

Small appliances

No home is complete without those indispensable devices that perform your daily chores. From making tea, toast and coffee to keeping you cool and smart, you can depend on Siemens appliances to tackle these tasks with elegant efficiency, day in day out.

It's not just design, it's Porsche design.

It's the striking design that sets Siemens appliances apart from the rest of the market. The high tech looks match the high tech features, fabulous Nespresso coffee machine to the matching set of kettle, toaster and filter coffee maker.

Toaster

Its unique dust cover floats back at the touch of a button. The residual time indicator on a digital display counts down the minutes and seconds until your toast is done and the integrated bun warming rack is perfect for heating croissants, muffins or bread rolls.

Kettle

A soft pop-up lid and specially shaped spout mean you can fill through either the spout or the lid. The cord storage winder is in the base so that you don't have excess cable trailing on the worktop.

Filter coffee maker

The unique swing out serving position lets you know when the coffee is ready. It has a removable water tank for easy filling and a hassle-free de-scaling function to keep your coffee tasting just right.

Our Nespresso machines. Real fresh coffee, real fast.

However you like your coffee, you'll love our Nespresso machines; innovative appliances with an exclusive coffee extraction technology that uses individual capsules filled with the finest coffees. The simplicity of, and, control over the Nespresso system ensures an exceptional cup of coffee every time.

Nespresso to go?

Inserting the Nespresso capsules couldn't be easier: simply moving your hand in front of a sensor causes the window to open, allowing you to drop the capsule in, while a spotlight highlights the position of the inserted capsule.

Single portion cleaning

A thermoblock heating element heats the water to between 86°C and 91°C during extraction. After each and every use, an innovative single portion cleaning function removes the cooled and stale water from the system, making sure that the coffee is always produced cleanly and hygienically.

Multi-lingual digital display

The TK70N01GB has several easy to operate programmable functions that include a choice of 8 languages, a water hardness setting, a cup warming plate and de-scaling. For the cleanest coffee making, it also has a unique balcony system that automatically feeds and disposes of the capsules.

Frothing nozzle

The frothing nozzle on most machines allows you to steam and produce rich, smooth milk froth for that perfect cappuccino or other coffee based recipes. The hot water function can be used to prepare teas.

High pressure 19 bar pump system

This makes sure all the flavour is drawn from the coffee and develops a smooth crema in the cup for the perfect coffee every time.

Our bean to cup machines. Coffee doesn't really come much fresher.

The TK69009GB features unique piano black finish, an easy to use programmable display, a unique AutoCappuccino frothing nozzle, milk container and built-in water filter and maintenance kit for the finest results with every cup of coffee.

Freshly ground coffee

The integrated coffee mill inside the bean to cup machines grinds the coffee beans as finely as you wish and fills the brewing chamber with ground coffee to the required level. Once the coffee is in place, the brewing chamber is hermetically sealed and the coffee is compressed. The hot water is then pumped into the chamber and the brewing process starts.

All models have coffee and cup filling levels that can be accurately adjusted. At the top of the appliance is a cup stand with pre-warming facility and the drip tray catches anything that misses the cup from the coffee dispenser.

Multi-lingual digital display

Our machines have several easy to operate programmable functions that include a choice of 8 languages, a water hardness setting, a cup warming plate and de-scaling.

AromaWhirl system

With conventional high-pressure methods, the water takes the easiest route through the ground coffee and in doing so, extracts a correspondingly high quantity of flavour. With the AromaWhirl system the ground coffee and water are whirled around the brewing chamber to extract more flavour than ever.

Bean to cup coffee machines

Fully automatic bean to cup coffee centre TK54001GB

Silver finish

For espresso, cappuccino and café latte
AromaWhirl brewing chamber for optimum flavour extraction
Easy to use symbol display
