REG. U.S. PAT. OFF.

8 & 6 DISC HARROWS 12" DIAMETER

INSTRUCTIONS FOR ASSEMBLING

Remove gang bolts (1) from the frames and assemble discs (2) into right and left hand gangs, as shown. (Right and left hand is determined by the location of the adjustment arm (3) in relation to the curve of the discs.) Insert bolt through discs and wood bearings (4) and fasten with washer and nut. Then clamp disc gangs to the tool bar (5) with clamps (6) to the rear as shown.

ADJUSTMENTS

Disc gangs are reversible and can be set to throw-in or throw-out. To reverse discs remove cotter pin from adjustment link (7), swing disc gang half way around and replace cotter pin.

To angle discs for greater or less penetration remove cotter pin, swing discs to desired angle and replace cotter pin in adjustment link. Set both gangs to the same angle. (There are two holes in the adjustment arm (3) so half spacing may be made to obtain finer angle adjustments.)

Tilt adjustment arm (8) provides for changing the tilt of the disc gang. Raising the arm causes the outside disc to penetrate deeper than the inner ones,

as is desirable when hilling. Tilt adjustment arm also permits perfect leveling of the discs at any depth of penetration.

Loosen bolts (9) on draw bar end to adjust handles of tractor to desired height, then retighten bolts.

When using as a disc harrow (with both gangs set to throw-out) it is desirable to double disc by lapping to avoid leaving ridges.

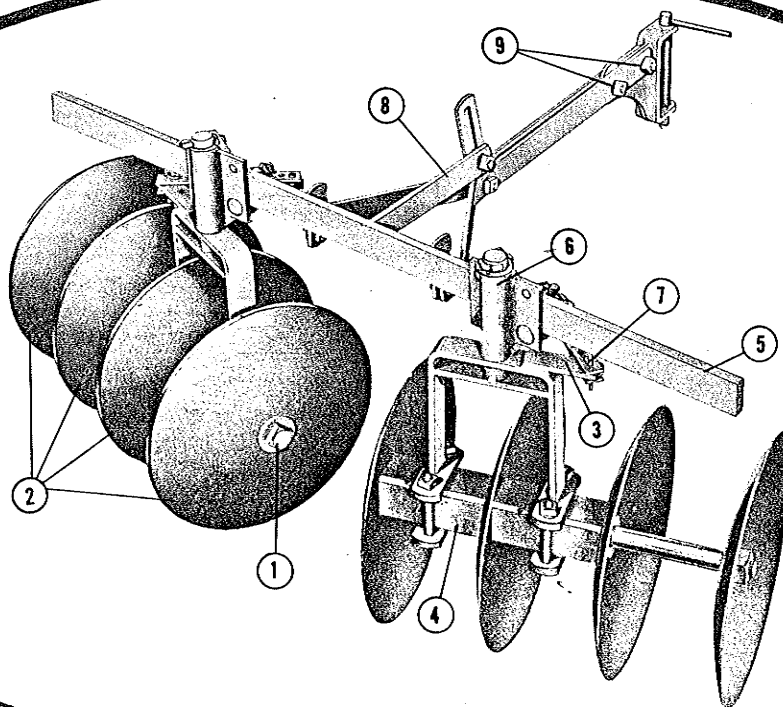

LUBRICATION

To lubricate the wood bearings remove cotter pin from bearings and apply ordinary machine oil.

CAUTION

When assembling disc blades to axle, be sure washers are placed on the inside or dish of the disc.
