# LOGO! App V1.0.0

LOGO!

Manual

Edition  
03/2013

Answers for industry.

# LOGO! App from Siemens

The free of charge LOGO! App enables you to monitor actual process values of your LOGO! OBA7 application with a smart phone or a tablet PC via WLAN or Internet. It allows to switch digital signal and adjust analogue values or timer settings. Supported will be the WLAN connection to a LOGO! OBA7 basic module via IP address typically or DynDNS-names which are used in the Internet.

With your LOGO! App you can ...

**... define customised names.**

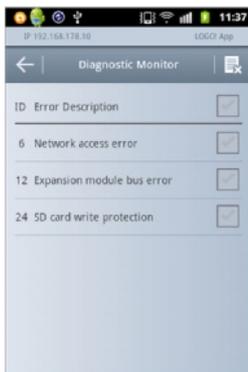

For fixed connections and preconfigured values you can define customised names. This helps if you want to connect to several LOGO! devices and monitor different values.

Device list with names

**... display diagnostic information in tabular form.**

The diagnostic information of the LOGO! modules are shown as a table. Any entry in the diagnostic buffer can be deleted via the LOGO! App only if the problem was solved.

Diagnostic information

**... read and change date and time settings.**

Furthermore you can read, manually change or synchronise date and time settings with the actual date/time of your mobile device.

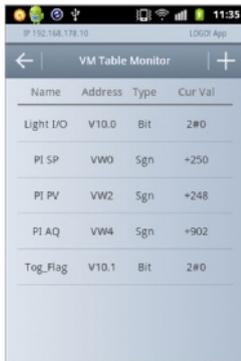

Date and time settings

# LOGO! App from Siemens

With LOGO! App you can ...

**... display and modify configured values in tabular form.**

Preconfigured values of the LOGO! program like parameters of function blocks or network inputs and outputs can be shown as table and the value can be changed.

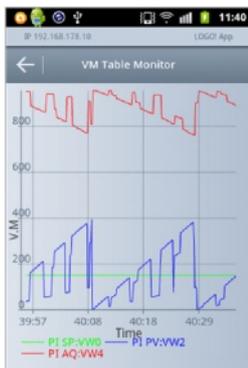

Name	Address	Type	Cur Val
Light I/O	V10.0	Bit	2#0
PI SP	VW0	Sgn	+250
PI PV	VW2	Sgn	+248
PI AQ	VW4	Sgn	+902
Tog_Flag	V10.1	Bit	2#0

Table of preconfigured values including names

**... display configured values as a diagram.**

Up to five of the configured values can be marked in the table shown graphically in a trend view. No further adjustments are necessary, the scaling will be done automatically. The name and the real address of the value will be also shown in the diagram.

The monitoring and control of the system with an LOGO! Text Display or an HMI panel is possible at the same time and won't be influenced by the LOGO! App.

Trend view of the configured values

## Features

- **Connection via IP-Address and DynDNS-name**  
Supports connection via Internet without fixed IP-Address
- **User specific names for devices and values**  
Simple recognition
- **Read and set date and time in LOGO! and synchronization with date and time of the mobile device**
- **Show configured values in status table or trend view**
- **Read Diagnostic information**  
Without program changes in LOGO!

## Step by step to success

## 2 Device configuration

- The LOGO! App supports connection via IP-Address and via DynDNS-name. If you want to use Internet then you have to enable Portforwarding for Port 10001.
- In addition to the physical address you can give a user specific name for the target device for simple recognition.
- A special configuration in the LOGO! program is not necessary.

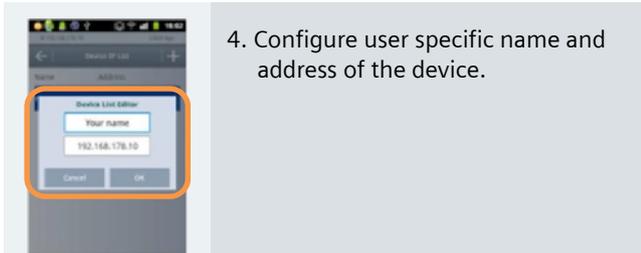

### Select kind of used connection

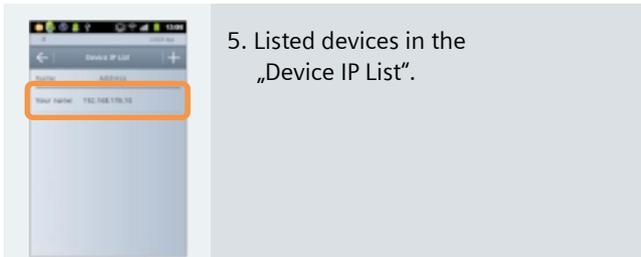

1. Select kind of used connection IP-Address or DynDNS-name.
2. Open the „Device IP List“.

3. Press button „ADD“ to add a new device.

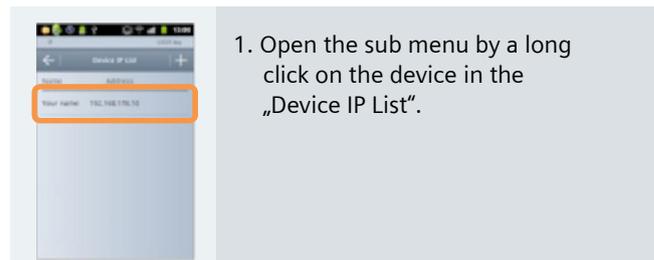

4. Configure user specific name and address of the device.

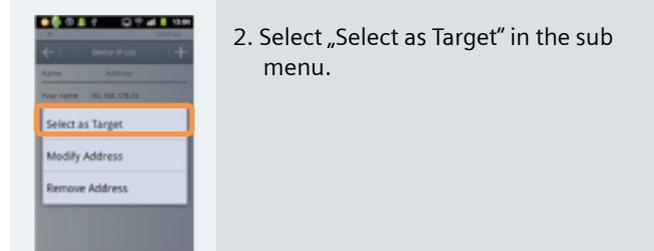

5. Listed devices in the „Device IP List“.

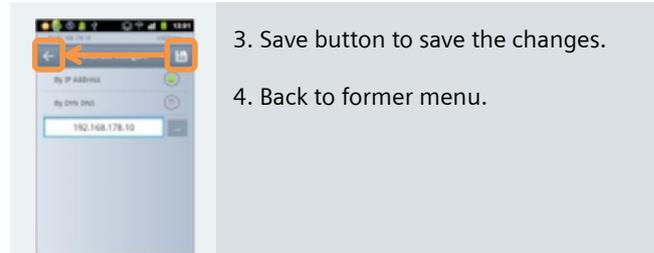

### Select a Target device

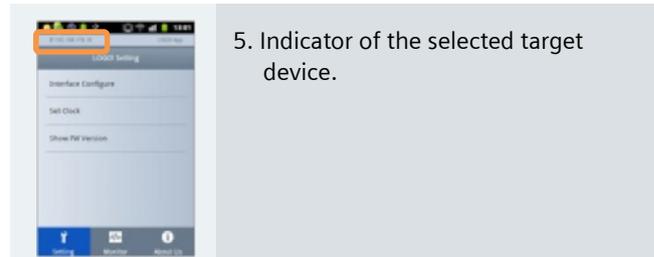

1. Open the sub menu by a long click on the device in the „Device IP List“.

2. Select „Select as Target“ in the sub menu.

3. Save button to save the changes.
4. Back to former menu.

5. Indicator of the selected target device.

## 4 Read and Set date and time

- A special configuration in the LOGO! program is not necessary.

### Read and Set date and time

	<ol style="list-style-type: none"> <li>1. Select the menu „Set Clock“ in the main menu.</li> </ol>		<ol style="list-style-type: none"> <li>7. Note: Change RUN/STOP mode in LOGO! (LOGO! must be in STOP mode).</li> </ol>
	<ol style="list-style-type: none"> <li>2. Select date or time for manual changes.</li> <li>3. Button Read to read and show the actual date and time of the connected LOGO!.</li> <li>4. Button „Current“ to get the actual date and time information of your mobile device.</li> <li>5. Depending on the selection the date or time information is shown and with the buttons „+ „ and „- „ you can change date or time manually.</li> <li>6. Button „Save“ to set date and time in LOGO! to the selected values.</li> </ol>		<ol style="list-style-type: none"> <li>8. Note: Result of the transfer.</li> </ol>

# LOGO! App from Siemens

## 5 Show status information of the connected LOGO!

- A special configuration in the LOGO! program is not necessary.

## 6 Show program specific Data/Parameter of the connected LOGO!

1. In the main menu select „I/O Status Monitor“.

2. Display of the LOGO! status table.
3. Button to modify the shown status information and the update time.

4. Scroll to see information outside of the screen.

5. Selection of the update time.
6. Selection of the status information shown in the status table.
7. Button „Save“ to confirm the modifications and show the status table.

1. In main menu select „VM Table Monitor“.

2. Button to add data or parameters.

3. Input fields for user specific name, address and data type.
4. Button to save the modification.

5. View of the specified data or parameters.

# LOGO! App from Siemens

## 7 Edit values

1. Select one of the specified values by long click on the value.

2. Select „Edit This Value“ in the sub menu.

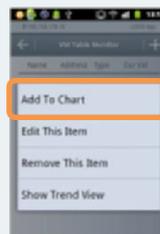

3. Change the value in the field „New Value“.

4. Button „Save“ to transfer the new value to LOGO! and go back to the VM Table Monitor.

## 8 Show values in trend view

1. Select up to 5 values from the VM Table Monitor by a long click on the value.

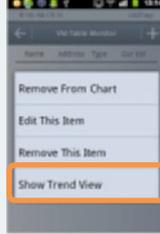

2. Select „Add To Chart“ from the sub menu.

3. The selected values to be shown in the trend view will get marked in blue color.

4. Open the sub menu by a long click in the blue area.

5. To start the trend view of the selected value select „Show Trend View“.

6. Selected values shown in the trend view.

7. In the trend view you will see the name and address of the shown values also and what color is used for the single line.
