

***This is rocket science.***

### Revolutionary temperature control

The Digital Velocity doesn't produce steam with the soleplate heat like traditional irons, but generates it within the iron, so you can adjust the soleplate temperature to the exact needs of the fabric you are pressing. No need for damp towels and other tricks to achieve optimum results. No water spluttering and spitting. At last, steam and low temperature are compatible.

### Concentrated steam gets the job done

More holes won't make an iron more powerful but their arrangement and diameter will. The Velocity soleplate surface has an exclusive design with steam holes concentrated at the tip. This prepares fabric with a constant and abundant outflow of steam for quicker ironing. A flawless finish is achieved by grooves that help smooth and dry the garment.

### Advantages that can be seen...

The Velocity is equipped with an innovative digital control system with LCD display, which allows for easier, more accurate and safer regulation of the iron functions.

- The panel displays:
- Temperature level selected and when effectively reached
  - Amount of steam selected
  - Auto shut-off indicator
  - Water tank refilling indicator
  - Anti-scaling system replacement indicator

### ...and heard

The Velocity has an acoustic warning device that beeps when the desired temperature is reached, when the auto shut-off safety system is activated and each time you press a selection button.

DIGITAL DISPLAY (LCD)

POWER 1500 W MAX

PROFESSIONAL INOX SOLEPLATE

PRESSURIZED STEAM POWER

ANTI-SCALE SYSTEM

*Enjoy professional ironing quality and speed with the simplicity of a traditional iron.*

*Reliable presents the Digital Velocity Compact Vapor Generator. A revolutionary and patented technology, Velocity incorporates an internal steam generator that produces more continuous steam than conventional irons. This guarantees a professional finish to your garments.*

<i>Model</i>	V95
<i>Electrical</i>	110V
