1. Introduction

The majority of data for Building as Symbol and Building to Scale was collected during the Ontario Base Map (OBM) program. A building is defined as a structure with permanent walls and roofed construction.

In Figure 1 (as seen in the [LIO Make a Topographic Map](#) viewer) large buildings (e.g. apartment buildings) are represented to scale while smaller buildings (e.g. residential houses) are represented as symbols.

Figure 1: Buildings represented to scale and as symbols in the Peterborough area

For more information about the Building data classes, contact sdi@ontario.ca.

2. Objectives

This guide is intended for users with a general interest in the Building as Symbol and Building to Scale LIO Data Classes. The remainder of this document describes the extent and context of the information collected in these data classes.

3. Data Classes: Building

Building as Symbol (BUILDSYM)

Small structures (including buildings less than 50 square metres) are not shown unless they constitute a point of orientation. When structures have one dimension larger than 50 metres for the 1:20,000 source scale and larger than 30 metres for the 1:10,000 source they are represented as points.

Building as Symbol locations are represented and maintained as point features in this data class.

Building to Scale (BUILDSCA)

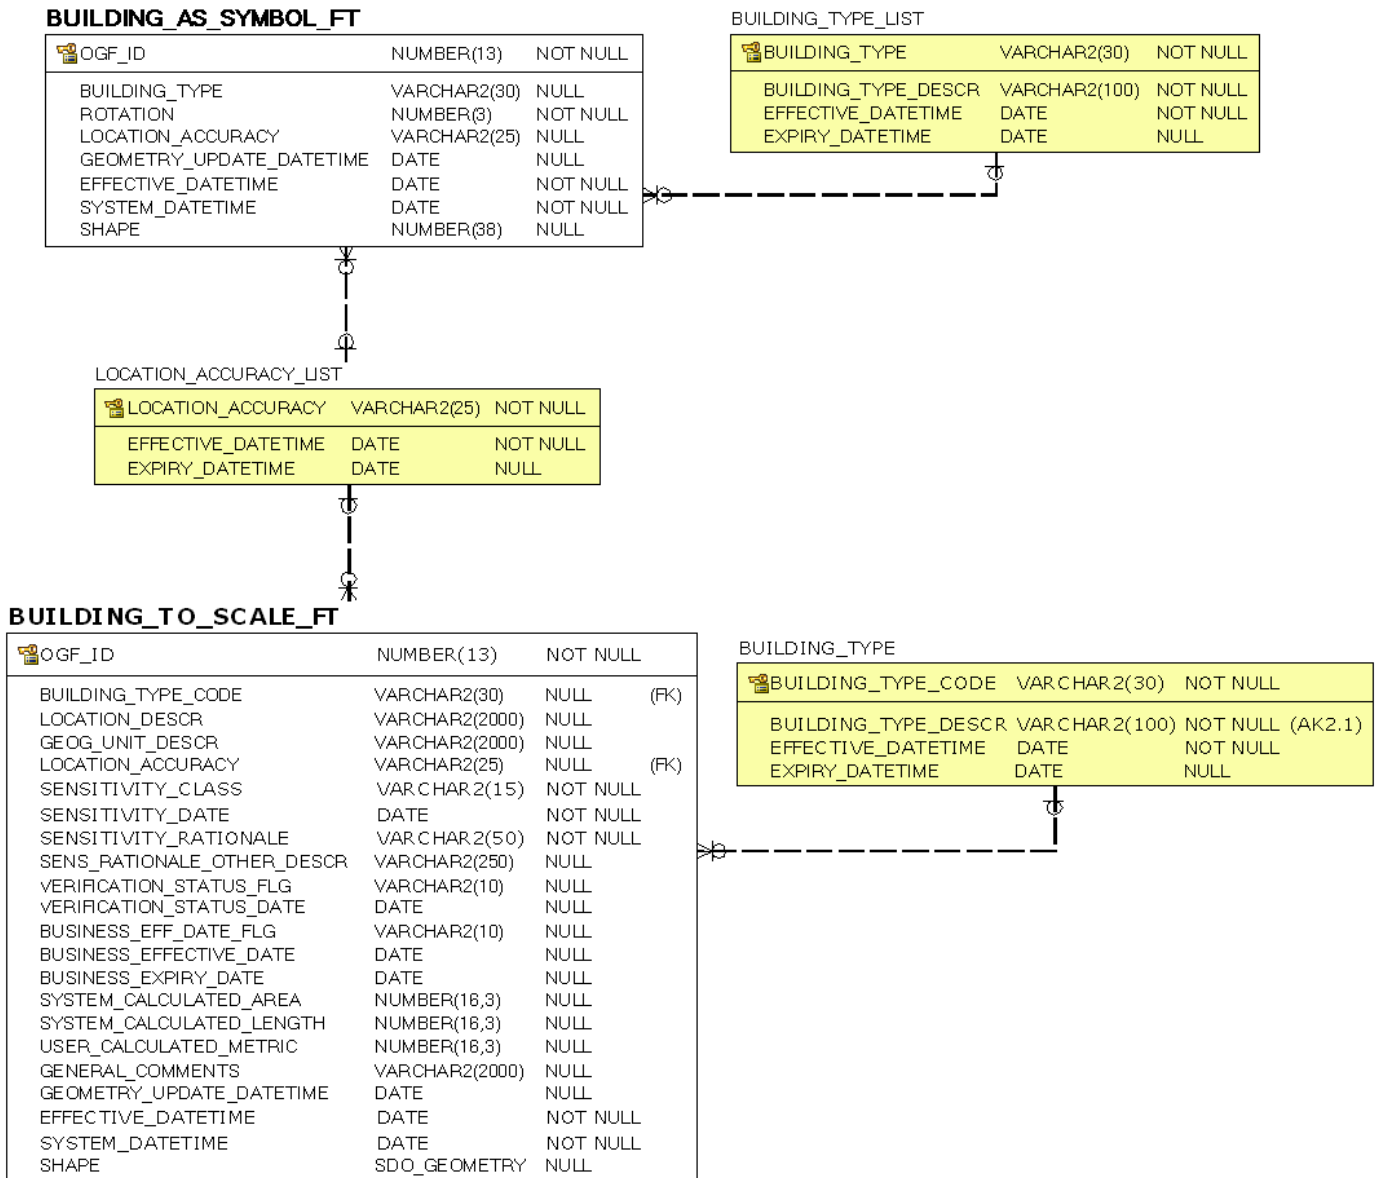

When structures have one dimension larger than 50 metres for the 1:20,000 scale and larger than 30 metres for the 1:10,000 scale, they are represented as polygons. Smaller structures should be considered points and entered in the Building as Symbol data class.

Building to Scale locations are represented and maintained as polygon features in this data class.

4. Model Diagram: Building as Symbol (BUILDSYM), Building to Scale (BUILDSCA)

Model Effective Date: 2012-JUN-14

Table names with “_LIST” suffix are lookup tables with permissible values.

5. Data Description

The main business area table(s) for this model can be found below. Associated lookup tables will be listed in [Appendix A](#) of this document and are hyperlinked where referenced in this section.

BUILDING_AS_SYMBOL_FT

A building is defined as a structure with permanent walls and roofed construction. Small structures (including buildings less than 50 square metres) are not shown unless they constitute a point of orientation. When structures have one dimension larger than 50 metres for the 1:20000 source scale and larger than 30 metres for the 1:10000 source scale, they are considered to be polygons and entered as Building to Scale.

Column Name	Column Type	Mandatory	Short Name	Description
OGF_ID	NUMBER(13)	Yes	OGF_ID	Ontario Geospatial Feature identifier (OGF ID). A unique numeric provincial identifier assigned to each object.
BUILDING_TYPE	VARCHAR2(30)	No	BUILDING_T	A general classification of a building, often by use, such as educational building, religious building, residence, police station, hospital or fire station. See table BUILDING TYPE LIST in Appendix for list of valid values.
ROTATION	NUMBER(3)	Yes	ROTATION	Amount in degrees that the representation of the feature should be rotated, with 0 representing no rotation.
LOCATION_ACCURACY	VARCHAR2(25)	No	ACCURACY	The degree of conformity or closeness of a measurement within the database to its true value in the world. See table LOCATION ACCURACY LIST in Appendix for list of valid values.
GEOMETRY_UPDATE_DATETIME	DATE	No	GEO_UPD_DT	Date/time the geometry was created or last modified in the source database.

Column Name	Column Type	Mandatory	Short Name	Description
EFFECTIVE_DATETIME	DATE	Yes	EFF_DATE	Date/time the record was created or last modified in the source database.
SYSTEM_DATETIME	DATE	Yes	SYS_DATE	Date/time the record was loaded into or last modified in the LIO database. DEFAULT: SYSDATE
SHAPE	NUMBER(38)	No	SHAPE	Geometry attribute.

BUILDING_TO_SCALE_FT

A building is defined as a structure with permanent walls and roofed construction. When structures have one dimension larger than 50 metres for the 1:20000 scale and larger than 30 metres for the 1:10000 scale, they are considered to be polygons. Smaller structures should be considered points and entered in the Building as Symbol data class.

APPENDIX B: Table Key Dependency and Relationship Index

Keys are used to link or make relationships between tables through one or more columns. A Parent Table is the source of unique key columns used by a Child Table. The main key types are described below.

Primary Key (PK):

A Primary Key (PK) is a column that uniquely identifies each record in a table. There can be more than one PK defined for a table when additional rules for record uniqueness are needed. Primary Keys cannot contain null values.

Figure 2: Primary Key example

Foreign Key (FK):

When a Primary Key from a Parent Table appears as a column in the Child Table it is referred to as a Foreign Key (FK). The FK may retain the same name of the Parent Table column, or it may be renamed.

Figure 3: Foreign Key example

Alternate Key (AK):

Alternate Keys (AK) are secondary unique identifiers in a Parent Table. A Child Table can link to a Parent Table AK and use it as a Foreign Key (FK). The FK may retain the same name of the Parent Table column, or it may be renamed. Alternate Keys allow null values.

Figure 4: Alternate Key example

There are two relationship type options, identifying and non-identifying, which are described below.

An **Identifying Relationship** occurs when a column from the Parent Table is added to the key section of the Child Table. Though technically a Foreign Key (FK) in the child table, it now forms part of the Primary Key (PK). Identifying Relationships are symbolized with a solid line.

Figure 5: Example of an Identifying Relationship

A **Non-identifying Relationship** occurs when a column from the Parent Table is added to the main body of the Child Table where it is treated as a Foreign Key (FK). Non-identifying Relationships are symbolized with a dashed line.

Figure 6: Example of a Non-identifying Relationship

The relationships between tables are set up with cardinality rules describing if the feature record in the Parent Table can relate to zero, one or more records in the associated Child Table and vice versa. These rules are symbolized in the model diagram as follows.

Symbol	Definition
	Zero or one (optional: 1 to 1)
	Zero, one or more (optional: one to many)
	One or more (mandatory: one to many)
	Nulls not allowed (mandatory: 1 to 1)

Figure 7: Model Diagram Relationship Symbology Table

The following section is an index of parent table primary keys identifying, where applicable, associated child table dependencies that have been implemented for the Building data classes.

APPENDIX C: Frequently Asked Questions

How do I rotate a building point feature?

ArcMap provides two options for rotation, Geographic and Arithmetic. Geographic rotates clockwise and has the origin at zero degrees, while Arithmetic rotates counter-clockwise and has the origin at ninety degrees. Arithmetic will align building symbols to road features.

Steps for using Rotation:

- Right-click on BUILDING_AS_SYMBOL_FT and choose Properties
- Click the Symbology tab
- Choose Features (single symbol) and assign a symbol for buildings
- Click Advanced and choose Rotation
- Select the Rotation field from the list
- Choose Arithmetic (counter-clockwise rotation)
- Click OK.
