WARRANTY POLICY

VIKING-CIVES MIDWEST warrants products of its manufacture against defects in workmanship and material for a period of one year, from the date of shipment to the customer. In consequence of this warranty, any component part or parts of such products proving defective within the above specified time will be repaired or replaced F.O.B. factory. Providing such parts are returned, transportation prepaid, to the factory and found defective by VIKING-CIVES MIDWEST.

This warranty will not apply to any product which has been repaired or altered outside of VIKING-CIVES MIDWEST factory in any way, so as in VIKING-CIVES MIDWEST's judgement, to affect its stability or reliability, nor which has been subject to misuse or accident.

The obligations of VIKING-CIVES MIDWEST under this warranty are limited to the replacement of defective parts. Such obligations are exclusive and in lieu of all other remedies, warranties, guarantees of liabilities, expressed or implied, with respect to each product delivered, hereunder, arising by law or otherwise (including without limitation any obligation or liability by VIKING-CIVES MIDWEST arising from negligence or with respect to fitness, merchantability, loss of use, revenue, or profit, or consequential damages or injuries).

This limited warranty shall not be extended, altered, or varied except by a written instrument signed by VIKING-CIVES MIDWEST.

VIKING-CIVES MIDWEST assumes no responsibility for engines, electrical equipment or any other equipment and accessories not manufactured by VIKING-CIVES MIDWEST beyond the warranty of the manufacturer of such equipment of accessories.

All warranty work done on VIKING-CIVES MIDWEST equipment must have prior authorization from VIKING-CIVES MIDWEST along with a **"Return Goods Authorization"** number. All labor and parts issued by user for VIKING-CIVES MIDWEST warranty without an authorization number and a signed authorization warranty form will be at the users own cost.

ORDERING PARTS

Delays and errors can be eliminated when ordering instructions are followed correctly.

1. Place orders direct with Viking-Cives Group/nearest dealer.
2. State Company name, address, and postal/zip code.
3. Give the exact model and serial number of the equipment/unit (stamped on the unit identification plate.)
4. Furnish part number, description and quantities required. *Note: An alpha designation in the Item ID column indicates a sub-component for that parent item. When placing parts orders reference the parent item to receive a complete assembly. Individual items can be ordered separately if required by ordering the alpha designated item number.*
5. Print or type order clearly.
6. Give specific shipping instructions.

VIKING-CIVES (USA) – RR2, Box 36-1/2; Harrisville, New York 13648; (315) 543-2321, (315) 543-2366 Fax

VIKING-CIVES (USA) Midwest Division – 212 North Evans Road; Evansdale, Iowa 50707; (319) 236-7977, (319) 236-7980 Fax

VIKING-CIVES LTD. – RR4, Box 1120; Mount Forest, Ontario, Canada N0G 2L0; (519) 323-4433, (519) 323-4608 Fax

WARRANTY REQUEST PROCEDURE

All repairs considered for warranty that are performed outside of VIKING – CIVES MIDWEST; require prior written authorization from VIKING – CIVES MIDWEST. Failure to obtain written warranty authorization prior to repairs may result in the rejection of the warranty claim. **To obtain warranty consideration one must provide all required VIKING – CIVES MIDWEST with unit information including date of manufacture and serial numbers.** In most cases this information is easily obtained from the “Shipped Unit Tag” (located in most cases inside the driver’s side door) and/or individual unit serial tag.

(A) To obtain Parts Warranty Consideration:

- (1) Contact VIKING – CIVES MIDWEST customer service to obtain a Return Goods Authorization (RGA) number. Any product arriving at VIKING – CIVES MIDWEST without a RGA number will be rejected and returned to the sender at his or her own expense.
- (2) Goods are to be shipped prepaid to VIKING – CIVES MIDWEST, Evansdale, Iowa 50707. **All items should be clearly marked with the appropriate RGA number.**
- (3) When a replacement item is shipped to replace a defective part for warranty consideration the following additional steps will occur:
 - a) An invoice will be generated for the value of the replacement item(s).
 - b) The defective part(s) must be returned (prepaid) to VIKING – CIVES MIDWEST.
 - c) Upon receiving the defective part(s) VIKING – CIVES MIDWEST will issue and process a Discrepant Material Report (DMR). Once the evaluation of the DMR report is complete and the parts are deemed warranty, a credit will be issued against the outstanding invoice. **If the part(s) are deemed Non-warranty the invoice will remain outstanding to be paid to VIKING – CIVES MIDWEST.** Any part(s) to be returned to the customer will be at his or her own expense.

(B) To obtain Labor Parts Repair Warranty Consideration:

In the event that repairs are required outside of VIKING – CIVES MIDWEST facility that may be considered for warranty the following steps must occur. **Notification of VIKING – CIVES MIDWEST customer service must take place prior to the start of any repairs.**

- (1) Contact VIKING – CIVES MIDWEST customer service to obtain a Warranty Claim Form (WCF) and warranty authorization number.
- (2) Fill out all required WCF information and fax or mail the completed form to VIKING – CIVES MIDWEST, attention Customer Service Department.
- (3) Once the WCF report has been reviewed warranty authorization will be granted or denied. **NOTE: VIKING – CIVES MIDWEST warranty labor rates will apply unless specifically determined otherwise.** Any part(s) involved in a WCF request must follow the Parts Warranty Consideration procedures.

For Customer Service and/or Parts requests please contact:

INTRODUCTION

This instruction/parts manual has operation and maintenance information for the Viking-Cives Sno-King Equipment. It has been prepared to familiarize you with the design features of the unit, and to instruct you in its proper operation and maintenance.

Read this manual carefully before you operate and/or service your Sno-King Equipment. Remember that you're working with heavy equipment that can injure you or someone else. You can help lessen the chance of injury by following the procedures in this manual, carefully.

DANGER: If incorrectly used, this equipment can cause severe injury. Your chance of injury can be greatly reduced by following all caution/warning decal notifications. All decals must be kept clean and complete. Replace any decals that are unreadable. Decals may be purchased directly from Viking-Cives Group and/or the nearest authorized dealer. All Operator/Service people should review this manual carefully and become familiar with its contents. **If anyone else beside you operates or services this equipment, make sure they read this manual and are instructed to follow the safety procedures related to this equipment.**

PERIODIC MAINTENANCE INSPECTION DAILY INSPECTION AND LUBRICATION

Daily inspection along with periodic preventive maintenance will reduce the chance of any major repairs and down time during equipment use.

1. Check the fluid level in the hydraulic oil reservoir. If the sight indicates low oil level, add the appropriate amount of the specified hydraulic fluid. **Cold Weather Operation:** All equipment is designed to operate with hydraulic oil minimally warm. During cold weather conditions, it is recommended that the truck be run at idle with the pump engaged and circulating the oil through the system before operating equipment.
2. Grease all required components:
 - All plow harness sheave nipples.
 - All pump drive shaft nipples.
 - Front and Rear tower sheave swivel blocks.
 - Wing extension arm nipples.
 - Front and Rear tower guide tracks.
 - All front harness pivot points.
3. Check all components for loose and/or missing fasteners, if required tighten and/or replace.
4. Visually inspect all battery terminals and electrical connections, wires, switches, etc. for signs of corrosion, wear, loose and/or broken connections, etc. At the beginning of each shift review all lighting accessories to ensure proper working conditions, immediately replace any broken or non-functioning bulbs and/or lenses.
5. Visually inspect all hydraulic connections and hoses for cracks and/or leaks.
6. Check all cables, chains and sheaves for excessive wear or damage.
7. Visually inspect plow and wing units. Check cutting edges and wear shoes. If cutting edge has excessive wear remove and rotate, or if required replace. **CAUTION:** Do not allow cutting edge to wear down to mounting angle. Any wear to the mounting angle may affect the operation and safety of the equipment. Replacement is costly.
8. At the beginning of each shift visually inspect all caution and warning decals. All decals should be complete and legible. If decals are not legible, clean them. If cleaning the decals does not make them legible, install new decals.

REGISTRATION OF EQUIPMENT AND WARRANTY INFORMATION

Report any damage to equipment at once to VIKING-CIVES MIDWEST. You should also register your equipment with VIKING-CIVES MIDWEST, by filing out a warranty certificate and registration card and returning them to VIKING-CIVES MIDWEST. The warranty period becomes effective upon date of delivery of equipment unless other arrangements have been made with a VIKING-CIVES MIDWEST Distributor or VIKING-CIVES MIDWEST. The information required to register the equipment may be found on the serial number tag secured to the equipment.

A WORD ABOUT SAFETY:

The equipment described in this manual is normally being operated in adverse winter conditions with bad weather, snow and ice. Due to these adverse operating conditions it is important that you the operator use good safety practices at all time to protect yourself, co-workers and others when using the equipment.

It is not practical or possible to warn you about all the hazards associated with the operation and maintenance of this equipment. You should always use your own good judgment supplemented with the information found on the safety decals, instructions in this manual, your employer's safety programs, safety codes, local, state/provincial, and federal laws, rules and regulations.

When operating/performing maintenance on this equipment, trouble shooting equipment operations and loading or unloading the sanders/spreaders with material observe & obey all safety decals on the equipment and warnings listed in the manual. Failure to do this could result in serious injury or death to you or others.

Remember at all times that as the operator you are responsible for the safe operation of this equipment and responsible for the safety of others. Good safety practices not only protect you but also protect the people around you.

2000-2004 FORD SUPER DUTY Installation Instructions – F250/350

1. Remove front bumper saving the fasteners for re-installation.
2. Remove clamp holding power steering cooler lines to radiator support.
3. Remove and relocate power steering cooler toward the drivers' side approximately 6" and re-install with self-tapping screws. (Request drawing to show cooler location.)
4. Install plastic split tubing or a similar insulating/protection type material onto lower portion of each cooler line and secure with wire ties.
5. Install a 1½" insulated frame hose support clamp to the side of radiator support as shown in illustration (pg. 14) and fasten with self-tapping screw.
6. Remove tow hook fasteners and install left and right tow hook post brackets "A" utilizing the original fasteners and tow hooks. Due to possible casting irregularities of front spring hanger, it may be necessary to radius the corners of bracket "A" to insure complete base surface contact within the spring hanger pocket. (Leave bracket fasteners slightly loose for further assembly and final alignment check.)
7. Drill drivers side thrust arm "C" as shown in illustration on page 14.
8. Install frame plates "D" thrust arms "C" and receiver pads "B" onto corresponding sides utilizing ½" X 2½" and ½" X 2" bolts with locking nuts as shown in illustration. Install ½" X 1½" bolts with locking nuts thru bracket "C" sway bar tabs to existing frame sway bar brackets. Using the frame pad outside plates as a guide, drill 17/32" holes thru frame rails. Insert ½" X 1½" bolts with locking nuts. (Leave bracket fasteners slightly loose for further assembly and final alignment check)
9. Install over frame brackets "E" onto frame plates "D" with ½" X 1½" bolts with the bracket hole as a guide, drill 17/32" holes thru the frame rails and insert ½" X 1½" bolt with the locking nut as shown in illustration. (Leave bracket fasteners slightly loose for further assembly and final alignment check.)
10. Position receiver plate "F" onto receiver pads "B" and install with 5/8" X 2" bolts and locking nuts. Insert 3 bolts upward and 1 bolt down per side as shown in illustration.
11. Verify proper frame contact and alignment of all components at this time. Adequately tighten the following fasteners in this sequence:
 - (6) Original.....Metric tow hook bolts
 - (8) ½" X 1½".....Thrust arm bolts
 - (8) 5/8" X 2".....Receiver plate bolts
 - (4) ½" X 2½"Front receiver pad bolts
 - (4) ½" X 2".....Rear receiver pad bolts
 - (5) ½" X 1½".....Over frame bracket bolts
12. Clamp properly re-located and insulated power steering hoses onto thrust arm "C" (drivers side only) utilizing original attachment clamp.
13. Install lift frame release pins, springs and cotter pins into receiver plate "F".
14. Re-install and properly adjust bumper utilizing the original fasteners.

2000-2004 FORD SUPER DUTY Installation Instructions – F450/550

1. Remove front bumper saving the fasteners for re-installation.
 2. Remove clamp holding power steering cooler lines to radiator support.
 3. Remove and relocate power steering cooler toward the drivers' side approximately 6" and re-install with self-tapping screws. (Request drawing to show cooler location.)
 4. Install plastic split tubing or a similar insulating/protection type material onto lower portion of each cooler line and secure with wire ties.
 5. Securely fasten cooler lines utilizing a 1½" insulated frame hose support clamp to the side radiator support as shown in illustration (pg. 14) with a self tapping screw.
 6. Remove tow hook fasteners and install left and right tow hook post brackets "A" utilizing the original fasteners and tow hooks. Due to possible casting irregularities of front spring hanger, it may be necessary to radius the corners of bracket "A" to insure complete base surface contact within the spring hanger pocket. (Leave bracket fasteners slightly loose for further assembly and final alignment check.)
 7. Drill drivers side thrust arm "C" as shown in illustration on page 14.
 8. Install frame plates "D" thrust arms "C" and receiver pads "B" onto corresponding sides utilizing ½" X 2½" and ½" X 2" bolts with Locking nuts as shown in illustration. Install ½" X 1½" bolts with locking nuts thru bracket "C" sway bar tabs to existing frame sway bar brackets. Using the frame pad outside plates as a guide, drill 17/32 holes thru frame rails. Insert ½" X 1½" bolts with locking nuts. (Leave bracket fasteners slightly loose for further assembly and final alignment check)
 9. Install over frame brackets "E" onto frame plates "D" with ½" X 1½" bolts with the bracket hole as a guide, drill 17/32" holes thru the frame rails and insert ½" X 1½" bolt with the locking nut as shown in illustration. (Leave bracket fasteners slightly loose for further assembly and final alignment check.)
 10. Position receiver plate "F" onto receiver pads "B" and install with 5/8" X 2" bolts and locking nuts. Insert 3 bolts upward and 1 bolt down per side as shown in illustration.
 11. Verify proper frame contact and alignment of all components at this time. Adequately tighten the following fasteners in this sequence:
 - (6) Original.....Metric tow hook bolts
 - (8) 5/8" X 2".....Receiver plate bolts
 - (6) ½" X 1 ½".....Thrust arm bolts
 - (4) ½" X 2 ½".....Front receiver pad bolts
 - (4) ½" X 2".....Rear receiver pad bolts
 - (6) ½" X 1 ½".....Over frame bracket bolts
 12. Clamp properly re-located and insulated power steering hoses onto thrust arm "C" (drivers side only) utilizing original attachment clamp.
 13. Install lift frame release pins, springs and cotter pins into receiver plate "F".
- Re-install and properly adjust bumper utilizing the original fasteners.

INSTRUCTIONS FOR INSTALATION ON 1999-2004 FORD'S

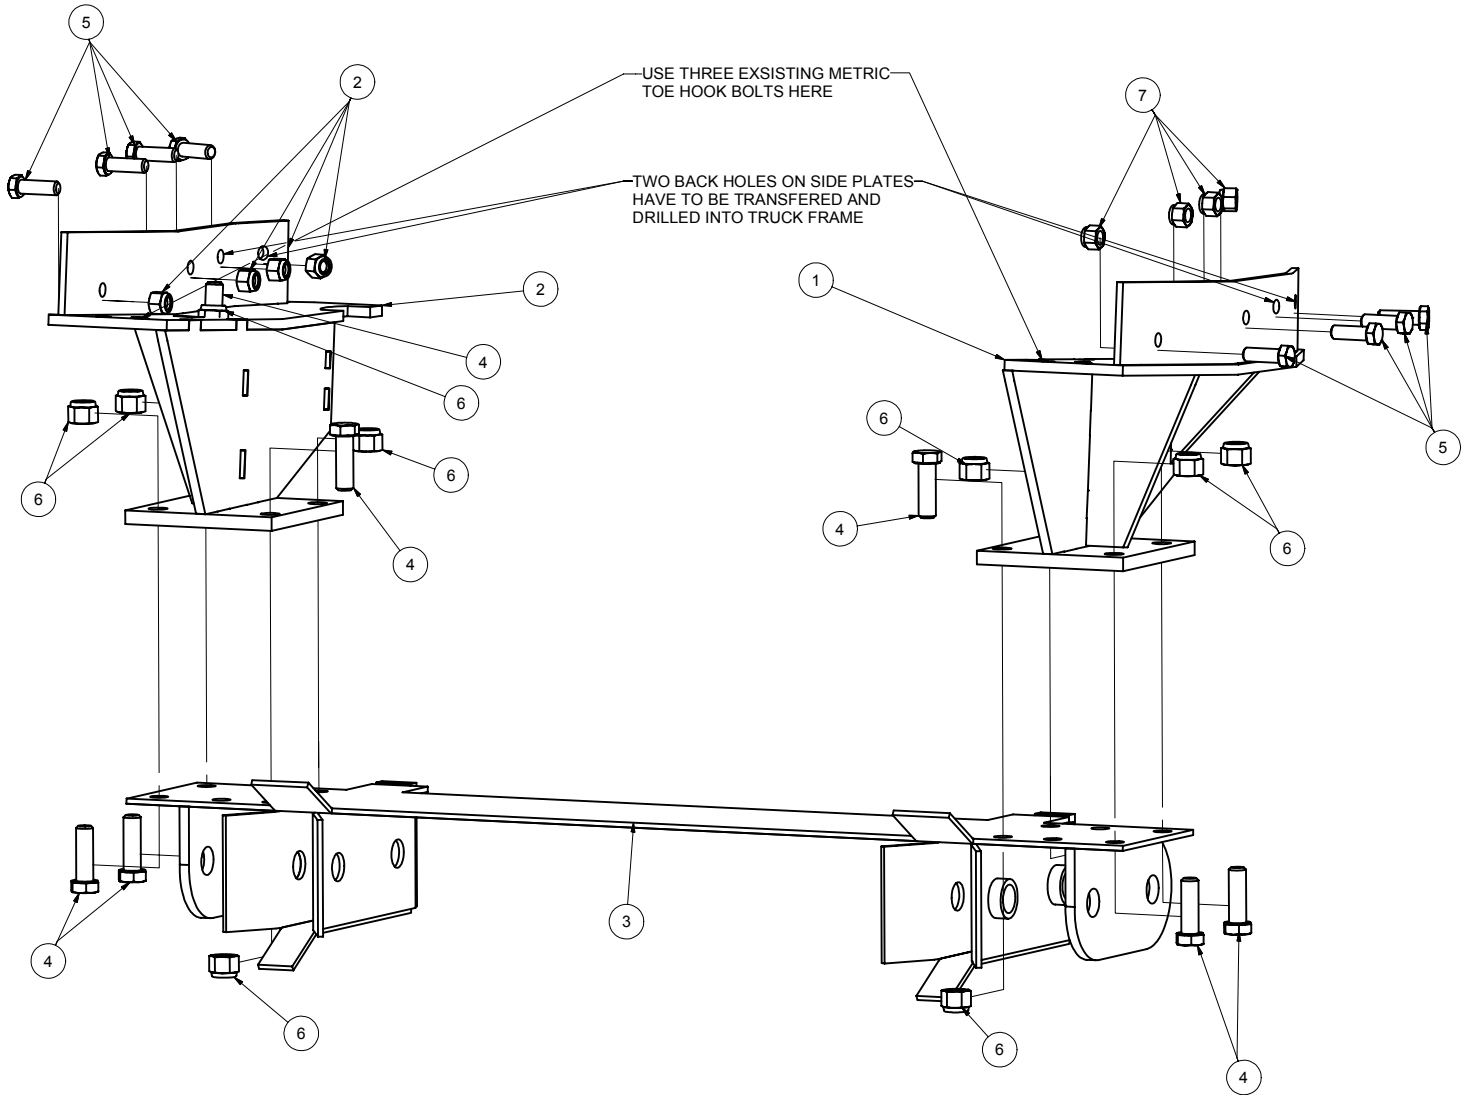

DRIVER'S SIDE "C" BRACKET

2005 FORD SUPER DUTY Installation Instructions – F250/350 &F450/550

1. Remove front bumper saving the fasteners for re-installation.
2. Remove tow hook fasteners.
3. Drop out blocker beam.
4. Install left and right attaching brackets utilizing the original fasteners and tow hooks. Also at this time install one 5/8" X 2" in hole 6" behind 3 tow hook bolts.
5. Install four 1/2" X 1 1/2" bolts on side plate.
6. Position receiver plate "F" onto receiver pads and install with 5/8" X 2" bolts and locking nuts. Insert three bolts upward and one bolt down per side as shown in illustrations.
7. Verify proper frame contact and alignment of all components at this time. Adequately tighten the following fasteners in this sequence:
 - (6) Original metric tow hook bolts
 - (2) 5/8" X 2" bolts behind tow hook bolts
 - (8) 1/2" X 1 1/2" bolts on side plate
 - (8) 5/8" X 2" bolts connecting receiver to Attaching kit
8. Install lift frame release pins, springs, and cotter pins into receiver plate "F".
9. Re-install and properly adjust bumper utilizing the original fasteners.

7	3SK3670		NUT HEX TOPLOCK 1/2 UNC ZINC	8

SNO-KING MOLDBOARD / PUSHFRAME ASSEMBLY INSTRUCTIONS

1. Position the moldboard assembly face down on a flat surface.
2. Remove the factory installed 1" and 3/4" fasteners from the left and right torque arm assemblies.
3. Utilizing adequate lifting equipment and proper safety procedures, position the torque tube and a-frame assembly into the rear moldboard cavity and attach with the 1" X 2 1/2" fine thread bolts and flat washers, (a coating of premium grade anti-seize thread compound is recommended) but do not completely tighten at this time.
4. Rotate the torque tube and a-frame assembly towards the moldboard and attach, but do not completely tighten at this time, the torque arms to the center moldboard rib adjusting holes with the 3/4" X 2 1/2" bolts and nuts while positioning the flat washers on the moldboard side of the ribs.
5. Apply thread sealant onto the 90-degree pipe fittings and install into the moldboard reversing cylinders.
6. Attach the correct reversing cylinder hose assemblies as indicated in the parts and service manual for your hydraulic application. A cushion valve is required on all central hydraulic systems. (Please note memo on the following page)
7. Connect each end of the lift chain assembly to the a-frame lifting lugs with the 3/8" clevis midlinks provided.

Once the completed plow assembly has been properly installed on the truck it will be necessary to adjust the moldboard to an angle of attack of 22-25 degrees and adequately tighten both the torque tube and torque arm fasteners at that time.

SNO-KING CUSHION VALVES WITH CENTRAL HYDRAULIC SYSTEMS

A cushion valve is *always* required in the reverse circuit of a Sno-King snowplow!

When you purchase a package which includes an electric / hydraulic power unit, a relief valve is an integral part of the power unit reverse valve.

When you purchase a Sno-King light duty package less hydraulics (3SK0110, 3SK0210, 3SK0310) no cushion valve is included in the package – we consider them to be a part of the hydraulic package. A cushion valve for reverse cylinder protection must be included in your hydraulic package or certain cylinder failure will result. We recommend a cushion valve with a relief setting between 2250 – 2500 psi (maximum working pressure of the reverse cylinder is 2500 psi).

The majority of our Dealers have opted to supply their own cushion valves. Sno-King will make an optional cushion valve available to those of you that wish to purchase them from us.

MAINTENANCE PROCEDURE:
Tightening Packing Nuts on Snowplow Cylinders

Adjusting packing nuts are used on snowplow cylinders to hold the cylinder together as well as providing pressure against the chevron style rod packing. As the nut is tightened, the v-shaped packing flare out and seal tightly against the rod surface.

Often times, it is necessary to adjust the packing nut in the field if oil starts to leak from the cylinder. This occurs because the seals tend to wear in after 100 cycles and need to have more pressure applied to them.

The proper adjustment procedure for the packing nut is listed below:

- 1) Loosen the packing nut.
- 2) Tighten the packing nut by hand until it is snug against the packing.
- 3) Use a nut wrench to tighten the nut $\frac{3}{4}$ turn.

This simple procedure should produce a torque value on the nut of 50 foot-pounds and should provide a dry rod when cycled.

TORQUE ARM REMOVAL

- Proper torque arm removal is accomplished by pulling the arms from the torque tube assembly via the threaded portion of the inner shaft. Never attempt to pound out the arms, as the arms will be damaged. To install the arms, adequately lubricate the inside of the torque tube, the outside of the torque arms, and press the arms into the torque tube while protecting the threads.
-
- Please contact Craig at 319-236-7977 if you have any questions.

18	SK4080		1/4" X 33" HOSE ASSEMBLY FOR ELECTRONIC HYDRAULICS	2
19	SK4090		1/4" X 40" HOSE ASSEMBLY FOR CENTRAL HYDRAULICS	2

INSTA-MOUNT REMOVAL INSTRUCTIONS

1. Put the power controller in the down position.
2. Compress the lift cylinder completely.
3. Remove the snowplow lift chains.
4. Remove the insta-shoe and place it on the ground beneath the holder.
5. Remove both the upper and lower 1” pins on the lift cylinder and invert the cylinder through the holder.
6. Install the cylinder shaft to the insta-shoe by sliding the pin through both. Secure each pin with a lynch pin clip.
7. Re-pin the cylinder barrel to the bottom of the lift ram hole.
8. Reattach the lift chains to the lift arm as tightly as possible. **VERY IMPORTANT:** Failure to attach the chains to the lift arm will allow the headgear to strike the front grill of the truck when backing away from the frame.
9. Press up on the switch on the power distribution box until the headgear lifts slightly after the ram pushes the shoe into the ground.
10. Release and secure the two spring pins on either side of the truck.
11. Place the switch in the neutral position.
12. Disconnect the two electrical connections and lights.
13. Back the truck away from the plow. If the plow frame drags backwards, attach the power supply and adjust the height as needed.

INSTA-MOUNT INSTALLATION INSTRUCTIONS

1. Pull out the spring-loaded pins on either side of the receiver boxes and rotate them to the release position (approximately a $\frac{1}{4}$ " turn).
2. Drive the truck into the lift frame staves after verifying the correct height and alignment.
3. Connect the electrical connections at this time. If the height of the stave is off, raising or lowering it with the power distribution box can adjust this.
4. Release the spring pins. If the pins do not slide in, a slight front to rear rocking on the top of the headgear will cause the pins to bottom out.
5. Place the rocker switch in the down position.
6. Remove the 1" pin holding the lift cylinder to the bottom of the lift. Lift up slightly.
7. Remove the $\frac{5}{8}$ " pin and the insta-shoe.
8. Invert the lift ram to the upward position and re-pin it.
9. Install the insta-shoe in the holder on the pushframes.
10. Reattach the lift chains, keeping the chain links straight.

GENERAL OPERATING INSTRUCTIONS

BEFORE SNOW-PLOWING:

1. Check the pump fluid level with the lift cylinder ram completely down. Keep the fluid level ½” below the filler neck.
2. Check all electrical connections for tightness. Remove any corrosion. Make sure the unit is grounded securely.
3. Carry the emergency repair kit and four quarts of *Dextron III ATF* fluid for commercial operations.
4. Tighten all bolts on the plow and truck hitch. Inspect for leaks and worn cutting edge. Replace if needed.
5. With the cylinder ram completely down, adjust both chains to the tightest position, keeping all the links straight.

DURING SNOW-PLOWING:

2. Adjust the skid shoes to the upper most position on pavement or frozen earth surfaces.
3. Lower the skid shoes to support the cutting edge ¼” above the surface to prevent digging in to thawed earth and “pea stone” surfaces.
4. If any hydraulic leaks occur, stop plowing immediately. Raise the plow with a jack or level. This will enable the vehicle to be driven for repair with the snowplow raised.
5. Inspect the entire snowplow system hourly during plowing.
6. Replace the cutting edge before it wears into the polymer. Remove the cutting edge bolts with proper tools. DO NOT burn-off the bolts, as this will destroy the polymer.
7. DO NOT exceed 5 MPH while snowplowing.

AFTER SNOW-PLOWING:

1. Check all hoses and fittings for leaks.
2. Lubricate the cylinder rams and pins with multi-purpose grease.

***** LIMITED WARRANTY*****

SNO-KING warrants products of its manufacture against defects in workmanship and material for a period of one year from date of shipment to customer; and in consequence of this warranty, any component part or parts of such products proving defective within the above specified time will be repaired or replaced F.O.B. factory, providing such parts are returned, transportation prepaid, to the factory and found defective by **SNO-KING**. This warranty will not apply to any product which shall have been repaired or altered outside of the **SNO-KING** factory in any way so as, in **SNO-KING** sole judgement, to affect its stability or reliability, nor which has been subjected to misuse, negligence or accident.

The obligations of **SNO-KING** under this limited warranty are limited to the replacement of defective parts as set forth above; such obligations are exclusive and in lieu of all other remedies, warranties, guarantees or liabilities, express or implied, with respect to each product delivered hereunder, arising by law or otherwise (including without limitation any obligation or liability of **SNO-KING**, arising from negligence or with respect to fitness for a particular purpose, merchantability, loss or use, revenue, or profit, or any incidental, indirect, special or consequential damages or injuries, even if **SNO-KING** has been advised of the possibility of such damages or injuries; and all other remedies, warranties, guarantees, or liabilities are hereby expressly excluded and disclaimed. This limited warranty shall not be extended, altered, or varied except by a written instrument signed by **SNO-KING**.

SNO-KING assumes no responsibility for engines, electrical equipment, or any other equipment and accessories not manufactured by **SNO-KING**.
