TECHNOLOGY & BENEFITS

VIDEO

- **ColorStream Pro® Component Video Outputs** - These outputs allow the video signal to be sent from the DVD player to a component video equipped interlaced or progressive scan TV. When this connection is utilized with today's HD-compatible sets, typical NTSC artifacts-like video noise, dot crawl, and flicker-are virtually eliminated, resulting in a low-noise, highly detailed picture with unequaled color purity.
- **Digital Cinema Progressive (3/2 Pulldown)** - Delivers the smoothest, most film-like images to any progressive scan television, such as an HD-compatible one, and ensures maximum resolution.
- **JPEG Viewer** - Enables the display of digital photographs captured in the JPEG format. Simply load the CD with your favorite photos and create custom slide shows with a few simple clicks of the player's remote control.
- **Digital Picture Zoom** - This interactive DVD feature allows you to select an area of the picture you want to zoom in on and magnify it. Enhanced digital processing during moving video or freeze-frame playback produces superior color fidelity and resolution, even when you're zoomed in. Also can be used to expand letterbox-only films to increase the viewable area on-screen.

AUDIO

- **DVD-Audio Multi-Channel Playback** - Enjoy playback of DVD-Audio titles encoded with higher resolution audio than standard CDs and expanded multi-channel effects. Sampling rates can be as high as 24-Bit/192kHz capturing every nuance of the recorded performance. This 'total immersion' experience can include text (song lyrics), still pictures (slide show), and moving visuals (music video).

- **Super Audio CD Multi-Channel Playback** - Offers playback of SA-CD discs recorded using Direct Stream Digital (DSD) encoding technology. The frequency response delivered by DSD is almost five times greater than that delivered by a normal CD. And, up to 70-80 minutes of both stereo and multi-channel DSD content can be encoded on a disc. Enjoy a dynamic range of 120dB compared to 96dB on CD for an exciting audio experience.
- **5.1 Channel Output with Bass Management** - Onboard decoding of Dolby Digital, DVD-Audio, and SA-CD content with control of independent channel parameters (speaker size, delay time, etc.) including control for bass reproduction. Use this feature to customize the player's multi-channel audio output to your particular home theater design.
- **WMA & MP3 Playback** - Recordable Compact Discs (CD-R & CD-RW) with music stored in either the Windows Media™ Audio or MP3 file formats can be enjoyed.
- **Coaxial and Optical TosLink® Dolby Digital and DTS® Surround Sound Output** - Use the single RCA-type or optical output jack to send signature multi-channel audio to an audio/video receiver with a compatible input.

CONVENIENCE

- **Random Play & Disc Exchange** - Load up a selection of your favorite CDs and the player can access tracks in a random order. Playback songs randomly among each CD sequentially, or randomly among all the discs loaded at one time. Additionally, the carousel tray can allow access to load and unload discs while one remains in play in the player so you'll never have to interrupt the music.
