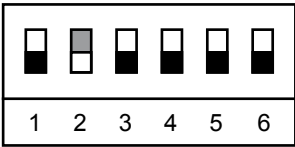

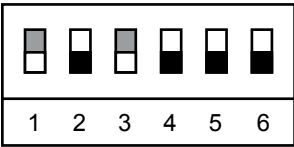

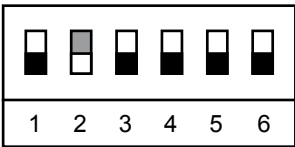

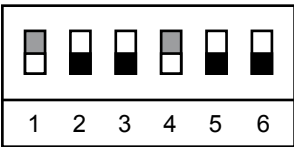

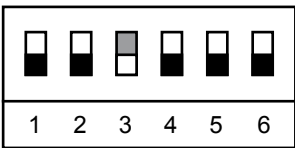

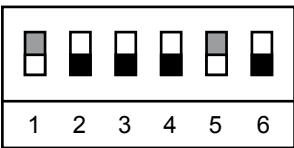

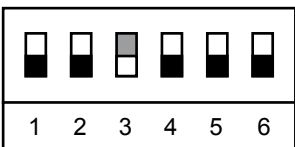

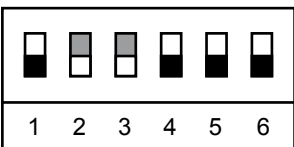

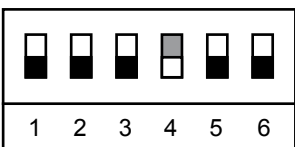

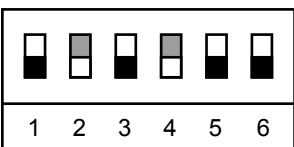

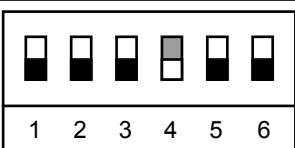

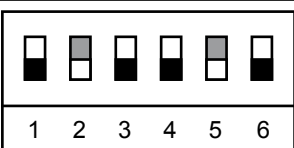

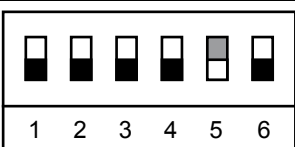

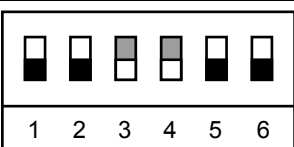

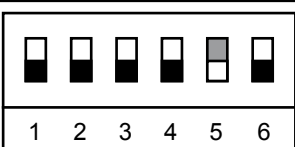

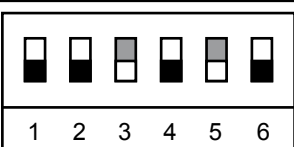

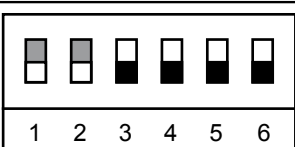

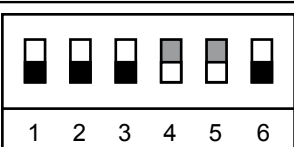

TABELLA 1

CODIFICA CONSIGLIATA	FIT SLIM BUS	CODIFICA CONSIGLIATA	FIT SLIM BUS
 1 2 3 4 5 6	TX 1	 1 2 3 4 5 6	RX 6
 1 2 3 4 5 6	RX 1	 1 2 3 4 5 6	TX 7
 1 2 3 4 5 6	TX 2	 1 2 3 4 5 6	RX 7
 1 2 3 4 5 6	RX 2	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 1
 1 2 3 4 5 6	TX 3	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 2
 1 2 3 4 5 6	RX 3	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 3
 1 2 3 4 5 6	TX 4	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 4
 1 2 3 4 5 6	RX 4	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 5
 1 2 3 4 5 6	TX 5	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 6
 1 2 3 4 5 6	RX 5	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 7
 1 2 3 4 5 6	TX 6	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 8

G - PROCEDURA DI MEMORIZZAZIONE AUTOMATICA DEI DISPOSITIVI

Dopo avere eseguito la codifica di tutti i dispositivi, è sufficiente premere e rilasciare il tastino P1 "PROG" che si trova sulla scheda BUS CONTROLLER. Il led DL4 inizierà a lampeggiare velocemente segnalando in questo modo la procedura di memorizzazione in atto.

La memorizzazione dura circa 10 secondi.

Al termine della memorizzazione il led DL4 continuerà a lampeggiare con frequenza più lenta.

Se le fotocellule risultano allineate tra di loro il led DL1 ed il relè corrispondente si accenderanno segnalando in questo modo la corretta memorizzazione e allineamento delle fotocellule FIT SLIM BUS.

Se il led DL1 non si accende, verificare che non vi siano ostacoli nel

raggio di azione delle fotocellule, oppure verificare che le fotocellule siano centrate.

Se le coste risultano correttamente collegate, il led DL2 ed il relè corrispondente si accenderanno segnalando in questo modo la corretta memorizzazione ed il corretto collegamento delle coste TOUCH BUS LINK EN12978.

Se il led DL2 non si accende, verificare che le coste non siano impegnate e che sia presente in serie al contatto chiuso o in parallelo al contatto aperto la resistenza da 8,2 K Ω 1/4W.

Senza la resistenza l'abilitazione del led DL2 non viene concessa (il sistema non funziona).

PROCEDURA DI CANCELLAZIONE TOTALE DEI DATI IN BUS CONTROLLER

La procedura di cancellazione è consigliata solo nel caso vi sia la necessità di eseguire una manutenzione del SISTEMA BUS.

Per eseguire una cancellazione totale dei dati in memoria sulla scheda BUS CONTROLLER è sufficiente staccare la morsetti J2 e premere per un attimo il tastino P1 "PROG".

Il led DL4 inizierà a lampeggiare velocemente segnalando in questo modo la procedura di cancellazione in atto.

La cancellazione dura circa 10 secondi.

Al termine della cancellazione il led DL4 continuerà a lampeggiare con frequenza più lenta.

A questo punto ricollegare la morsetti J2 ed eseguire una nuova procedura di memorizzazione come descritto nel paragrafo precedente.

VERIFICA DEL CORRETTO FUNZIONAMENTO

Dopo avere eseguito la procedura di programmazione, verificare il corretto funzionamento nel seguente modo:

FOTOCELLULE FIT SLIM BUS

- Verificare che il led dei trasmettitori FIT SLIM BUS lampeggi regolarmente.
- Verificare che il led dei ricevitori FIT SLIM BUS lampeggi.
- Se il lampeggio è veloce significa che il segnale ricevuto è ottimo.
- Se il lampeggio è meno veloce significa che il segnale ricevuto è sufficiente, oppure il TX e l'RX sono distanti più di 10 m tra loro.
- Interporre un ostacolo. Il led si accende fisso con conseguente disattivazione del led DL1 e del rispettivo relè a bordo BUS CONTROLLER. **NOTA: Fare riferimento al libretto istruzioni del quadro elettronico per verificare**

il corretto funzionamento delle fotocellule durante la funzionalità dell'automazione.

TOUCH BUS LINK EN12978 (costa)

- Verificare che il led a bordo scheda TOUCH BUS LINK EN12978 lampeggi regolarmente.
- Verificare che premendo la costa e quindi impegnando costantemente il contatto, il led si accenda fisso con conseguente spegnimento del Led DL2 e del rispettivo relè a bordo BUS CONTROLLER.

NOTA: Fare riferimento al libretto istruzioni del quadro elettronico per verificare il corretto funzionamento delle coste mentre l'automatismo è in movimento.

H - AGGIUNTA DI DISPOSITIVI

Se si vogliono applicare altri dispositivi (fotocellule FIT SLIM BUS o coste TOUCH BUS LINK EN12978) per aumentare lo stato di sicurezza dell'automazione si consiglia di:

- Togliere tensione all'impianto.
- Eseguire i nuovi collegamenti seguendo le indicazioni date nel paragrafo "COLLEGAMENTI".
- Eseguire la codifica dei nuovi dispositivi facendo attenzione a non

duplicare codici già presenti in memoria.

- Alimentare l'impianto.
- Eseguire una nuova procedura di memorizzazione tramite la quale verranno aggiunti i codici dei nuovi dispositivi.
- Verificare il corretto funzionamento dei vecchi e nuovi dispositivi che compongono il SISTEMA BUS.

IN CASO DI DIFFICOLTA'

SINTOMO	VERIFICA
TUTTI I LED DELLA SCHEDA BUS CONTROLLER SONO SPENTI.	VERIFICARE LA PRESENZA DI TENSIONE COMPRESA TRA 11 E 30 VAC/DC AI MORSETTI A/D+ A/D-.
IL LED DL1 (FOTOCELLULE) SULLA SCHEDA BUS CONTROLLER NON È ACCESO.	VERIFICARE CHE NON VI SIANO OSTRUZIONI NEI RAGGI DI AZIONE DELLE FOTOCELLULE. VERIFICARE CHE LE FOTOCELLULE SIANO ALLINEATE. VERIFICARE LE CODIFICHE DEI TX E RX. VERIFICARE LE SEGNALAZIONI DEI LED TX E RX COME DA SPECIFICHE COLLEGAMENTI.
IL LED DL2 (COSTE) SULLA SCHEDA BUS CONTROLLER NON È ACCESO NONOSTANTE LE COSTE SIANO CORRETTAMENTE COLLEGATE E FUNZIONANTI A LIVELLO LOCALE.	VERIFICARE CHE TRA I MORSETTI A/D- E A/D+ TEST VI SIA PRESENZA DI TENSIONE COMPRESA TRA 11 E 30 VAC/DC. SE IL MORSETTO A/D+ TEST NON È COLLEGATO AL CORRISPETTIVO MORSETTO PRESENTE SUL QUADRO COMANDO MOTORE, COLLEGATELO. SE SUL QUADRO COMANDO MOTORE IL MORSETTO A/D+ TEST NON È PRESENTE, ESEGUIRE UN PONTE A FILO TRA I MORSETTI A/D+ TEST E A/D-.
IL LED A BORDO SCHEDA TOUCH BUS LINK EN12978 RIMANE ACCESO FISSO.	VERIFICARE CHE IL CONTATTO DELLA COSTA NON SIA IMPEGNATO. VERIFICATE LA PRESENZA DELLA RESISTENZA DA 8,2 K Ω IN SERIE (SE CONTATTO COSTA N.C.) O IN PARALLELO (SE CONTATTO COSTA N.O.)
TUTTI I LED DEI DISPOSITIVI (FIT SLIM BUS E TOUCH BUS LINK EN12978) ESEGUONO UN LAMPEGGIO SEGUITO DA 3 SECONDI DI SPENTO.	LA PROCEDURA DI MEMORIZZAZIONE NON È STATA ESEGUITA.
SULLA SCHEDA BUS CONTROLLER SOLO IL LED DL4 LAMPEGGIA.	VI È UN CORTO CIRCUITO SULL'ALIMENTAZIONE IN RIFERIMENTO AI MORSETTI V+ E V-. VERIFICARE I COLLEGAMENTI.
SULLA SCHEDA BUS CONTROLLER SOLO IL LED DL4 LAMPEGGIA, MENTRE I LED DEI DISPOSITIVI (FIT SLIM BUS E TOUCH BUS LINK EN12978) ESEGUONO UN LAMPEGGIO SEGUITO DA 3 SECONDI DI SPENTO.	VI È UN CORTO CIRCUITO IN RIFERIMENTO AI MORSETTI BUS+ BUS-. VERIFICARE I COLLEGAMENTI.

MANUTENZIONE PERIODICA

La manutenzione periodica deve essere effettuata ogni 6 mesi da personale competente equiparato all'installatore e si deve attenere alle seguenti istruzioni.

MANUTENZIONE PERIODICA SISTEMA BUS E FOTOCELLULE

- 1 - Verificare che i contenitori delle schede BUS CONTROLLER, TOUCH BUS LINK EN12978 siano integri.
- 2 - Verificare che i coperchi delle fotocellule siano integri e puliti, in caso contrario sostituirli.
- 3 - Smontare i coperchi.

4 - Verificare che all'interno dei contenitori non vi siano corpi estranei, in caso contrario eliminarli.

- 5 - Controllare il serraggio dei collegamenti elettrici ai morsetti.
- 6 - Controllare con un tester che la tensione ai morsetti A/D+ e A/D- sulla scheda BUS CONTROLLER sia compresa tra 11 e 30 Vdc.
- 7 - Controllare con un tester che la tensione ai morsetti V+ V- dei vari dispositivi sia compresa tra i 7 e 8,5 Vdc.
- 8 - Rimontare i coperchi.

MANUTENZIONE PERIODICA COSTE

Fare riferimento alle note riportate sul libretto istruzione del prodotto installato.

CARATTERISTICHE TECNICHE SISTEMA BUS

| - CONTENITORI | Esterni in policarbonato, interni in PS antiurto, guarnizioni in gomma termoplastica 60 SHORE A |
| - DIMENSIONI | 35x110x25 mm |
| - ALIMENTAZIONE | Generata dalla scheda base compresa tra 7 e 8,5 vdc. |
| - TRASMETTITORE | Modulato con diodo infrarosso |
| - GRADO DI PROTEZIONE | IP44 |
| - PORTATA | 20 m (con buone condizioni atmosferiche) N.B.: La portata si può ridurre in presenza di fenomeni atmosferici quali nebbia, pioggia, polvere, ecc. |

OPTIONAL - Per i collegamenti ed i dati tecnici degli accessori attenersi ai relativi libretti di istruzione.

COPPIA DI COLONNINE PER FIT SLIM

cod. ACG8065

COSTA MECCANICA

cod. ACG3015

LE SYSTEME DE SECURITE BUS est conforme à la norme EN13849-1:2007 et, conjointement à un tableau électronique RIB, c'est un dispositif de Classe 2.

Comme indiqué par la dénomination de la norme, le SYSTEME DE SECURITE BUS permet le branchement continue de toutes les barres palpeuses de sécurité (mécaniques ou électriques par carte TOUCH BUS LINK EN12978) et de toutes les photocellules (FIT SLIM BUS) sans devoir étendre des câbles pour chaque composant seul donc une simplification conséquente de l'installation électrique et une économie de matériaux et de temps d'installation.

LE SYSTEME DE SECURITE BUS se base sur un protocole exclusif RIB avec contrôle d'erreur qui a lieu par une interface différentielle RS485 à 56 Kbit/s.

Technologiquement à l'avant-garde, il satisfait pleinement l'exigence d'une sécurité sur tous les types d'ouvertures automatiques.

Il est indiqué pour des applications sur des automations vieilles ou neuves

en les rendant sécuritaire leur fonctionnement et permet d'obtempérer aux Normes de Directives actuellement en vigueur.

En utilisant les tableaux électroniques RIB, il est possible d'effectuer l'autotest du système.

REFERENCES DES NORMES POUR PORTES ET PORTAILS AUTOMATIQUES

L'installateur doit s'assurer que le SYSTEME DE SECURITE BUS soit relié tel que spécifié dans la norme EN12453 au point 5.1.1.6 (points e et f) à une centrale électronique capable d'effectuer un contrôle du fonctionnement avant d'effectuer le mouvement de fermeture (AUTOTEST).

Une fois réalisée l'installation de l'appareil, il faut vérifier qu'elle soit conforme à la norme EN13241-1.

RIB ne peut être tenu responsable des dommages éventuels causés par à un usage inapproprié, erroné ou non raisonnable du produit.

A - CONNEXIONS

Le SYSTEME BUS est composé de:

BUS CONTROLLER (code ACG8615)

Reçoit les signaux des dispositifs qui lui sont reliés et les transmet au tableau électronique de l'automatisation.

La BUS CONTROLLER permet de brancher jusqu'à un maximum de 7 couples de photocellules FIT SLIM BUS et jusqu'à un maximum de 8 cartes TOUCH BUS LINK EN12978 pour la gestion des barres palpeuses.

- SW1** Commutateur DIP de codification du dispositif

B - POSSIBILITE D'INSTALLATION

Le SYSTEME DE SECURITE BUS peut être installé sur différentes typologies d'automatismes. Vous trouverez ci-dessous quelques possibilités.

C - MONTAGE

Fixer la BUS CONTROLLER très proche du tableau Electronique RIB.
Fixer les photocellules FIT SLIM BUS sur des piliers ou des colonnes situés à chaque 60-70 cm de hauteur de façon à couvrir l'hauteur du portail (maximum 2,5 m, il n'est pas nécessaire d'appliquer d'autres dispositifs au dessus d'une telle hauteur).

Nous conseillons d'appliquer la première photocellule à 20 cm du sol et à une distance maximum de 10 cm de la zone d'acheminement ou d'écrasement ou tout de suite après l'encombrement d'une barre palpeuse éventuelle.

Installez le récepteur de la photocellule à l'ombre ou dans une position où le soleil ne peut pas taper horizontalement.

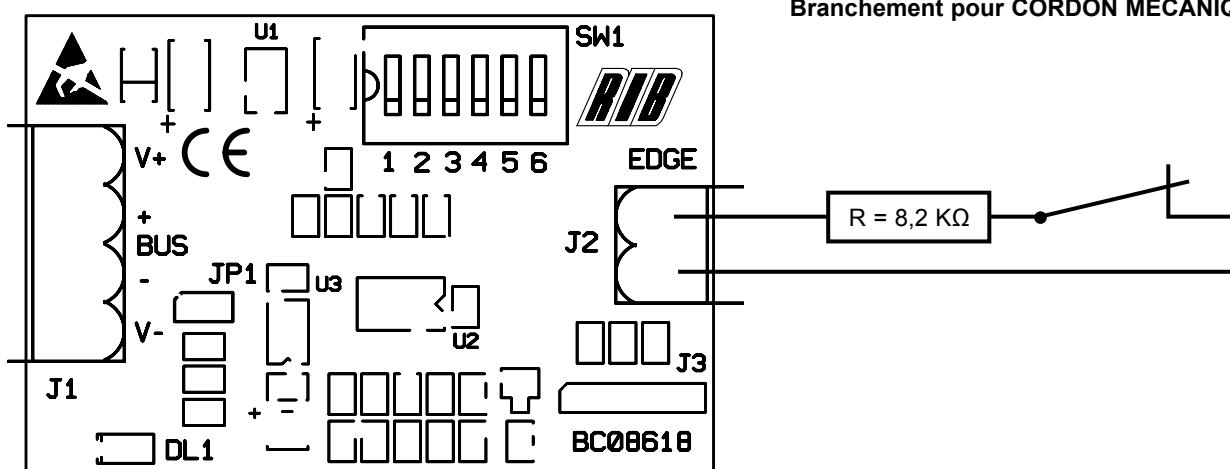

Dans chaque cas, il est conseillé de positionner les couples de photocellules à la même hauteur et alignés entre eux.

Fixer la boîte du dispositif TOUCH BUS LINK EN12978 près de la barre palpeuse mécanique ou électrique (au contact NC ou NO) que l'on veut contrôler.

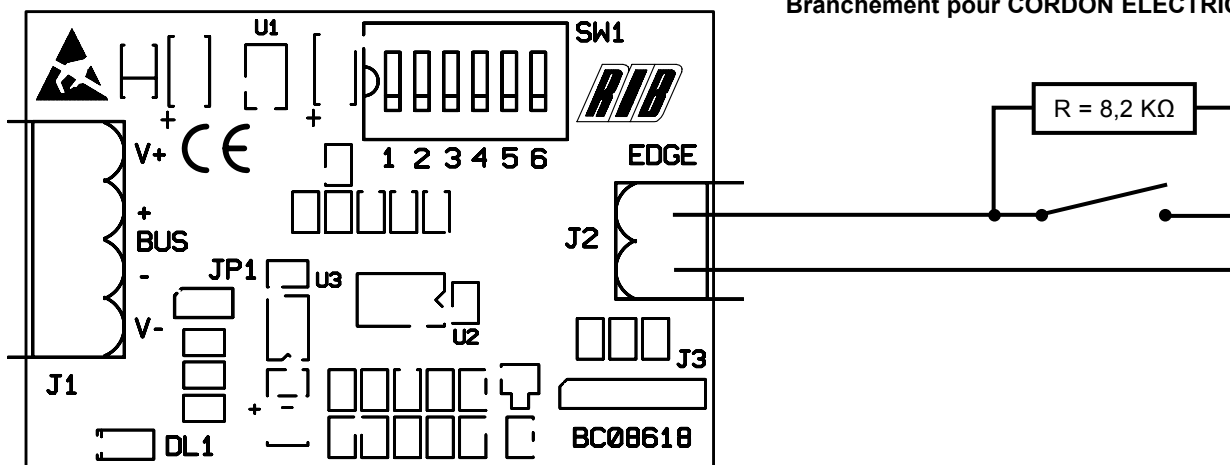

ATTENTION: Il est obligatoire d'appliquer une résistance de 8,2 K Ω et 1/4 de Watt (en dotation) en série s'il est utilisé un contact NC, ou bien en parallèle si le contact est NO (voir exemples ci-dessous).

Si la résistance de 8,2 K Ω et 1/4 de Watt n'est pas reliée le système ne fonctionne pas et passe en alarme.

E - ALIMENTATION DU SYSTEME BUS

Après avoir effectué toutes les branchements, alimenter la carte BUS CONTROLLER.

L'état d'alimentation correct de la BUS CONTROLLER et des dispositifs qui lui sont reliés est la suivante:

La LED DL4 (jaune) installée sur la BUS CONTROLLER et les LED de

signalisation installées sur la photocellule FIT SLIM BUS (tx et rx) et les cartes TOUCH BUS LINK EN12978 (barre palpeuse) clignoteront et s'éteindront ensuite pendant 3 secondes.

Si cette signalisation n'est pas effectuée, contrôler les branchements et réessayer d'alimenter le système.

F - CODIFICATION DES DISPOSITIFS

Chaque photocellule FIT SLIM BUS (tx et rx) et chaque carte TOUCH BUS LINK EN12978 (barre palpeuse) doivent être codifiés par le commutateur DIP à 6 voies présentes sur le dispositif.

ATTENTION: Seuls les 5 premiers commutateurs DIP sont actifs et le 6^e est une prévision pour implémentations futures.

CODIFICATION DES DISPOSITIFS

Chaque couple de photocellule FIT SLIM BUS doit être identifié avec un code identique entre transmetteur et récepteur mais qui soit toujours différent des autres couples de photocellules.

Il ne doit pas y avoir 2 dispositifs (barre palpeuse ou photocellule)

avec le même code.

POUR VOUS AIDER DANS LA CODIFICATION SUIVRE LE TABLEAU 1.

NOTE: il n'est pas nécessaire que les codifications soient progressives.

CODIFICATION DE LA CARTE TOUCH BUS LINK EN12978 (CORDON)

Chaque carte TOUCH BUS LINK EN12978 doit être identifiée avec un code différent des autres.

Il ne doit pas y avoir 2 dispositifs (barre palpeuse ou photocellule) avec le même code.

POUR VOUS AIDER DANS LA CODIFICATION SUIVRE LE TABLEAU 1.

NOTE: il n'est pas nécessaire que les codes soient progressifs.

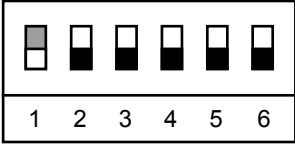

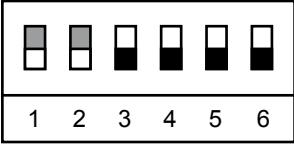

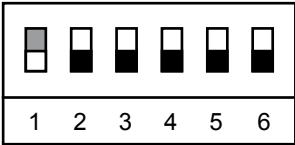

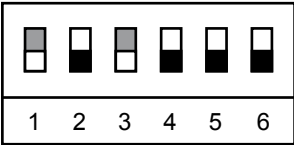

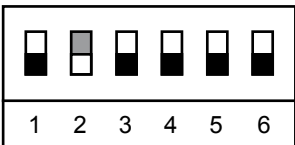

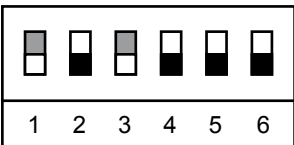

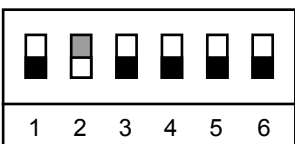

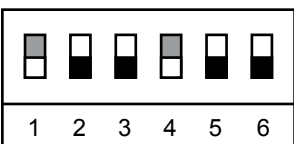

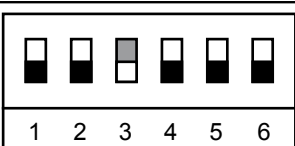

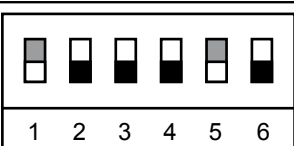

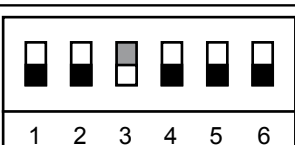

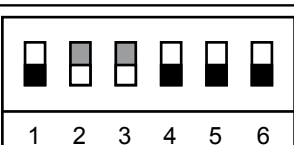

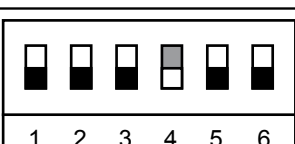

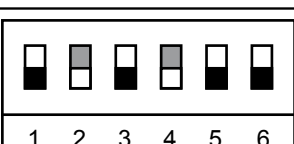

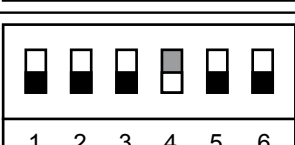

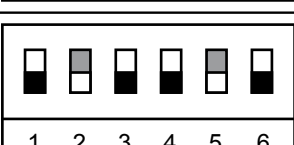

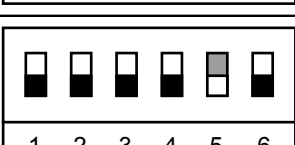

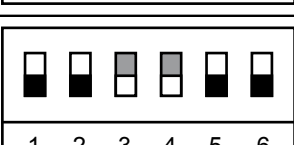

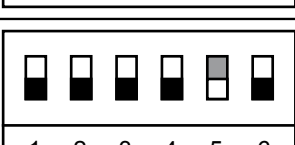

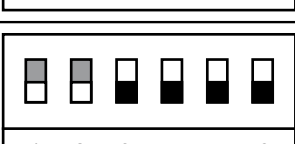

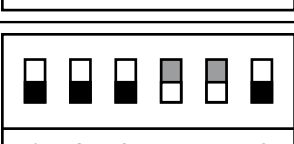

TABLEAU 1

CODIFICATION CONSEILLÉE	FIT SLIM BUS	CODIFICATION CONSEILLÉE	FIT SLIM BUS

G - PROCEDURE DE MEMORISATION AUTOMATIQUE DES DISPOSITIFS

Après avoir codifié tous les dispositifs, il suffit d'appuyer et de relâcher le bouton P1 "PROG" qui se trouve sur la carte BUS CONTROLLER. La LED DL4 commencera à clignoter rapidement signalant ainsi la procédure de mémorisation en cours.

La mémorisation dure environ 10 secondes.

A la fin de la mémorisation la LED DL4 continuera à clignoter avec une fréquence plus lente.

Si les photocellules sont alignées entre elles la LED DL1 et le relais correspondant s'allumeront en signalant ainsi la mémorisation correcte et l'alignement des photocellules FIT SLIM BUS.

Si la LED DL1 ne s'allume pas, vérifier qu'il n'y ait pas d'obstacles dans le

rayon d'action des photocellules, ou vérifier que les photocellules soient centrées.

Si les barres palpeuses sont connectées correctement, la LED DL2 et le relais correspondant s'allumeront en signalant ainsi la mémorisation correcte et l'alignement des barres palpeuses TOUCH BUS LINK EN12978.

Si la LED DL2 ne s'allume pas, vérifier que les barres palpeuses ne soient pas occupées et que la résistance de 8,2 K Ω 1/4W soit présente en série au contact fermé ou en parallèle au contact ouvert.

Sans la résistance, l'habilitation de la LED DL2 ne sera pas permise (le système ne fonctionne pas).

PROCEDURE D'ELIMINATION TOTALE DES DONNEES DE LA BUS CONTROLLER

La procédure d'élimination est conseillée dans le cas où il est nécessaire de faire la maintenance du SYSTEME BUS. Pour supprimer toutes les données en mémoire sur la carte BUS CONTROLLER, il suffit de détacher le bornier J2 et d'appuyer pendant un moment sur le bouton P1 "PROG".

La LED DL4 commencera à clignoter rapidement indiquant que la procédure d'élimination est en cours.

L'effacement dure environ 10 secondes.

A la fin de l'effacement, la LED DL4 continuera à clignoter avec une fréquence plus lente.

A ce moment-là, connecter le bornier J2 et faire une nouvelle procédure de mémorisation comme décrit au paragraphe précédent.

CONTROLE DU FONCTIONNEMENT CORRECT

Après avoir fait la procédure de programmation, vérifier le fonctionnement correct de la façon suivante:

PHOTOCELLULE FIT SLIM BUS

- Vérifier que la LED des transmetteurs PHOTO BUS clignote régulièrement.
- Vérifier que la LED des récepteurs PHOTO BUS clignote.
- Si le clignotement est rapide, cela signifie que le signal reçu est optimal.
- Si le clignotement est moins rapide, cela signifie que le signal reçu est suffisant ou que le TX et l'RX sont à plus de 10 mètres l'un de l'autre.
- Interposer un obstacle. La LED s'allume sans clignoter et consécutivement il y a une désactivation de la LED DL1 et du relais respectif installés sur la BUS CONTROLLER.

NOTE: Se référer au Manuel d'instructions du tableau électronique pour

vérifier le fonctionnement correct des photocellules pendant la fonctionnalité de l'automatisme.

TOUCH BUS LINK EN12978 (cordon)

- Vérifier que la LED côté carte TOUCH BUS LINK EN12978 clignote régulièrement.
- Vérifier qu'en appuyant sur la barre palpeuse et donc en engageant constamment le contact, la LED s'allume sans clignoter et que conséquemment la LED DL2 et le relais respectifs installés sur la BUS CONTROLLER s'éteignent. **NOTE:** Faire référence au Manuel d'instructions du tableau électronique pour vérifier le fonctionnement correct des barres palpeuses pendant la fonctionnalité de l'automatisme.

H - AJOUT DE DISPOSITIFS

Si l'on veut appliquer d'autres dispositifs (photocellules FIT SLIM BUS ou cordon TOUCH BUS LINK EN12978) pour augmenter l'état de sécurité de l'automatisme, il est conseillé de:

- Enlever le courant à l'installation.
- Faire de nouveaux branchements en suivant les indications du paragraphe "BRANCHEMENTS".

- Codifier les nouveaux dispositifs en faisant attention de ne pas dupliquer des codes déjà présents en mémoire.
- Alimenter l'installation.
- Faire une nouvelle procédure de mémorisation à laquelle seront ajoutés les codes des nouveaux dispositifs
- Vérifier le fonctionnement correct des vieux et nouveaux dispositifs qui composent le SYSTEME BUS.

EN CAS DE DIFFICULTE

SYMPTOME	CONTROLE
TOUTES LES LED DE LA CARTE BUS CONTROLLER SONT ETEINTES	VERIFIER LA PRESENCE DE LA TENSION ENTRE 11 ET 30 VAC/DC AUX BORNES A/D+ A/D-.
LA LED DL1 (PHOTOCELLULE) SUR LA CARTE BUS CONTROLLER N'EST PAS ALLUMEE.	VERIFIER QU'IL N'Y AIT PAS D'OBSTRUCTIONS DANS LE RAYONS D'ACTION DES PHOTOCELLULES. VERIFIER QUE LES PHOTOCELULES SOIENT ALIGNEES. VERIFIER LES CODES DES TX ET RX. VERIFIER LES SIGNAUX DES LED TX ET RX COMME DES BRANCHEMENTS SPECIFIQUES.
LA LED DL2 (CORDON) SUR LA CARTE BUS CONTROLLER N'EST PAS ALLUMEE MEME SI LES BARRES PALPEUSES SONT CORRECTEMENT RELIEES ET FONCTIONNELLES AU NIVEAU LOCAL.	VERIFIER QU'ENTRE LES BORNES A/D- ET A/D+ TEST LA TENSION SOIT COMPRISE ENTRE 11 ET 30 VAC/DC. SI LA BORNE A/D+ TEST N'EST PAS RELIEE A LA BORNE CORRESPONDANTE PRESENTE SUR LE TABLEAU DE COMMANDE DU MOTEUR, LA RELIER. SI SUR LE TABLEAU DE COMMANDE DU MOTEUR LA BORNE A/D+ TEST N'EST PAS PRESENTE, EFFECTUER UN PONT A L'AIDE D'UN FIL ENTRE LES BORNES A/D+ TEST ET A/D+.
LA LED INSTALLÉE SUR LA CARTE TOUCH BUS LINK EN12978 RESTE ALLUMEE FIXE.	VERIFIER QUE LE CONTACT DE LA BARRE PALPEUSE NE SOIT PAS OCCUPEE. VERIFIER LA PRESENCE DE LA RESISTANCE DE 8,2 K Ω EN SERIE (SI CONTACT BARRE PALPEUSE N.F.) OU EN PARALLELE (SI CONTACT BARRE PALPEUSE N.O.)
TOUTES LES LED DES DISPOSITIFS (FIT SLIM BUS ET TOUCH BUS LINK EN12978) CLIGNOTENT ET S'ETEIGNENT ENSUITE PENDANT 3 SECONDES.	LA PROCEDURE DE MEMORISATION N'A PAS EU LIEU.
SUR LA CARTE BUS CONTROLLER SEUL LA LED DL4 CLIGNOTE.	IL Y A UN COURT-CIRCUIT SUR L'ALIMENTATION EN REFERENCE AUX BORNES V+ ET V-. VERIFIER LES BRANCHEMENTS.
SUR LA CARTE BUS CONTROLLER SEUL LA LED DL4 CLIGNOTE ALORS QUE LES LED DES DISPOSITIFS (FIT SLIM BUS ET TOUCH BUS LINK EN12978) CLIGNOTENT ET S'ETEIGNENT ENSUITE PENDANT 3 SECONDES.	IL Y A UN COURT-CIRCUIT POUR CE QUI CONCERNE LES BORNES BUS+ BUS-. VERIFIER LES BRANCHEMENTS.

ENTRETIEN PERIODIQUE

L'entretien périodique doit être effectué chaque 6 mois par un personnel compétent, de même compétence que l'installateur et doit suivre les instructions suivantes.

ENTRETIEN PERIODIQUE SYSTEME BUS ET PHOTOCELLULE

- 1 - Vérifier que les boîtes des cartes BUS CONTROLLER, TOUCH BUS LINK EN12978 soient intègres.
- 2 - Vérifier que les couvercles des photocellules soient intègres et propres, dans le cas contraire les changer.
- 3 - Démontez les couvercles.

4 - Vérifier qu'il n'y ait pas de corps étrangers à l'intérieur des boîtes, sinon les éliminer

- 5 - Contrôler le serrage des branchements électriques aux bornes.
- 6 - Contrôler avec un tester que la tension aux bornes A/D+ et A/D- sur la carte BUS CONTROLLER soit comprise entre 11 et 30 Vdc.
- 7 - Contrôler avec un tester que la tension aux bornes V+ V- des dispositifs variés soit comprise entre 7 et 8,5 Vdc.
- 8 - Remonter les couvercles.

ENTRETIEN PERIODIQUE DE LA CORDON

Faire référence aux notes reportées sur le Manuel d'instructions du produit installé.

CARACTERISTIQUES TECHNIQUES SYSTEME BUS

CARTE BUS CONTROLLER

- BOITE externe en techno-polymère
- DIMENSIONS 120x80x50 mm
- STANDARD ELECTRIQUE RS485 (bus données différentielles)
- VITESSE DE TRANSMISSION 56 Kbit/s
- ALIMENTATION 11+30 Vac/d
- ABSORPTION 60 mA avec charge maximale de 7 couples de photocellules et 8 cordons
- PORTEE RELAIS 1A - 30 Vdc
- DEGRE DE PROTECTION IP56

CORDON TOUCH BUS LINK EN12978

- BOITE externe en techno-polymère
- DIMENSIONS 120x80x50 mm
- ALIMENTAZTON générée par la carte base comprise entre 7 et 8,5 Vdc
- DEGRE DE PROTECTION IP56

PHOTOCELLULE FIT SLIM BUS

- BOITES externes en polycarbonate, internes en PS antichoc, joints en caoutchouc thermoplastique 60 SHORE A
- DIMENSIONS 35x110x25 mm
- ALIMENTATION générée par la carte base comprise entre 7 et 8,5 Vdc.
- TRANSMETTEUR Modulé avec diode infrarouge
- DEGRE DE PROTECTION IP44
- PORTEE 20 m (avec bonnes conditions atmosphériques) N.B.: La porte peut être réduite en présence de phénomènes atmosphériques comme le brouillard, la pluie, la poussière, etc.

OPTIONS - Pour les branchements et les données techniques des accessoires, se conformer aux livrets d'instruction correspondants.

PAIRE DE POTEAUX POUR PHOTOCELLULES FIT SLIM

code ACG8065

CORDON MECANIQUE

code ACG3015

The BUS SAFETY SYSTEM is EN13849-1:2007 Standard compliant, if installed either with an RIB Electronic Board it is a Class-2 Device.

As the name indicates, the BUS SAFETY SYSTEM allows the continuous connection of all safety strips (both Mechanical or Electrical, through the TOUCH BUS LINK EN12978 card) and photocells (FIT SLIM BUS), without having to lay one cable for every component, thus simplifying the electrical system and saving material and installation time.

The BUS SAFETY SYSTEM is based on an exclusive RIB protocol with Error Control, by means of a 56Kbit/s RS485 differential interface.

The technologically State-of-the-art system allows to provide active safety to all types of automatic openings.

It is suitable for application on old and new automated systems. It allows them to operate safely and comply with Standards and Regulations in force.

RIB Electronic Boards also allow to run System Auto-test.

LEGISLATION AND REGULATION ON AUTOMATIC GATES AND DOORS

At installation, the operator must ensure that the BUS SAFETY SYSTEM is plugged, as explained in the EN12453 Standard at section 5.1.1.6 (e and f), to an electronic controller able to run operation control before the shutting movement engages (AUTOTEST).

Once installation is complete, the operator must ensure it is EN13241-1-compliant.

RIB shall not be held liable for any damages caused by misuse or wrongful or unreasonable use of the product.

POINT A - CONNECTIONS

The BUS SYSTEM is made up of the following:

BUS CONTROLLER (code ACG8615)

It receives signals from the connected devices and forwards them to the automation (gate/door) electronic board.

The BUS CONTROLLER allows to connect up to 7 FIT SLIM BUS photocell couples and up to 8 TOUCH BUS LINK EN12978 cards for safety strip operation.

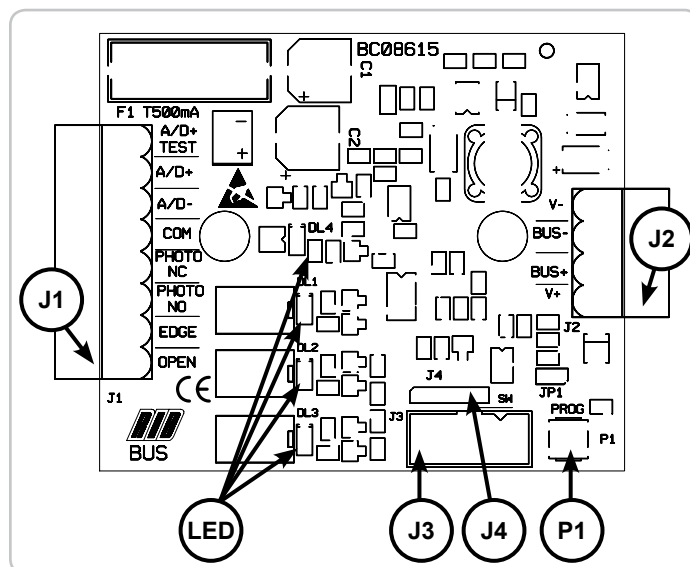

CONNECTION TO THE RIB AUTOMATION CONTROLLER BOARD

J1	A/D + TEST	Safety strip self-test power supply +12V/+24V ac/dc
	A/D +	Accessory power supply +12V/+24 ac/dc
	A/D-	Accessory power supply -12V/-24 ac/dc
	COM	Contact common
	PHOTO NC	Photocell Contact (NC)
	PHOTO NO	Photocell Contact (NO)
	EDGE	Safety strip Contact (NC)
	OPEN	Available for future applications

CONNECTION TO THE RIB BUS DEVICES

J2	V -	Negative power supply for bus devices
	BUS-	Negative BUS data
	BUS+	Positive BUS data
	V +	Positive power supply for bus devices (7-8.5 Vdc)
J3	SW	DO NOT REMOVE ANY JUMPER! OTHERWISE THE OPERATOR WILL NOT WORK!
J4	SW	In-factory use
P1	PROG.	Programming push button for BUS connected devices
JP1	JUMPER	Do not short circuit (in-factory test dedicated)

- DL1 - (red) - FIT SLIM BUS photocell state signal
 - if on it signals photocell correct operation
 - if off the photocells were not yet configured or there's an obstacle between one or more transmitter(s) and receiver(s)

- DL2 - (red) - TOUCH BUS LINK EN12978 safety strip state signal
 - if on it signals the safety strip correct operation
 - if off the safety-strips were not configured or the contact is faulty
- DL3 - (red) - available for future applications
- DL4 - (yellow) - Power supply led
 - if flashing slowly, it signals that the power supply is connected
 - if flashing fast, it signals cancel or storage procedures are running

FIT SLIM BUS (code ACG8033)

FIT SLIM BUS TRANSMITTER

J1	V +	Positive power supply (7-8.5 Vdc)
	BUS+	Positive BUS data
	BUS-	Negative BUS data
	V -	Negative power supply
J2		Service connector
J3	JUMPER	Do not short circuit (in-factory test dedicated)
DL1	(red)	FIT SLIM BUS Transmitter Status Signal <ul style="list-style-type: none"> - if it flashes once and then it is turned off for the following three seconds, the transmitter is powered but not yet configured - if it flashes continuously, the transmitter is powered and configured
SW1		Device coding dip switch

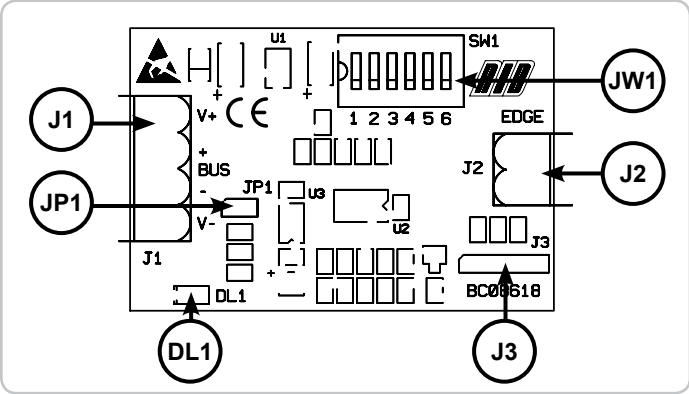

FIT SLIM BUS RECEIVER

- J1** V + Positive power supply (range from 7Vdc to 8.5Vdc)
- BUS+ Positive BUS data
- BUS- Negative BUS data
- V - Negative power supply
- J2** Service connector
- J3** JUMPER Do not short circuit (in-factory test dedicated)
- DL2** (red) FIT SLIM BUS Transmitter Status Signal
 - if it flashes once and then is turned off for the following three seconds, the receiver is powered but not yet configured
 - if it flashes fast, the receiver is stored and is receiving an optimal signal from the transmitter
 - if it flashes slowly, the receiver is stored and is receiving a sufficient signal from the transmitter
 - if it is permanently turned on, the transmitter is not receiving any signal (there could be an obstacle between the transmitter and its receiver)
- SW1** Device coding Dipswitch

**TOUCH BUS LINK EN12978 (code ACG8618)
ELECTRICAL OR MECHANICAL EDGE TRANSMISSION DEVICE**

- J1** V + Positive power supply (range from 7 Vdc to 8.5 Vdc)
- BUS+ Positive BUS data
- BUS- Negative BUS data
- V - Negative power supply
- J2** EDGE Safety strip contact connection (NO or NC)
- J3** Service connector
- DL1** (red) Safety strip state (TOUCH BUS LINK EN12978)
 - if it flashes once and then is turned off for the following three seconds, the card is powered but not yet configured
 - if it flashes continuously, the card is correctly stored
 - if it is permanently turned on, the safety strip contact is engaged or unconnected
- SW1** Device coding Dipswitch
- JP1** JUMPER Do not short circuit (in-factory test dedicated)

POINT B - INSTALLATION OPTIONS

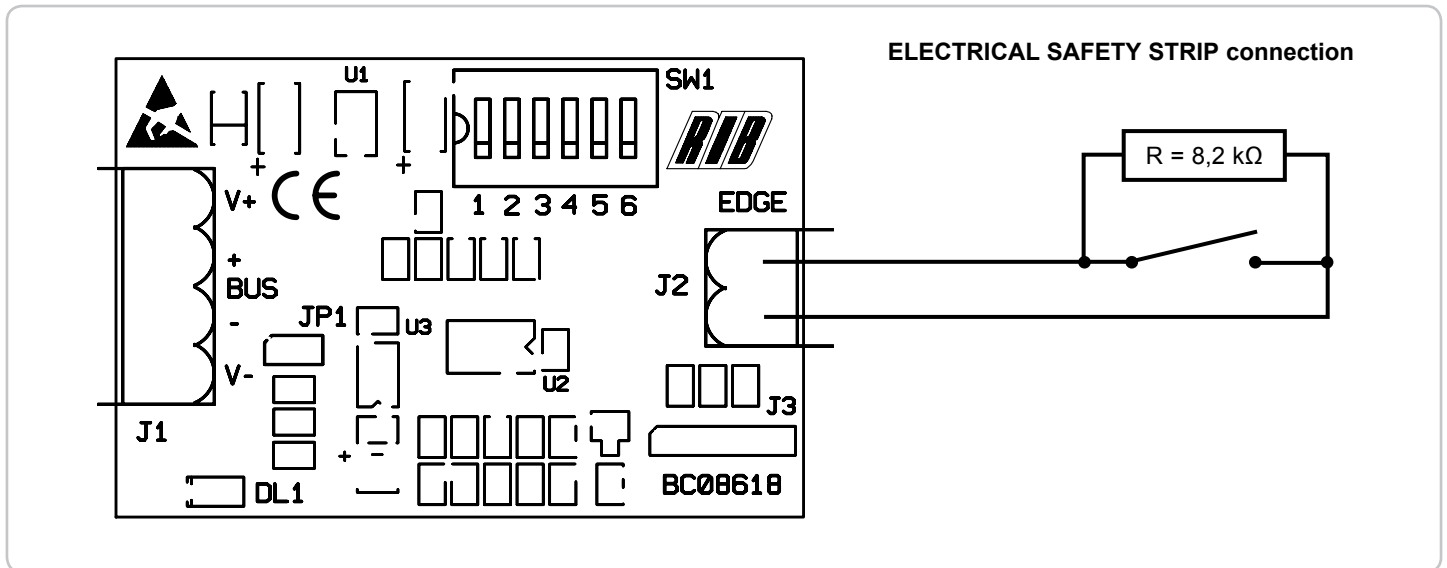

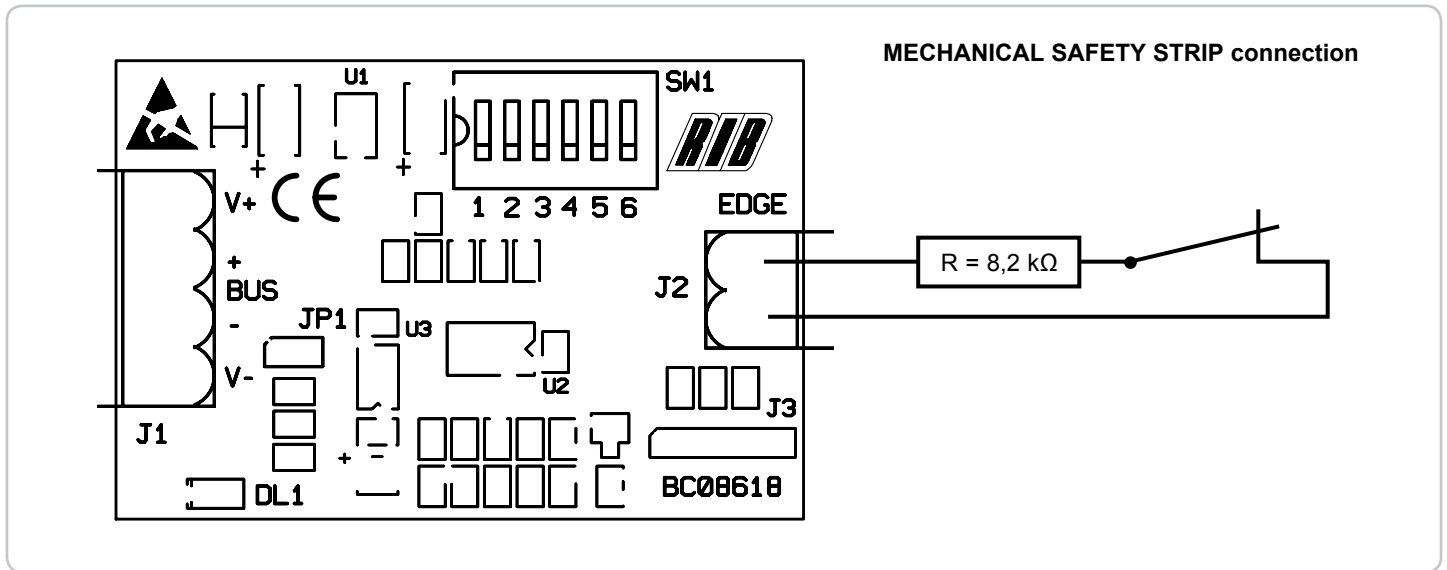

The BUS SAFETY SYSTEM can be installed on several types of automation. Below are some options:

POINT C - ASSEMBLY

Install the BUS CONTROLLER near the RIB gate electronic board.
 Secure FIT SLIM BUS photocells on pillars every 60-70 cm high, in order to cover the entire gate height (to max. 2.5 meters because beyond such measure other devices are required).
 It is suggested to apply the first photocell 20 cm above the ground and 10 cm maximum from the conveyance or deflection area, or, if any, right after the edge encumbrance.
 Install the photocell receiver in the shade or where sun rays do not hit it horizontally.

It is suggested to place the photocell couples at the same height on the same line.
 Secure the TOUCH BUS LINK EN12978 device case near the electrical or mechanical edge (NC or NO contact) for it to be monitored.
WARNING: It is necessary to apply an 8,2 kΩ, 1/4 Watt resistor (included) in series (NC contact) or in parallel (NO contact, see examples below).
 If the 8,2 kΩ, 1/4 Watt resistor is not connected the system does not operate and the alarm goes on.

POINT D - CONNECTIONS

Carry out connection as explained in the figure.

WARNING: pay attention to the devices connections, with extra care for the power supply wires. Wrong connection disable BUS system operation.

It is possible to connect the BUS CONTROLLER with FIT SLIM BUS photocells (max. 7 couples) and TOUCH BUS LINK EN12978 edges (max. 8) depending on the type of protection to be guaranteed to the system.

Connection can be performed randomly with desired connections (e.g. BUS CONTROLLER to TX1 > EDGE 1 > TX 2 > RX2 > EDGE 2 > RX 1 etc...).

WARNING: In order to prevent electrical interference, it is suggested to use a shielded 26AWG-type 4-pole cable.

Do not exceed the cable length of 50 m from the BUS CONTROLLER to the farthest connected device.

Per each device, connect the cable shielding to terminal V- (negative).

AUTO-TEST INPUT CONNECTION

The automation electronic board must have the auto-test input for the system to be EN13849-1:2007 standard-compliant, thus

becoming a class-2 device.

If the electronic board is RIB made: Connect the auto-test terminal on the RIB electronic board to the A/D+ TEST terminal on the BUS CONTROLLER card.

Enable the auto-test function on the RIB electronic board as shown in the following page.

Auto-test consists of a BUS CONTROLLER card functional test run at the end of every automation opening.

Shutting is allowed only if BUS CONTROLLER has passed the functional test.

If BUS CONTROLLER control has a negative outcome, the RIB electronic board blocks automation and the flashing light (if installed) goes on, thus signalling a state of alarm.

If the electronic board is not RIB-make or is obsolete: In order to use the BUS SYSTEM without auto-test control, apply a jumper between A/D+ TEST and A/D+ terminals.

WARNING: By performing such connection the system will NOT be monitored and thus is not completely safe.

AUTO-TEST-ENABLED RIB ELECTRONIC BOARD CHART

RIB ELECTRONIC BOARD	CONNECT A/D+ TEST TERMINAL TO TERMINAL	ENABLE AUTO-TEST FUNCTION THROUGH
T2 - T2CRX	D+ TEST	DIP 13
PT2 - PT2 CRX	D+ TEST	DIP 13
PARK - PARK CRX	D+ TEST	DIP 9
K 2007 - K 2007 CRX	D+ TEST	DIP 10
K2 24V - K2 24V CRX	A+ TEST	JP4 JUMPER
PK2 24V - PK2 24V CRX	A+ TEST	JP4 JUMPER

S1 - S1 CRX	A+ TEST	DIP 12
KS (THROUGH PLEX EXPANDER)	PLEX EXPANDER CARD 2S TERMINAL	PLUGGING THE EXPANDER PLEX CARD
KS 2 (THROUGH PLEX EXPANDER)	PLEX EXPANDER CARD 2S TERMINAL	PLUGGING THE EXPANDER PLEX CARD
KS 24V (THROUGH PLEX EXPANDER)	PLEX EXPANDER CARD 2S TERMINAL	PLUGGING THE EXPANDER PLEX CARD
KS 24V CRX (THROUGH PLEX EXPANDER)	PLEX EXPANDER CARD 2S TERMINAL	PLUGGING THE EXPANDER PLEX CARD

POINT E - BUS SYSTEM POWER SUPPLY

Once all connections are complete, turn on the power supply to the BUS CONTROLLER card:
DL4 BUS CONTROLLER led (yellow), FIT SLIM BUS photocell signal

leds (tx and rx) and TOUCH BUS LINK boards (safety strip) led will flash once and stay off for three seconds afterwards. Otherwise, check the connections.

POINT F - DEVICE CODING

Every FIT SLIM BUS photocell (tx and rx) and every TOUCH BUS LINK EN12978 card (edge) shall be codified by 6-way dip switch.

WARNING: The first 5 digits are active, while the 6th is for future applications.

DEVICE CODING

Every couple of FIT SLIM BUS photocells must be identified by the same code between the transmitter and the receiver, furthermore such code must be different for every photocell couple.

FOR CODING SUPPORT REFER TO TABLE 1.

TOUCH BUS LINK EN12978 CARD CODING (edge)

Every TOUCH BUS LINK EN12978 card must be identified with a different code from any other.

FOR CODING SUPPORT REFER TO TABLE 1.

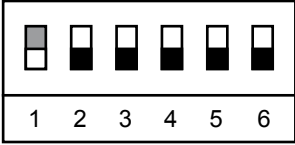

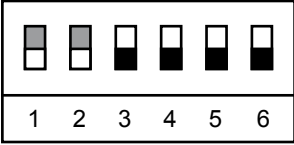

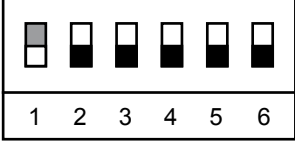

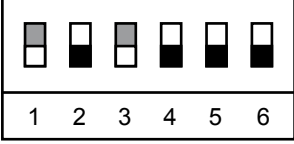

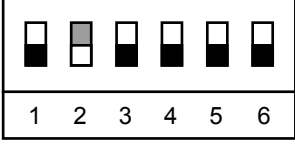

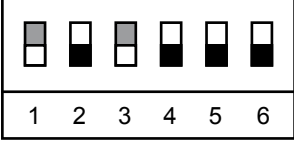

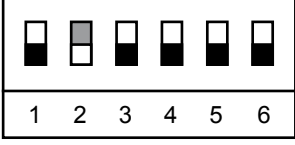

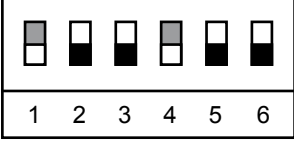

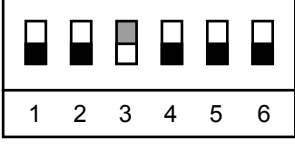

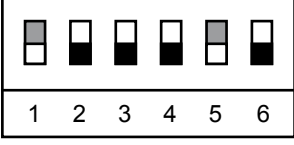

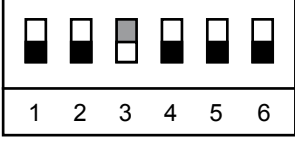

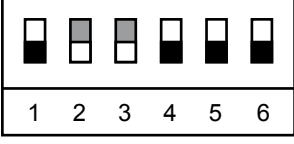

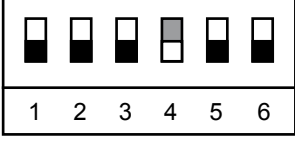

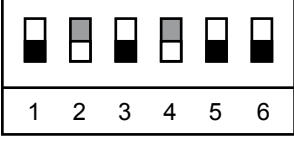

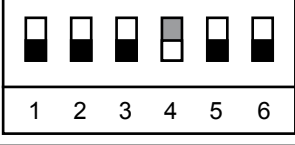

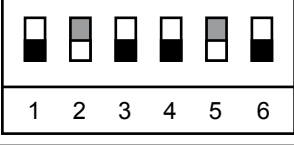

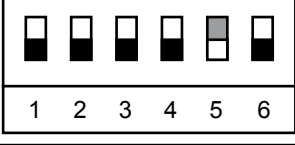

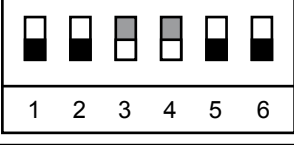

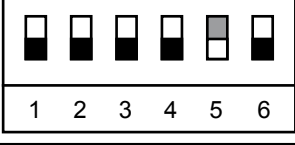

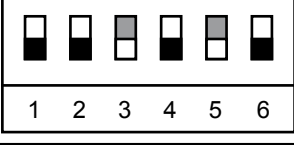

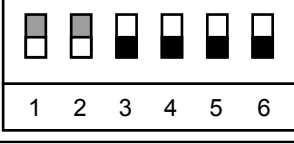

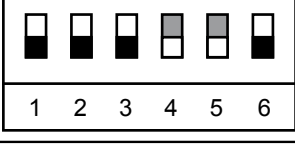

TABLE 1

SUGGESTED CODING	FIT SLIM BUS	SUGGESTED CODING	FIT SLIM BUS
 <p>1 2 3 4 5 6</p>	TX 1	 <p>1 2 3 4 5 6</p>	RX 6
 <p>1 2 3 4 5 6</p>	RX 1	 <p>1 2 3 4 5 6</p>	TX 7
 <p>1 2 3 4 5 6</p>	TX 2	 <p>1 2 3 4 5 6</p>	RX 7
 <p>1 2 3 4 5 6</p>	RX 2	 <p>1 2 3 4 5 6</p>	TOUCH BUS LINK EN12978 1
 <p>1 2 3 4 5 6</p>	TX 3	 <p>1 2 3 4 5 6</p>	TOUCH BUS LINK EN12978 2
 <p>1 2 3 4 5 6</p>	RX 3	 <p>1 2 3 4 5 6</p>	TOUCH BUS LINK EN12978 3
 <p>1 2 3 4 5 6</p>	TX 4	 <p>1 2 3 4 5 6</p>	TOUCH BUS LINK EN12978 4
 <p>1 2 3 4 5 6</p>	RX 4	 <p>1 2 3 4 5 6</p>	TOUCH BUS LINK EN12978 5
 <p>1 2 3 4 5 6</p>	TX 5	 <p>1 2 3 4 5 6</p>	TOUCH BUS LINK EN12978 6
 <p>1 2 3 4 5 6</p>	RX 5	 <p>1 2 3 4 5 6</p>	TOUCH BUS LINK EN12978 7
 <p>1 2 3 4 5 6</p>	TX 6	 <p>1 2 3 4 5 6</p>	TOUCH BUS LINK EN12978 8

POINT G - DEVICE AUTOMATIC CONFIGURING PROCEDURE

Once coding of all devices is complete, press and release the P1 "PROG" button on the BUS CONTROLLER card. The BUS CONTROLLER DL4 led will start flashing fast, thus signalling that the storage procedure is running.

The procedure lasts about 10 seconds and once configuring is complete, the DL4 led will flash slowly.

If all photocell couples are well aligned the BUS CONTROLLER DL1 led and the corresponding relay will turn on.

In case of DL1 led does not turn on, check if there's any obstacle between the photocells or if any transmitters and/or receivers are not well aligned.

If all safety strips are properly connected, the BUS CONTROLLER DL2 led and the corresponding relay will turn on.

In case of DL2 led does not turn on, check that safety strips are not engaged and that the 8,2 kΩ 1/4W resistor is connected (in series if there's a closed contact, in parallel if there's an open contact).

BUS CONTROLLER TOTAL DATA ERASING PROCEDURE

The erasing procedure is suggested only in case BUS SYSTEM controller maintenance is required.

In order to start the data erasing, remove the J2 connector from the BUS CONTROLLER, press and hold for a few seconds the P1 "PROG" button.

The DL4 led will start flashing fast, thus signalling that the erasing

procedure is running.

The procedure lasts about 10 seconds and once configuring is complete, the DL4 led will flash slowly.

Re-plug the J2 connector and run another configuring procedure as described in the Point G.

SYSTEM CHECK

Once the programming procedure is complete, check the system functioning as follows:

FIT SLIM BUS PHOTOCELLS

- Make sure that FIT SLIM BUS transmitter red leds are flashing regularly.
- Make sure that FIT SLIM BUS receiver red leds are flashing regularly.
- In case of the receiver led flashes fast, the received beam signal quality is good.
- In case of the receiver led flashes slowly, the received beam signal quality is enough but poor (TX and RX could be not perfectly aligned or installed at more than 10meters one to each other)
- Put an obstacle within the photocell transmitter and its receiver. As soon as the photocell beam is cut, the photocell receiver led will turn on permanently, the BUS CONTROLLER DL1 photocell led is turned off and the relay disabled.

NOTE: Refer to the gate electronic board instruction manual in order to check photocell correct operation during automation operation.

TOUCH BUS LINK EN12978 (edge)

- Make sure that the on board TOUCH BUS LINK EN12978 card led is flashing regularly.
- Press the safety strip and hold it pressed, the led will turn on permanently and the BUS CONTROLLER DL2 edge led is turned off and the relay disabled.
- NOTE: Refer to the gate electronic board instruction manual in order to check photocell correct operation during automation operation.**

POINT H - ADDING DEVICES

In case of other devices are required (FIT SLIM BUS photocells or TOUCH BUS LINK EN12978 edges) in order to increase automation safety, it is suggested to:

- Turn off the system power supply.
- Perform the new connections following the instructions as described at the POINT A.

- Repeat the device coding as described at the POINT F.
- Turn on the system power supply.
- Repeat the configuring procedure as described at the POINT G.
- Repeat the system checking to verify if each safety devices is working properly.

TROUBLESHOOTING

PROBLEM	SOLUTION
ALL LEDS ON THE BUS CONTROLLER CARD ARE TURNED OFF.	CHECK THE VOLTAGE BETWEEN AT A/D+ A/D- TERMINALS, IT MUST BE WITHIN 11V AND 30V AC/DC
THE BUS CONTROLLER CARD DL1 LED (PHOTOCCELL) IS TURNED OFF.	CHECK THAT NO OBSTACLES CUT THE PHOTOCCELLS BEAMS. CHECK THAT ALL PHOTOCCELL COUPLES ARE WELL ALIGNED. CHECK TX AND RX CODING. CHECK TX AND RX LED SIGNALS AS PER CONNECTION SPECIFICATIONS.
THE BUS CONTROLLER CARD DL2 LED (EDGE) IS TURNED OFF EVEN THOUGH THE SAFETY STRIP ARE PROPERLY CONNECTED.	CHECK THE VOLTAGE BETWEEN AT A/D+ A/D- TERMINALS, IT MUST BE WITHIN 11V AND 30V AC/DC IF THE A/D+ TEST INPUT IS NOT CONNECTED TO THE CORRESPONDING OUTPUT FROM THE GATE CONTROL PANEL, PROCEED WITH CONNECTION. IF THE A/D+ TEST OUTPUT IS NOT AVAILABLE ON THE GATE CONTROL PANEL, PLACE A JUMPER BETWEEN A/D+ TEST AND A/D+ TERMINALS.
THE BUS CONTROLLER CARD DL2 LED (EDGE) IS PERMANENTLY TURNED OFF EVEN THOUGH THE SAFETY STRIP ARE PROPERLY CONNECTED	MAKE SURE THE EDGE CONTACT IS NOT ENGAGED. CHECK THE 8,2 kΩ RESISTOR IS INSTALLED AND PLACED IN SERIES (IF THE SAFETY STRIP CONTACT IS N.C.) OR IN PARALLEL (IF THE SAFETY STRIP CONTACT IS N.O.)
ALL THE DEVICE CARD LEDS (FIT SLIM BUS AND EDGE BUS) FLASH ONCE AND THEN STAY OFF FOR THE FOLLOWING THREE SECONDS.	CONFIGURING PROCEDURE WAS NOT CARRIED OUT.
ON THE BUS CONTROLLER CARD ONLY THE DL4 LED IS FLASHING.	A SHORT CIRCUIT OCCURRED AT V+ AND V- POWER SUPPLY TERMINALS. CHECK CONNECTIONS.
ON THE BUS CONTROLLER CARD ONLY THE DL4 LED IS FLASHING, WHILE DEVICE LEDS (FIT SLIM BUS AND TOUCH BUS LINK EN12978) FLASH ONCE AND STAY OFF FOR THE FOLLOWING THREE SECONDS.	A SHORT CIRCUIT OCCURRED AT BUS+ AND BUS- TERMINALS. CHECK CONNECTIONS.

PERIODICAL MAINTENANCE

Periodical maintenance must be carried out every six months by qualified personnel and must be done in according with the following instructions.

BUS SYSTEM AND PHOTOCCELL PERIODICAL MAINTENANCE

- 1 - Check that BUS CONTROLLER and TOUCH BUS LINK EN12978 cards plastic boxes are not damaged.
- 2 - Check that photocell covers are clean and not damaged, otherwise replace them.
- 3 - Disassemble the covers.
- 4 - Make sure that there are no foreign materials, if necessary remove it.
- 5 - Check electrical connection clamping to terminal blocks and connectors.

6 - By using a tester, check the power supply voltage between A/D+ and A/D- on the BUS CONTROLLER card. It must be between 11V and 30V AC/DC.

7 - By using a tester, check the devices voltage between V+ and V- on each photocell and safety strip cards. The voltage range must be from 7Vdc to 8.5Vdc.

8 - Assemble covers.

EDGE PERIODICAL MAINTENANCE

Refer to the notes in the instruction manual of the installed product.

BUS SYSTEM TECHNICAL FEATURES

BUS CONTROLLER CARD

- CASE External - Techno-polymer
- SIZE 120x80x50 mm
- ELECTRICAL STANDARD RS485 (differential bus data)
- TRANSMISSION SPEED 56 Kbit/s
- POWER SUPPLY INPUT from 11V to 30V ac/dc
- ABSORPTION 60mA at maximum load (7 photocell couples and 8 edges).
- RELAY CAPACITY 1A - 30Vdc
- PROTECTION LEVEL IP56

TOUCH BUS LINK EN12978 EDGE

- CASE External - Techno-polymer
- SIZE 120x80x50 mm
- POWER SUPPLY INPUT from 7Vdc to 8,5Vdc
- PROTECTION LEVEL IP5

FIT SLIM BUS PHOTOCCELLS

- CASES External - polycarbonate, internal - anti-shock PS, 60 SHORE A thermoplastic rubber gaskets.
- SIZE 35x110x25 mm
- POWER SUPPLY INPUT from 7Vdc to 8,5Vdc
- TRANSMITTER Infrared diode, modulated
- PROTECTION LEVEL IP44
- BEAM RANGE 20 meters (in good weather conditions) **Note:** Range may reduce due to weather conditions such as fog, rain, dust, etc.

OPTIONALS - For the connections and the technical data of the fixtures follow the relevant handbooks.

PAIR OF COLUMNS FOR FIT SLIM

code ACG8065

MECHANICAL STRIP

code ACG3015

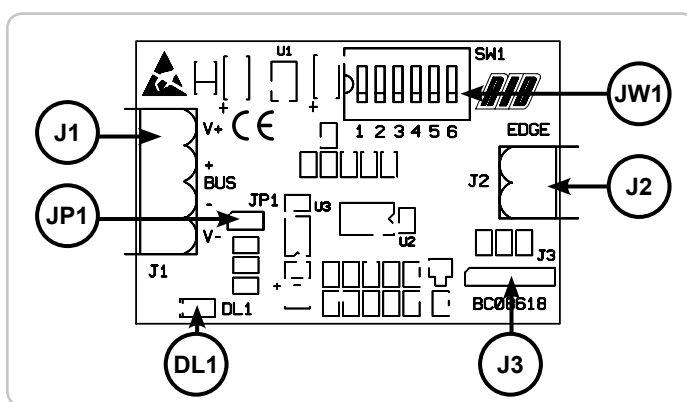

RECEPTOR FIT SLIM BUS

- J1 V+ Positivo alimentación (7-8,5 Vdc)
- BUS+ Positivo datos BUS
- BUS- Negativo datos BUS
- V- Negativo alimentación
- J2 Conector de servicio
- J3 JUMPER No provocar cortocircuitos (exclusivo para la prueba en fábrica)
- DL2 (rojo) Indicador del estado del transmisor FIT SLIM BUS
 - si parpadea una vez seguido por 3 segundos de apagado, el receptor está alimentado pero no memorizado.
 - si parpadea rápidamente, el receptor ha sido memorizado y recibe una excelente señal por parte del transmisor.
 - si parpadea lentamente, el receptor ha sido memorizado y recibe una señal suficiente por parte del transmisor.
 - si permanece encendido fijo, el receptor no recibe ninguna señal por parte del transmisor o hay un obstáculo interpuesto entre el transmisor y el receptor.
- SW1 Dip switch de codificación del dispositivo

**TOUCH BUS LINK EN12978 (cód. ACG8618)
DISPOSITIVO DE TRANSMISIÓN PARA NERVADURAS
MECÁNICAS O ELÉCTRICAS**

- J1 V+ Positivo alimentación (7-8,5 Vdc)
- BUS+ Positivo datos BUS
- BUS- Negativo datos BUS
- V- Negativo alimentación
- J2 EDGE Conexión contacto de la nervadura (NO o NC)
- J3 Conector de servicio
- DL1 (rojo) Indicador del estado de la nervadura (TOUCH BUS LINK EN12978)
 - si parpadea una vez seguido de 3 segundos de apagado, la tarjeta está alimentada pero no memorizada.
 - si parpadea continuamente, la tarjeta ha sido memorizada.
 - si permanece encendido fijo, el contacto de la nervadura se encuentra ocupado o faltante.
- SW1 Dip switch de codificación del dispositivo
- JP1 JUMPER No provocar cortocircuito (exclusivo para prueba en fábrica)

B - POSIBILIDADES DE INSTALACIÓN

EL SISTEMA DE SEGURIDAD BUS puede ser instalado en distintos tipos de automatizaciones. A continuación indicamos algunas posibilidades:

C - MONTAJE

Fijar BUS CONTROLLER cercano al cuadro electrónico RIB.

Fijar las fotocélulas FIT SLIM BUS sobre pilares o columnas posicionándolas cada 60-70 cm de alto, de modo que la altura de la cancela quede cubierta (máximo 2,5 m, superada dicha medida no es necesario aplicar otros dispositivos).

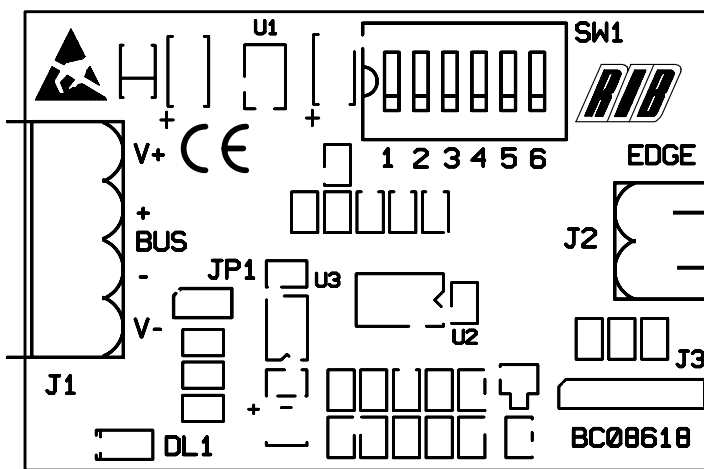

Sugerimos colocar la primer fotocélula a 20 cm del piso y a una distancia máxima de 10 cm. de la zona de desplazamiento o aplastamiento o inmediatamente después del área ocupada por una eventual nervadura. Instalar el receptor de la fotocélula a la sombra o en una posición en la cual el sol no pegue horizontalmente.

En todos los casos se sugiere colocar los pares de fotocélulas a la misma altura y alineados entre ellos.

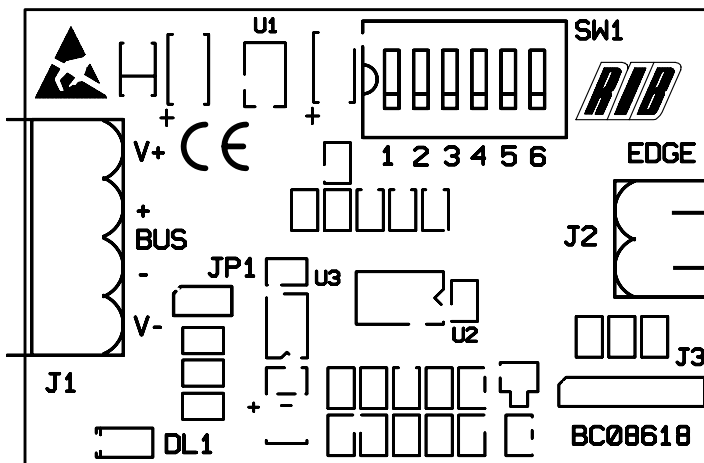

Fijar el contenedor del dispositivo TOUCH BUS LINK EN12978 cercano a la Nervadura mecánica o eléctrica (con contacto NC o bien NO) que se desea monitorizar.

ATENCIÓN: Es obligatorio aplicar la resistencia de 8,2 K Ω y 1/4 de Watt (en dotación) en serie si se utiliza un contacto NC, o bien en paralelo si se utiliza un contacto NO (véanse los ejemplos abajo reportados).

Si la resistencia de 8,2 K Ω y 1/4 de Watt no se conecta al sistema, este no funciona y entra en estado de alarma.

Conexión para NERVADURA MECÁNICA

Conexión para NERVADURA ELÉCTRICA

D - COLLEGAMENTI

Efectuar las conexiones como indica el diseño.

ATENCIÓN: Conectar los dispositivos en paralelo respetando escrupulosamente las polaridades indicadas. Una conexión incorrecta no habilita el funcionamiento del sistema BUS.

Es posible realizar la conexión entre la BUS CONTROLLER sólo con fotocélulas FIT SLIM BUS (máx. 7 pares) o sólo con nervaduras TOUCH BUS LINK EN12978 (máx. 8) según el tipo de protección que se desea instaurar en la instalación. La conexión también puede realizarse sin seguir ningún orden (por ejemplo desde BUS CONTROLLER a TX1 > EDGE 1 > TX 2 > RX2 > EDGE 2 > RX 1 etc.)

ATENCIÓN: Para mantener una alta inmunidad contra interferencias se sugiere utilizar un cable de 4 polos tipo 26AWG protegido.

NO superar los 50 metros de cable total conectado desde la regleta de bornes J2 de BUS CONTROLLER hasta alcanzar el último dispositivo conectado.

Conectar la protección del cable al borne V- (negativo) de cada uno de los dispositivos conectados.

EN13849-1:2007 convirtiéndose en un dispositivo de Clase 2.

Si el cuadro electrónico es un cuadro electrónico RIB:
Conectar el borne de autoevaluación del cuadro electrónico RIB al borne A/D+ TEST de la tarjeta BUS CONTROLLER.

Habilitar en el cuadro electrónico RIB la función de autoevaluación como indica la tabla de la página siguiente.

La autoevaluación consiste en una prueba funcional de la tarjeta BUS CONTROLLER llevada a cabo al finalizar la abertura completa de la automatización.

Sólo si BUS CONTROLLER ha superado la prueba funcional se habilita el cierre. Si el control de BUS CONTROLLER obtuvo un resultado negativo, el cuadro electrónico RIB bloquea la automatización y el intermitente (si se encuentra instalado) se activará indicando continuamente el estado de alarma.

Si el cuadro electrónico no es un cuadro electrónico RIB o es obsoleto:
Para poder utilizar el SISTEMA BUS sin el control de autoevaluación, realizar un puente de hilo entre los bornes A/D+ TEST y A/D+.

ATENCIÓN: cuando se realiza esta conexión, el sistema NO es monitorizado y, por ende, no es completamente seguro.

CONEXIÓN DE LA ENTRADA AUTOEVALUACIÓN (AUTOTEST)

El cuadro electrónico del automatismo debe tener una entrada de autoevaluación para que el sistema cumpla con la norma

TABLA CUADROS ELECTRÓNICOS RIB HABILITADOS PARA EL CONTROL DE AUTOEVALUACIÓN

CUADRO ELECTRÓNICO RIB	CONECTAR EL BORNE A/D+ TEST AL BORNE	HABILITAR LA FUNCIÓN DE AUTOEVALUACIÓN MEDIANTE

E - ALIMENTACIÓN DEL SISTEMA BUS

Luego de haber efectuado todas las conexiones, alimentar la tarjeta BUS CONTROLLER.

El estado de correcta alimentación de BUS CONTROLLER y de los dispositivos conectados a la misma será el siguiente:

El led DL4 (amarillo) situado en BUS CONTROLLER, los led de señalización

ubicados en las fotocélulas FIT SLIM BUS (tx y rx) y la tarjeta TOUCH BUS LINK EN12978 (nervadura) producirán un parpadeo seguido por 3 segundos de apagado.

Si esta señalización no se activa, controlar las conexiones y volver a alimentar el sistema.

F - CODIFICACIÓN DE LOS DISPOSITIVOS

Cada fotocélula FIT SLIM BUS (tx y rx) y cada tarjeta TOUCH BUS LINK EN12978 (nervadura) deben ser codificadas mediante el dip switch de 6 vías presente en el dispositivo.

ATENCIÓN: Solo están activos los primeros 5 dip switch mientras que el 6° está previsto para implementaciones futuras.

CODIFICACIÓN DE LOS DISPOSITIVOS

Cada par de fotocélulas FIT SLIM BUS debe ser identificado con un código igual entre transmisor y receptor, pero con uno siempre distinto al de los otros pares de fotocélulas.

No debe haber 2 dispositivos (nervadura o fotocélulas) con el mismo

código.

PARA AYUDARSE EN LA CODIFICACIÓN SEGUIR LA TABLA 1.

NOTA: no es necesario que las codificaciones efectuadas sean progresivas.

CODIFICACIÓN DE LA TARJETA TOUCH BUS LINK EN12978 (nervadura)

Cada tarjeta TOUCH BUS LINK EN12978 debe ser identificada con un código distinto al de las otras.

No debe haber 2 dispositivos (nervadura o fotocélulas) con el mismo código.

PARA AYUDARSE EN LA CODIFICACIÓN SEGUIR LA TABLA 1.

NOTA: no es necesario que las codificaciones efectuadas sean progresivas.

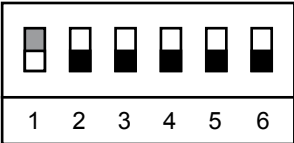

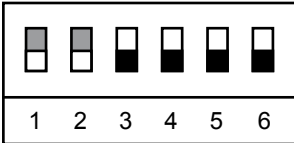

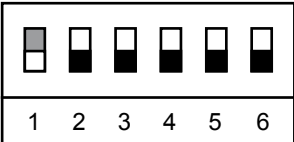

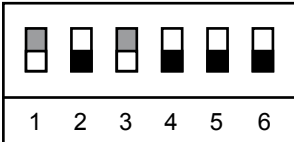

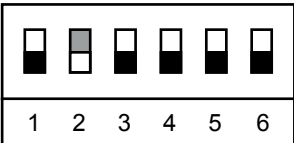

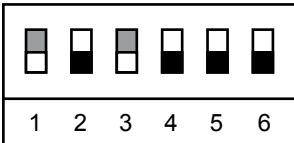

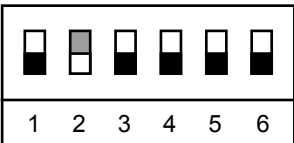

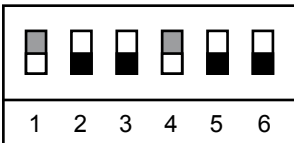

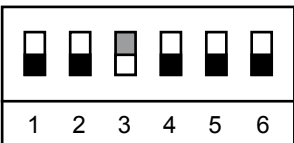

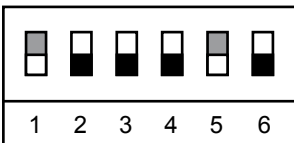

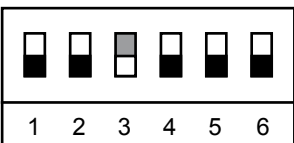

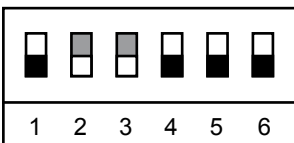

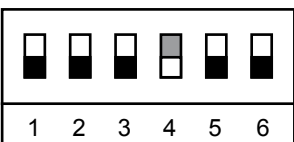

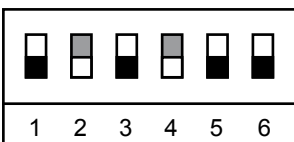

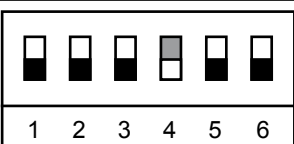

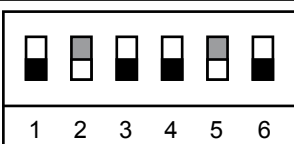

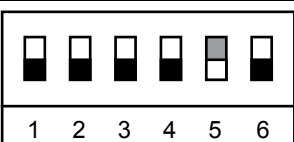

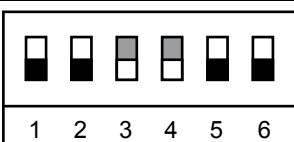

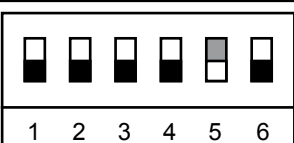

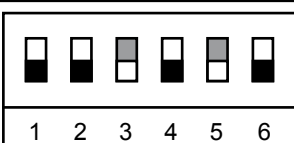

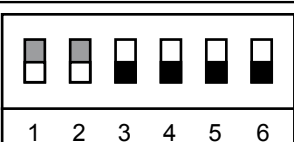

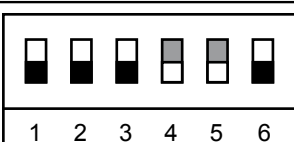

TABLA 1

CODIFICACIÓN SUGERIDA	FIT SLIM BUS	CODIFICACIÓN SUGERIDA	FIT SLIM BUS
 1 2 3 4 5 6	TX 1	 1 2 3 4 5 6	RX 6
 1 2 3 4 5 6	RX 1	 1 2 3 4 5 6	TX 7
 1 2 3 4 5 6	TX 2	 1 2 3 4 5 6	RX 7
 1 2 3 4 5 6	RX 2	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 1
 1 2 3 4 5 6	TX 3	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 2
 1 2 3 4 5 6	RX 3	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 3
 1 2 3 4 5 6	TX 4	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 4
 1 2 3 4 5 6	RX 4	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 5
 1 2 3 4 5 6	TX 5	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 6
 1 2 3 4 5 6	RX 5	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 7
 1 2 3 4 5 6	TX 6	 1 2 3 4 5 6	TOUCH BUS LINK EN12978 8

G - PROCEDIMIENTO PARA LA MEMORIZACIÓN AUTOMÁTICA DE LOS DISPOSITIVOS

Luego de haber realizado la codificación de todos los dispositivos, es suficiente presionar y liberar la tecla P1 "PROG" que se encuentra en la tarjeta BUS CONTROLLER. El led DL4 comenzará a parpadear rápidamente indicando, de este modo, que el procedimiento de memorización se está ejecutando.

La memorización dura 10 segundos aproximadamente.

Al finalizar la memorización, el led DL4 continuará parpadearo con una frecuencia más lenta.

Si las fotocélulas resultan alineadas entre ellas, el led DL1 y el correspondiente relé se encenderán indicando, de este modo, la correcta memorización y alineación de las fotocélulas FIT SLIM BUS.

Si el led DL1 no se enciende, comprobar que no haya obstáculos en el rayo de acción de las fotocélulas o bien, comprobar que las fotocélulas se encuentren centradas.

Si las nervaduras resultan correctamente conectadas, el led DL2 y el correspondiente relé se encenderán indicando, de este modo, la correcta memorización y conexión de las nervaduras TOUCH BUS LINK EN12978.

Si el led DL2 no se enciende, comprobar que las nervaduras no se encuentren ocupadas y que esté presente la resistencia de 8,2 K Ω 1/4W en serie del contacto cerrado o en paralelo del contacto abierto.

Sin la resistencia, la habilitación del led DL2 no se activa (el sistema no funciona).

PROCEDIMIENTO PARA LA CANCELACIÓN TOTAL DE LOS DATOS EN BUS CONTROLLER

El procedimiento de cancelación se recomienda solo cuando sea necesario realizar el mantenimiento del SISTEMA BUS.

Para efectuar una cancelación total de los datos de la memoria en la tarjeta BUS CONTROLLER es suficiente desconectar la regleta de bornes J2 y presionar un instante la tecla P1 "PROG".

El led DL4 comenzará a parpadear rápidamente indicando, de este modo, que el procedimiento de cancelación se está ejecutando.

El proceso de cancelación dura 10 segundos aproximadamente.

Al finalizar la cancelación el led DL4 continuará parpadearo con una frecuencia más lenta.

A este punto, volver a conectar la regleta de bornes J2 y realizar un nuevo procedimiento de memorización como descrito en el párrafo anterior.

VERIFICACIÓN DEL CORRECTO FUNCIONAMIENTO

Luego de haber llevado a cabo el procedimiento de programación, comprobar el correcto funcionamiento de la siguiente manera:

FOTOCÉLULAS FIT SLIM BUS

- Verificar que el led de los transmisores FIT SLIM BUS parpadee regularmente.
- Verificar que el led de los receptores FIT SLIM BUS parpadee:
- Si la intermitencia es rápida, significa que la señal recibida es óptima.
- Si la intermitencia es menos rápida, significa que la señal recibida es suficiente, o que el TX y el RX se encuentran a más de 10 m de distancia entre ellos.
- Interponer un obstáculo. El led se enciende fijo con una consiguiente desactivación del led DL1 y del respectivo relé ubicado en la BUS CONTROLLER.

NOTA: Remitirse al manual de instrucciones del cuadro electrónico

para verificar el correcto funcionamiento de las fotocélulas mientras la automatización se encuentra activa.

TOUCH BUS LINK EN12978 (nervadura)

- Verificar que el led en la tarjeta TOUCH BUS LINK EN12978 parpadee regularmente.
- Verificar que al presionar la nervadura y, por lo tanto, utilizando constantemente el contacto, el led se encienda fijo con un ulterior apagado del Led DL2 y del respectivo relé en la BUS CONTROLLER.

NOTA: Remitirse al manual de instrucciones del cuadro electrónico para verificar el correcto funcionamiento de las nervaduras mientras el automatismo está en movimiento.

H - AGREGADO DE DISPOSITIVOS

Si se desean aplicar otros dispositivos (fotocélulas FIT SLIM BUS o nervaduras TOUCH BUS LINK EN12978) para aumentar el estado de seguridad de la automatización, se sugiere:

- Desconectar la tensión de red de la instalación.
- Efectuar las nuevas conexiones respetando las indicaciones suministradas en el apartado "CONEXIONES".
- Efectuar la codificación de los nuevos dispositivos prestando atención a

no duplicar los códigos ya presentes en la memoria.

- Alimentar la instalación.
- Realizar un nuevo procedimiento de memorización mediante el cual se agregarán los códigos de los nuevos dispositivos.
- Verificar el correcto funcionamiento de los dispositivos nuevos y viejos que componen el SISTEMA BUS.

EN CASO DE INCONVENIENTE

SÍNTOMA	VERIFICACIÓN
TODOS LOS LED DE LA TARJETA BUS CONTROLLER ESTÁN APAGADOS.	VERIFICAR LA PRESENCIA DE TENSIÓN COMPRENDIDA ENTRE 11 Y 30 VAC/DC EN LOS BORNES A/D+ A/D-.
EL LED DL1 (FOTOCÉLULAS) EN LA TARJETA BUS CONTROLLER NO ESTÁ ENCENDIDO.	VERIFICAR QUE NO HAYA OBSTRUCCIONES EN LOS RAYOS DE ACCIÓN DE LAS FOTOCÉLULAS. VERIFICAR QUE LAS FOTOCÉLULAS ESTÉN ALINEADAS. VERIFICAR LAS CÓDIFICACIONES DE LOS TX Y RX. VERIFICAR LAS SEÑALIZACIONES DE LOS LED TX Y RX SIGUIENDO LAS ESPECIFICACIONES DE LAS CONEXIONES.
EL LED DL2 (COSTE) EN LA TARJETA BUS CONTROLLER NO ESTÁ ENCENDIDO A PESAR DE QUE LAS NERVADURAS ESTAN CORRECTAMENTE CONECTADAS Y FUNCIONAN A NIVEL LOCAL.	VERIFICAR QUE ENTRE LOS BORNES A/D- E A/D+ TEST HAYA UNA TENSIÓN COMPRENDIDA ENTRE 11 Y 30 VAC/DC. SI EL BORNE A/D+ TEST NO SE ENCUENTRA CONECTADO AL BORNE CORRESPONDIENTE PRESENTE EN EL CUADRO DE MANDO DEL MOTOR, CONECTARLO. SI EN EL CUADRO DE MANDO DEL MOTOR EL BORNE A/D+ TEST NO ESTÁ PRESENTE, EFECTUAR UN PUENTE DE HILO ENTRE LOS BORNES A/D+ TEST Y A/D+.
EL LED UBICADO EN LA TARJETA TOUCH BUS LINK EN12978 PERMANECE ENCENDIDO FIJO.	VERIFICAR QUE EL CONTACTO DE LA NERVADURA NO SE ENCUENTRE OCUPADO. VERIFICAR LA PRESENCIA DE RESISTENCIA DE 8,2 K Ω EN SERIE (CONTACTO NERVADURA N.C.) O EN PARALELO (CONTACTO NERVADURA N.O.)
TODOS LOS LED DE LOS DISPOSITIVOS (FIT SLIM BUS E TOUCH BUS LINK EN12978) PRODUCEN UN PARPADEO SEGUIDO POR 3 SEGUNDOS DE APAGADO.	EL PROCEDIMIENTO PARA LA MEMORIZACIÓN NO HA SIDO REALIZADO.
EN LA TARJETA BUS CONTROLLER SOLO PARPADEA EL LED DL4.	HAY UN CORTO CIRCUITO EN LA ALIMENTACIÓN VINCULADO A LOS BORNES V+ E V-. VERIFICAR LAS CONEXIONES.
EN LA TARJETA BUS CONTROLLER PARPADEA SOLO EL LED DL4, MIENTRAS QUE LOS LED DE LOS DISPOSITIVOS (FIT SLIM BUS Y TOUCH BUS LINK EN12978) REALIZAN UN PARPADEO SEGUIDO POR 3 SEGUNDOS DE APAGADO.	HAY UN CORTO CIRCUITO VINCULADO A LOS BORNES BUS+ BUS-. VERIFICAR LAS CONEXIONES.

MANTENIMIENTO PERIÓDICO

El mantenimiento periódico debe ser realizado cada 6 meses por personal idóneo como el instalador, respetando las siguientes instrucciones.

MANTENIMIENTO PERIÓDICO DEL SISTEMA BUS Y DE LAS FOTOCÉLULAS

- 1 - Verificar que los contenedores de las tarjetas BUS CONTROLLER, TOUCH BUS LINK EN12978 estén íntegros.
- 2 - Verificar que las tapas de las fotocélulas estén íntegras y limpias; en caso contrario, sustituir las.
- 3 - Desmontar las tapas.

- 4 - Verificar que en el interior de los contenedores no haya cuerpos extraños; en caso contrario, eliminarlos.
- 5 - Controlar el ajuste de las conexiones eléctricas a los bornes.
- 6 - Controlar con un tester que la tensión de los bornes A/D+ y A/D- ubicados en la tarjeta BUS CONTROLLER esté comprendida entre 11 y 30 Vdc.
- 7 - Controlar con un tester que la tensión de los bornes V+ V- de los distintos dispositivos esté comprendida entre 7 y 8,5 Vdc.
- 8 - Volver a montar las tapas.

MANTENIMIENTO PERIÓDICO DE LAS NERVADURAS

Remitirse a las notas del manual de instrucciones del producto instalado.

CARACTERÍSTICAS TÉCNICAS DEL SISTEMA BUS

TARJETA BUS CONTROLLER

- CONTENEDOR Externo en tecnopolímero
- DIMENSIONES 120x80x50 mm.
- ESTÁNDAR ELÉCTRICO RS485 (bus datos diferenciales)
- VELOCIDAD DE TRANSMISIÓN 56 Kbit/s
- ALIMENTACIÓN 11+30 Vac/dc
- ABSORCIÓN 60 mA con carga máxima dada por 7 pares de fotocélulas y 8 nervaduras.
- CAPACIDAD DEL RELE' 1A - 30Vdc
- GRADO DE PROTECCIÓN IP56

NERVADURA TOUCH BUS LINK EN12978

- CONTENEDOR Externo en tecnopolímero
- DIMENSIONES 120x80x50 mm
- ALIMENTACIÓN Generada por la tarjeta base, comprendida entre 7 y 8,5 Vdc.
- GRADO DE PROTECCIÓN IP56

FOTOCÉLULAS FIT SLIM BUS

- CONTENEDORES Externos en policarbonato, internos en PS antichoque, juntas en goma termoplástica 60 SHORE A
- DIMENSIONES 35x110x25 mm
- ALIMENTACIÓN Generada por la tarjeta base, comprendida entre 7 y 8,5 Vdc
- TRANSMISOR Modulado con diodo infrarrojo
- GRADO DE PROTECCIÓN IP44
- CAPACIDAD 20 m (con buenas condiciones atmosféricas) Nota: La capacidad puede reducirse en presencia de fenómenos atmosféricos tales como neblina, lluvia, polvo, etc.

OPCIONALES - Para las conexiones y datos técnicos de los accesorios, consultar los manuales respectivos.

DICHIARAZIONE DI CONFORMITÀ - DÉCLARATION DE CONFORMITÉ DECLARATION OF COMPLIANCE - DECLARACIÓN DE CONFORMIDAD

Dichiariamo sotto la nostra responsabilità che il SISTEMA DI SICUREZZA BUS è conforme alle seguenti norme e Direttive:
SYSTEME DE SECURITE BUS se conforme aux normes suivantes:

We declare under our responsibility that BUS SAFETY SYSTEM is conform to the following standards:

Declaramos bajo nuestra responsabilidad que el SISTEMA DE SEGURIDAD BUS ed conforme a la siguientes normas y disposiciones:

EN 12978	2003	EN 61000-3-2	2000	EN 61000-6-3	2001
EN 55014-1	2000	EN 61000-3-3	1995	EN 61000-6-4	2001
EN 55014-2	1997	EN 61000-6-1	2001		
EN 60335-1	2002	EN 61000-6-2	1999		

Inoltre permette un'installazione a Norme - Permit, en plus, une installation selon les normes suivantes
You can also install according to the following rules - Además permite una instalación según las Normas:

EN13849-1	2007	EN 13241-1	2003
-----------	------	------------	------

Come richiesto dalle seguenti Direttive - Conformément aux Directives

As is provided by the following Directives - Tal y como requerido por las siguientes Disposiciones:

89/106/EEC	73/23/EEC	92/31/EC
93/68/EEC	89/336/EEC	93/68/EEC

Il presente prodotto non può funzionare in modo indipendente ed è destinato ad essere incorporato in un impianto costituito da ulteriori elementi. Rientra perciò nell'Art. 6 paragrafo 2 della **Direttiva 2006/42/CE (Macchine)** e successive modifiche, per cui segnaliamo il divieto di messa in servizio prima che l'impianto sia stato dichiarato conforme alle disposizioni della Direttiva.

Le présent dispositif ne peut fonctionner de manière indépendante, étant prévu pour être intégré à une installation constituée d'autres éléments. Aussi rentre-t-il dans le champ d'application de l'art. 6, paragraphe 2 de la **Directive machines 2006/42/CEE** et de ses modifications successives. Sa mise en service est interdite avant que l'installation ait été déclarée conforme aux dispositions prévues par la Directive.

This product can not work alone and was designed to be fitted into a system made up of various other elements. Hence, it falls within Article 6, Paragraph 2 of the **EC-Directive 2006/42 (Machines)** and following modifications, to which respect we point out the ban on its putting into service before being found compliant with what is provided by the Directive.

El presente producto no puede funcionar de manera independiente y está destinado a ser incorporado en un equipo constituido por ulteriores elementos. Entra por lo tanto en el Art. 6 párrafo 2 de la **Directiva 2006/42/CEE (Máquinas)** y sucesivas modificaciones, por lo que señalamos la prohibición de puesta en servicio antes de que el equipo haya sido declarado conforme con las disposiciones de la Directiva.
