SAFETY PRECAUTIONS

IN GENERAL

When using rotating head cutting equipment, basic safety precautions should always be followed to reduce the risk of personal injury.

Operate this tool only in accordance with specific operating instructions.

WARNING:

Do not override the deadman switch on the power unit. Locking down, obstructing, or in any way defeating the deadman switch on the power drive unit may result in serious injury.

DRESS CONSIDERATIONS

Use standard safety equipment. Hard hats, safety shoes, safety harnesses, protective clothes, and other safety devices should always be used when appropriate.

Use safety glasses. Do not operate cutting tools without eye protection.

Dress properly. Do not wear loose clothing or jewelry. They can be caught in rotating and moving parts. Avoid slippery floors or wear nonskid footwear. If you have long hair, wear protective hair covering to contain it.

WORK AREA

Keep the work area clean. Cluttered work areas and benches invite injuries.

Consider the work area environment. Keep the area well lit. Keep electrical cords, cables, rags, rigging straps, and etc. clear of rotating equipment. Do not use power-cutting tools in the presence of flammable liquids and gasses.

Keep visitors away. Do not let visitors or untrained personnel at or near operating tools. Enforce eye protection requirements for all observers.

Do not over reach. Keep proper footing at all times.

Stay alert. Watch what you are doing. Use common sense. Do not operate tools when you are tired.

TOOL CARE

Maintain tools with care. Keep tools in good operating condition. Sharp tool bits perform better and safer than dull tool bits. Well maintained tools function properly when needed.

Check for damaged parts. If a tool has malfunctioned, been dropped or hit, it must be checked for damage. Run no-load tests and feed function checks. Do a complete visual inspection.

Electric motors. Use only with proper AC voltage power sources and observe all normal electric shock hazard procedures.

Do not abuse power and control cords. Pulling or running over cords and cables can result in electrical shock hazards and malfunctions. Keep control and power cords out of all cutting fluids and water.

Hydraulic drives. Observe proper procedures for electrically driven power sources. Avoid damage to hydraulic lines. Keep quick-disconnects clean. Grit contamination causes malfunctions.

Air tools. Check the exhaust muffler. Broken or damaged mufflers can restrict air flow or cause excessive noise. Use air motors only with a filtered, lubricated and regulated air supply. Dirty air, low-pressure air or over pressure air will cause malfunctions, including delayed starting.

AREA EQUIPMENT

Secure work. Whenever possible use clamps, vises, chains and straps to secure pipe.

Make sure the tool is secured; it is safer to have both hands free to operate the tool.

TOOL USE

Use the right tool and tool bit for the job. Do not use a tool, which is incorrect for the job you are doing.

Keep the tool bits fully engaged in the tool bit holders. Loose bits are a safety hazard.

Disconnect power supply during setup and maintenance. Use all 'Stop' or Shut off' features available when changing or adjusting tool bits, maintaining the tool, or when the tool is not in use.

Remove adjusting keys and wrenches before applying power to the equipment. Develop a habit of checking the tool before turning it on to make sure that all keys and wrenches have been removed.

Do not force tools. Tools and tool bits function better and safer when used at the feed and speed rate for which they were designed.

Do not reach into rotating equipment. Do not reach into the rotating head stock to clear chips, to make adjustments, or to check surface finish. A machine designed to cut steel will not stop for a hand or an arm.

Handle chips with care. Chips have very sharp edges and are hot. Do not try to pull chips apart with are hands; they are very tough.

Avoid unintentional starts. Do not carry or handle tools with your hand on the operating switches or levers. Do not lay the tool down in a manner that will start the drive. Do not allow the tool to flip around or move when adjusting or changing tool bits.

Store idle tools properly. Disconnect tools from the power source and store in a safe place. Remove tool bits for safe handling of the tool.

GENERAL DESCRIPTION

The Model 550 Tube Severing Tool series of tube cutters is designed to cut tubing in areas where access to and around the tube is limited.

The Model 550 uses a cutter wheel to sever the tube. Normal operation will not produce chips.

The Model 550 is powered by Tri Tool Inc. pneumatic, electrical or manual Drive Units.

The Model 550 features an automatic feed, which permits an even pressure on the cutting wheel during operation.

SPECIFICATIONS

Envelope, Model 550-00, Tube Severing Tool

Envelope, Model 550-00, Tube Severing Tool						
Model No.	P/N	Tube Size	"A"	"B"	"C"	Weight
550-03	01-1062	3/16" (4.8 mm)	3.67" (93.2 mm)	1.50" (38.8 mm)	1.25" (31.8 mm)	.75 lb (.34 kg)
550-04	01-1063	1/4" (6.4 mm)	3.67" (93.2 mm)	1.50" (38.8 mm)	1.25" (31.8 mm)	.75 lb (.34 kg)
550-05	01-1064	5/16" (7.9 mm)	3.67" (93.2 mm)	1.50" (38.8 mm)	1.25" (31.8 mm)	.75 lb (.34 kg)
550-06	01-1009	3/8" (9.5 mm)	3.67" (93.2 mm)	1.50" (38.8 mm)	1.25" (31.8 mm)	.75 lb (.34 kg)
550-08	01-1065	1/2" (12.7 mm)	4.36" (110.7 mm)	2.25" (57.2 mm)	1.53" (38.9 mm)	2.25 lb (1.02 kg)
550-10	01-1066	5/8" (15.9 mm)	4.53" (115.1 mm)	2.38" (60.5 mm)	1.53" (38.9 mm)	2.47 lb (1.12 kg)
550-12	01-1067	3/4" (19.1 mm)	4.63" (117.6 mm)	2.50" (63.5 mm)	1.53" (38.9 mm)	2.65 lb (1.20 kg)
550-14	01-1075	7/8" (22.2 mm)	4.88" (124.0 mm)	2.63" (66.8 mm)	1.53" (38.9 mm)	2.94 lb (1.33 kg)
550-16	01-1068	1" (25.4 mm)	5.02" (127.5 mm)	2.75" (69.9 mm)	1.53" (38.9 mm)	3.16 lb (1.43 kg)
550-18	01-1069	1 1/8" (28.6 mm)	5.88" (149.4 mm)	3.13" (79.5 mm)	1.53" (38.9 mm)	4.22 lb (1.91 kg)
550-20	01-1070	1 1/4" (31.8 mm)	6.13" (155.6 mm)	3.38" (85.9 mm)	1.56" (39.6 mm)	4.85 lb (2.20 kg)
550-24	01-1071	1 1/2" (38.1 mm)	7.10" (180.3 mm)	4.00" (101.6 mm)	1.56" (39.6 mm)	6.64 lb (3.01 kg)
550-28	01-1072	1 3/4" (44.5 mm)	7.70" (195.6 mm)	4.38" (111.3 mm)	1.56" (39.6 mm)	7.87 lb (3.57 kg)
550-32	01-1073	2" (50.8 mm)	8.19" (208.0 mm)	4.75" (120.7 mm)	1.56" (39.6 mm)	9.10 lb (4.13 kg)

MAINTENANCE

All components should be periodically cleaned and coated with a light film of oil.

Use a clean, non-detergent oil, preferably SAE 10 (90 SSU or lighter.)

The Cutting Wheel should be replaced if worn or damaged.

The Cutting Wheel life depends upon the tube material, wall thickness, and operator's experience.

Short and long bearing plugs should be replaced when worn, damaged or scratches occur on the tube being cut.

OPERATION

Read the operating instructions carefully before attempting to operate the Model 550 Tube Severing Tool.

Be sure to use eye protection at all times when operating the Model 550.

Select the proper Model 550 for the size of tubing to be severed.

Maximum Tube Wall Thickness				
Model No.	Tube Size	Aluminum	Stainless Steel	Titanium
550-03	3/16" (4.8 mm)	.065" (1.6 mm)	.065" (1.6 mm)	.065" (1.6 mm)
550-04	1/4" (6.4 mm)			
550-05	5/16" (7.9 mm)			
550-06	3/8" (9.5 mm)			
550-08	1/2" (12.7 mm)	.095" (2.4 mm)	.100" (2.5 mm)	.100" (2.5 mm)
550-10	5/8" (15.9 mm)	.125" (3.2 mm)		
550-12	3/4" (19.1 mm)	.095" (2.4 mm)		
550-14	7/8" (22.2 mm)	.125" (3.2 mm)		
550-16	1" (25.4 mm)	.095" (2.4 mm)		
550-18	1 1/8" (28.6 mm)	.125" (3.2 mm)		
550-20	1 1/4" (31.8 mm)	.100" (2.5 mm)		
550-24	1 1/2" (38.1 mm)	.110" (2.8 mm)		
550-28	1 3/4" (44.5 mm)	.125" (3.2 mm)		
550-32	2" (50.8 mm)			

Be sure the Cutter Wheel of the Tube Severing Tool you have selected is sharp, rotates freely and is not damaged in any way.

A damaged or non-rotating Cutter Wheel can affect the performance of the tool.

Be sure Bearing Plugs are clean and not damaged.

Damaged Bearing Plugs affect the performance of the tool and should be changed.

Select the proper Tri Tool Inc. Drive Unit that best suits the operation needed to be performed.

A non Tri Tool Inc. Drive Unit will void the warranty.

NOTE: If input is counterclockwise, sever damage will occur during cutting.

CONNECTING AND DISCONNECTING THE DRIVE SYSTEM TO THE MODEL 550

The entire series of Model 550 Tube Cutters are equipped with a quick disconnect drive-mounting system.

The drive units, which are equipped with a mating quick disconnect, are universal, they will operate with any Model 550 size that is selected.

! WARNING !

Disconnect the Drive Unit from its power source when installing or removing it from the Model 550 Tub Cutter otherwise serious injury may occur.

To connect an air or electric drive unit, simply align the slots of the drive system to the pin located inside the Model 550 coupling, push the drive system inward and rotate counterclockwise and release.

The drive unit is equipped with a spring to allow it to lock securely.

The drive unit should now be locked in place.

Align the slot.

The rotation direction of the input must be clockwise.

Rotate drive shaft in a clockwise direction to align the slot.

If you miss alignment, simply realign the slot.

Load the Model 550 around the tube to be cut.

Apply a light force to insure that the Model 550 is over the tube.

The Model 550 must be held perpendicular to the surface of the tube to be cut.

Turn on the power for the Model 550 and begin the tube sever.

After the tube has severed, continue rotation, observing the cutting wheels until they have returned to the home position.

Turn the power off.

Remove the Model 550 from the tube.

REPAIRS AND REPLACEMENT

WARNING: Disconnect the Drive Unit from the Model 550 Tube Cutter prior to any repairs or replacements.

Rotate the drive shaft manually clockwise to rotate the cutter carriage to the desired position.

REPLACEMENT OF THE CUTTER WHEEL

Rotate the Cutter Carriage Assy until you see the Cutting Wheel and the cutter Wheel Securing Pin access hole.

Take a small screwdriver and a pair of needle nose pliers to remove the Wheel Securing Pin.

Insert a pair of needle nose pliers and take hold of the edge of the Cutter Wheel and remove it from the Model 550 Tube Cutter.

Take the new Cutter Wheel and install it by reversing the removal procedure.

REPLACEMENT OF THE BEARING PLUGS

Rotate the Cutter Carriage Assy until the Bearing Plug that is to be replaced can be seen.

Press out the worn Bearing Plug.

Press in the new Bearing Plug.

Refer to the Illustrated Parts Breakdown for the correct Bearing Plug.

AIR DRIVE ASSEMBLY

REMOVAL OF A SHEARED ROLL PIN FROM THE DRIVE ASSY.

Push the Air Drive Assy into the Model 550 Tube Cutter and rotate it clockwise and pull it out.

Unscrew the Bayonet Mounting Tube from the Motor Housing by rotating the Bayonet Mounting Tube counterclockwise.

Take a punch and gently remove the remaining parts of the Roll Pin from the Drive Shaft and the Motor Shaft.

ASSEMBLY OF THE DRIVE ASSY.

Press Roll Pin partly into one side of hole in Drive Shaft being careful not to protrude into inside diameter.

Position Drive Shaft onto the Motor Shaft and press Roll Pin into the Shafts.

Recess the Roll Pin slightly below the surface of the outside diameter of the Drive Shaft using a punch.

Slide the Bayonet Mounting Tube over the Drive Shaft and screw the Bayonet Mounting Tube onto the Motor Housing by rotating clockwise.

TROUBLE SHOOTING

Problem: The Tool Bit Chatters

Probable causes:

- The tool bit is loose or overextended.
- The tool bit is damaged.
- The tool holder is too loose in the slides.
- The cutting speed is too fast.
- The clamping pads are loose on the pipe or tube.
- Cutting fluid is required.
- The main bearing pre-load is loose.

Problem: There is excessive Tool Bit wear

Probable causes:

- The pipe or tube material is too hard or abrasive.
- The cutting speed is too fast.
- Cutting fluid is required.
- A dull Tool Bit is causing surface hardening conditions (Stainless pipe or tubing).
- There is scale or other foreign matter on the pipe or tube, which is dulling the tool bit at the start of the cut.
- The tool bit is incorrect for the material being cut.

Problem: The surface finish is rough

Probable causes:

- The tool bit is dull, chipped, etc.
- Metal build-up on the cutting edge of the tool bit is creating a false cutting edge.
- Cutting fluid is required.

Problem: The tool holder is not feeding

Probable causes:

The feed pin is broken or out of position.
The feed sprocket shear pin is broken.
The feed screw is stripped.
The feed nut is stripped.
The slide rails are too tight.

Problem: There is a loss of air power

Probable causes:

The air supply pressure is too low.
The air filter is plugged.
The air line size is insufficient.
The air line is too long.

Problem: There is a loss of hydraulic power

Probable causes:

The hydraulic supply pressure is too low.
The hydraulic filter is plugged.
The hydraulic line size is insufficient.
The hydraulic line is too long.

Problem: The tool bit will not reach the work

Probable causes:

Incorrect tool blocks are installed for the size of the pipe or tube being worked on.
Incorrect tool bit is installed.

Problem: The hydraulic motor will not start

Probable causes:

The hydraulic power supply is shut off.
The hydraulic motor is damaged and will not run free.

ACCESSORIES

The following accessories are recommended for use with the Model 550 Tube Cutters and are available from TRI TOOL INC.

1. Portable Air Filter (P/N 75-0115)
2. Drive Assembly, Air (P/N 04-0084)
3. Shaft Assembly, 18" Flexible (P/N 14-0036)
4. Motor Assembly, Cordless, 14.4V (P/N 58-0213)

A Filter/Regulator/Lubricator (FRL) is required to protect the warranty on all TRI TOOL INC air driven tools.

DEWALT SAFETY INSTRUCTIONS

The DeWALT Cordless Drill/Driver comes with an 'Instruction Manual' and should be referenced for all safety and operating procedures.
