Cover Rev 06f, 07e

Specifications

Welding Process	Resistance Weld
Power Requirement	120 V~, 60 Hz, ~40 A Peak
Recommended Circuit	20 A (dedicated)
Switch	Pushbutton, momentary
Circuit Breaker	Pushbutton reset; Rating: 125/250 VAC, 60 Hz, 10 amp
Stud Weld Time	0.5 to 1.0 seconds
Line Cord	6 foot, 3-prong plug, UL listed
Weight	10.1 lb.
Accessories	- Bag: 100 each 2mm, 3mm, 4mm studs; steel with copper coating - 2 lb. slide hammer dent puller - One of each nozzle (2mm, 3mm, 4mm)

Save This Manual

You will need the manual for the safety warnings and precautions, assembly instructions, operating and maintenance procedures, parts list and diagram. Keep your invoice with this manual. Write the invoice number on the inside of the front cover. Keep the manual and invoice in a safe and dry place for future reference.

Safety Warnings and Precautions

WARNING: When using tool, basic safety precautions should always be followed to reduce the risk of personal injury and damage to equipment.

Read all instructions before using this tool!

1. **Keep work area clean.** Cluttered areas invite injuries.
2. **Observe work area conditions.** Do not use machines or power tools in damp or wet locations. Don't expose to rain. Keep work area well lighted. Do not use electrically powered tools in the presence of flammable gases or liquids.
3. **Keep children away.** Children must never be allowed in the work area. Do not let them handle machines, tools, or extension cords.
4. **Store idle equipment.** When not in use, tools must be stored in a dry location to inhibit rust. Always lock up tools and keep out of reach of children.
5. **Use the right tool for the job.** Do not attempt to force a small tool or attachment to do the work of a larger industrial tool. There are certain applications for which this tool was designed. It will do the job better and more safely at the rate for which it was intended. Do not modify this tool and do not use this tool for a purpose for which it was not intended.
6. **Dress properly.** Do not wear loose clothing or jewelry as they can be caught in moving parts. Protective, electrically non-conductive clothes and non-skid footwear are recommended when working. Wear restrictive hair covering to contain long hair.
7. **Do not overreach.** Keep proper footing and balance at all times. Do not reach over or across running machines.

REV 04b, 04e, 07e

8. **Use eye and ear protection.** Always wear ANSI-approved impact safety goggles. Wear a NIOSH-approved dust mask or respirator when working around metal, wood, and chemical dusts and mists.
9. **Maintain tools with care.** Keep tools sharp and clean for better and safer performance. Follow instructions for lubricating and changing accessories. Inspect tool cords periodically and, if damaged, have them repaired by a qualified technician. The handles must be kept clean, dry, and free from oil and grease at all times.
10. **Disconnect power.** Unplug tool when not in use.
11. **Remove adjusting keys and wrenches.** Check that keys and adjusting wrenches are removed from the tool or machine work surface before plugging it in.
12. **Avoid unintentional starting.** Be sure the switch is in the Off position when not in use and before plugging in. Do not carry any tool with your finger on the trigger, whether it is plugged in or not.
13. **Stay alert.** Watch what you are doing, use common sense. Do not operate any tool when you are tired.
14. **Check for damaged parts.** Before using any tool, any part that appears damaged should be carefully checked to determine that it will operate properly and perform its intended function. Check for alignment and binding of moving parts; any broken parts or mounting fixtures; and any other condition that may affect proper operation. Any part that is damaged should be properly repaired or replaced by a qualified technician. Do not use the tool if any switch does not turn On and Off properly.
15. **Guard against electric shock.** Prevent body contact with grounded surfaces such as pipes, radiators, ranges, and refrigerator enclosures.
16. **Replacement parts and accessories.** When servicing, use only identical replacement parts. Use of any other parts will void the warranty. Only use accessories intended for use with this tool. Approved accessories are available from Harbor Freight Tools.
17. **Do not operate tool if under the influence of alcohol or drugs.** Read warning labels if taking prescription medicine to determine if your judgment or reflexes are impaired while taking drugs. If there is any doubt, do not operate the tool.
18. **Use proper size and type extension cord.** If an extension cord is required, it must be of the proper size and type to supply the correct current to the tool without heating up. Otherwise, the extension cord could melt and catch fire, or cause electrical damage to the tool. This tool requires use of an extension cord with up to **20 amps** capability (up to 50 feet), with wire size rated at **10 AWG**. Longer extension cords require larger size wire. If you are using the tool outdoors, use an extension cord rated for outdoor use (signified by "WA" on the jacket).
19. **Maintenance.** For your safety, service and maintenance should be performed regularly by a qualified technician.
20. **People with pacemakers should consult their physician(s) before use.** Electromagnetic fields in close proximity to heart pacemaker could cause pacemaker interference or pacemaker failure.
21. **This Stud Welder requires the use of both hands when operating.** This helps maintain tool stability and keeps hands away from the working area of the tool.

22. **Avoid burns.** Do not touch the welded stud electrode or work surface until it cools.
23. **Avoid accidental activation.** Unplug the Stud Welder while inserting the stud electrode into the Stud Welder.
24. **Avoid electrical shock.** Do not operate the Stud Welder with its protective case removed. Do not touch grounded surfaces while operating.

Inhalation Hazard

Welding Produces TOXIC FUMES and GASSES.

Exposure to welding gasses can increase the risk of developing certain cancers, such as cancer of the larynx and lung cancer. Also, some diseases that may be linked to exposure to welding gasses or fumes are:

- Early onset of Parkinson's Disease
- Damage to the reproductive organs
- Inflammation of the small intestine or stomach
- Respiratory diseases such as emphysema, bronchitis or pneumonia
- Heart Disease
- Ulcers
- Kidney damage

Safety precautions, such as using natural or forced air ventilation and wearing an ANSI approved respirator, are **ESSENTIAL** to reduce the risk of developing the above illnesses.

Warning: The warnings, cautions, and instructions discussed in this instruction manual cannot cover all possible conditions and situations that may occur. It must be understood by the operator that common sense and caution are factors which cannot be built into this product, but must be supplied by the operator.

Note: Performance of this tool may vary depending on variations in local line voltage. Extension cord usage may also affect tool performance.

Unpacking

When unpacking, check to make sure the following parts are included.

If any parts are missing or broken, please call Harbor Freight Tools at the number on the cover of this manual as soon as possible.

Operation

Note: Before trying to pull out a dent on your vehicle, it is recommended that you first practice welding to a scrap of metal. Also practice pulling out the dent with the Slide Hammer.

1. Clean the surface down to the metal where the stud is to be welded.
2. Insert the stud into the hole of the Stud Electrode.
3. Plug the Line Cord into an electrical circuit outlet with at least a 20 amp capacity.

4. With sure footing, and both hands on the Stud Welder, push the Stud Welder toward the metal surface until the Electrode Assembly touches the metal surface.
5. While holding the Stud Welder steady, press in on the Trigger Switch momentarily from 0.5 to 1 second. Release the Trigger Switch.

6. Pull the Stud Welder directly back, leaving the welded stud in place. There should be less than 1/4 inch discoloration around the weld.
7. Place and tighten the Slide Hammer head onto the welded stud by turning the head roller toward you to the top of its rotation and slide the tip over the stud to be pulled.
8. With one hand on the (center) handle, and the other hand on the back handle, apply a backward hammering motion to the desired pressure until the dent has popped out.

9. Disengage the Slide Hammer head from the welded stud by tapping the (center) handle forward on the head until the Stud is released.
10. Cut off stud and grind down the stud tip to the metal surface.

Troubleshooting

SYMPTOM	POSSIBLE CAUSE	SUGGESTED ACTION
Stud does not weld; Weld area cold	<ol style="list-style-type: none"> 1. No power to line cord 2. Stud Welder circuit breaker open 3. Not making contact to metal surface with Electrode Assy. 	<ol style="list-style-type: none"> 1. Check power source 2. Press Circuit Breaker Reset button 3. Press harder on the Stud Welder; Clean metal area better.
Weld time is longer than one second	<ol style="list-style-type: none"> 1. Electrode or Stud dirty 2. Weld surface not cleaned to the metal 	<ol style="list-style-type: none"> 1. Clean or replace both 2. Clean surface again
Weak weld, stud does not hold	<ol style="list-style-type: none"> 1. "On Time" not long enough 2. Electrode or Stud dirty 3. Weld surface not cleaned down to bare metal 	<ol style="list-style-type: none"> 1. Hold trigger longer 2. Clean or replace both 3. Clean surface to metal
Circuit breaker continues to trip	<ol style="list-style-type: none"> 1. Circuit rating not large enough 2. Electrical fault in Welder 	<ol style="list-style-type: none"> 1. Connect to 20 A dedicated circuit 2. Have qualified technician service welder
Weld is burning through the metal	<ol style="list-style-type: none"> 1. Weld time is too long 2. Using incorrect stud 3. Dirty electrode 	<ol style="list-style-type: none"> 1. Shorten weld time 2. Replace stud with correct size 3. Clean electrode

Maintenance

Warning: Always unplug the line cord from the electrical outlet before performing any maintenance. Repairs should only be performed by a qualified technician.

1. Periodically inspect line cord for cracks. Replace if necessary.
2. Clean the unit using a damp cloth. Never use solvents.
3. Keep the electrode assembly free of oxidation by cleaning with fine steel wool.
4. If necessary, use a fine metal file to keep the electrode flat and clean.

Parts List

Part	Description	Qty
1	Nut, Brass, 5/16-18	2
2	Insulator Sleeve	1
3	Studs, Bag of 100	1
4	Slide Hammer	1
5	Washer, Split Lock, 5/16"	1
6	Terminal, Closed End	2
7	Wire Assembly, flag / spade	1
8	Wire Assembly, flag / bare	1
9	Electrode Assembly	1
10	Spring, Sliding Electrode	1
11	Sliding Electrode	1
12	Stud Electrode	1
13	Screw, hex head cap, 1/4x20x5/8"	1
14	Insulator, FRP	1
15	Circuit Breaker, 120 VAC	1
16	Screw, Roundhead, 10-32x7/8"	2
17	Trigger Boot	1
18	Trigger Switch	1
19	Line Cord, 120 VAC	1
20	Case, Left	1
21	Nut, hex, 10-32	8
22	Insulator, Nomex	1
23	Transformer, 120 VAC	1
24	Screw, hex head cap, 1/4x20x3/4"	1
25	Washer, flat SAE 1/4"	4
26	Case, right	1
27	Screw, round head, 10-32x1-3/4"	6
28	Strap, Braided	1
29	Washer, Split Lock, 1/4"	2
30	Nut, hex, 1/4x20	2
31	Washer, Flat brass, 5/16"	2
32	Transformer Assembly	1

Replacement parts with asterisk are not available individually. You must purchase #32 Transformer Assembly.

* #32 Transformer Assembly only sold as a replacement assembly.

NOTE: Some parts are listed and shown for illustration purposes only and are not available individually as replacement parts.
