

## INSTALLATION INSTRUCTION INSTRUCCIONES DE INSTALACION FOR BAY AND BOW WINDOW WITH SEAT BOARD VENTANAS DE MIRADOR CON TABLA DE ASIENTO

Lea las instrucciones en español en el reverso.

Always read the Pella® Limited Warranty before purchasing or installing Pella products. By installing this product, you are acknowledging that this Limited Warranty is part of the terms of the sale. Failure to comply with all Pella installation and maintenance instructions may void your Pella product warranty. See Limited Warranty for complete details at <http://warranty.pella.com>.

**Note:** These instructions may be used for all Pella Bay and Bow windows that have a head and seat board. Support cables are installed in factory assembled bay and bow combinations.

**Caution:** The factory-installed support cables must be attached to members capable of supporting 1,300 lbs. If the members are not capable of supporting 1,300 lbs., knee braces must be used in addition to the cables. Bay and bow units are not intended to support any roof structure. Consult an architect, engineer or construction professional if the ability of the members to support the bay or bow is not known.

### Installation Instructions for Typical Wood Frame Construction.

These instructions were developed and tested for use with typical wood frame wall construction in a wall system designed to manage water. **These instructions are not to be used with any other construction method.** Installation instructions for use with other construction methods, multiple units or bow and bay windows, may be obtained from Pella Corporation, a local Pella retailer, or by visiting <http://www.pella.com>. Building designs, construction methods, building materials, and site conditions unique to your project may require an installation method different from these instructions and additional care. Determining the appropriate installation method is the responsibility of you, your architect, or construction professional.

## YOU WILL NEED TO SUPPLY:

- Cedar or Impervious shims/spacers (12 to 20) 
- 10d galvanized finish nails or #8 x 2 1/2" flat head corrosion-resistant screws (4 to 6) 
- Closed cell foam backer rod/sealant backer (20 to 35 ft.) 
- Pella® SmartFlash™ foil backed butyl window and door flashing tape or equivalent
- High quality exterior grade polyurethane or silicone sealant (1 tube per window) 
- Great Stuff™ Window and Door Insulating Foam Sealant by the Dow Chemical Company or equivalent low pressure polyurethane window and door foam - DO NOT use high pressure or latex foams
- Interior trim and/or jamb extensions (25 to 40 ft.)
- Knee braces (2)

## TOOLS REQUIRED:

- Tape measure 
- Level 
- Square 
- Hammer 
- Stapler 
- Scissors or utility knife 
- Sealant gun 
- Drill with a #2 Phillips and a #3 square drive bit
- 3/16" wrench or socket
- 1/2" open end wrench

**REMEMBER TO USE APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.**

# 1

## ROUGH OPENING PREPARATION

### A. Verify the opening is plumb and level.

*Note: It is critical that the bottom is level.*

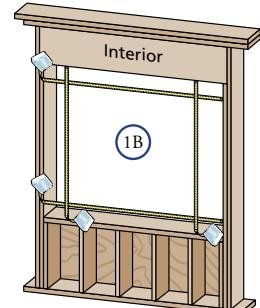

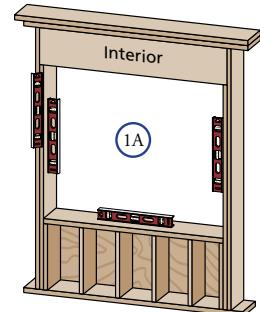

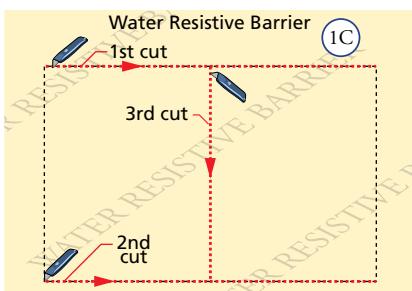

### B. Verify the window will fit the opening.

Measure all four sides of the opening to make sure it is 3/4" larger than the window in both width and height. On larger openings measure the width and height in several places to ensure the header or studs are not bowed.

*Note: 1-1/2" or more of solid wood blocking is required around the perimeter of the opening. Fix any problems with the rough opening before proceeding.*

### C. Cut the water resistive barrier.

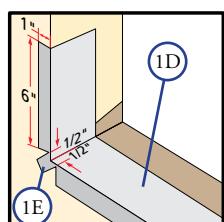

Fold side flaps into the opening and staple to inside wall.

### D. Apply sill flashing tape #1.

Cut a piece of flashing tape 12" longer than the opening width. Apply at the bottom of the opening as shown (1D) so it overhangs 1" to the exterior.

*Note: The tape is cut 12" longer than the width so that it will extend 6" up each side of the opening.*

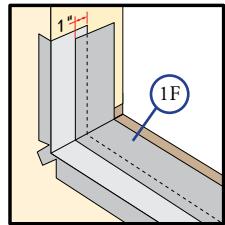

### E. Tab the sill flashing tape and fold.

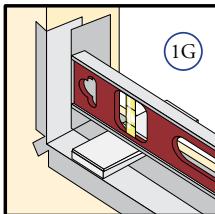

Cut 1" wide tabs at each corner (1/2" from each side of corner) (1E). Fold tape to the exterior and press firmly to adhere it to the water resistive barrier.

- F. **Apply sill flashing tape #2.** Cut a piece of flashing tape 12" longer than the opening width. Apply at the bottom, overlapping tape #1 by at least 1". DO NOT allow the tape to extend past the interior face of the framing (1F).

*Note: The flashing tape may not fully cover the framing members.*

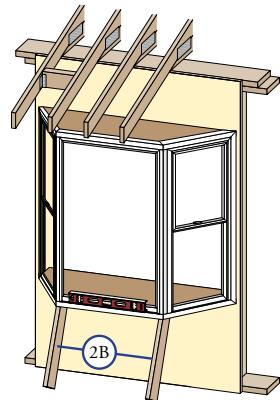

- G. **Install and level sill spacers.** Place 1" wide by 3/8" thick spacers on the bottom of the opening 1/2" from each side. Add shims to ensure the spacers are level. Once level, attach spacers and shims to the opening to prevent movement.

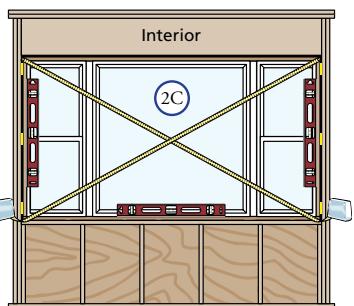

## 2 SETTING THE WINDOW

TWO OR MORE PEOPLE WILL BE REQUIRED FOR THE FOLLOWING STEPS.

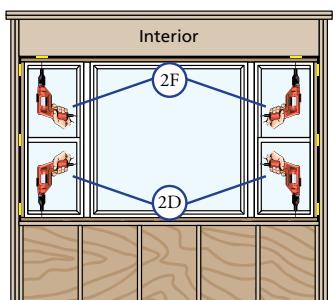

*Note: In some installations, the cable clamps will not be accessible for cable attachment and adjustment after the window is installed. For this type of installation proceed to Cross Bracing Mount - Non Accessible Cable Attachment. The cable and clamp will have to be measured and installed before the window is installed.*

- A. **Insert the window from the exterior of the building.** Place the seat of the window at the bottom of the opening and slide the top into position. Center the window between the sides of the opening to allow clearance for shimming.
- B. **Place temporary bracing** under the seat of the window and raise the unit until level as shown (2B).

- C. **Plumb and square window.** Place shims 1" from the bottom and top of the window between the window and the sides of the opening. Adjust the shims as required to plumb and square the window in the opening. Place shims at the midpoint of the window sides.
- D. **Nail one 10d finishing nail or drive a #8 x 2-1/2" long screw** on each end, through the seat board into the rough opening.
- E. **Continue placing shims/spacers** between the seat board and the rough opening at not more than 16" on center. Ensure the seat board is flat.
- F. **Nail one 10d finishing nail or drive a #8 x 2-1/2" long screw** on each end, through the head board into the rough opening.
- G. **Place shims** between the head board and the rough opening at not more than 16" on center. Ensure the head board is straight and level.

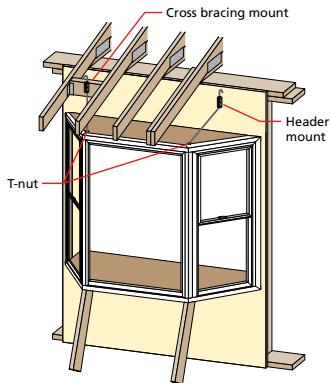

# 3

## CABLE CLAMP INSTALLATION

**Note:** Support cables are installed in factory assembled bay and bow combinations.

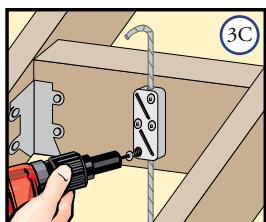

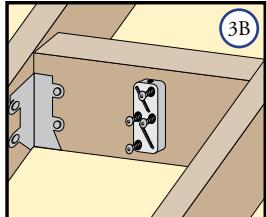

**Install Cable Clamps based on type of installation needed.**  
**Cross Bracing Installation** consists of attaching 2 x 6 cross bracing between the rafter tails. **Header Mount Installation** consists of attaching to a solid structural member - header, sill plates or wall stud.

### CROSS BRACING MOUNT OF CABLE CLAMPS

- A. **Install 2 x 6 cross braces** between the rafter tails, directly above the cable holes in the bay/bow head board.
- B. **Install the cable clamps** directly above the T-nuts where adequate support is available. Holding the clamp parallel to the up-running cable, drive the #12 x 3-1/4" square screws partway into the mounting surface using a #3 square drive bit.
- C. **Run the cable up through the bottom of the cable clamp.** Hold the cable up tight above the clamp and drive the two center clamp screws all the way in to lock the cable in place. Drive in the remaining #12 x 3-1/4" square screws all the way.

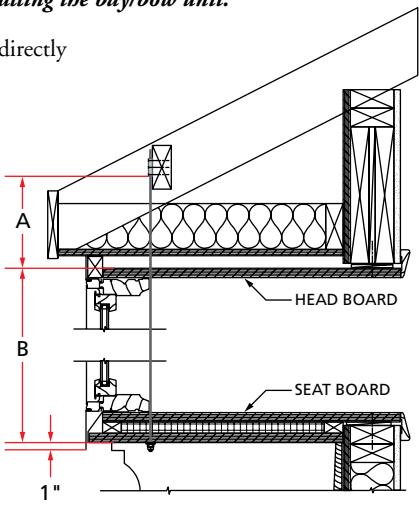

**Note:** Make sure all 4 screws are driven in at maximum torque. Additional tensioning may be done with the nuts on the opposite end of the cable at the bottom of the bay/bow unit.

### CROSS BRACING MOUNT - NONACCESSIBLE CABLE ATTACHMENT

**Note:** Install the cable clamp and cable prior to installing the bay/bow unit.

- A. **Install 2 x 6 cross braces** between the rafter tails, directly above the cable holes in the bay/bow head board.
- B. **Remove the cable from the bay/bow unit.** Measure the distance from the bottom of the cable clamp to the bottom of the header plus 3/8" head clearance (A dimension). Measure the height of the unit from the top of the head board to the bottom of the seat board (B dimension). Add "A" to "B" to get the correct length of cable hanging from the bottom of the cable clamp. Insert the cable end through the round hole of the cable clamp. Ensure the correct length of cable is hanging below the bottom of the cable clamp. Tighten the two cable clamp corner screws. Insert one screw into each of the center holes in the cable clamp, and tighten to fully clamp the cable in position.

# 3

## CABLE CLAMP INSTALLATION (continued)

- C. When the bay/bow unit is being installed,** thread the threaded end of the cable through the "T" nut, down the length of the bay/bow unit, and out the drilled hole in the seat board. Place a washer and two hex nuts on each cable end.

*Note: The interior mullion cover can easily be removed for this purpose and must be reinstalled when installation is complete.*

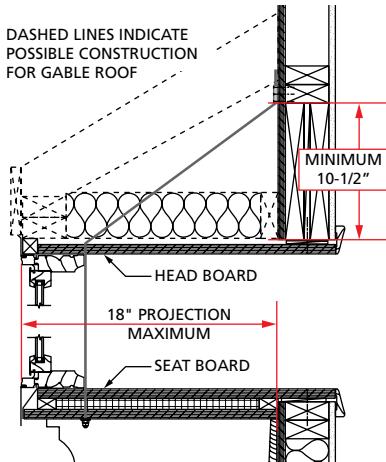

### HEADER MOUNT OF CABLE CLAMPS

*This method may only be used if the projection of the bay/bow is 18" or less. Use the Cross Bracing method if the projection of the bay/bow is more than 18".*

*Note: Be sure that the cable clamps are secured to a solid structural member - header, sill plates or wall stud. If the structural member or cable clamps are not securely attached, they may loosen during or after installation causing the bay/bow unit to sag.*

- Install the cable clamps.** Drive the #12 x 3-1/4" square screws part way into the mounting surface using a #3 square drive bit.
- Run the cable up through the bottom of the cable clamp.** Hold the cable up tight above the clamp and drive the two center clamp screws all the way in to lock the cable in place. Drive in the remaining #12 x 3-1/4" square screws all the way.

*Note: Make sure all 4 screws are driven in at maximum torque. Additional tensioning may be done with the nuts on the opposite end of the cable at the bottom of the window.*

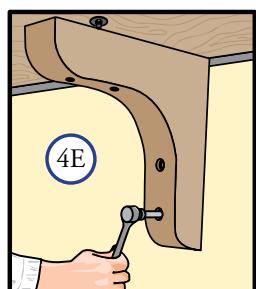

# 4

## FASTENING THE WINDOW

- Tighten the top hex nut on both cable ends.** Using a 3/16" wrench or socket, hold the cable end in position while tightening the top hex nut with a 1/2" wrench or socket. This will keep the cable from twisting as the hex nuts are tightened with a wrench.
- Secure the seat board and head board** by using 10d finishing nails or 2-1/2" long screws on 16" centers; nail or screw through the head board, seat board and shims into the rough opening.
- Remove the temporary bracing.** Check the window for level, plumb, sash reveal and operation. Readjust, if needed.

*Note: Be sure to use the temporary support when readjusting the nuts.*

- Tighten the locking (bottom) nut on both cable ends and remove the temporary support** once the final position is found. DO NOT cut the threaded end off the cable as this will prevent future adjustment should it be needed.
- Installation of knee braces is recommended** to help support the weight of the bay/bow unit. Weight calculations must take into account the weight of the items that may be placed on the seat board of the bay/bow unit. Knee braces are required if the upper roof/framing members cannot support 1,300 lbs. or more.

# 5

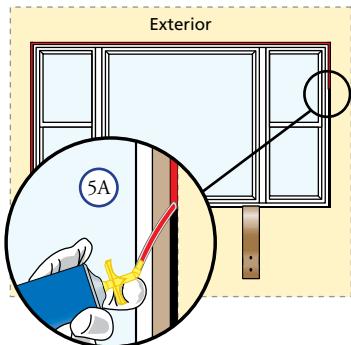

## INSULATING FOAM APPLICATION

**Caution:** Ensure use of low pressure polyurethane window and door insulating foams and strictly follow the foam manufacturer's recommendations for application. Use of high pressure foams or improper application of the foam may cause the window frame to bow and binder operation.

### A. Apply insulating foam sealant (see Caution above).

From the exterior, insert the nozzle of the applicator approximately 1" deep into the space between the window and the rough opening and apply a 1" deep bead of foam. This will allow room for expansion of the foam and will minimize squeeze out. If using insulating foam other than Great Stuff™ Window and Door Insulation Foam by the Dow chemical Company, allow the foam to cure completely (usually 8 to 24 hours) before proceeding to the next step.

**Note:** It may be necessary to squeeze the end of the tube with pliers to be able to insert into the space between the jamb boards and the rough opening, and between the head and seat board and the rough opening.

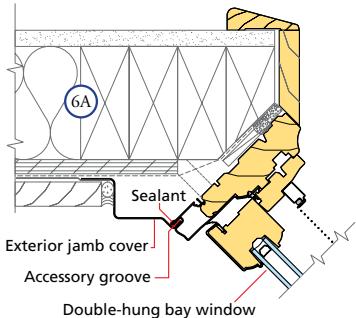

# 6

## SEALING THE BAY/BOW UNIT TO THE EXTERIOR WALL CLADDING

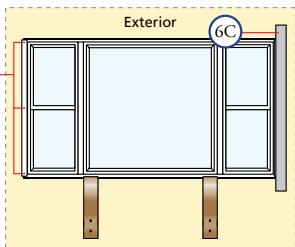

When applying siding, brick veneer or other exterior finish material, leave adequate space between the jamb cover and the exterior finish material for sealant.

### A. Install the exterior jamb covers onto the outer two windows. Apply a bead of sealant to the edge of the leg that will be driven into the accessory groove. Drive the short leg into the accessory groove using a block of wood with rounded edges and a hammer.

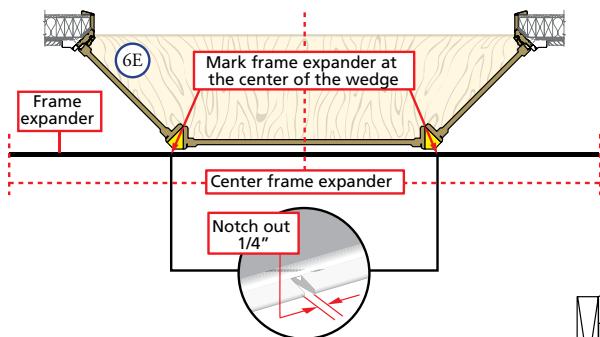

### B. Nail the jamb covers to the wall using one nail on each end, and one in the center.

### C. Cut two pieces of flashing tape 6" longer than the frame height of the window. Apply the flashing tape 3" above the top of the jamb cover, overlapping it onto the water resistive barrier.

- D. **Install wood blocking between the top of the window and the soffit as shown.** The blocking should be flush with the exterior of the window frame.
- E. **Notch the retainer leg of the top and bottom frame expanders.** Hold the frame expander so it is centered on the center window, and mark the frame expander at the center of the wedge that is between the windows. Cut a 1/4" wide notch out of the retainer leg to allow the frame expander to bend and attach to the flanker windows.

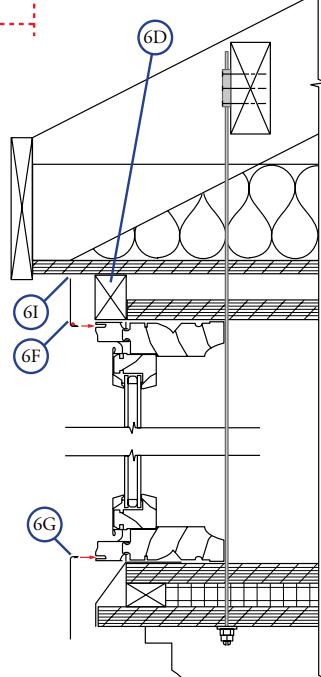

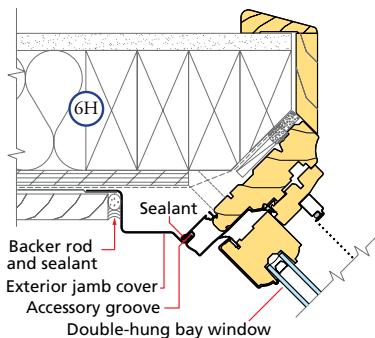

F. **Apply a bead of sealant on the leg of the head frame expander** and install by tapping on using a block of wood with rounded edges and a hammer.

G. **Install the bottom frame expander** by tapping on with a block of wood with rounded edges and a hammer.

H. **Insert backer rod** into the space between the jamb cover and the exterior finish material as deep as it will go. Apply a bead of high quality exterior grade sealant on top of the backer rod. Shape, tool and clean excess sealant. When finished, the sealant should be the shape of an hourglass.

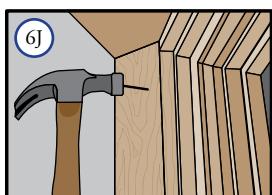

*Note: Backer rod adds shape and depth for the sealant line. This method creates a more flexible sealant line capable of expanding and contracting.*

I. **Apply a corner bead of sealant** across the top of the head frame expander. Shape, tool and clean excess sealant.

J. **Install the interior jamb extensions (provided).**

K. **Install roofing material per the manufacturer's instructions.**

## **INTERIOR FINISHING**

If products cannot be finished immediately, cover with clear plastic to protect from dirt, damage and moisture. Remove any construction residue before finishing. Sand all wood surfaces lightly with 180 grit or finer sandpaper. DO NOT use steel wool. BE CAREFUL NOT TO SCRATCH THE GLASS. Remove sanding dust.

Pella products must be finished per the below instructions; failure to follow these instructions voids the Limited Warranty.

- On casement and awnings, it is optional to paint, stain or finish the vertical and horizontal sash edges.
- On single-hung and double-hung, do not paint, stain or finish the vertical sash edges, any finish on the vertical sash edges may cause the sash to stick; it is optional to paint, stain or finish the horizontal sash edges.
- On patio doors, it is optional to paint, stain or finish the vertical and horizontal panel edges.

*Note: To maintain proper performance do not paint, finish or remove the weather-stripping, mobair dust pads, gaskets or vinyl parts. Air and water leakage will result if these parts are removed. After finishing, allow venting windows and doors to dry completely before closing them.*

Pella Corporation is not responsible for interior paint and stain finish imperfections for any product that is not factory-applied by Pella Corporation. Use of inappropriate finishes, solvents, brickwash, or cleaning chemicals will cause adverse reactions with window and door materials and voids the Limited Warranty.

For additional information on finishing see the Pella Owner's Manual or go to [www.pella.com](http://www.pella.com).

## **EXTERIOR FINISH**

The exterior frame and sash are protected by aluminum cladding with our tough EnduraClad® or EnduraClad Plus baked-on factory finish that needs no painting. Clean this surface with mild soap and water. Stubborn stains and deposits may be removed with mineral spirits. DO NOT use abrasives. DO NOT scrape or use tools that might damage the surface.

Use of inappropriate finishes, solvents, brickwash or cleaning chemicals will cause adverse reactions with window and door materials and voids the Limited Warranty.

## **CARE AND MAINTENANCE**

Care and maintenance information is available in the Pella Owner's Manual. You can obtain an owner's manual by contacting your local Pella retailer. This information is also available on [www.pella.com](http://www.pella.com).

## **IMPORTANT NOTICE**

Because all construction must anticipate some water infiltration, it is important that the wall system be designed and constructed to properly manage moisture. Pella Corporation is not responsible for claims or damages caused by anticipated and unanticipated water infiltration; deficiencies in building design, construction and maintenance; failure to install Pella® products in accordance with Pella installation instructions; or the use of Pella products in wall systems which do not allow for proper management of moisture within the wall systems. The determination of the suitability of flashing and sealing systems are the responsibility of the Buyer or User, the architect, contractor, installer, or other construction professional and are not the responsibility of Pella.

Pella products should not be used in barrier wall systems which do not allow for proper management of moisture within the wall systems, such as barrier Exterior Insulation and Finish Systems, (EIFS) (also known as synthetic stucco) or other non-water managed systems. Except in the states of California, New Mexico, Arizona, Nevada, Utah, and Colorado, **Pella makes no warranty of any kind on and assumes no responsibility for Pella windows and doors installed in barrier wall systems. In the states listed above, the installation of Pella Products in barrier wall or similar systems must be in accordance with Pella's installation instructions.**

Product modifications that are not approved by Pella Corporation will void the Limited Warranty.

Debido a que en todas las construcciones se debe anticipar algún tipo de humedad, es importante que el sistema de parades sea eficiente y duradero para manejar adecuadamente la humedad. Pella Corporation no se responsabiliza por daños causados por filtración de agua que se produzcan en el diseño de instalaciones de edificación, construcción y mantenimiento, incluyendo sistemas de paradas de pared; los cuales no permiten el uso de los productos Pella en sistemas de barrera de impermeabilización de la construcción de los productos Pella, así como del diseño y la instalación de impermeabilizante y sistemas selladores, son los productos Pella, así como del diseño y la instalación de impermeabilizante, constructores, instalador u otro profesional de la construcción y no son responsabilidad de Pella.

Los productos Pella no deben ser usados en sistemas de barrera de pared que no permitan el adecuado manejo de la humedad dentro de los sistemas de pared, tales como barrera de aislamiento exterior y sistemas de aislamiento interior que no posean indicadores de fugas (termógenos como silicona sintética) o sistemas de aislamiento interior que no posean indicadores de fugas (termógenos). Excepción a los sistemas de pared, tales como barrera de aislamiento exterior y sistemas de aislamiento interior que no posean indicadores de fugas (termógenos) (silicona sintética).

Los sistemas de aislamiento exterior y sistemas de aislamiento interior que no posean indicadores de fugas (termógenos) (silicona sintética) no deben ser usados en sistemas de pared que no permitan el adecuado manejo de la humedad dentro de los sistemas de pared, tales como barrera de aislamiento exterior y sistemas de aislamiento interior que no posean indicadores de fugas (termógenos).

Las modificaciones al producto que no hayan sido aprobadas por Pella Corporation invalidarán la garantía.

**NOTA IMPORTANTE**

también está disponible en [www.pella.com](http://www.pella.com).

La información sobre el cuidado y el mantenimiento se incluye en el Manual del Propietario de Peña. Puede obtener un manual del propietario contáctando a su representante de ventas local de Peña. Esta información

CUIDADO Y MANTENIMIENTO

El basítorde<sup>®</sup> o Enduraclad Plus de Pella aplica tanto en aluminio como en acero inoxidable y ofrece una protección reversimilante que no necesita pintura. Limpie esa superficie con un jabón suave y seca. Las manchas y los depósitos resistentes quedan quitadas con alcohol espirítus.

NO utilice agentes abrasivos. NO raye ni utilice herramientas que puden dañar la superficie.

El uso de acetatos, solventes, lavados de lavadoras o productos químicos de limpieza inadequados provocará reacciones adversas con los materiales de las ventanas y las puertas, y anulará la garantía limitada.

**ACABADO EXTERIOR**

**Nota:** *Puedes mantener el control rendimiento del producto, no pierde, accede ni elimine los bultos,*  
*las almohadillas de mopa, ni las pizzas de envío. Si eliminan estas*  
*pizzas, se producirán fugas de aire y agua. Despues de aplicar el aceite, dese que las pueras*  
*se asientan de entallado en la papa, los empagues ni las pizzas de envío.* Si eliminan estas

**y horizontalles.**

**Pella Corporation no es responsable de las imperfecciones de la pintura interior y el aceite usado dentro**  
**de ningún producto que no haya sido aplicado en la fría por Pella Corporation. El uso incorrecto**  
**de aceites, solventes, productos químicos para lavar lámparas y limpiadores causará reacciones adversas**  
**en los materiales de plásticos y vinilas, y dañará la garantía limitada.**

**Para obtener información adicional sobre el aceite usado, vea el manual del usuario de Pella o visite [www.pellacom](http://www.pellacom).**

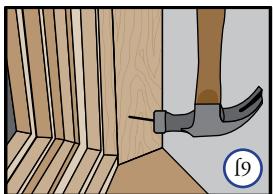

- **Estructuras y horizontales.**
- **Estructuras de ventanas simple y doble, no planas, curvadas ni acabe los bordes de la hoja.**
- **Estructuras para patio, es ocidental estípite o acábar los bordes de los paneles verticales.**

- En los marcos gráficos y tolidos, es opción definir un cuadro o acábar los bordes de las hojas el incumplimiento de estas instrucciones invalidaría la garantía limitada.

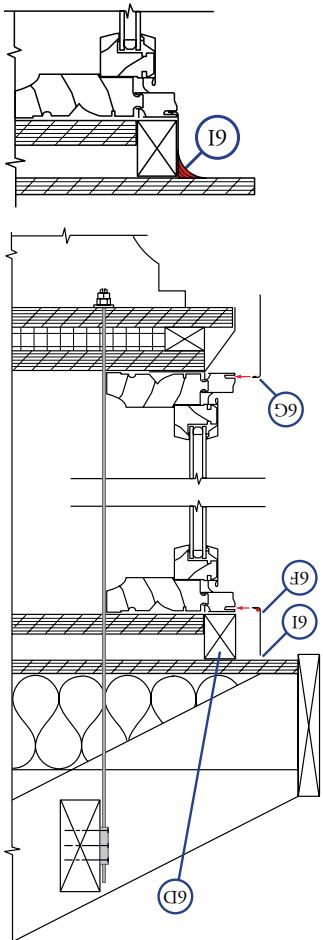

Los productos Pella deben recibir un acabado seguro en las instalaciones que vera a continuación:

Si no pude realizar el secado de los productos inmediatamente, cubriélos con plástico transparente para protegerlos de la humedad. De igual modo, las salsas y demás ingredientes se deben secar en un recipiente hermético y se deben almacenar en un lugar seco y fresco.

ACABADO INTERIOR

- I. Aplique un reborde de sellador sobre la parte superior del extensor del marco del cabecero. Moldee, trabeje y límpie el exceso de sellador.
- J. Instale las extensiones de las jambas interiores (incluidas).
- K. Instale el material para techos según las instrucciones del fabricante.

H. **Inserir la variilla de relleno en el espacio entre la cubierta de redondedas.**

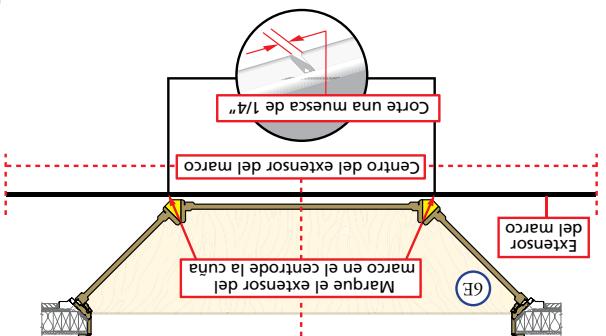

G. **Instalar el extensor del marco inferior golpeando con un martillo sobre un boloque de madera.**

F. **Aplicar un rebordo de sellador sobre la para del extensor del marco del cabecero e instalarlo golpeando con un martillo sobre un boloque de madera.**

E. **Aplicar un rebordo de sellador sobre la para del extensor del marco del cabecero e instalarlo golpeando con un martillo sobre un boloque de madera.**

D. **Aplicar una lijada profundamente como pueda. Aplicarle un rebordo de sellador para exteriores de la misma calidad en la punta de la variilla de relleno. Moldée, trabaaje y limpie el exceso de sellador. Cuando termine, el sellador debe tener la forma de un reloj de arena.**

C. **Note: La variilla de relleno confiere forma y profundidad a la lijada del sellador. Este método crea una lijada de sellador más flexible, capaz de expandirse y contraerse.**

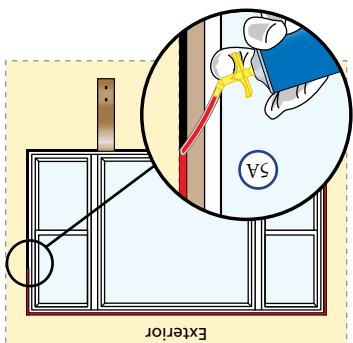

D. **Instale bloques sujetadores** entre el extremo superior de la ventana y el plafón de alero como se muestra. Los bloques sujetadores deben quedar a ras del exterior del marco de la ventana.

E. **Haga una muesca** en la parte de retenión de los extensores del marco superior y del inferior. Sostenga el extensor del marco, a la altura deseada centrado en la ventana del centro, y marque el punto de corte. Una muesca en la parte de retenión de los extensores del marco que permita que el extensor del marco en el centro de la cuba que extra entre las ventanas. Corte una muesca de 1/4 de pulgada de ancho de la parte de retenión a fin de permitir que el extensor del marco se instale y sujetre los paneles laterales de las ventanas.

9

*Nota* Puedes sacar necesariamente de la plaza para insertarla en el espacio entre los muros y la abertura, y entre las tablas del cabecero y de asiento y la abertura sin alterarla.

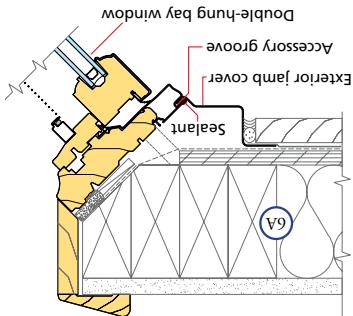

**Lecturas:** Utilice exclusivamente esquemas de poniéreto de una sola extensión para instanciar de *lenguaje*. Utilice exclusivamente esquemas de poniéreto de la esquina para instanciar de *funcionamiento*.

#### APLICACION DE LA ESPUMA AISLANTE

5

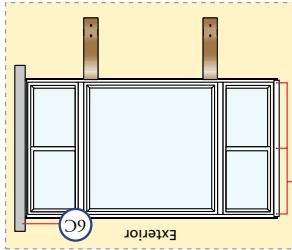

A. **Iniste la sas cubiertas exteriores de las jambas sobre las dos vertientes exteriores de la barda de la parte que se insertara**  
se llevada sobre el bordo de la barda en rebordo de  
dentro de la rampa adicional con un logote de madera con bordes  
ranchera adicional con una corra en la parte que se insertara

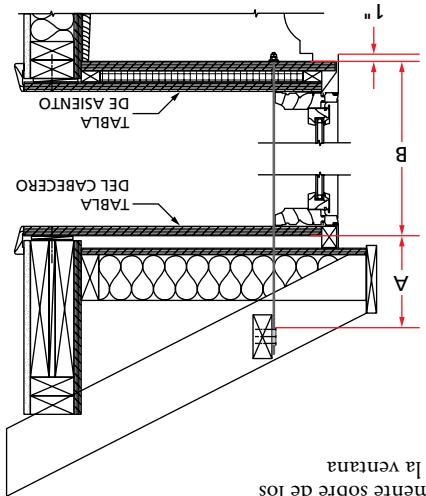

B. Clave las cubiertas de las jambas a la pared utilizando un clavo en cada extremo y uno en el centro.

C. Corre dos trozos de cinta tapajuntas que sean 6 pulgadas (15,24 cm) más largos que la altura del marco de la ventanilla. Aplicable la cinta tapajuntas de 3 pulgadas (7,60 cm) por encima del exterior de la cubierta de la jamba.

D. Suproporciona con la barreta resisente a la intemperie.

*Nota: Instale la abrazadera del cable y el cable antes de instalar la*

DE DOS O MAS PERSONAS.

## COLLOCACIÓN DE LA VENTANA

2

**C.** *Linstaléy nivele los espaciadores del alfeízaz. Coloque los espaciadores de 1 pulgada de ancho por 3/8 de pulgada de espesor sobre la base de la estructura a 1/2 pulgada de cada lado. Asegúrelos con clavos para asegurarse de que los espaciadores estén a nivel. Una vez que estén a nivel, los espaciadores y las calzas en la abertura están en su lugar. Una vez que estén en su lugar, aplique una capa de silicona líquida en la parte superior de la abertura para sellarla. Deje secar la silicona durante 24 horas antes de usar la estructura.*

**E. Aplicable la cinta tapasuntas No. 2 del alfeizar.** Corte un trozo de cinta tapasuntas que sea 12 pulgadas (30,5 cm) más largo que el ancho de la abertura. Aplicable en la base, superponiendo la cinta No. 1, como muestra. No permita que la cinta inferior del marco (F).

## PREPARACION DE LA ABERTURA SIN TERMINAR

**ARTICULOS QUE USTE D NECESITARA COMPRAR:**

- Cazetas/espaldaderos de madera de cedro o imperecederos (12 a 20 unidades)
- Cinta metrica (10 clavos de acabado galvanizado o tornillos de cabeza plana resistenes a la corrosion N.º 8 de 2 1/2 pulgadas (entre 4 y 6 mm) (20 a 35 piezas)
- Escuadra (20 a 35 piezas)
- Martillo (Grapadora) (Cinta para sujetar unidades de bulto con relleno metrizada para aislar/micropartículas de bulto para puentes y ventanas de Pella) (Selván) (Selván)
- Tijeras o cuchillo para uso general (Selván)
- Pistola para sellador (Espuma adhesiva para puertas y ventanas de Gasket Sealant fabricada por Dow Chemical Company o espuma aquiliana de la presión o de latex para puertas y ventanas. No utilice espumas de alta presión o de baja presión para que no se rompan las juntas) (Reflexiones en angulo 2)
- Llave de 3/16 de pulgada (Llave espiral de 1/2 pulgada 0,47cm) o sujetador
- Llave de 3/16 de pulgada (Llave espiral de 1/2 pulgada)
- NO OLVIDE UTILIZAR UN EQUIPO DE PROTECCION PERSONAL ADECUADO.

*Instucciones de instalación para marcos de madera tipos.*

Estas instrucciones han sido elaboradas y probadas con marcos de madera típicos en un sistema de muro de ladrillo para controlar el agua. **No las utilice con otros métodos de construcción** de muros que no se describen en este documento. Si necesita instrucciones de instalación adicionales para otros métodos de construcción, visite [www.pella.com](http://www.pella.com). Los sistemas, métodos y materiales locales de producciones Pella o visitando <http://www.pella.com>. Los sistemas, métodos y materiales locales cumplen con las normas de la Corporación de un vendedor autorizado de Pella o obtendrá más información de la Corporación de un vendedor autorizado de Pella.

**diferentes.** La determinación del método de instalación adecuado para su caso es responsabilidad suya, de su arquitecto o de su constructor.

**Précacutión:** Los cables deben sujetarse a los miembros con capacidad de sostener 1300 libras.

**Note:** Estas instancias pueden utilizarse para todas las entidades de medida de *Lella* con cabazal y tabla de asiento. Las capas de soporte se instalan en combinaciones de salientes y arcos armados en *jáquira*.

Lea siempre la garantía limitada de Pella®. Antes de comprar o de instalar cualquier producto Pella®, Al instalar este producto, usted recibe una garantía adicional que es extra garantía limitada es parte de las cláusulas de la venta. El cumplimiento de algunas de las instrucciones de instalación y de mantenimiento puede invalidar la garantía de su producto Pella. Para conocer todos los detalles de la garantía limitada de Pella, visite <http://www.pella.com>.
