

PRINTED IN U.S.A.

FORM NO. 770-6787

IMPORTANT MPORTANT

It is suggested that this manual be read in its entirety before attempting to assemble or operate. Keep this manual in a safe place for future reference and for ordering replacement parts.

This unit is shipped WITHOUT GASOLINE or OIL. After assembly, see operating section of this manual for proper fuel and amount.

SAFE OPERATION PRACTICES FOR POWER SHREDDERS

TRAINING

- The operator should become fully familiar with all of the different sections of the Owner's Manual before attempting to operate this equipment.
- Children must never be allowed to operate this equipment.
- 3. This equipment should never be operated in the vicinity of children, pets or other persons.
- 4. Never run your machine in an enclosed area as the exhaust from the engine contains carbon monoxide, which is an odorless, tasteless and a deadly poison gas.
- 5. Never allow your hands or any part of your body or clothing inside the feeding chamber, discharge chute, or near any moving part while the machine or engine is running.
- 6. If it is necessary for any reason to inspect or repair the feeding chamber or any part of the machine where a moving part can come in contact with your body or clothing, stop the machine, allow it to cool, and disconnect the spark plug wire from the spark plug before attempting such inspection or repair.

PREPARATION

- 1. It is recommended that the operator of this equipment obtain and wear safety glasses at all times while operating the machine.
- 2. Wear proper apparel, avoid wearing loose fitting clothing.
- 3. This machine should be operated only upon an earthen level surface.
- 4. Assure that all screws, nuts and bolts and other fasteners are properly secured.

OPERATION

- 1. When feeding shreddable material into this equipment, be extremely careful that pieces of metal, rocks, bottles, cans or other foreign objects are not included.
- 2. If the cutting mechanism strikes any foreign object or if your machine should start making an unusual noise or vibration, immediately stop the engine and disconnect the spark plug wire from the spark plug. Allow the machine to stop and take the following steps:
 - A. Inspect for damage.
 - B. Replace or repair any damaged parts.
 - C. Check for any loose parts and tighten to assure continued safe operation.

- 3. The engine must be kept clean of debris and other accumulations.
- Do not allow an accumulation of processed material to build up in the discharge area as this will prevent proper discharge and can result in kick-back from feed opening.
- 5. Never allow your hands or any other part of your body or clothing inside the feeding chamber, discharge chute or near any moving part while the engine is running.
- 6. Keep all guards and deflectors in place and in good working condition to assure continued safe operation.
- 7. Always stand clear of the discharge area when operating this machine.
- 8. Keep your face and body back from the feed opening to avoid accidental bounce back of any material.
- 9. Do not over-reach. Keep proper balance and footing at all times.
- 10. The engine governor settings on your machine must not be altered, changed, or tampered with. The governor controls the maximum safe operating speeds and protects the engine and all moving parts from damage caused by overspeed.
- 11. Do not transport machine while engine is running.

MAINTENANCE AND STORAGE

- 1. When this equipment is stopped for servicing, inspection, storage or to change an accessory, make sure the spark plug wire is disconnected from the spark plug. The machine should be allowed to cool down before making such inspection, adjustments, service, etc. Maintain your machine with care and keep it clean for the best and continued safe operation.
- 2. When not in use, your machine should be stored out of the reach of children. Keep where gasoline fumes will not reach an open flame or spark. For long periods of storage, the gasoline should be drained and disposed in a safe manner. Always allow the machine to cool before storing in any enclosure.

ASSEMBLY INSTRUCTIONS

- 1. Remove the shredder, parts pack and all literature from the carton before discarding carton.
- Place the guide extension assembly in place on guide extension and secure with four hex bolts 1/2" long and hex nuts provided in hardware pack. See figure 1.

FIGURE 1.

3. Place the bag over the chute deflector and pull draw string and lock. See figure 2.

FIGURE 2.

OPERATION

- 1. Service engine with gas and oil. See engine manual packed with shredder for complete instructions for the care and maintenance of engine. READ DIRECTIONS CAREFULLY.
- 2. When ready to start engine, place throttle control lever in START position and start engine in accordance with instructions in engine manual. After engine starts, move throttle control lever to desired engine speed. The engine is stopped by placing control lever in the STOP position.

The manufacturer recommends that the operator wear safety glasses or some other suitable eye protection as it is possible for chips to be ejected out of the inlet openings while feeding material.

USING YOUR SHREDDER

Your shredder is designed for safe, efficient, operation. CARE, OF COURSE, MUST BE EXERCISED THAT HANDS ARE KEPT AWAY FROM ALL OPENINGS.

Your shredder guide extension is adjustable. It may be adjusted to desired height by loosening the hand knob as shown in figure 3.

FIGURE 3. GUIDE EXTENSION ADJUSTMENT

Feed the material so that it slides down the guide extension. See figure 4.

FIGURE 4. FEEDING MATERIAL INTO GUIDE

EXTENSION

A steady flow of material provides the best results. Bulky material, such as stalks or heavy branches, should be fed into the upper guide extension. See figure 5.

FIGURE 5. FEEDING MATERIAL INTO UPPER GUIDE

It is possible to feed too fast and you will find it will take some experimenting with feeding rates to get the most out of your shredder without stalling the engine.

Under certain conditions, it may be necessary to push the materials into the inlet guide assembly. When this becomes necessary, use a small diameter stick—NOT YOUR HANDS. The stick should be of a size that will be ground up if it gets into the impeller assembly.

The discharge chute will direct the shredded material into a pile or a container.

Your shredder is equipped with a nylon bag with drawstring lock. This will accommodate a perforated disposable plastic bag.

CAUTION Keep clear of the chute area since the shredded material comes out with considerable velocity. Always stop engine and disconnect spark plug wire when changing bags.

MAINTENANCE

Always stop engine and disconnect spark plug wire before doing any maintenance.

Cutting Blade—The blade may easily be removed for grinding or replacement as follows:

- 1. Remove guide extension assembly by removing four elastic locknuts (Ref. No. 11). See page 10.
- Remove bolt (Ref. No. 38), lockwasher (Ref. No. 37), flat washer (Ref. No. 36) holding blade (Ref. No. 45) and blade retainer (Ref. No. 48) to engine crankshaft. See page 10.
- NOTE: Blade is reversible and can be assembled to crankshaft with either side showing.

When sharpening blade, follow the original angle of grind as a guide. It is extremely important that each cutting edge receives an equal amount of grinding to prevent an unbalanced blade. An unbalanced blade will cause excessive vibration when rotating at high speeds and may cause damage to the unit. Upon reassembly, make certain all parts are assembled properly and tightened securely.

LUBRICATION

WHEELS—Wheel bearings are of lifetime Fortiflex. They require no lubrication.

ENGINE—Follow engine manual for lubrication instructions.

Do Not deposit material larger than $\frac{1}{2}$ " diameter in hopper. This may cause damage to the shredding mechanism. Any material heavier than $\frac{1}{2}$ " should be fed into the upper guide extension. (See figure 5.)

BEFORE STARTING

Do not mix oil with gasoline.

- 1. Fill fuel tank with fresh regular gasoline. (See figure 6.)
- 2. Fill crankcase with oil. (See figure 6.)

FIGURE 6.

Position equipment so that engine is setting level. Remove dip stick or oil filler plug(Figure 6.). Pour oil into oil filler tube from which dip stick was removed and fill to FULL mark on dip stick. Do not overfill. After initial filling follow instructions on dip stick. Be sure dip stick is screwed into filler opening as far as it will go when measuring oil level.

During initial break-in period, oil level should be watched closely. See ENGINE MAINTENANCE.

Use MS classification oil. Do not use oils marked only MM or ML or unmarked.

Above 32° use SAE 30; below 32° use SAE 10W. These recommendations must be followed for best performance and long life.

Change oil first two (2) hours of operation and check oil level every five (5) operating hours or each time equipment is used.

Change oil every twenty-five (25) operating hours or sooner if equipment is operated in extremely dusty or dirty conditions.

Carburetors are preset at the factory. DO NOT attempt to make adjustments at this time. See carburetor instructions outlined under CAR-BURETOR ADJUSTMENT.

TO START ENGINE

- 1. Place control lever (on engine) in START position. See figure 7.
- 2. Move carburetor control to CHOKE position. See figure 7.
- 3. Rewind starter—use quick full arm stroke. Keep firm grip on handle and return rope slowly.

FIGURE 7.

TO STOP ENGINE

- 1. Move control lever to STOP position. See figure 8.
- 2. Remove high tension wire from spark plug to prevent accidental starting by children while equipment is unattended.

FIGURE 8.

ENGINE MAINTENANCE

To obtain long life and trouble-free service from your engine, certain normal maintenance must be performed as outlined below:

1. Change oil in crankcase after first two (2) hours of operation. Then, follow instructions outlined on page 5.

FIGURE 9.

Disconnect high tension wire at spark plug to prevent accidental starting of engine. Unscrew oil drain plug located on side at bottom of engine (figure 9).

Always tip engine towards oil drain hole. Be sure oil drains completely.

Replace oil drain plug and refill with oil as directed on page 5 or engine nameplate.

2. Check oil every five (5) operating hours or each time equipment is used.

If engine has dip stick, keep oil level at mark indicated by adding if necessary.

3. Cleaning engine—This is an aircooled engine which operates most efficiently when the cooling fins are clean.

Clean cylinder fins and underside of tank or housing thoroughly of all accumulated grass and debris.

4. Air Cleaner. (See figure 10.)

a. Paper Type Element. Remove every 10 hours or oftener if under dusty conditions. Tap to remove loose dirt and/or blow from inside out with low pressure air. Replace if torn or perforated or when plugged to maintain proper carburetor setting (50 hours). DO NOT WASH IN ANY LIQUID AND DO NOT OIL.

FIGURE 10.

CARBURETOR ADJUSTMENTS

Do not make unnecessary adjustment. Factory settings are correct for most application. If adjustments are needed, proceed as follows:

- 1. Close power adjusting needle (figure 11) by turning to right (clockwise). Close finger tight only. Forcing will cause damage.
- 2. Open one turn (counterclockwise).
- Close idle adjusting needle (figure 11) by turning to right (clockwise). Close finger tight only. Forcing will cause damage.
- 4. Open one and one-half (11/2) turns (counterclockwise).
- 5. Start engine. Follow starting instructions page 5.
- With throttle open (carburetor control at RUN or FAST position) adjust power adjusting needle one-eighth (1/8) turn at a time forward or backward until engine runs smoothly. If engine tends to stall under load enrich mixture slightly (counterclockwise).
- Hold throttle lever closed or move carburetor control to IDLE or SLOW position and adjust idle adjusting needle until engine runs smoothly proceeding as in step six (6) above.

8. Allow several seconds between each adjustment when performing either step six (6) or seven (7) to allow engine to react to new setting.

FIGURE 11.

STORAGE INSTRUCTIONS

In event engine is to be stored for any length of time (30 days or more), prepare as follows:

1. Drain gasoline by tipping or by syphon hose, then run engine until remainder is used and tank and carburetor are empty.

Drain into container outdoors away from fire or flame.

- 2. Drain carburetor by pressing upward on bowl drain (figure 11)
- 3. Inside protection of engine for storage is performed by removing spark plug and pouring one ounce of SAE 30 oil through spark plug hole into cylinder. Crank engine, without starting, several times to spread oil over cylinder walls.

WARRANTY PARTS AND SERVICE POLICY

The purpose of warranty is to protect the customer from defects in workmanship and materials, defects which are NOT detected at the time of manufacture, It does not provide for the unlimited and unrestricted replacement of parts. Use and maintenance are the responsibility of the customer. The manufacturer cannot assume responsibility for conditions over which it has no control. Simply put, if it's the manufacturer's fault, it's the manufacturer's responsibility; if it's the customer's fault, it's the customer's responsibility.

CLAIMS AGAINST THE MANUFACTURER'S WARRANTY INCLUDES

- 1. Replacement of Missing Parts on new equipment.
- 2. Replacement of Defective Parts within the warranty period.
- 3. Repair of Defects within the warranty period.

All claims MUST be substantiated with the following information:

- 1. Model Number of unit involved.
- 2. Date unit was purchased or first put into service.
- 3. Date of failure.
- 4. Nature of failure.
