# **FlashBack<sup>TM</sup> 4x4**

## **Owner's Manual with Assembly Instructions**

Please read this manual and save it with your original sales receipt.

For Model 75547

Tools needed for assembly: Phillips Screwdriver, Slotted Screwdriver, Hammer, and Safety Scissors.

Use only with a Power Wheels® 6 Volt Battery with A-style Connector and Built-in Thermal Fuse and a Power Wheels® Super 6™ Volt Charger (both included).

## A

## Important Information

- Your new vehicle requires adult assembly. Please set aside at least 45 minutes for assembly.
- You must charge your battery for 18 - 30 hours **before you use your vehicle for the first time.** We recommend that you start charging your battery before beginning assembly. Please see Battery Charging beginning on page 7 for detailed instructions.
- Read this manual carefully for important safety information and operating instructions before using your vehicle.
- This vehicle is designed for use on grass, asphalt or other hard surfaces by children 3 - 6 years of age.
- This vehicle has an adjustable play seat belt. Please note that the adjustable seat belt is designed to be a play feature only and does not function as a protective safety restraint.
- To prevent damaging the motors and gears, do not tow anything behind the vehicle or overload it. Do not exceed the maximum weight capacity of 65 lbs. (30 kg).
- If you have any questions about your Power Wheels® vehicle, please call our toll-free service lines at **1-800-348-0751** from 8 AM to 5 PM (EST) Monday through Friday. Trained customer service representatives are available to take your call in English or French. Habla Español? Si usted tiene alguna pregunta ó necesita asistencia llame gratis **1-800-348-0755** para los Estados Unidos. Tenemos representantes que hablan español para atender su llamada.
- For your convenience, Power Wheels® maintains an Authorized Service Center Network with more than 400 authorized service centers nationwide. Our authorized service centers will repair or replace parts under warranty at no extra charge, and can perform non-warranty repairs for a minimal charge. Please see the Authorized Service Center list beginning on page 23 to find the authorized service center nearest you, or call 1-800-348-0751.
- Please complete and return the enclosed Registration Card today, or call **1-800-348-0751** to register your vehicle by phone.

# B

## Warnings and Cautions

### WARNING

- Children can be harmed by small parts, sharp edges and sharp points in the vehicle's unassembled state, or by electrical items. Care should be taken in unpacking and assembly of the vehicle. Children should not handle parts, including the battery, or help in assembly of the vehicle.
- Keep small parts and plastic bags out of children's reach. Dispose of plastic bags properly.
- Adult supervision is required. Children do not have the judgement necessary to avoid many accidents. Be sure that children operating this vehicle can do so safely and that they are supervised at all times.
- Never use near steps, driveways, steep inclines, roadways, alleys, swimming pool areas or other bodies of water.
- Always wear shoes or sneakers when operating this vehicle.
- Never allow more than one rider.
- The rider should sit on the seat when the vehicle is in operation.
- **Hot** motor cover. Handle carefully.
- Never alter this vehicle or its electrical system in any way. Alterations could cause a fire resulting in injury and could also ruin the electrical system.
- Use of the wrong type battery or charger could cause a fire or explosion, resulting in serious injury.
- Use of Power Wheels® components in products other than Power Wheels® vehicles could cause overheating, fire or explosion.
- The battery must be handled by adults only. The battery is heavy and contains sulfuric acid (electrolyte). Dropping the battery could result in serious injury.
- Read the cautions on the back panel of the battery.
- Never allow children to charge the battery. Battery charging must be done by adults only. A child could be injured by the electricity involved in charging the battery.
- Examine the battery, charger and its connector for excessive wear or damage each time you charge the battery. If damage or excessive wear is detected, do not use the vehicle until you have replaced the worn or damaged part as it could possibly cause a fire resulting in injury.

### CAUTION

- This product contains small parts. Adult assembly is required.
- Use the charger in dry locations only.

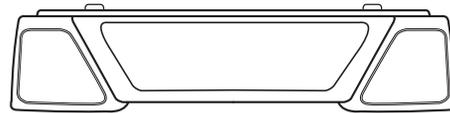

# C

## Parts

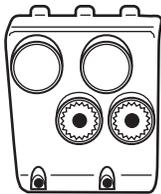

- If you experience a problem with this product or are missing a part, please call us at **1-800-348-0751** rather than return this product to the store.
- Please identify all parts before assembly and save all packaging material until assembly is complete to ensure that no parts are discarded.
- Metal parts have been coated with a lubricant to protect them during shipment. Wipe all metal parts with a paper towel to remove any excess lubricant.

 **WARNING**

- The battery must be handled by adults only. The battery is heavy and contains sulfuric acid (electrolyte). Dropping the battery could result in serious injury.
- Never allow children to charge the battery. Battery charging must be done by adults only. A child could be injured by the electricity involved in charging the battery.
- Use of the wrong type battery or charger could cause a fire or explosion, resulting in serious injury.
- Use of Power Wheels® components in products other than Power Wheels® vehicles could cause overheating, fire or explosion.
- Read the cautions on the back panel of the battery.
- Examine the battery, charger and its connector for excessive wear or damage each time you charge the battery. If damage or excessive wear is detected, do not use the charger or the vehicle until you have replaced the worn or damaged part.
- Never alter this vehicle or its electrical system in any way. Alterations could cause a fire resulting in injury and could also ruin the electrical system.

**Important Notes**

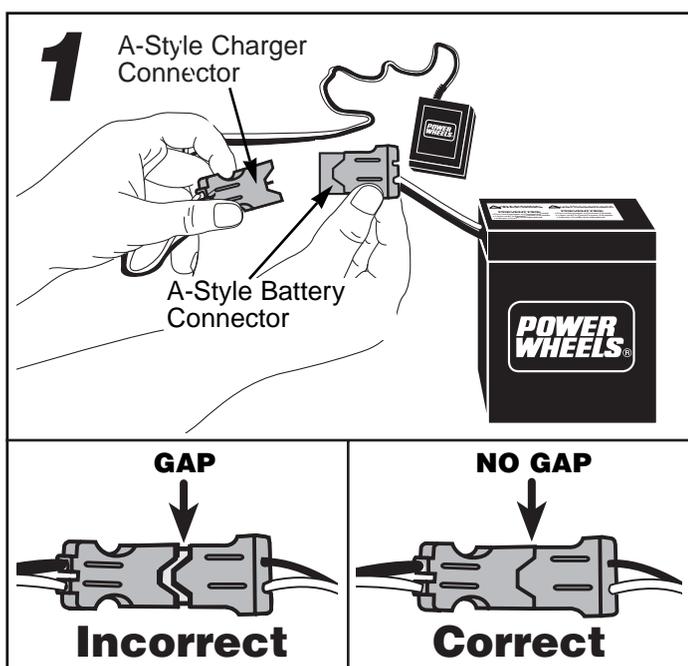

- **Your new battery must be charged for at least 18 hours before you use it in your vehicle for the first time.**
- We recommend that you start charging your battery before beginning assembly of your vehicle.
- The battery must be upright while charging.
- The charger is not a toy.
- Do not short circuit the battery.
- You do not need to remove the battery from the vehicle to recharge it.
- Before charging the battery, examine the battery case for cracks and other damage which may cause sulfuric acid (electrolyte) to leak during the charging process. If damage is detected, do not charge the battery or use it in your vehicle. Battery acid is very corrosive and can cause severe damage to surfaces it contacts. Take precautions to protect the surface on which you charge the battery.
- Use only a Power Wheels Super 6™ Volt charger with an A-style connector (120VAC 60 Hz 28W with an output of 6VDC 7.2W) to charge your 6 volt battery.

**About Thermal Fuses**

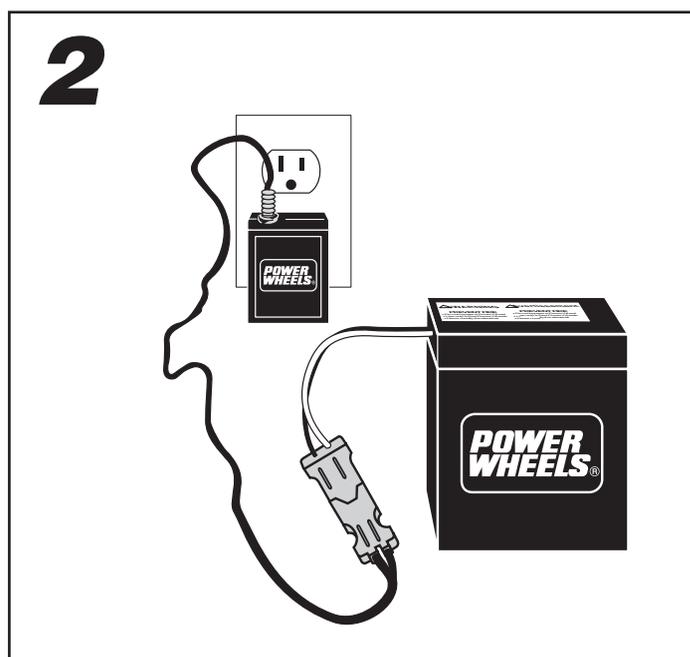

Your Power Wheels® battery is equipped with a built-in thermal fuse. The thermal fuse is a self-resetting safety device which automatically “trips” and shuts down operation of the vehicle if the vehicle is overloaded or the driving conditions too severe. Once the fuse has “tripped”, it will automatically reset itself after approximately 25 seconds and allow the vehicle to resume normal operation. To avoid repeated automatic shutdowns, do not overload the vehicle by exceeding the 65 lbs. maximum weight capacity or by towing anything behind the vehicle. Avoid severe driving conditions, such as driving up very steep hills or running into fixed objects, which can cause the wheels to stop spinning while power is still being supplied to the motors.

If under normal use conditions the thermal fuse continually trips, contact your local Power Wheels® Authorized Service Center. Please refer to the Authorized Service Center listing beginning on page 23 for the location of the Authorized Service Center nearest to you.

# Battery Charging

- Plug the charger and battery connectors together. Push firmly to make sure the two connectors are completely joined.

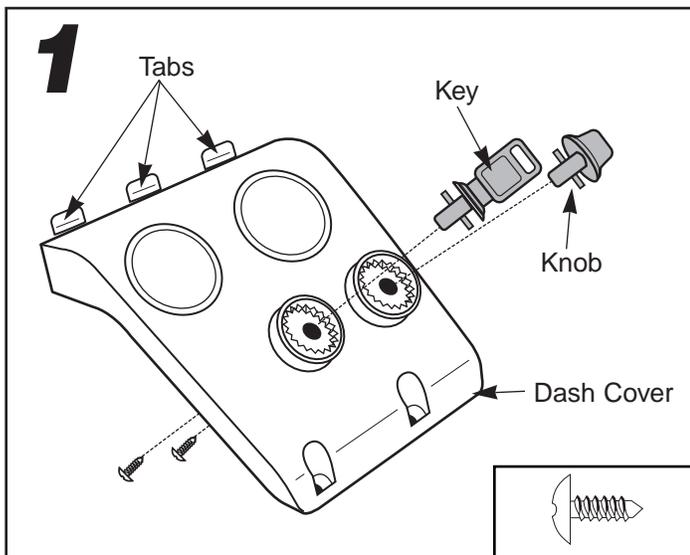

- Plug the charger into a standard 120 volt wall outlet.  
**Note:** If power flow to the wall outlet is controlled by a switch, make sure the switch is "ON".
- **Before first time use, charge the battery for at least 18 hours.** Never charge the battery longer than 30 hours.
- **Recharge the battery for at least 14 hours** after each use of your vehicle. Do not charge the battery longer than 30 hours.
- Once the battery is charged, disconnect the charger connector from the battery connector. Unplug the charger from the wall outlet. The battery is now charged and is ready to be installed in your vehicle. Please see "Battery Installation" on page 15 for detailed battery installation instructions.

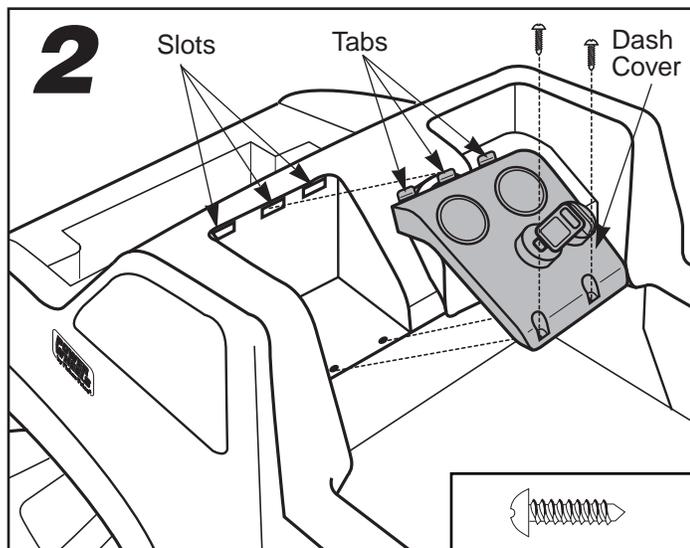

# F

## Assembly

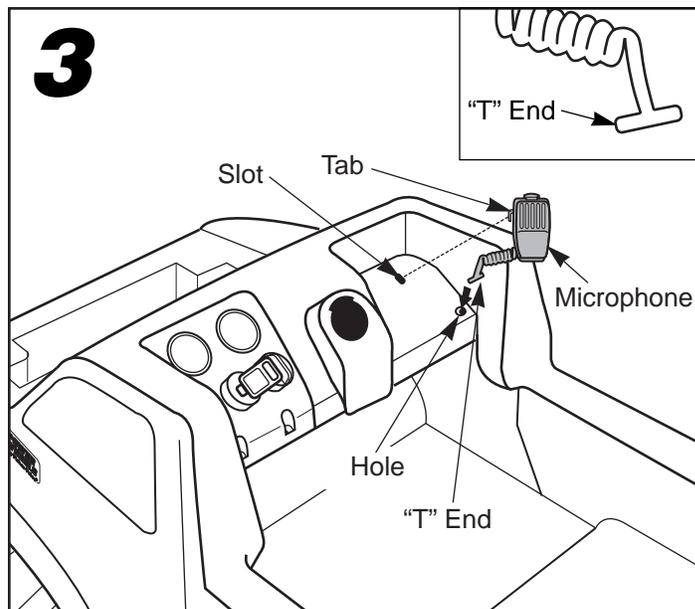

Do Not Omit Any Steps

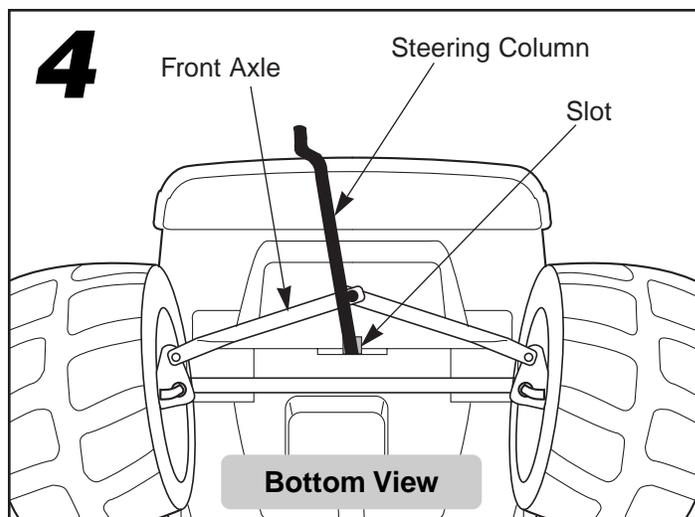

- Position the dash cover as shown. Make sure the three tabs are at the top.
- Fit the knob into the hole in the right side of the dash cover.
- Fit the key into the hole to the left of the knob.
- Insert a #6 x  $\frac{3}{8}$ " screw into the back of the knob and into the back of the key.
- Tighten the screws with a Phillips screwdriver. Do not over-tighten.

- Insert the tabs on the top of the dash cover into the slots in the dash.
- Lower the bottom of the dash cover.
- Insert two #6 x  $\frac{1}{2}$ " screws through the dash cover and into the dash.
- Tighten the screws with a Phillips screwdriver. Do not over-tighten.

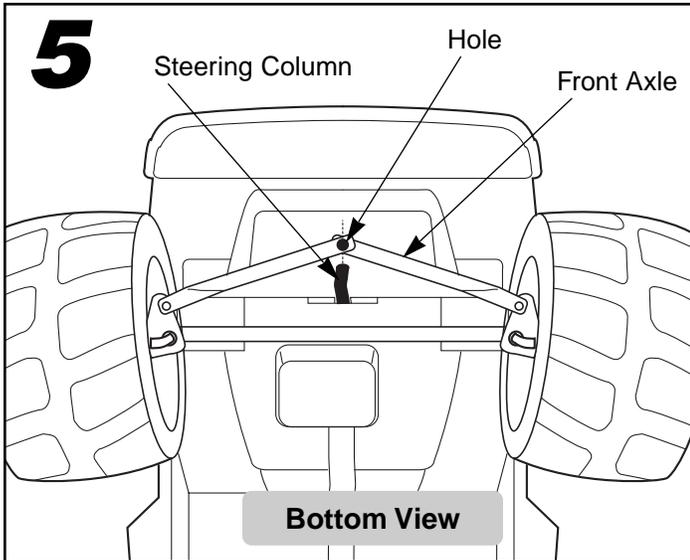

- Insert the end of the microphone cord through the hole in the right side of the dash.
- From the underside of the vehicle, bend the end of the microphone cord so that it forms a "T" under the dash.
- Gently pull on the microphone cord to make sure it is secure in the dash.
- Fit the tab on the back of the microphone into the slot in the dash to secure the microphone.

**Helpful Hint:** You may want the help of another person to complete assembly steps 4 through 7.

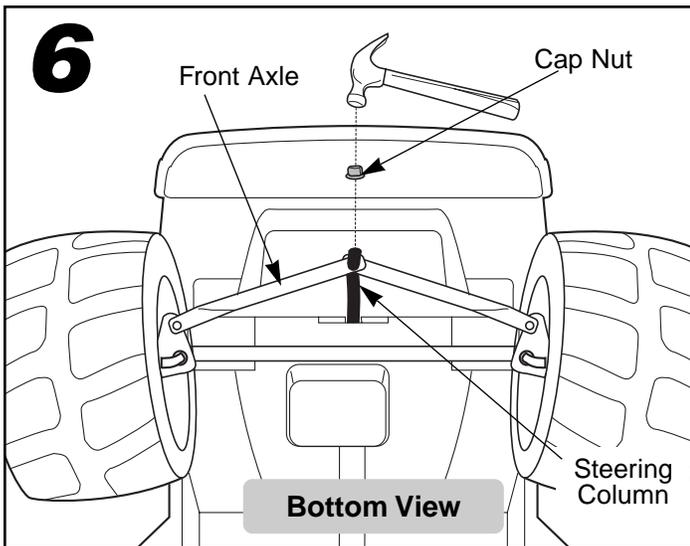

- Wipe the steering column with a paper towel to remove any excess lubricant.
- Carefully lift the front end of the vehicle.
- Insert the straight end of the steering column **under** the front axle, through the slot in the vehicle body and out through the large hole in the center of the dash.

# Assembly

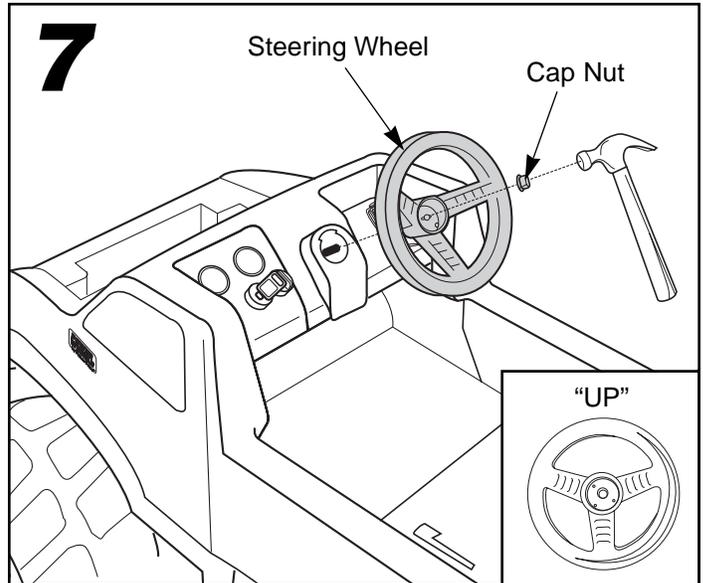

- Fit the curved end of the steering column into the hole in the front axle.

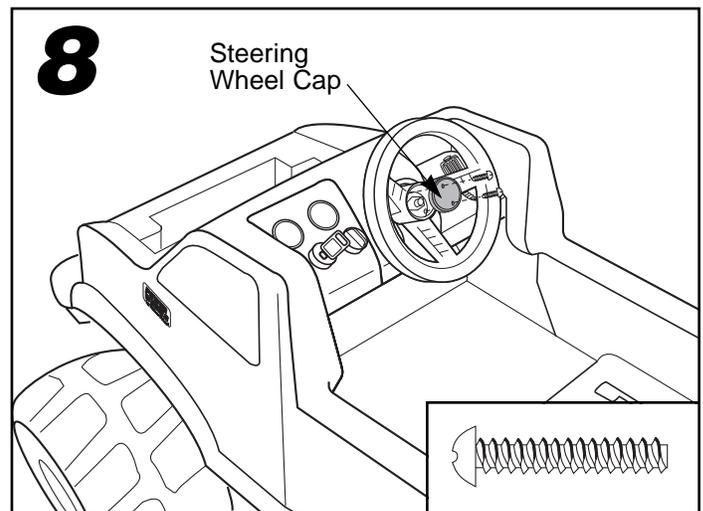

**Please Note:** You may need to straighten the vehicle tires and rotate the steering column to fit it into the hole in the front axle.

- Fit a cap nut onto the end of the steering column.
- While supporting the steering column, tap the cap nut with a hammer to secure it on the steering column.

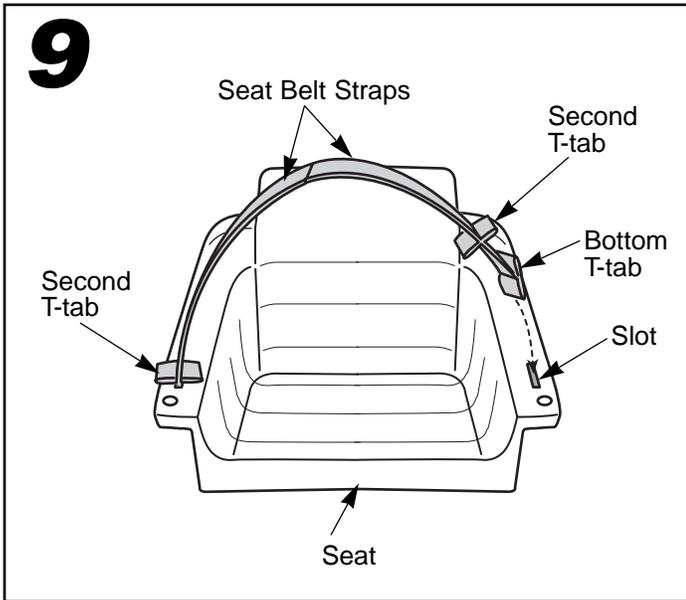

- Hold the steering column in place and gently lower the vehicle body.
- Position the steering wheel so that the spokes form a "Y" as shown.
- While supporting the steering column, fit the steering wheel onto the steering column.
- Fit a cap nut onto the end of the steering column.
- Tap the cap nut with a hammer to secure it on the steering column.

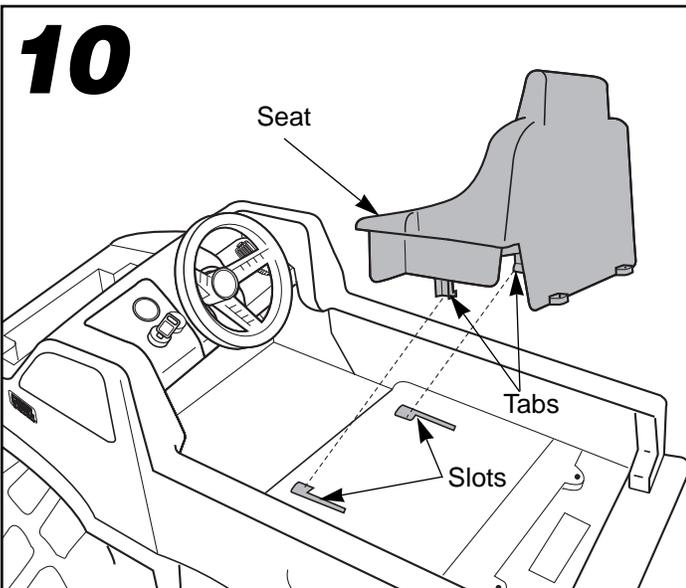

- Align the tab on the steering wheel cap with the slot in the center of the steering wheel.
- Fit the steering wheel cap into the center of the steering wheel.
- Insert two #8 x 1" screws into the steering wheel cap.
- Tighten the screws with a Phillips screwdriver. Do not over-tighten.

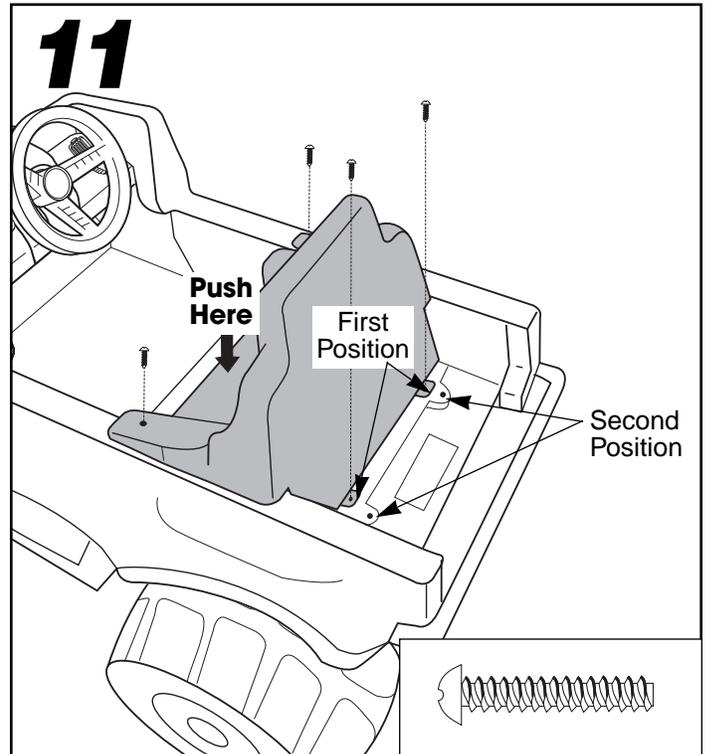

# Assembly

- Make sure the two seat belt straps are fastened together. If they are not fastened together, connect the fasteners to form one seat belt.
- Insert the T-tab at one end of the seat belt through the slot in one arm of the seat. **Do not pull the second T-tab through the slot.**
- Repeat this procedure to secure the other end of the seat belt in the seat.
- Pull up on the seat belt to make sure it is securely attached to the seat.

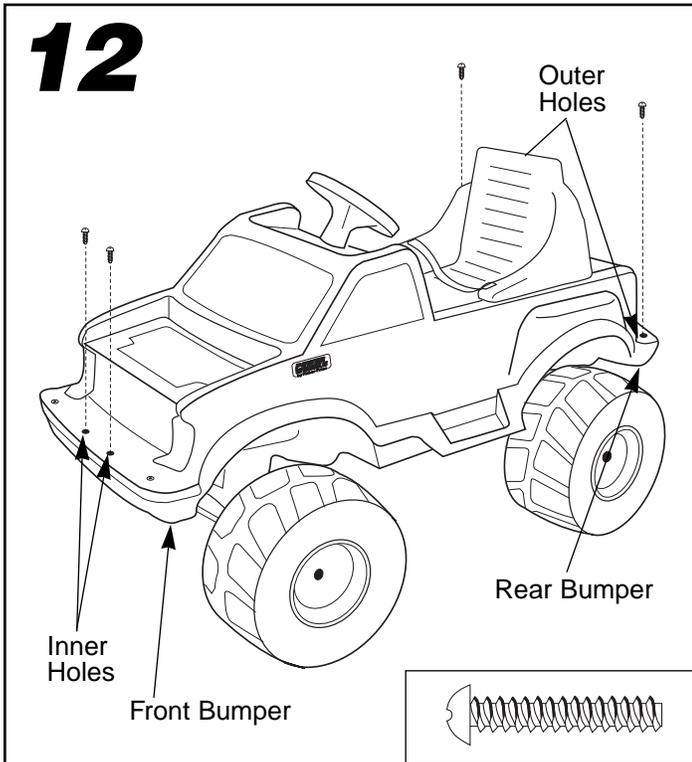

- Insert the two tabs on the bottom of the seat into the slots in the vehicle body.

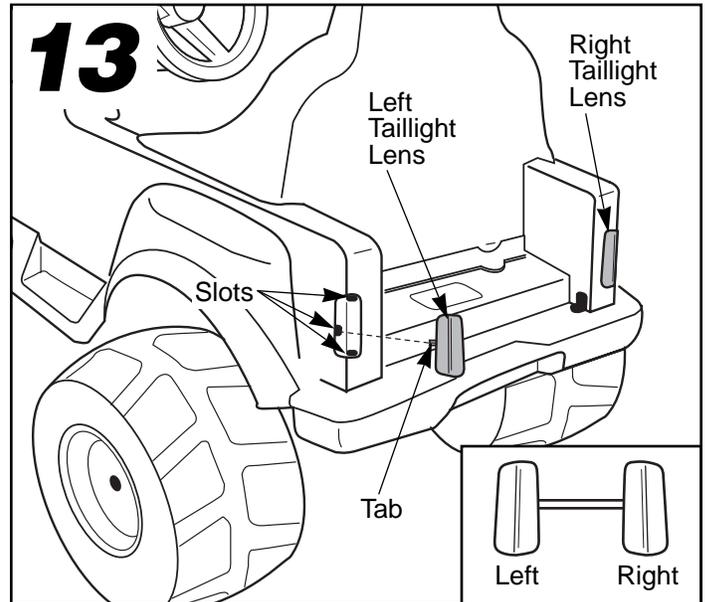

**Please Note:** The seat can be assembled in either of two positions for your child's comfort.

- Push down on the center of the seat and slide it toward the rear of the vehicle.
- Align the screw holes in the back of the seat with the first or second set of holes in the vehicle body.
- Check your child's fit in the vehicle by observing foot to pedal distance and adjust the position of the seat, if necessary.
- Insert two #8 x 1" screws through the holes in the back of the seat and into the holes in the vehicle body, as shown.
- Insert two #8 x 1" screws through the holes in the armrests and into the vehicle body, as shown.
- Tighten the screws with a Phillips screwdriver. Do not over-tighten.

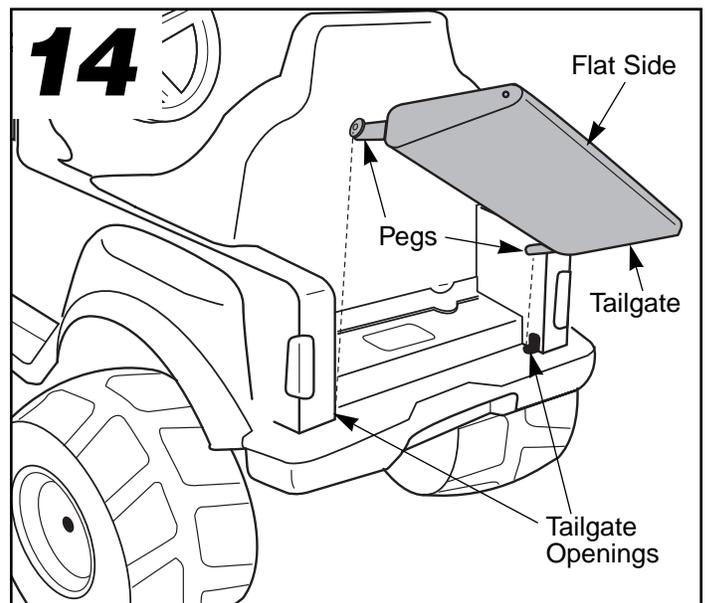

# Assembly

- Insert a #8 x 1" screw into each of the two **inner** screw holes in the top of the **front bumper**.
- Tighten the screws with a Phillips screwdriver. Do not over-tighten.
- Insert a #8 x 1" screw into each of the two **outer** screw holes in the top of the **rear bumper**.
- Tighten the screws with a Phillips screwdriver. Do not over-tighten.

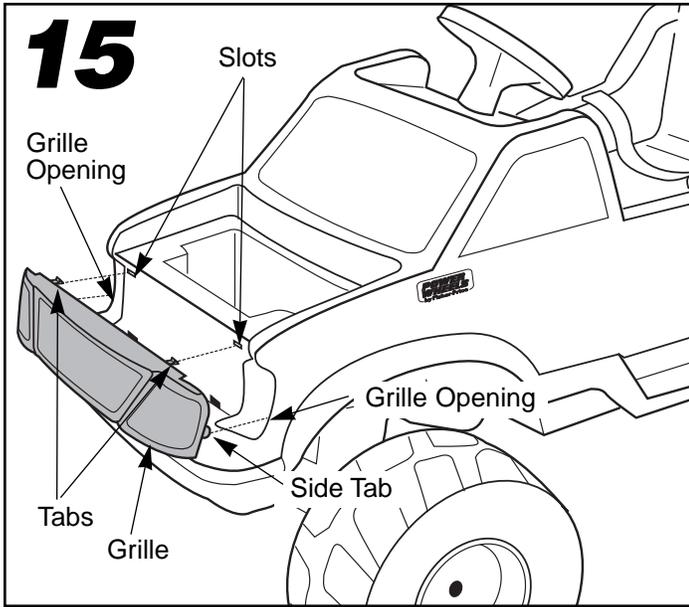

- Using safety scissors, remove the taillight lenses from the plastic connector. Dispose of the plastic connector.
  - Face the rear of the vehicle.
  - Insert the tabs on the back of the right and left taillight lenses into the taillight slots in the vehicle body.
- Please Note:** The left and right taillight lenses are NOT interchangeable.
- Press firmly to snap the tabs into the slots.

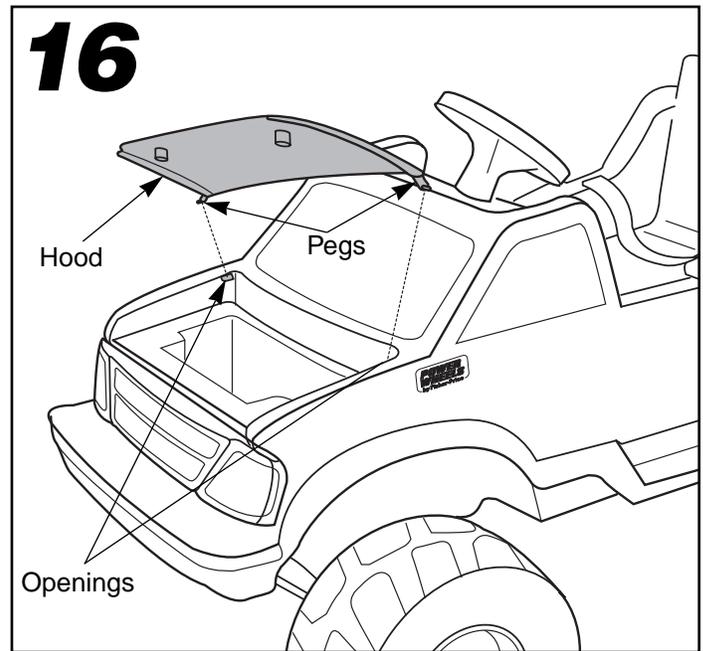

- Position the tailgate with the flat side facing up.
- Fit the peg on one side of the tailgate into the tailgate opening in the rear of the vehicle body.
- Slide the peg on the other side of the tailgate into the tailgate opening in the other side of the vehicle body.
- Lift the tailgate and press firmly to snap it closed.

# Assembly

- Face the front of the vehicle.
- Insert the two tabs at the top of the grille into the slots in the front of the vehicle body.
- Press firmly to snap the tabs into the slots.
- **Fit the two side tabs on the grille into the grille openings in the front of the vehicle body.**
- Press firmly at the bottom of the grille to snap the two tabs at the bottom of the grille into the vehicle body.

**Please Note:** If you have already charged your Power Wheels® battery for at least 18 hours, you may want to install it in the battery compartment before assembling the hood. Please refer to the Battery Installation section on page 15 for instructions.

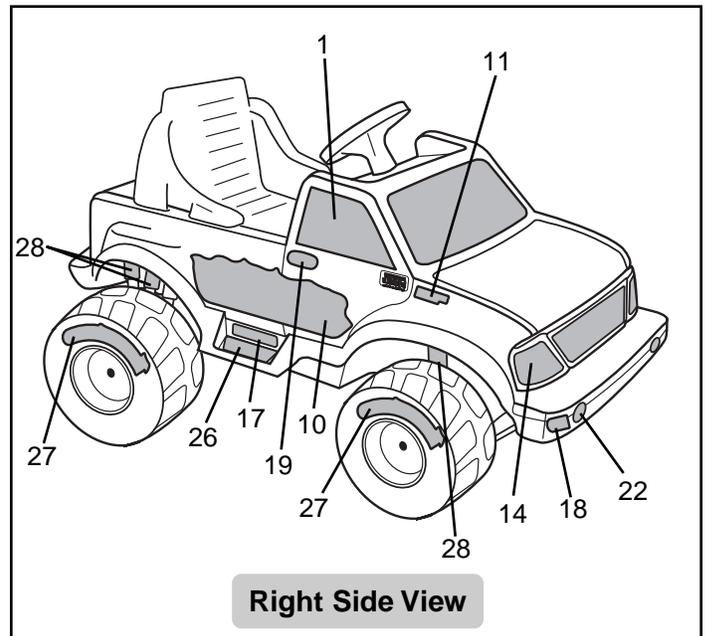

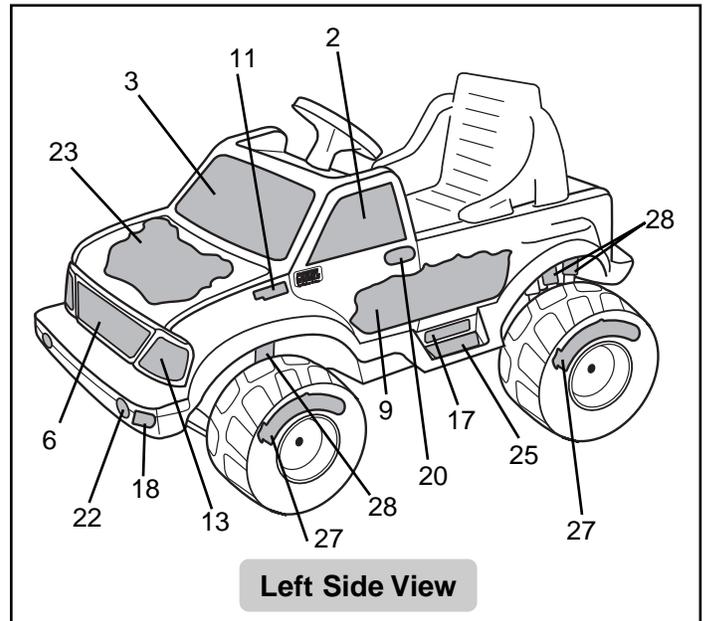

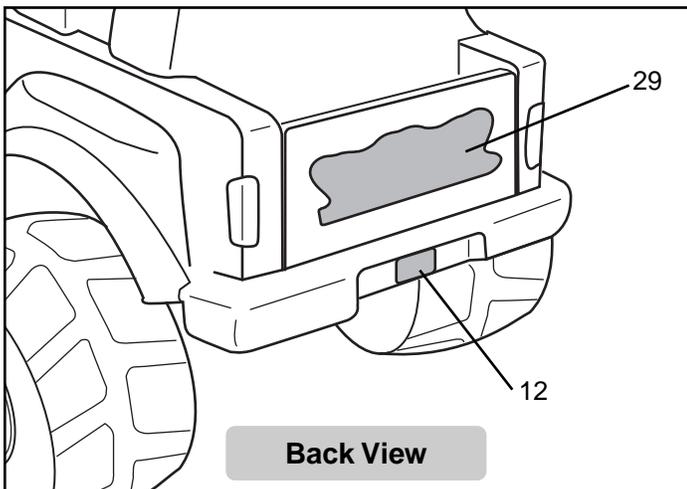

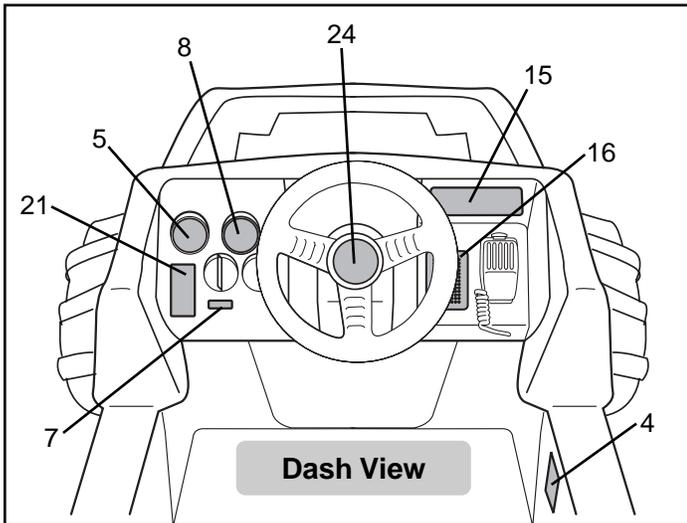

- Fit the peg on one side of the hood into one of the hood openings near the base of the windshield area.
- Gently bend the hood to insert the peg on the other side of the hood into the opening on the other side of the vehicle body.
- Lower the hood.

# G

## Label Decoration

Proper label application will help to keep the labels looking their best! When applying labels, keep the following guidelines in mind:

- Wash your hands before applying the labels.
- Before applying the labels, wipe the surface of the vehicle with a clean, dry cloth to remove any dust or oils.
- Place the labels exactly as shown in the illustrations.
- For best results, avoid repositioning a label once it has been applied to the vehicle.
- **After applying a label, rub the label firmly with a clean, dry cloth to make sure the label is adhered to your vehicle. Start at the center of a label, and smooth towards the outer edges to remove air bubbles.**

**One-time assembly is now complete.**

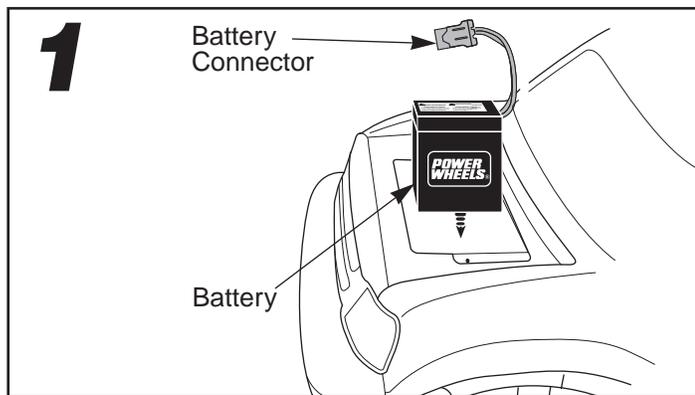

Please carefully read the owner's information in this manual and teach your child about proper vehicle operation and rules for safe driving before allowing operation of this vehicle.

# H

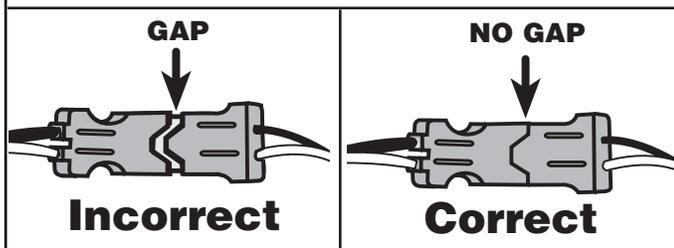

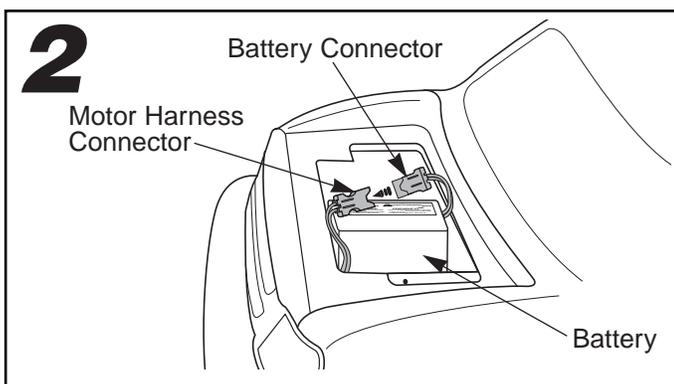

## Battery Installation

**Important Note:** Use only a Power Wheels® 6 volt battery with A-style connector and built-in thermal fuse. Use of any other battery can damage your vehicle. Make sure that you charge the battery for at least 18 hours using the enclosed Power Wheels® Super 6™ volt charger before operating your vehicle for the first time. Charge the battery for at least 14 hours after each use of the vehicle. Never charge the battery longer than 30 hours. Failure to follow these instructions may damage your battery and will void your warranty.

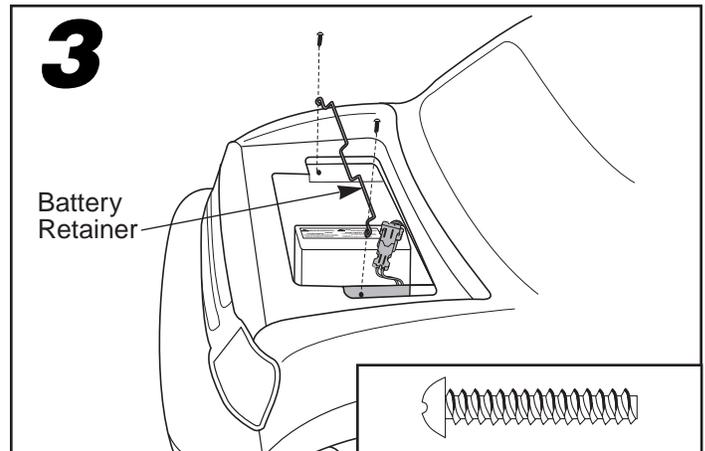

It is easier to install the battery before assembling the hood to your vehicle. If you have already assembled the hood to your vehicle, you may want to remove it to install the battery.

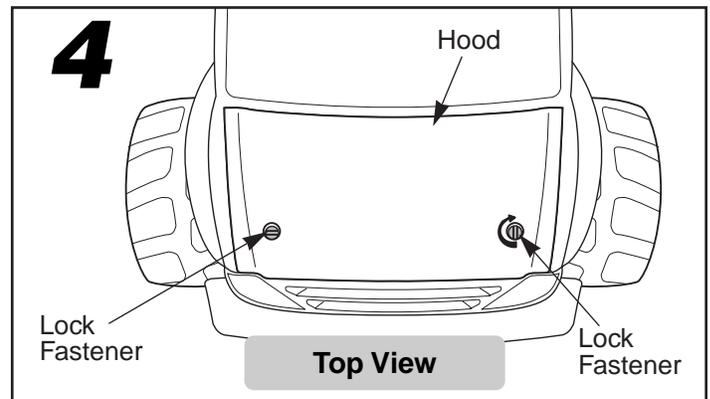

- The battery compartment is located under the hood of your vehicle.
- Place the battery upright in the battery compartment. Make sure the bottom of the battery is flat on the bottom of the battery compartment and that the battery connector extends toward the rear of the vehicle.

- Plug the battery and motor harness connectors together. Push firmly to make sure the two connectors are completely joined.

- Position the battery retainer over the battery with the ends of the battery retainer aligned with the screw holes in the battery compartment.
- Insert two #8 x 1" screws through the battery retainer and into the battery compartment.
- Tighten the screws with a Phillips screwdriver. Do not over-tighten.
- Place the connectors toward the rear of the battery compartment, on top of the battery as shown.

- Re-assemble the hood to the vehicle if you have removed it to install your battery.
- Lower the hood.
- Face the front of the vehicle.
- Using a slotted screwdriver, rotate the lock-fasteners in the hood so that they are horizontal (⊖).
- Press down on the hood so that the lock fastener tabs on the underside of the hood fit into the lock fastener slots under the hood in the battery compartment.
- Rotate the lock fasteners clockwise 90° (¼ turn) using a slotted screwdriver to lock the hood and prevent children from accessing the battery (⊕).
- Lift up on the hood to make sure it is securely fastened.

## Care

**If a battery leak develops**, avoid contact with the leaking acid and place the damaged battery in a plastic bag. See information below for proper disposal.

**If acid comes in contact with skin or eyes**, flush with cool water for at least 15 minutes and call a physician.

**If acid is internally ingested**, give water, milk of magnesia or egg whites immediately. Never give emetics or induce vomiting. Call a physician.

- Charge a new battery for at least 18 hours before first use. Never charge the battery longer than 30 hours. Overcharging or undercharging the battery may shorten battery life and decrease vehicle running time.
- After the first charge, recharge the battery for at least 14 hours after each use. Never charge the battery longer than 30 hours. Charge the battery after each use, regardless of how long the vehicle was used.
- The battery must be upright while charging.
- Do not allow the battery to run down completely before charging.
- Charge the battery before storing the vehicle.
- Charge the battery at least once per month, even if the vehicle has not been used.
- Leaving the battery in a discharged condition will ruin it.
- Always remove an exhausted battery from the vehicle. Battery leakage and corrosion can damage the vehicle.
- Do not store the battery in temperatures above 75° F or below -10° F.
- Prevent the battery from moving freely inside the battery compartment. Always use the battery retainer to secure the battery in the battery compartment.
- Examine the battery, charger and its connector for excessive wear or damage each time you charge the battery. If damage is detected, do not use the charger or the battery until you have replaced the worn or damaged part.

## Disposal

- Your Power Wheels® battery is a sealed lead-acid battery. It must be recycled or disposed of in an environmentally sound manner.
- Do not dispose of a lead-acid battery in your regular, household trash. The incineration, landfilling or mixing of sealed lead-acid batteries with household trash is prohibited by law in most areas.
- Return the battery to a federal or state approved lead-acid battery recycler, such as a Power Wheels® authorized service center, or a local seller of automotive batteries. In Minnesota, call 1-800-348-0751 if further disposal information is required. Contact your local waste management officials for other information regarding the environmentally sound collection, recycling and disposal of lead-acid batteries.

# J

## Rules for Safe Driving

### WARNING

- Adult supervision is required. Children do not have the judgement necessary to avoid many accidents. Be sure that children operating this vehicle can do so safely and that they are supervised at all times.
- Never use near steps, driveways, steep inclines, roadways, alleys, swimming pool areas or other bodies of water.
- Always wear shoes or sneakers when operating this vehicle.
- Never allow more than one rider.
- The rider should sit on the seat when the vehicle is in operation.

### Teach Safety Rules to Children

While children can quickly develop the skill necessary to drive this vehicle, it is important to remember that their judgement skills are still very immature. Unsupervised driving by children can lead to serious injury. Before children use this vehicle, an adult should carefully evaluate the driving area as well as the children's skill level and ability to drive it safely. Children are not always able to recognize or anticipate hazards, even when they have been taught about them. There is no acceptable substitute for adult supervision.

Teach appropriate safety rules to your child before allowing operation of this vehicle. These rules should also be reviewed with neighborhood children or other playmates who want to drive this vehicle.

1. Do not allow any child to drive the vehicle in the street or near moving (motorized) vehicles.
2. Do not allow any child to drive near bodies of water (such as pools or creeks), obstructions (such as furniture, low tree limbs or play equipment), or drop-offs (such as stairs or decks).
3. Do not allow any child to drive the vehicle in the dark. A child could encounter unexpected obstacles and have an accident. Operate the vehicle only in the daytime or in a well-lit area.
4. Teach your child to avoid driving on steep inclines or slopes. Restrict your child's driving to areas that are fairly level with gentle inclines or slopes of no more than 10°.
  - While driving down a steep slope, the vehicle may gain unsafe speed, even if the foot pedal is released to stop.

- While driving across a steep slope, the vehicle may tilt and tip over. The wheels could lose traction, causing the vehicle to slip.
- While driving up a steep incline, the motor may stop and the vehicle could roll backwards at an unsafe speed.

**Incline should never be more than 10°**

5. Do not operate this vehicle with more than one rider who is seated on the seating area. A child who is not sitting on the seat or who is standing on the vehicle could fall off, cause a tip-over or block the driver's view. A child could be seriously injured.
6. Always wear shoes or sneakers when operating this vehicle.
7. Never put anything near any moving parts. Rotating parts such as motors, gear boxes and wheels can snag fingers, hair, etc., causing serious injury. Do not allow operation of the vehicle when it is on its side or in an upside-down position.
8. Do not operate the vehicle near flammable vapors (gasoline, paint thinner, acetone, liquid wax, etc.). The vehicle's electrical switches, like most electrical switches, emit an internal spark when first turned on or turned off. The presence of flammable liquids or vapors could cause an explosion or a fire. Keep all flammable products in tightly sealed containers and away from the vehicle.
9. Do not allow a child to operate the vehicle without proper adult supervision. To prevent unsupervised use of the vehicle, disconnect the motor harness from the battery when the vehicle is not in use.

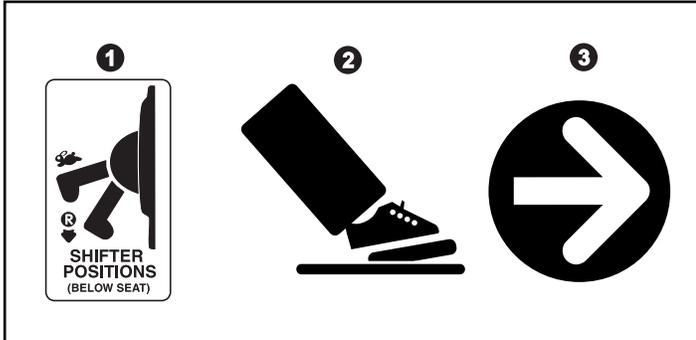

#### To disconnect the motor harness connector and battery connector:

- Rotate the lock fasteners in the hood counter-clockwise 90° (1/4 turn) with a slotted screwdriver to unlock the hood (⊖).
- Raise the hood to access the battery.
- Unplug the battery connector from the motor harness connector.
- Lower the hood and rotate the lock fasteners clockwise 90° (1/4 turn) with a slotted screwdriver to lock the hood (⊕).

# K

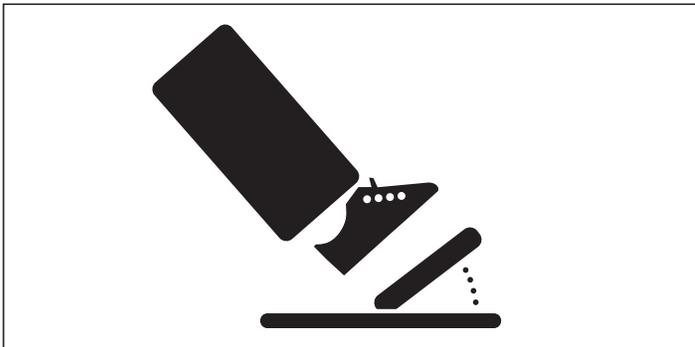

## How to Operate Your Vehicle

### To Drive

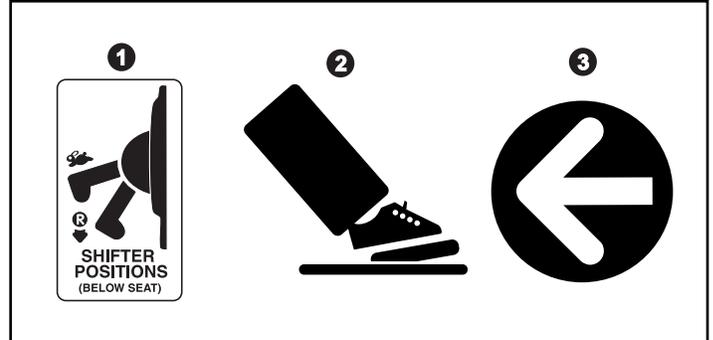

- Make sure the Power Stick™ shifter is in the forward (👉) position ①.
- Press down on the foot pedal ②. The vehicle goes forward at a maximum of 3½ mph ③.
- Help your child practice steering to learn how far and how quickly to turn the steering wheel when driving forward.

### To Stop 🖐️

- Your vehicle has a patented, electronic braking system that automatically stops the vehicle when your child's foot is lifted from the pedal.
- Make sure your child is comfortable with steering the vehicle and automatically knows how to stop.

### To Back Up

**Please Note: To avoid damaging the motors and gears, stop the vehicle before shifting from forward to reverse (♥).**

- Once your child is completely comfortable with operating the vehicle in the forward mode, introduce reverse (♥).

### To Back Up

- Make sure the Power Stick™ shifter is in the reverse (♥) position ①.
- Press down on the foot pedal ②. The vehicle goes in reverse at a maximum of 3½ mph ③.
- Help your child practice steering to learn how far and how quickly to turn the steering wheel when driving in reverse.

# L

## Caring For Your Vehicle

- Check all screws, retainers and their protective coverings regularly and tighten as required. Check plastic parts on a regular basis for cracks or broken pieces.
- During snowy or rainy weather, the vehicle should be stored inside or under a protective cover. Remember to charge the battery at least once per month while your vehicle is not in regular use.
- Avoid operating the vehicle in wet or snowy conditions, and do not spray the vehicle with a hose. Do not wash the vehicle with soap and water. Water or moisture in the motor or electrical switches can cause them to corrode, and could cause switch or motor failure.
- Avoid operating the vehicle on sand, loose dirt or gravel. Sand, loose dirt or gravel in the motor or electrical switches can cause them to jam, and could cause switch or motor failure.
- The vehicle can be wiped down with a soft, dry cloth. For a shiny finish, you can wipe plastic parts with a non-wax furniture polish applied to a soft-cloth. Do not use automotive wax. Do not use soap and water or spray the vehicle with a hose.
- To ensure that your vehicle stays in good operating order, we recommend that you periodically have your vehicle checked by a Power Wheels® authorized service center. See page 23 for the list of authorized service centers or call **1-800-348-0751** for the location of the authorized service center nearest you.

# M

## Bumper - to - Bumper\* Limited Warranty

**\*One year limited warranty from date of purchase on Power Wheels® vehicle.  
Six month limited warranty on 6 volt battery.**

For the original purchaser, this one year limited warranty covers the Power Wheels® ride-on vehicle (purchased from Power Wheels®) against defects in materials and workmanship. The six month limited warranty applies only to the 6 volt battery included by Power Wheels with the original purchase of the vehicle.

This warranty covers normal use and does not cover the Power Wheels® vehicle or battery if it has been damaged by unreasonable use, neglect, accident, abuse, misuse, improper service or other causes not arising out of defects in materials or workmanship. Evidence of any attempt at consumer repair will void this warranty. This warranty does not cover, and is intended to exclude, any liability on the part of Power Wheels®, whether under this warranty or implied by law, or any indirect or consequential damages for breach of warranty. Some states do not allow the exclusion or limitation, so this limitation may not apply to you.

Should you need service or assistance with your vehicle during the warranty period, **do not return this vehicle to the store.** Power Wheels® has provided a nationwide network of authorized service centers. Please refer to the list in this manual. Power Wheels® is continually expanding our Authorized Service Center Network. If there is not an authorized service center in your area, please call Consumer Affairs for information, **1-800-348-0751**.

This warranty gives you specific legal rights, and you may also have other rights which may vary from state to state.

**Please save your original sales receipt.**

# N

## Problems and Solutions Guide

**IMPORTANT!** If you experience a problem with your vehicle, first check the Problems and Solutions Guide below. If you still experience a problem, please contact Power Wheels® Consumer Affairs, toll-free at **1-800-348-0751** between 8 AM and 5 PM (EST) Monday through Friday. Or, contact your local Power Wheels® authorized service center. For the location nearest you, please refer to the Authorized Service Center list beginning on page 23.

| Problem                                  | Possible Cause                  | Solution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Vehicle does not run                     | Undercharged battery            | Charge the battery. A new battery should have been charged for at least 18 hours before using the vehicle for the first time. After first-time use, recharge the battery for at least 14 hours after each use. Never charge the battery longer than 30 hours.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|                                          |                                 | Check all connectors. Make sure the battery connector is tightly plugged into the charger connector, and that the charger is plugged into the wall.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|                                          |                                 | Make sure power flow to the wall outlet is "ON".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|                                          | Charger is not working          | There is no sure way to tell if your charger is working unless you have a volt meter. If you suspect there is a problem with your charger, contact your local Power Wheels® authorized service center. They can test your charger for you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|                                          | Tripped thermal fuse in battery | The built-in thermal fuse may "trip" and shut down operation of the vehicle if the vehicle is overloaded or the driving conditions too severe. The fuse will automatically reset itself after approximately 25 seconds allowing the vehicle to resume normal operation. To avoid repeated automatic shut downs, do not overload the vehicle by exceeding the 65 lbs. maximum weight capacity or by towing anything behind the vehicle. Avoid severe driving conditions, such as driving up very steep hills or running into fixed objects, which can cause the wheels to stop spinning while power is still being supplied to the motors. If the thermal fuse continually trips, contact your local Power Wheels® authorized service center. |
|                                          | Loose wire or loose connectors  | Check all wires and connectors. Make sure the battery connector is tightly plugged into the motor harness connector, and that there are no loose wires around the motor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|                                          | Dead battery                    | If your battery is old or if you have not followed Battery Care instructions, your battery may be dead. If you are unsure whether or not the battery is dead, you can have it tested at your local Power Wheels® authorized service center.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|                                          | Electrical switch damage        | The electrical switches can become corroded due to exposure to water or moisture, or can jam due to loose dirt, sand or gravel. Contact your local Power Wheels® authorized service center for diagnosis and repair.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Vehicle was running but suddenly stopped | Motor damage                    | Contact your local Power Wheels® authorized service center for diagnosis and repair.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|                                          | Loose wire or loose connectors  | Check all wires and connectors. Make sure the battery connector is tightly plugged into the motor harness connector, and that there are no loose wires around the motor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

# Problems and Solutions Guide

| Problem                                           | Possible Cause                                 | Solution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Vehicle was running but suddenly stopped (cont.)  | Tripped thermal fuse                           | The built-in thermal fuse may "trip" and shut down operation of the vehicle if the vehicle is overloaded or the driving conditions too severe. The fuse will automatically reset itself after approximately 25 seconds allowing the vehicle to resume normal operation. To avoid repeated automatic shut-downs, do not overload the vehicle by exceeding the 65 lbs. maximum weight capacity or by towing anything behind the vehicle. Avoid severe driving conditions, such as driving up very steep hills or running into fixed objects, which can cause the wheels to stop spinning while power is still being supplied to the motors. If the thermal fuse continually trips, contact your local Power Wheels® authorized service center. |
| Short run time (Less than 1 - 3 hours per charge) | Undercharged battery                           | Charge the battery. A new battery should have been charged for at least 18 hours before using the vehicle for the first time. After first-time use, recharge the battery for at least 14 hours after each use. Never charge the battery longer than 30 hours.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|                                                   |                                                | Check all wires and connectors. Make sure the battery connector is tightly plugged into the charger connector, and that the charger is plugged into the wall.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|                                                   |                                                | Make sure power flow to the wall outlet is "ON".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|                                                   | Overcharged battery                            | Do not charge the battery longer than 30 hours. If you suspect that your battery is damaged as a result of overcharging, contact your local Power Wheels® authorized service center. They can test your battery for you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|                                                   | Battery is old and will not accept full charge | Even with proper care, a rechargeable battery does not last forever. Average battery life is 1 to 3 years depending on vehicle use and use conditions. For best performance, do not use substitute parts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                                                   | Driving conditions are too stressful           | Use only on gentle inclines or slopes of 10° or less. If the driving conditions are too stressful the built-in thermal fuse in the battery may "trip" and automatically shut down operation of the vehicle for approximately 25 seconds. Adjust the driving conditions to prevent repeated automatic shutdowns.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Vehicle runs sluggishly                           | Undercharged battery                           | Make sure you do not overload the vehicle by allowing more than 1 rider at one time, by exceeding the 65 lbs. maximum weight capacity, or by towing objects behind the vehicle. If the vehicle is overloaded, the built-in thermal fuse in the battery may "trip" and automatically shut down operation of the vehicle for approximately 25 seconds. Reduce the load on the vehicle to prevent repeated automatic shutdowns.                                                                                                                                                                                                                                                                                                                 |
|                                                   |                                                | Charge the battery. A new battery should have been charged for at least 18 hours before using the vehicle for the first time. After first-time use, recharge the battery for at least 14 hours after each use. Never charge the battery longer than 30 hours.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|                                                   |                                                | Check all connectors. Make sure the battery connector is tightly plugged into the charger connector, and that the charger is plugged into the wall.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Vehicle runs sluggishly (cont.)                                      | Battery is old and will not accept full charge                                                                 | Even with proper care, rechargeable batteries do not last forever. Average battery life is 1 to 3 years depending on the vehicle use and use conditions. Replace the battery with a Power Wheels® 6 volt battery with A-style connector and built-in thermal fuse. For best performance, do not use substitute parts.                                                                                                        |
|                                                                      | Vehicle is overloaded                                                                                          | Make sure you do not overload the vehicle by allowing more than 1 rider at one time, by exceeding the 65 lbs. maximum weight capacity, or by towing objects behind the vehicle. If the vehicle is overloaded, the built-in thermal fuse in the battery may "trip" and automatically shut down operation of the vehicle for approximately 25 seconds. Reduce the load on the vehicle to prevent repeated automatic shutdowns. |
|                                                                      | Driving conditions are too stressful                                                                           | Use only on gentle inclines or slopes of 10° or less. If the driving conditions are too stressful the built-in thermal fuse in the battery may "trip" and automatically shut down operation of the vehicle for approximately 25 seconds. Adjust the driving conditions to prevent repeated automatic shutdowns.                                                                                                              |
| Sometimes the vehicle doesn't run, but other times it does           | Loose wire or connector                                                                                        | Check all wires around the motor and all connectors to make sure they are tight.                                                                                                                                                                                                                                                                                                                                             |
|                                                                      | Motor or electrical switch damage                                                                              | Contact your local Power Wheels® authorized service center for diagnosis and repair.                                                                                                                                                                                                                                                                                                                                         |
| When the foot pedal is pressed, the vehicle won't run without a push | Loose wire or connector                                                                                        | Check all wires around the motor and all connectors to make sure they are tight.                                                                                                                                                                                                                                                                                                                                             |
|                                                                      | "Dead Spot" on motor                                                                                           | Contact your local Power Wheels® authorized service center for diagnosis and repair.                                                                                                                                                                                                                                                                                                                                         |
| Built-in fuse constantly "trips"                                     | Child is switching between forward and reverse without stopping.                                               | Teach your child to stop the vehicle before switching direction.                                                                                                                                                                                                                                                                                                                                                             |

If, after reviewing the Problems and Solutions Guide, the vehicle still fails to operate, please contact your nearest authorized service center (see page 23) or contact Power Wheels® Consumer Affairs toll-free at **1-800-348-0751**.

**Helpful Hint:** For faster service when calling Consumer Affairs, completely charge the battery before calling and have the following available by the phone:

- vehicle,
- vehicle model number (see sticker in battery compartment),
- vehicle production run number (see sticker in battery compartment),
- Phillips screwdriver, slotted screwdriver and needle-nose pliers.
