Notes on Discs

DVD (Digital Versatile Disc) offers fantastic audio and video, thanks to Dolby Digital surround sound and MPEG-2 video compression technology. Now you can enjoy these realistic effects in the home, as if you were in a movie theater or concert hall.

DVD players and the discs are coded by region. These regional codes must match in order for the disc to play. If the codes do not match, the disc will not play.
The Region Number for this player is given on the rear panel of the player.
(Your DVD player will only play DVDs that are labeled with identical region codes.)

Position of the DVD Player

● Place it on a stand or cabinet shelf, or under the TV stand.

Front Speakers ⓛⓡ

● Place these speakers in front of your listening position, facing inwards (about 45°) toward you.
● Place the speakers so that their tweeters will be at the same height as your ear.
● Align the front face of the front speakers with the front face of the center speaker or place them slightly in front of the center speakers.

Center Speaker ⓒ

● It is best to install it at the same height as the front speakers.
● You can also install it directly over or under the TV.

Selecting the Listening Position

The listening position should be located about 2.5 to 3 times the distance of the TV's screen size away from the TV. Example: For 32" TVs 2~2.4m (6~8feet)
For 55" TVs 3.5~4m (11~13feet)

Rear Speakers ⓛⓢ ⓡⓢ

● Place these speakers behind your listening position.
● If there isn't enough room, place these speakers to face each other.
● Place them about 60 to 90cm (2 to 3feet) above your ear, facing slightly downward.

  * Unlike the front and center speakers, the rear speakers are used to handle mainly sound effects and sound will not come from them all the time.

Connecting the Video Out to TV

Make sure that turn off and disconnect the plug from outlet before moving or installing the product.
In connecting to video, select one of following three methods that suits for TV and connect it.

METHOD 3

METHOD 2

METHOD 1

TV

VIDEO IN   S-Video   COMPONENT IN
METHOD 1 Composite Video ·············· Good Quality

Connect the supplied video cable from the VIDEO OUT jack on the back panel of the system to the VIDEO IN jack on your television.

METHOD 2 S-Video ·············· Better Quality

If you television is equipped with an S-Video input, connect an S-Video cable (not supplied) from the S-VIDEO OUT jack on the back panel of the system to the S-VIDEO IN jack on your television.

METHOD 3 Component (Progressive Scan) Video ·············· Best Quality

If your television is equipped with Component Video inputs, connect a component video cable (not supplied) from the Pr, Pb and Y jacks on the back panel of the system to the corresponding jacks on your television.

Note • When the Progressive scan mode is selected, the VIDEO and S-VIDEO outputs do not feed any signal. See page 14 to select Progressive Scan.

P.SCAN (Progressive Scan) Function

Unlike regular Interlace Scan, in which two fields of picture information alternate to create the entire picture (odd scan lines, then even scan lines), Progressive Scan uses one field of information (all lines displayed in one pass) to create a clear and detailed picture without visible scan lines.

Press and hold P.SCAN button on the remote controller for over 5 seconds in stop mode.

• Pressing and holding the button for over 5 seconds will select "**Progressive Scan**" and "**Interlace Scan**" repetitively.

What is Progressive (or Non-Interlaced) Scanning?

Interlaced Scan (1 FRAME = 2 FIELDS)	Progressive Scan (FULL FRAME)
even odd	
In interlaced-scan video, a frame consists of two interlaced fields (odd and even), where each field contains every other horizontal line in the frame. The odd field of alternating lines is displayed first, and then the even field is displayed to fill in the alternating gaps left by the odd field to form a single frame. One frame, displayed every 1/30th of a second, contains two interfaced fields, thus a total of 60 fields are displayed every 1/60th of a second. The interlaced scanning method is intended for capturing a still object.	The progressive scanning method scans one full frame of video consecutively down the screen, line by line. An entire image is drawn at one time, as opposed to the interlaced scanning process by which a video image is drawn in a series of passes. The progressive scanning method is desirable for dealing with moving objects.

Note • This function works only on TVs equipped with component video inputs (Y, Pr, Pb) that support Progressive Video. (It does not work on TVs with conventional component inputs, i.e., non-progressive scan TVs.)
• Depending on the brand and model of your TV, this function may not work.

Selecting the Video Format

Press and hold **NTSC/PAL** button on the remote controller for over 5 seconds while the power is turned off.

• "**NTSC**" or "**PAL**" will appear in the display.
At this time, press the **NTSC/PAL** button shortly to select between "**NTSC**" and "**PAL**".
• Each country has a different video format standard.
• For normal playback, the video format of the disc must be the same as the video format of your TV.
