STEP 3:

- If the **HEAD PLATE** does not sit on top of the first **WEIGHT PLATE**, push the head plate down, insert the **SELECTOR PIN** and perform several repetitions on the machine. This will relax the cable system and prevent the **HEAD PLATE** from lifting up.
- If after completing the previous step, the **HEAD PLATE** still does not sit on top of the first **WEIGHT PLATE** or if there is excess slack in the cable system, adjust the threaded end of the **CABLE** accordingly and retighten the jam nut.
