# Introduction

This document aims to help you to familiarize yourself with WS|Publishing and its functions. WS|Publishing is a convenient tool for capturing item master data in a user-friendly environment. Trade item master data plays a central role in the entire supply chain between the manufacturer and retailer. With regard to efficient and smooth business processes, it is crucial for data to meet high quality standards and to stay up to date.

All functionalities and the basics of working with the application are explained in the respective sections of this document. As a supplier, the application allows you to easily create and maintain your complete product master data descriptions and publish them in a GDSN-compliant data pool. The chapter GDSN gives a brief overview of the GDSN standards and choreography. You can use the application without any prior GDSN knowledge but it is highly recommended to familiarize yourself with the basics of the GDSN choreography.

---

## Maintain and synchronize Trade Items

The application enables users to maintain item data through the entire workflow of a trade item.

Trade item data records can be added to the system either manually or via data import (Excel interface)

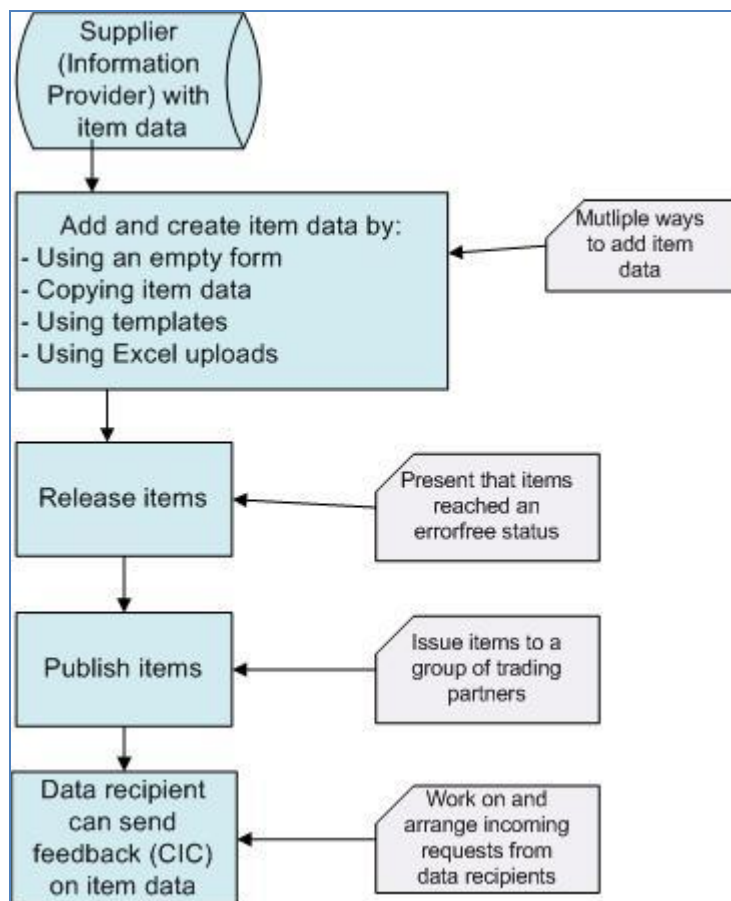

Items saved in the system can be edited. Every time an item is saved an automatic validation check ensures the validity of the item data.

Items that have been correctly validated can be released.

A released item is the precondition for publishing the item. A publication distributes the data to a selected group of data recipients who can then view the item data provided they have subscribed to the respective item data.

Having received the item data, data recipients return a feedback sending confirmations with different status like Accepted, Synchronized or Review. A response with status [Review](#) tells the supplier that the data needs further adaption. The retailer can also specify when the data is incomplete.

These responses for the supplier, i.e. all trade items with a 'To Do' status, e.g. a received confirmation with status [Review](#), or perhaps a GDSN Exception, can specifically be accessed and managed in the task list module of Webforms.

## GDSN

GDSN (Global Data Synchronization Network) is a standardized network of databases, referred to as data pools, for trade item master data. GDSN is managed by GS1 and GDSN Inc. GDSN allows trading partners to centralize, professionalize and, therefore optimize data exchange. When using the GDSN, master data updates are performed in only one location (GDSN source data pool) and are automatically published to all customers around the world who have subscribed to this data. Manufacturers and customers who collaborate via GDSN can be sure they are viewing the same data.

Please note that this chapter gives only a very brief introduction to a complex subject. For more detailed information on the GDSN standards and processes, please refer to the Knowledge Center on the GS1.org website <http://www.gs1.org/gsm/kc>

### ***GDSN choreography***

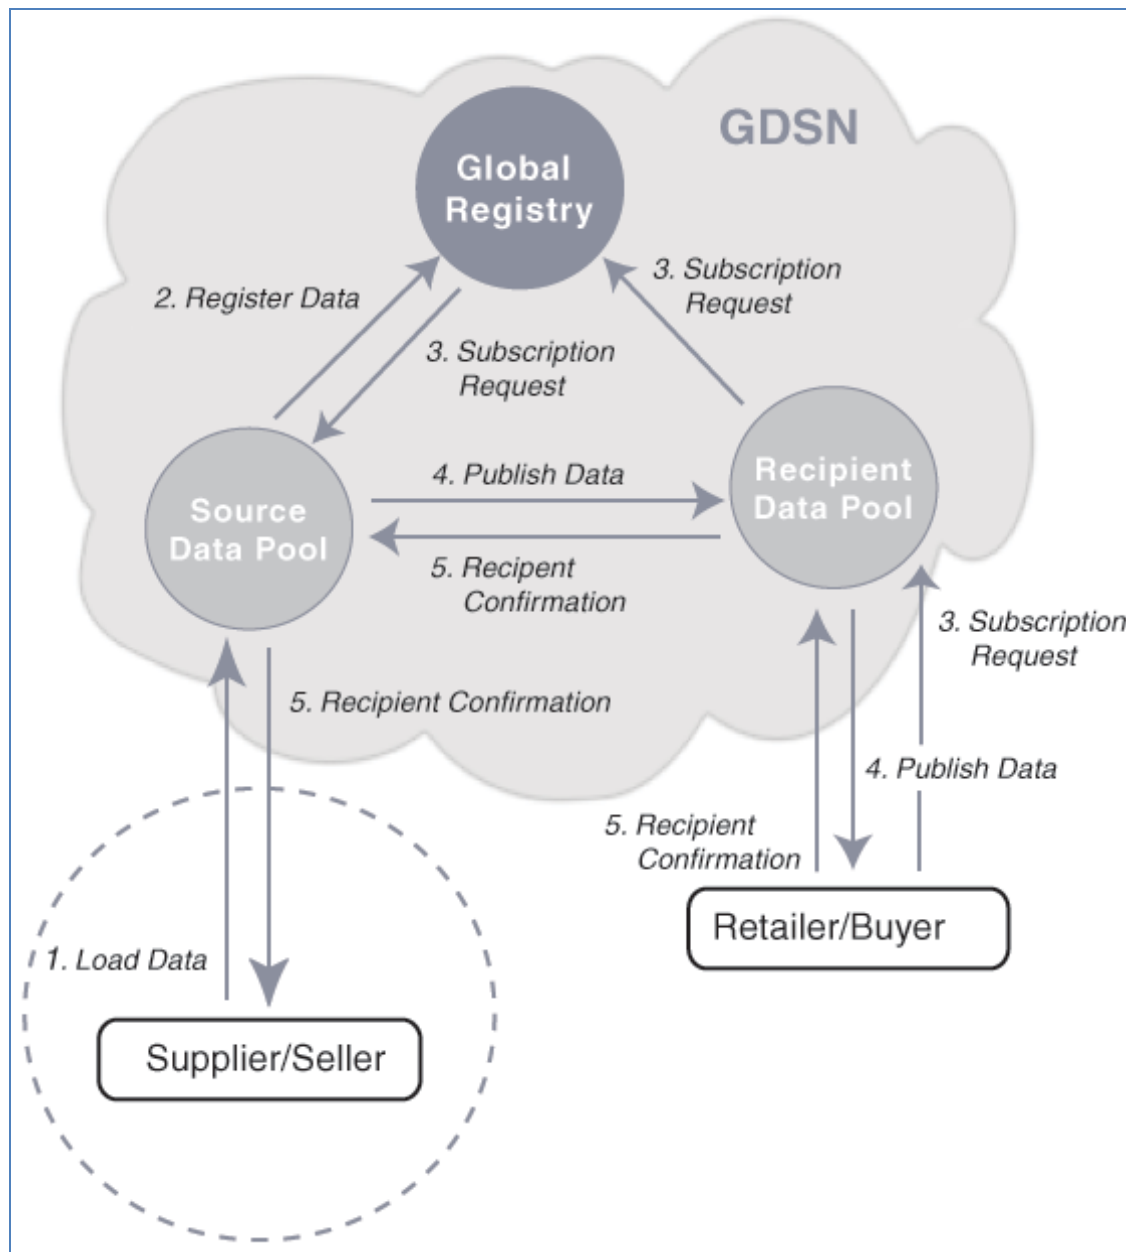

A data supplier creates a trade item ("item") with the required master data ("item data") and sends it to his GDSN Source Data Pool (by publishing it to either an entire target market or to particular receivers). The item is registered within the Global Registry from the Source Data Pool and published to receivers (retailers) who have subscribed to this data.

A Retailer subscribes the item data he wants to receive via his GDSN Recipient Data Pool. He can specify data by target market, GPC, information provider and/or GTIN.

Via the Global Registry this subscription is sent to the Source Data Pool that hosts this data.

The Source Data Pool then delivers the subscribed data to the Recipient Data Pool by CIN (Catalog Item Notification) messages.

The Retailer receives item data from there, and can now check and synchronize it or ask for a revision by the supplier. Via the Recipient Data Pool he sends a CIC (Catalog Item Confirmation) message to the Source Data Pool that is received by the Supplier, who then ensures the necessary steps are taken to correct and/or update the data.

## Online Help Structure

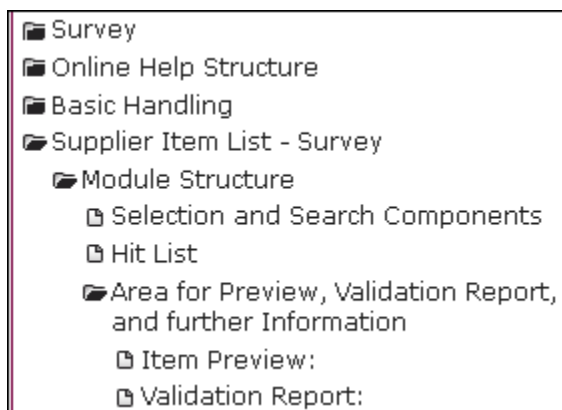

The help documentation describes structure and functionality of the application. The Online Help can be accessed by clicking on the question mark icon on the right-hand side of the menu bar:

Help Button

Use the Index and Search areas to perform an exact search for individual chapters or subjects. The Glossary is useful for looking up definitions and explanations of many hyperlinked words in the text.

The table of contents of the online help is reflected in the structure on the left. Topics can be accessed directly from this structure by clicking on the icon in front of the topic:

After an introduction to the overall and basic handling of the user interface, the following functions are described:

How to:

- search and find existing items using the search functions and search criteria.
- create, maintain, edit and validate items.
- import (upload) and export items via Excel interface.
- prepare and maintain templates as a base for the creation of new items.
- release and publishing item data.

Please note that the application is customized to meet individual customer requirements. This can result in a slightly different appearance of the UI , e.g. colors, logos, tab names. The screenshots in this document may not always reflect the UI 100%. The functionalities remain untouched.

---

## Systems requirements

Operating system	No restrictions
Broad band internet connection	At least 1 MBit DSL
Browser	Internet Explorer 8 and 9 Firefox
Javascript enabled	Required
Accept cookies	Required
Accept CSS	Required
Accept popups	Required
Allow images	Required
Screen resolution	Min 1024*768

We recommend using Mozilla Firefox ESR version 17 as a browser for all online applications and Microsoft Internet Explorer 8 or 9. For IE 8 the Google Chrome plugin is required.

Mozilla Firefox is available for download from the following website:

<http://www.mozilla.org/en-US/firefox/organizations/all.html>

## Basic Handling - User Interface

This chapter explains the basic handling of |variable=Productname.

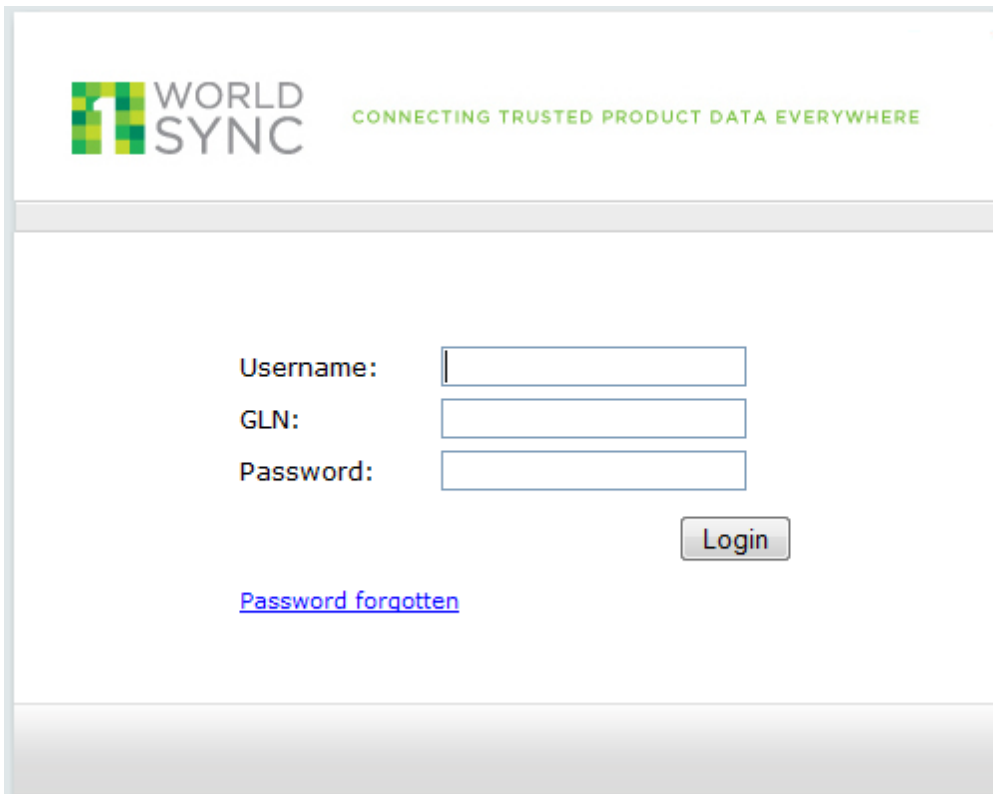

This refers to the login procedure, to the dashboard homepage with its menu and module structure, and to the screen structure of the item modules.

Also some general control elements and widgets of the user interface, and standard functions like language and time zone setting, how to change the password, and the logout function are described here in detail.

---

### Login- Logout

You access the application via your Web browser. Please enter your login data:

The screenshot shows the 1WorldSync login interface. At the top left is the 1WorldSync logo with the tagline "CONNECTING TRUSTED PRODUCT DATA EVERYWHERE". Below the header, there are three input fields labeled "Username:", "GLN:", and "Password:". To the right of the "Password:" field is a "Login" button. Below the "Login" button is a blue underlined link that says "Password forgotten".

**Username:** Enter your user name.

**GLN:** Enter your global location number (GLN).

**Password:** Enter your password.

The password is covered by asterisk characters and can be changed anytime.

Click Login to start the process.

## Logout

To exit the application, choose Logout from the menu bar.

*Logout function*

## Reset password

If you cannot remember your login data, the password can be reset.

Click the link Password forgotten in the login screen. You will then be taken to a new screen where you can enter your email address, user name and GLN.

Email:

Username:

GLN:

[Login Page](#)

Fill in the details and click reset password. The new password will be sent to the email address entered.

Please note that the password must be changed when logging in for the first time.

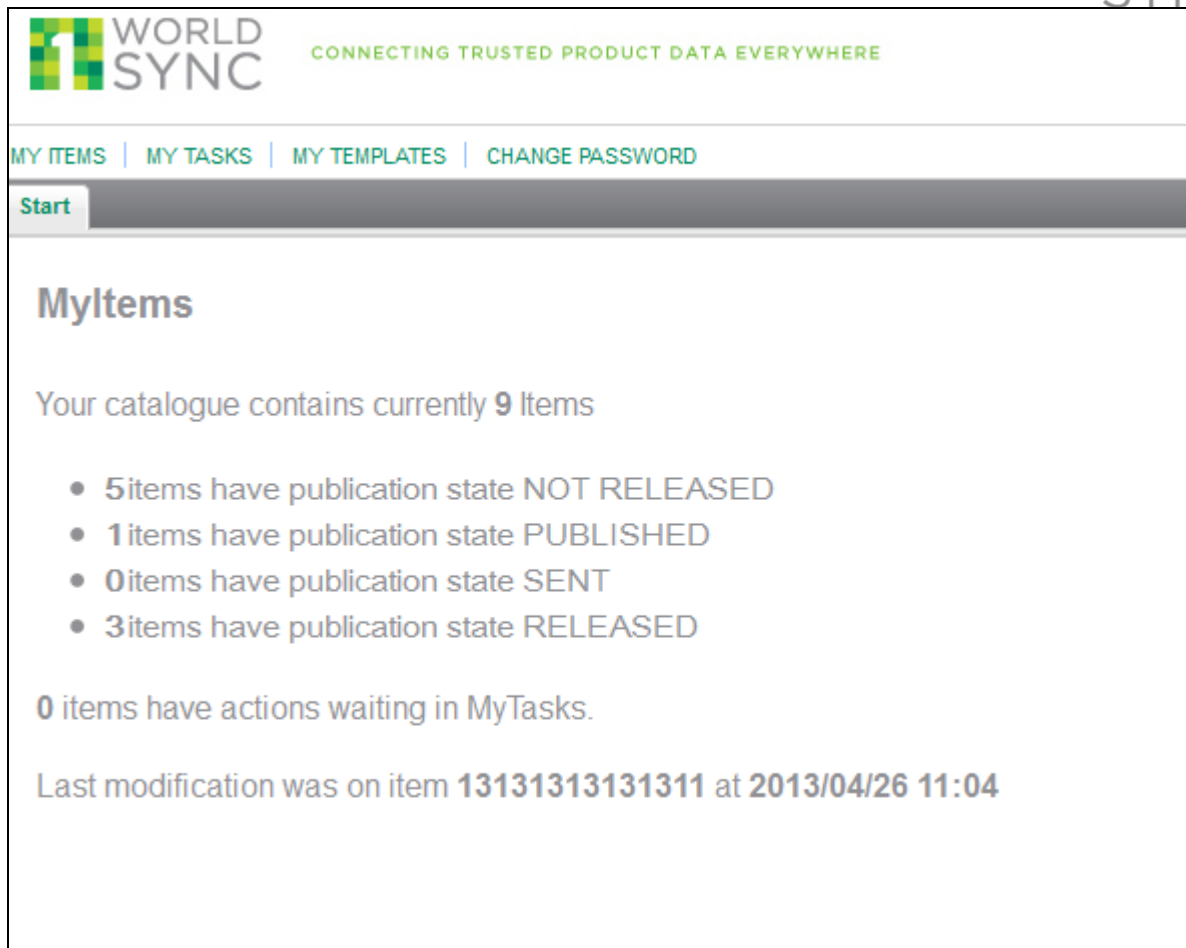

---

## Dash board

### Start Tab

After a successful login the start tab with the dash board opens as your point of entry to the system. See screenshot below

1 WORLD SYNC CONNECTING TRUSTED PRODUCT DATA EVERYWHERE

MY ITEMS | MY TASKS | MY TEMPLATES | CHANGE PASSWORD

Start

## MyItems

Your catalogue contains currently **9** Items

- **5** items have publication state NOT RELEASED
- **1** items have publication state PUBLISHED
- **0** items have publication state SENT
- **3** items have publication state RELEASED

**0** items have actions waiting in MyTasks.

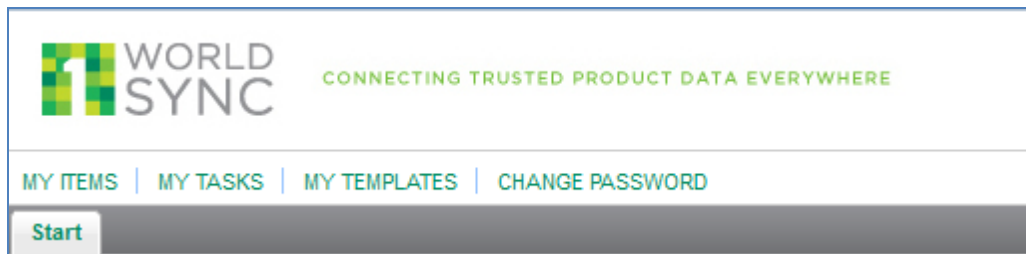

Last modification was on item **13131313131311** at **2013/04/26 11:04**

Dashboard – Item Summary on start page

The information displayed here provides you with a summary of the current status of your items. This tab is always open.

## Menu Structure

From the menu bar you have access to all functions assigned to you by the administrator. The respective menu items will open in a separate tab when clicked

1 WORLD SYNC CONNECTING TRUSTED PRODUCT DATA EVERYWHERE

MY ITEMS | MY TASKS | MY TEMPLATES | CHANGE PASSWORD

Start

#### Dashboard menu bar

The standard functions, i.e. language or time zone setting, password change and the logout function can be accessed from here as well.

The following functions are available to you for maintaining item data in the application

**MyItems:** This is the main module of the application where new items are created or uploaded, and existing items are searched for and maintained (e.g. edited, deleted, validated, released, published, or downloaded etc.). The item list per default presents all items no matter which status they have.

**MyTasks:** This list is restricted to published items for which a response with a 'To Do' status has been returned, e.g. a GDSN exception or a recipient confirmation (CIC = Catalogue Item Conformation) with status Review. This usually means a recipient retailer demands corrections or improvements to the received item data.

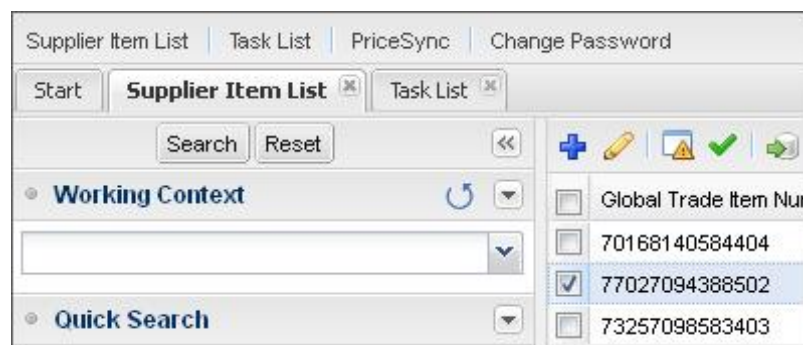

**My Templates:** This is the area where new item templates can be created and existing templates can be searched for and maintained. Templates contain item data that are common for many items. They are saved under a template name and the content defined as common in the template is then automatically populated when creating an item from a template. The templates listed can also include templates assigned to the supplier by the Community Admin.

Change password: This is the place to change your log in password.

The right-hand section of the menu bar offers the standard functions. They include the language selection function and the Logout. The Info menu provides access to a number of help topics as well as information on the product version. It explains elements and functions and describes typical work processes of the application.

## Screen Structure of Module Area

Every function is opened in a separate tab. You can have several tabs open at the same time and switch between them. Several items or templates can be opened at the same time as well - each one displayed in its own tab. It is possible to switch between these items and templates.

### Tabs in the module area

#### Status line

At the bottom of the screen there is a status line that provides information on recent actions, for example a confirmation message after changes to an item are successfully saved.

Status Line

#### Display of functions

All available options are always visible as buttons on the function bar. Whether an option is active or not depends on the context (selection of items, status of items). Options that are not active are grayed out. See further information in section [‘Hit List Function Bar’](#).

Function bar above the Hit List

## General Control Elements and Widgets

You can change the size of the various areas of this screen. To do so, move the mouse pointer to the dividing line between the areas whose size you want to change. When the mouse pointer changes, click and hold the left mouse button down. Then pull the dividing line in the required direction

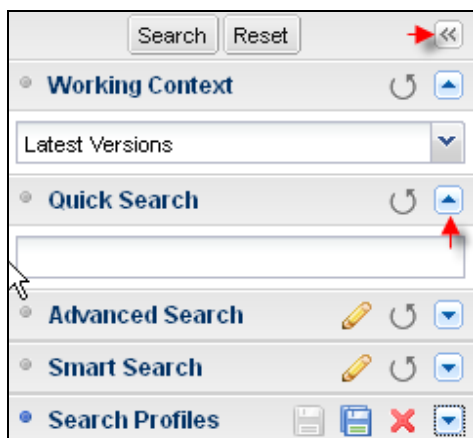

Dividing line with mouse pointer icon

#### Widgets

The search section to the left of the item hit lists contains five widgets (see below), that can be expanded and collapsed again by clicking the arrow icon in the title bar.

If not needed, you can hide the entire search with all widgets at once by clicking the double arrow icon in the function bar. If you click this icon again, the area reopens.

Arrow icon for expanding/collapsing widgets

### Edit an Item without saving

An item that has not been saved after modification is marked with an asterisk in front of the tab title. Trying to close this item tab leads to a warning message shown below. Selecting 'Reject Changed' will revert the entry back to its original state.

Unsaved item tab with asterisk in tab title

## Set UI Language

If your system supports more than one language, you can change the UI language here.

Select the language you wish to switch to from the drop down menu.

Drop down for changing the language (example – available languages differ depending on customer requirements)

Please note that all open tabs will be closed when the language is switched.

---

## Set Time Zone

To change the time zone setting, select the control from the menu bar.

Then open the drop down list in the dialog shown below, select your time zone by clicking, and Save or Cancel.

Flagging Show all time zones will extend the listing to all available time zones.

Once the time zone is changed all date and time information in the user interface will automatically be adjusted.

---

## Change Password

To change your password, simply access the Change Password menu.

#### *Change Password option*

The Change Password dialogue opens as a separate dialogue box on the dashboard.

The image shows a 'Change Password' dialogue box with a title bar containing 'Change Password', 'Comments', and a close button. Inside the box, there are three input fields: 'Old password:', 'New password:', and 'Confirm new password:'. Each field contains a series of dots representing masked text. At the bottom right of the box are two buttons: 'Save' and 'Cancel'.

#### *Change Password dialogue*

In the respective fields enter your current password, then enter and confirm the new password. Click Save to save the new password. It will be valid from the next log in. Clicking Cancel closes the dialogue without changing the password.

The new password must meet the following requirements:

- It must have at least five characters.
- It can contain any alphanumeric characters. Passwords are case sensitive. You can use letters A to Z/a to z and the numbers 0 to 9.
- The following non-alphanumeric characters are allowed:  
~!@#\$%^&\* \_+=`|()\{}[]:;'"<>,.?/
- The new password must be different to the previous password.

# MyItems

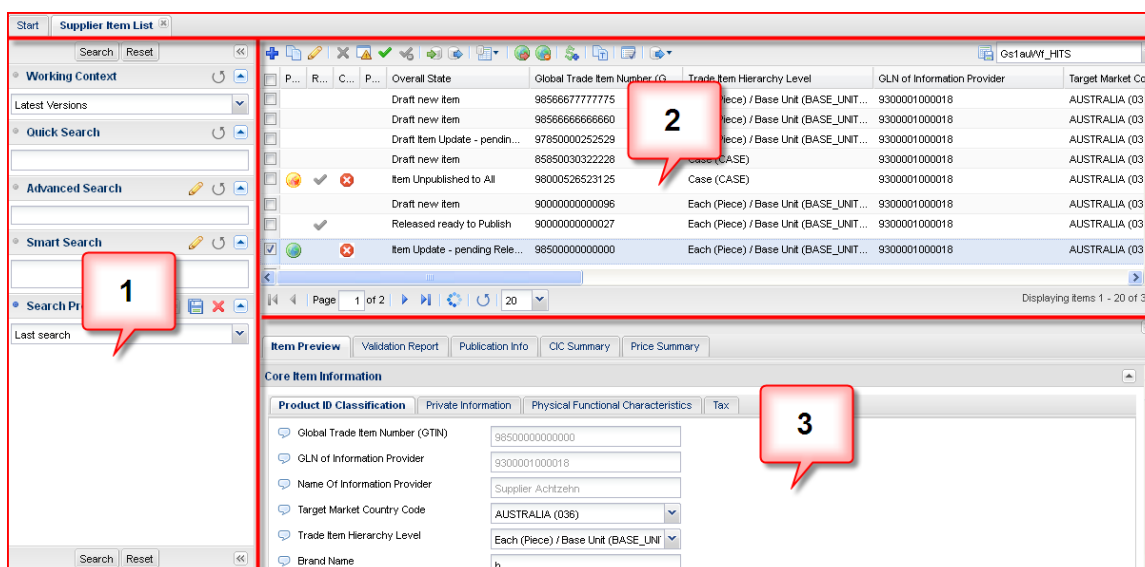

When you access the application for the first time, all items are displayed. The latest versions of the items will be shown sorted by the 'Last User Change' option by default. In order to reduce the number of displayed hits, you can carry out a search or use other selection options. Proceed as described in the section 'Search and find Items' to do this.

The entry screen of the item list consists of three areas:

Area showing the various selection and search components (area 1 in the figure)

Hit list area, showing the items found and a function bar above the list of items (area 2 in the figure)

Area for the item preview, validation report, and other information on actions carried out by the user (area 3 in the figure)

Structure of the Supplier Item List module

## Selection and Search Components

The left-hand area of the module allows you to use search and filter criteria to affect the selection of items. The selected criteria take effect on the items displayed in the hit list and supplier item details as soon as you click Search.

*Selection and search components area*

This area gives you various different options for finding items:

- You can restrict the item search to items with a specific release status.
- You can use the Quick Search function.
- You can also carry out a structured search in attributes (Advanced Search function)
- You can restrict the item search using status filters in the Smart Search area.
- You can use an existing search profile.
- You can find an item starting from the task list.

## Execute a search

Once you have defined all required restrictions and search criteria, click Search in the title bar or footer of the search and selection conditions area or press Enter.

The search is carried out with the selection conditions defined. This means that the results only show items that meet the defined criteria.

A blue icon in the title bar indicates whether a search restriction has been defined in a widget. This allows you to see where you have defined search criteria. If no selection conditions have been defined in a widget, the icon is grayed out.

*Widget with search restriction*

You can reset the search restrictions made in each widget using the Reset option.

*Reset option*

You can also combine these widgets to one complex search profile, i.e. you could enter search/filter criteria in two, three or all four widgets, in order to search for items that match all these filter criteria at once.

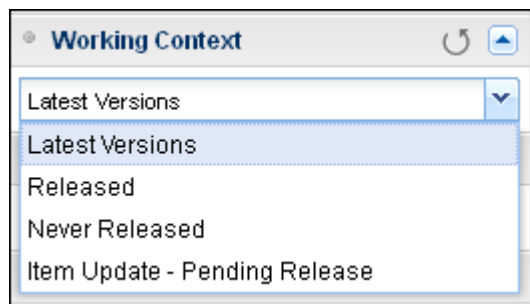

## Save search profiles

The last search executed here before leaving the hit list will automatically be used next time you enter it.

Search profiles can also be permanently saved and reused any time later on. This is the purpose of the fifth widget Search Profiles at the bottom of the search area. (See respective sub section below.)

## Find Items in a specific Working Context

In WS|Publishing you can reduce the number of items that are displayed in the hit list via the release status of items.

*Working Context area in the area for the search and selection components*

The following possible selections are available in the Working Context widget:

**Latest Versions:** All items belonging to the GLN of the user are displayed. The hit list shows items of the most recent revision regardless of whether this revision is released, published or a working version.

**Note:** The hit list will be sorted in this Working Context by default. It is recommended to carry out all updates and data maintenance from the 'Latest Versions' Context to ensure only up-to-date items will be displayed for the user.

**Released:** Selecting this working context shows all items belonging to the user's GLN(s), where a released revision exists. The attribute values shown in the list are the released revision attribute values.

**Note:** For this working context, an item with a 'pending Release' has been released. Only the released version with its attribute values are available in this context.

**Never Released:** All items that belong to the GLN of the user and that do not yet have a released revision are displayed. The hit list shows the attribute values of the working version (most recent version).

**Item Update – Pending Release:** Selecting this working context shows all items belonging to the user's GLN(s), which do have a released version and a (latest) working revision. The attribute values shown in the list are the working (latest) revision attribute values.

## Find Items with the Quick Search function

Within the hit list, you can search for items that you want to edit or copy. To do so, use the search function in the Quick Search widget.

*Search and selection components area - Quick Search*

In the Quick Search input field, enter one or more search terms. Your search terms must consist of alphanumeric characters.

You can restrict the number of items displayed in the hit list by using wildcards and logical operators. The following table gives you an overview of ways in which you can restrict the search. The entered search terms are shown in square brackets ([]) in the examples.

Search for a word	If you enter a single word as a search term, the system finds all items that contain this word as an attribute value. A search for [shelf] finds all items that contain "wall shelf", "pine wall shelf", and "red wall shelf", for example.
Search for more than one word	If you enter more than one word (separated by spaces) as search terms, the system finds all items that contain at least one of the words you entered. A search for [pine wall shelf] finds items with the attribute value "wall shelf", "pine", "red wall shelf", and "pine wall shelf", for example.
[*]	You can use the wildcard [*] when entering search terms. The asterisk represents any string of characters. The search term [b*k] finds "book", "back", "bark", and "buck", for example. You can use a placeholder at the beginning, in the middle and at the end of a search term. [b*k] and [book*] are allowed.
[+]	The search connector [+] connects search terms using an AND relationship, thus specifying that all entered terms must occur in an attribute value in order for the item in question to be included in the search results. You can use wildcards and search connectors together. The search queries [wall shelf +pine] and [wal* +pine] find all items with the attribute value [pine wall shelf]. Note that you cannot use a [+] sign at the start of a search term. The search ignores this type of search term. Search terms restricted using [+] must always relate to a preceding search term.
[-]	You can use the search connector [-] to exclude search terms. The system finds items that do not contain the term preceded by [-]. A search for [wall shelf -pine] finds items with the attribute value "wall shelf", "larch wall shelf", and "red wall shelf" but not "pine wall shelf", for example. Search terms restricted using [-] must always relate to a preceding search term. Again, you can combine wildcards and search connectors.
["..."]	If you place quotation marks around the search term you enter, the search only finds items that contain an attribute value with this exact phrase. For example, a search for ["heavy duty work gloves"] finds all items whose attributes contain the exact character string "heavy duty work gloves".

If necessary, define further restrictions for the search.

Then click Search.

The search is carried out using the defined search criteria. This means that the results only show items that meet the search criteria and the visibility conditions defined for the user.

## Find items with the Advanced Search function

In addition to the Quick Search function, |variable=Productname allows you to carry out a structured search with advanced search criteria.

When using the Advanced Search function, you can define which values certain attributes must have in order for items with those attributes to be included in the hit list. This allows you to form a set of search criteria. You can view the restrictions defined using the Advanced Search functions if necessary.

You can carry out an ad-hoc structured search or save the selected search criteria as a search profile and make this profile accessible to other users.

## Define a search criteria for an advanced search

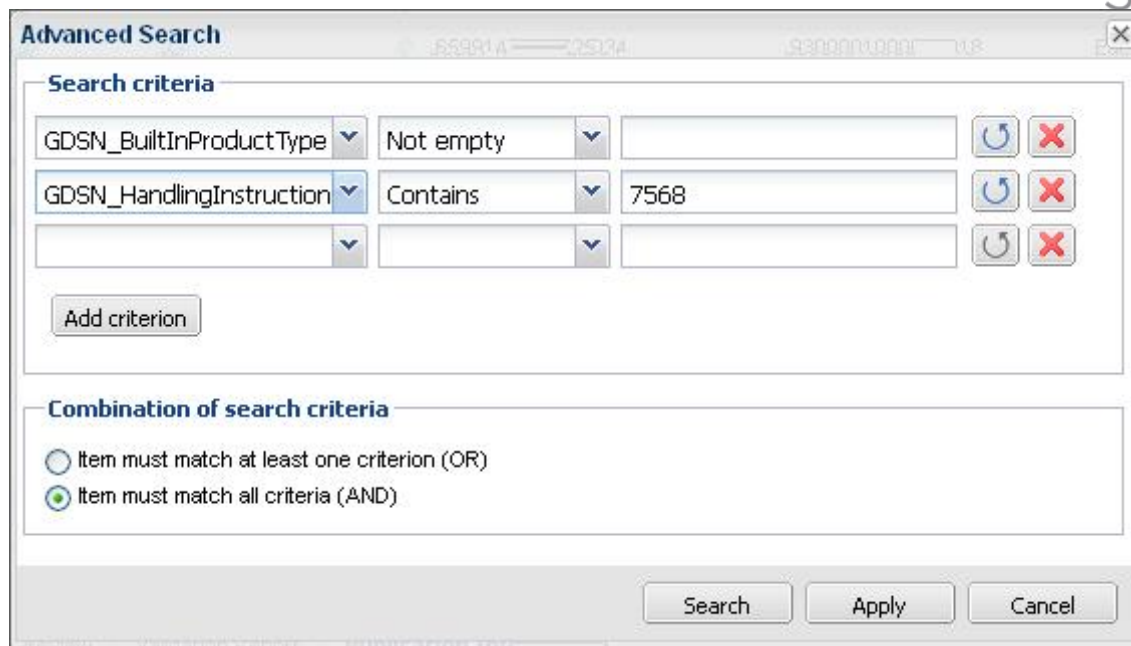

Proceed as follows to define the search criteria for an advanced search:

In the Advanced Search widget, click the Edit icon.

*Edit option in Advanced Search widget*

The form for defining search criteria opens.

#### Defining search criteria

Define the search criteria for the attributes. To do so, select the required attribute from the dropdown boxes and then, in the input field, enter the value.

You can restrict the list of attributes shown in the dropdown box by entering the name of the attribute or part of its name as a search term in the search field.

There are the following types of search criteria:

Search criterion	Description
Contains	The attribute contains the entered value.
Does Not Contain	The attribute can contain no value or any value other than the entered value.
Equals	The attribute value is exactly the entered value. Note that in the case of attributes of the type Boolean, the value "true" should be entered here. The value "false" should not be used for this search criterion, since in this case items for which the attribute is not set would not be found.
Does not equal	The attribute can have no value or any value other than the entered value. Note that in the case of attributes of the type Boolean, the value "true" should be entered here. The value "false" should not be used for this search criterion, since in this case items for which the attribute is not set would not be found.
Empty	The attribute has no value.
Not Empty	The attribute is not empty, i.e. it has a value.
From - To	The attribute value lies within the range defined by the two entered

	<p>values. If the search criterion "From"- "To" is chosen, two input fields are shown where you can enter the values for the range. In the case of numerical attributes, the comparison is carried out on a numerical basis; in all other cases, the comparison is alphanumeric.</p> <p>Example for an attribute of the type Identifier: A search for "From" = "a" and "To" = "h" (or "A"- "H") finds all values between those that start with "a" and those that start with "h".</p> <p>Example for an attribute of the type GTIN: The search finds all values that are greater than or equal to the entered "From" value and smaller than or equal to the entered "To" value: The search criterion "From" = "10000000" and "To" = "20000000" would find all GTINs from 10000000 to 29999999; the search criterion "From" = "401234500000" and "To" = "4012345999999" would find all GTINs with the stem "4012345", e.g. "4012345000009".</p>
Begins With	The attribute value begins with the entered value.
Does Not Begin With	The attribute has no value or the attribute value does not begin with the entered value.
Ends With	The attribute value ends with the entered value.
Does Not End With	The attribute has no value or the attribute value does not end with the entered value.

You can define multiple search criteria for an attribute: To do so, choose the required attribute (e.g. "Product Variant Description") in multiple dropdown boxes and give each one a value ("red", "green", and "blue"). The hit list then displays all items that have one of these values ("red", "green", or "blue") for the attribute in question. Make sure that the option Item must match at least one criterion (OR) is selected.

Make sure that you enter the attribute values in the correct format. This depends on the attribute type of the selected attribute:

Attribute Type	Search Criteria	Format
Number	Contains, Does Not Contain, Equals, Does Not Equal, Empty, Not Empty, From-To, Begins With, Does Not Begin With	Digits with a maximum of one decimal point
Date	Equals, Does Not Equal, Empty, Not Empty, From-To	YYYY-MM-DD
Date-Time	Equals, Does Not Equal, Empty, Not Empty, From-To	YYYY-MM-DD hhmm
GTIN	Contains, Does Not Contain, Equals, Does Not Equal, Empty, Not Empty, From-To, Begins With, Does Not Begin With, Ends With, Does Not End With	Digits

Text	Contains, Does Not Contain, Equals, Does Not Equal, Empty, Not Empty, Begins With, Does Not Begin With, Ends With, Does Not End With	Alphanumeric characters
Enumeration Type	Equals, Does Not Equal, Empty, Not Empty	System name

## Add further search criteria and remove search criteria

The number of search criteria in the Advanced Search area can be defined freely:

You can use the Add criterion option to add further search criteria. Each time you click this option, a new line with selection and input fields is generated; you can use each new line to define search criteria for the attributes.

You can use the Remove option - provided for each line - to remove existing search criteria.

### ***Combine search criteria***

Define how you want the specified search criteria for the attributes to be evaluated. You can combine the search criteria with AND or OR. The selection applies to all criteria defined in the Advanced Search area.

Activate one of the following radio buttons:

Item must match at least one criterion (OR)

Item must match all criteria (AND)

Exit the advanced search

You now have the following options for completing the operation.

Click Search if you want to use the search criteria to restrict the hit list straight away and immediately obtain a search result.

Click Apply to return to the hit list without executing an immediate search and have the ability to add more search criteria using the Quick or Smart search.

The search criteria you defined are now displayed in the Advanced Search widget on the left side (read-only mode).

Click Cancel to abort the advanced search and immediately get back to the hit list.

Delete all search criteria for the advanced search

To delete an advanced search along with all defined search criteria, proceed as follows:

In the Advanced Search widget, click the Reset icon.

The search criteria are deleted and the field with the search criteria is now empty.

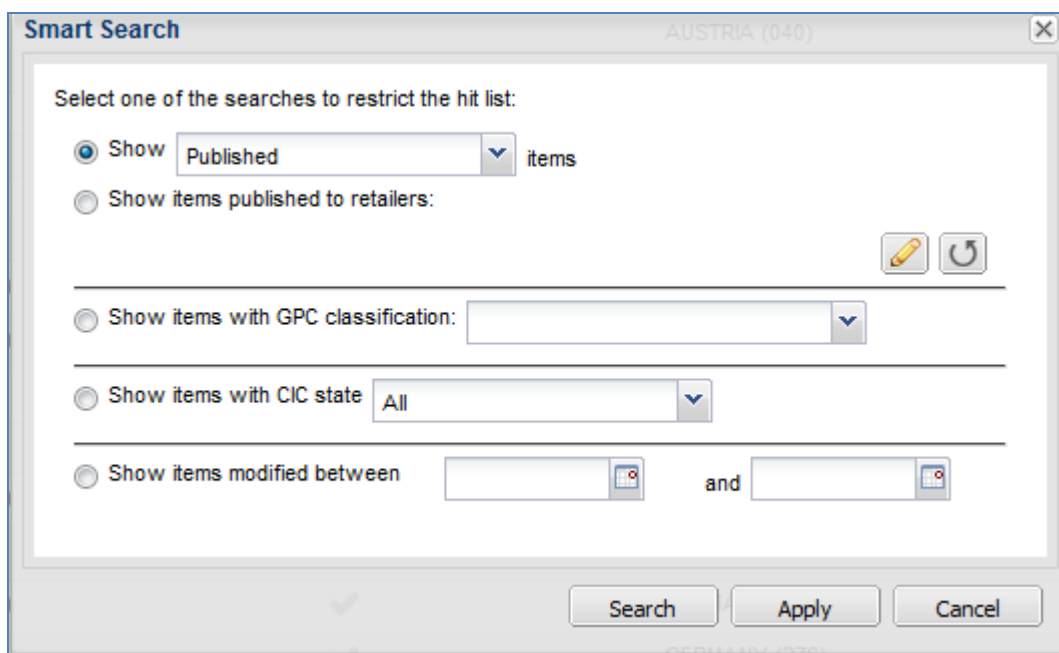

## Find Items with the Smart Search function

You can restrict the hit list by means of a predefined search (Smart Search function). To define the search criteria for a smart search, proceed as follows. In the Smart Search widget, click the Edit icon.

*Edit option in Smart Search widget*

The form for defining search criteria opens.

**Smart Search** AUSTRIA (040)

Select one of the searches to restrict the hit list:

- ☒ Show  items
- ☐ Show items published to retailers:  
- ☐ Show items with GPC classification:
- ☐ Show items with CIC state
- ☐ Show items modified between  and

*Smart Search*

There are the following types of search criteria:

- You can display all items with a specific publication status (Published, Sent, Not Sent) by selecting the required entry in the dropdown box.
- You can display all published items for one or more retailers by activating the radio button next to the option and then click the Edit  icon. A search dialogue opens where you can search for the required retailers and select them. You can use the Reset option to clear your selection.
- You can display all items with a specific GPC (global product classification)

- You can display all items with a specific CIC status (Accepted, Synchronized, Review, Rejected).
- You can display all items that were edited within a certain time period. Type in the dates or use the calendar function to select the start and end dates of the period. If you do not enter an end date, all items changed since the entered start date are displayed.

You now have the following options for completing the operation.

Use the Apply option to use the defined search criteria to restrict the hit list.  
Click Cancel to return to the hit list without saving the changes.

The defined search restrictions are now displayed in the Smart Search widget (read-only mode).

*Results of search restrictions for a smart search*

To delete a smart search along with the defined search criteria, proceed as follows:  
In the Smart Search widget, click the Reset icon.  
The search criteria are deleted and the field with the search criteria is now empty.

## Find Items with Search Profiles

You can use search profiles to save defined search settings in order to use them for future searches.

*Search Profiles widget*

### Create a search profile

To create a new search profile, proceed as follows:

Define the required search settings in the selection and search components area.  
Click Save in the Search Profiles widget.  
In the dialogue box that now opens, enter a name for the new search profile.

Complete the operation by clicking Save. Click Cancel if you want to return to the hit list without creating a new search profile.

### ***Change a search profile***

To change an existing search profile, proceed as follows:

From the dropdown list, select the required search profile.

Change the search settings or create new search settings for the selected search profile.

Then either click the Save or the Save as option within the function bar of the Search Profiles widget. This option is only active once you have changed the search settings for the search profile.

The changes are saved in the search profile you selected previously.

### ***Delete a search profile***

To delete a search profile, proceed as follows:

From the dropdown list, select the required search profile.

Click the Remove option.

Confirm the safety prompt that now appears. Click Cancel if you want to return to the hit list without deleting the search profile.

The search profile is deleted from the list.

### ***Apply an existing Search Profile***

To apply an existing search profile, proceed as follows:

Select the required search profile from the dropdown box of existing search profiles.

The search settings for this search profile are now loaded.

Then execute the search by clicking the Search button.

---

## **Hit List**

### **Structure of the hit list**

The item data belonging to the Supplier GLN is displayed by default providing you with a quick view of key and status information of the selected item. This information is displayed below the hit list at the bottom of the screen without having to open the item.

A number of functions such as editing or publishing items can be performed directly by selecting the icons from the function bar. This section describes how to work with the hit list. It deals with the structure of the module, its basic functions, and the control elements used in the various use cases.

Overall State	Publication State	CIC State	Release State	Target Market Country Code	Global Trade Item Number (GTIN)	Information Provider	Trade Item Unit Descriptor

Hit list

## Customize the Hit List

The layout of the hit list can be modified according to the user's preferences in a number of ways.

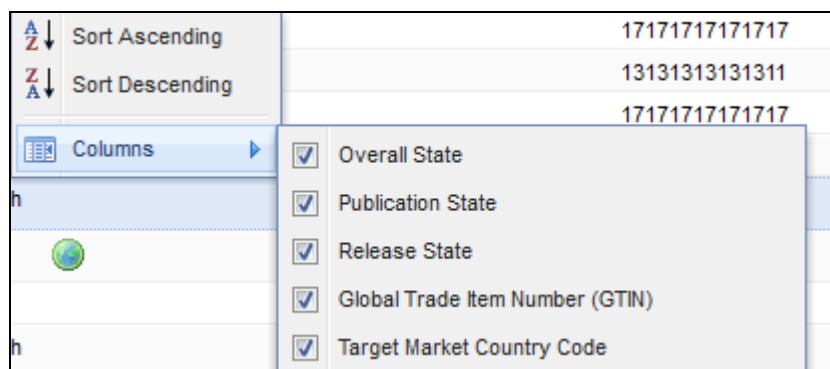

### Sorting the Results

By default, the results are sorted by processing date which means the items that were changed last are always displayed at the top.

You can sort the hit list in ascending or descending order by column. To do so, click the arrow icon in the header of the column you want to use for sorting. A drop down menu opens, providing the options Sort Ascending and Sort Descending. Alternatively, you can simply click the column header.

### Showing and hiding Columns

The columns displayed in the hit list can be shown or hidden. Click the arrow icon in one of the column headers. A dropdown menu appears, providing the submenu Columns. You can now define which of the columns you want to display by activating or deactivating the checkboxes next to the column names accordingly.

Column options

### Arranging columns differently

You can change the position of the columns in the hit list. To do so, click the header of the column whose position you want to change, hold down the mouse button, and pull the column to the desired position in the table. Release the mouse button once the column is in the position you require. Please note that the order the columns are displayed in is also reflected in the columns submenu described above.

### Save Layout

Once you have customized the list, you can save the layout by activating the Save layout button on the top right of the screen.

## Hit List Function Bar

The function bar below the hit list contains actions that you can carry out on the selected items:

Function bar

Icon	Description and Definition
	Create: Use this option if you want to add a new item
	Copy: You can create a new item on the basis of an existing item.
	Edit: You can use this option to make changes to an item.

	Delete: Only saved draft items, which have not been released or published can be deleted.
	Validate: From the hit list, you can check items for completeness, formatting, and consistency so that you can release them later on.
	Release: If the current revision of an item has a quality state that is suitable for release, you can use the Release option to release it. To do so, proceed as described in the section 'Release Items'.
	Undo Release: The release of an item can be revoked with this button.
	Upload: You can create items by importing them into the system from an Excel file.
	Download: To export the data of one or more items into an Excel or PDF file use this option. You can also generate an empty Excel file to use as a template when creating items for upload from here.
	Maintain possible publication targets: Choose this option to select future recipient(s) to publish the items. To be confirmed with the Publish option.
	Publish: Choose this option if you want to publish the selected item in the source data pool.
	Unpublish: The publication of an item can be revoked with the 'Unpublish' button.
	Template: An item can be saved as template, to use it as a basis for other new items.
	Select Rows: Use this button to select all rows or lines on all pages of the hit list at once.

## Overall State, Release State and Publication State

The Overall State gives information about the current status of the items. The table should give an overview about the status as well as the matching icons displayed in the Release and Publication state.

Publication state	Release State	Overall State – Definition
		Draft new Item A newly created item which has been saved and perhaps edited several times Not released yet.
		Item update – pending release New item which was already released, but not yet published. Has been edited again afterwards, and the latest version is not yet released.
		Released ready to publish

	✓	Newly created item – possibly edited several times– latest version is already released and now ready to be published.
		Sent item update – pending release Item which itself was already released and published, but has been edited again. The latest version is not yet released. As soon as this is done, the item is automatically sent to the source pool again.
	✓	Item published Item which was already released and published. No changes took place on this item meanwhile. After publishing the item cannot be unreleased anymore.
		Sent item update –pending release Item which was already released and sent as part of a published hierarchy, but afterwards has been edited again. The latest version is not yet released. As soon as this version is released, it is automatically sent to the pool again.
	✓	Item sent Item which was already released, and sent as part of a published hierarchy. No changes took place on this item meanwhile.
	✓	Unpublished to all Item which itself was unpublished from all recipients, but has not been edited and is still released.
		Unpublished to all –draft item Item which itself was unpublished from all recipients and has been unreleased.
	✓	Unpublished to all – still sent Item which itself was unpublished from all recipients but is still part of another published hierarchy and has not been edited again.
		Item unpublished to all – still sent Update – pending release and re-publish Item which itself was unpublished from all recipients but is still part of another published hierarchy and has been edited again.

## CIC State Column

The CIC State column displays the cumulated confirmation status of each item, so only the last status will be displayed here. Beside a CIC, GDSN Exception will be displayed here as well.

The table gives an overview of the icons displayed along with the CIC State in the hit list.

Cumulated CIC State	Comment
---------------------	---------

	No CIC feedback received yet. No feedback from recipients and no CIC Review as well as no GDSN Exception Item is released again and there is no open CIC review and no GDSN Exception.
	CICs from recipients have been received and have status ACCEPTED.
	CICs from recipients have been received and have status SYNCHRONIZED.
	“To do” state: At least one latest CIC has state REVIEW and there is no open GDSN Exception.
	CICs from all recipients have been received and have the state REJECTED.
	“To do” state: At least one GDSN Exception was received for that item and is still open.

---

## Area for Preview, Validation Report, and further Information

A report area is provided beneath the hit list. You can change the size of this area or you can hide it altogether. This area displays a preview of the item data or the validation report, for example. Various tabs provide further information on the selected item.

### Item Preview

If you select an item from the hit list by clicking it once, a preview of the item data for the item is displayed on the Item Preview tab beneath the list. The preview gives you a quick overview of the item and only displays a limited set of attributes. The item preview is in a read-only mode. No modifications can be carried out here but validation errors will be displayed for the user.

## Validation Report

The Validation Report tab beneath the hit list provides the item data check in accordance with the validation rules. Highlight one or more items in the hit list and click on the  Validate button. The validation report will not be loaded automatically; it has to be activated by the user. If there are errors or warnings for an item these are listed in the report. When highlighting more than one item, the validation report shows the reports for the items one after another.

Report for item 40103557926484				
<div>  The item 40103557926484/9300001000018/036 has been added. (0 errors, 0 warnings, 0 hints) </div> <div>  The item 40103557926484/9300001000018/036 can not be released. (35 notes) </div>				
	Operation	Attribute	Message	Rule ID

	release	Effective Date	The mandatory indication "Effective Date" is missing.	21111

Validation Report

The top column shows icons indicating the result in terms of Adding, Saving or Releasing the item in question.

Icons in the report:

	Action successful / no validation errors
	Cannot be released due to validation errors

Icons for various error levels:

	Error	The data cannot be saved or released.
	Warning	The data can be saved but not released.
	Info	The data can be saved and released.
	Error	The data can be saved but not released.

## Publication Info

The Publication info provides the information if and to whom the item has been published as well as the publication date and delivery state.

2 publication(s), to:		
Recipient name	Delivery date	Delivery state
GS1 AU Autopublish Retailer 30	2013-03-13	
DATARET6	2013-04-10	

*Publication Info*

You are able to publish or unpublish the item from here. See chapter on publication for details.

## CIC Summary

The CIC Summary tab displays the number of received CatalogueItemConfirmations (CIC) as well as the most recent CIC from each retailer.

The icon  is displayed if at least one current CIC has the status REVIEW.

The icon  is displayed if at least one GDSN Exception has been received.

The icon  is displayed if the CIC of this retailer has the status ACCEPTED.

The icon  is displayed if the CIC of this retailer has the status SYNCHRONIZED.

The icon  is displayed if the CIC of this retailer has the status REJECTED.

An immediate feedback on items when major validation errors arise will be send by the source data pool. This will be done by the GDSNException displayed as shown in the screenshot below:

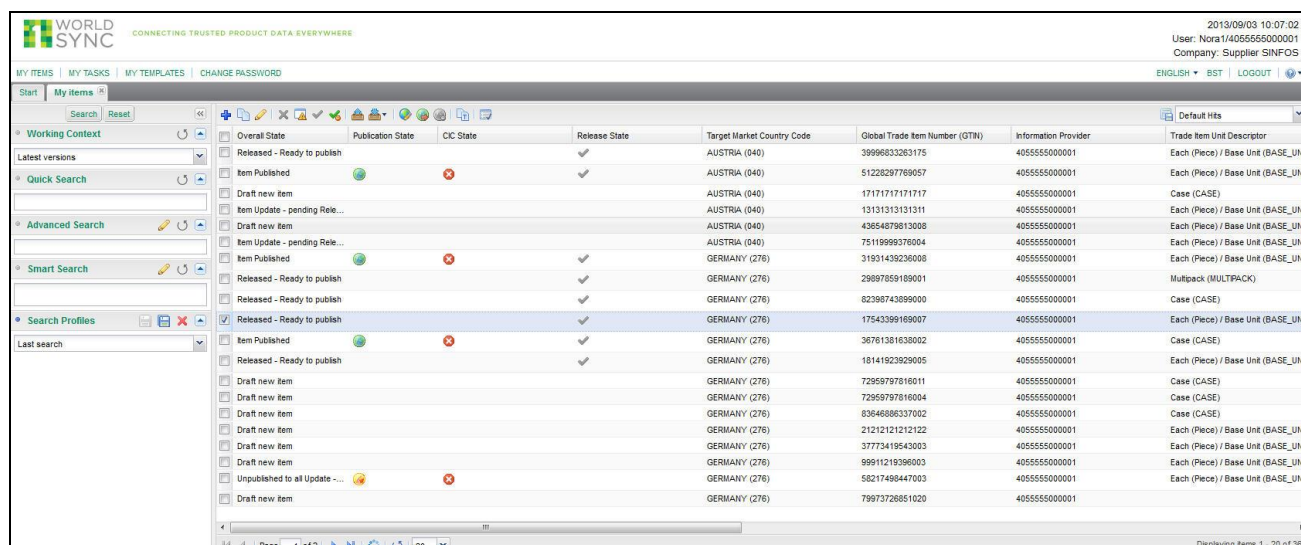

Item Preview	Validation Report	Publication Info	<b>CIC Summary</b>	Price Summary
No CICs received, GDSN-Exception received				
<input checked="" type="checkbox"/>	CIC-state	Recipient Name	Response message for CIP timed out	

# Maintain and create item data

## Item editor

Open the hit list to access your items. All tasks relevant to item data maintenance can be performed from here. To access an item, simply double click on it in the hit list

### Supplier Item Details

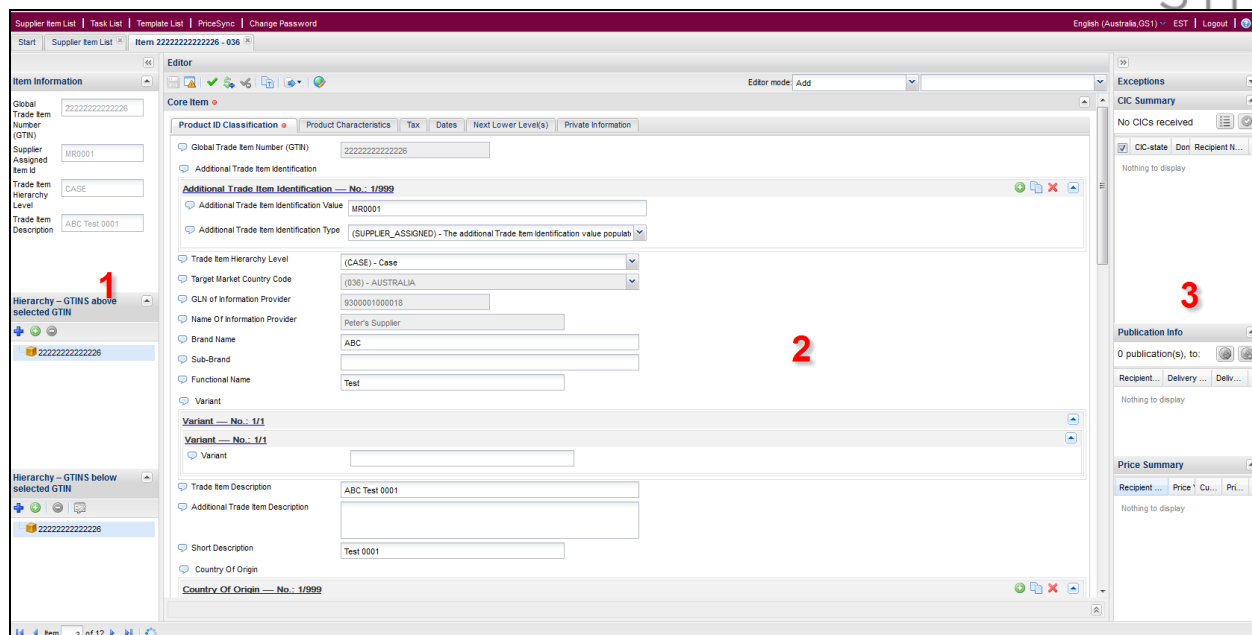

Any item accessed in the editor will open in a new tab. The tab header always displays the item GTIN.

The supplier item detail area is split into three sub-areas:

The left-hand area (area 1 in the figure) shows the hierarchical assignment of the item. The packaging and component hierarchies for the item are displayed here in their own sub-areas.

The actual Edit Form (area 2 in the figure) forms the main part of the supplier item details area. You can make changes to the attributes here. In addition, there is a report area for the validation report beneath the edit form. You can change the size of this area or hide the report area.

The right-hand area (area 3 in the figure) next to the edit form provides further information on the selected item.

### Structure of item details

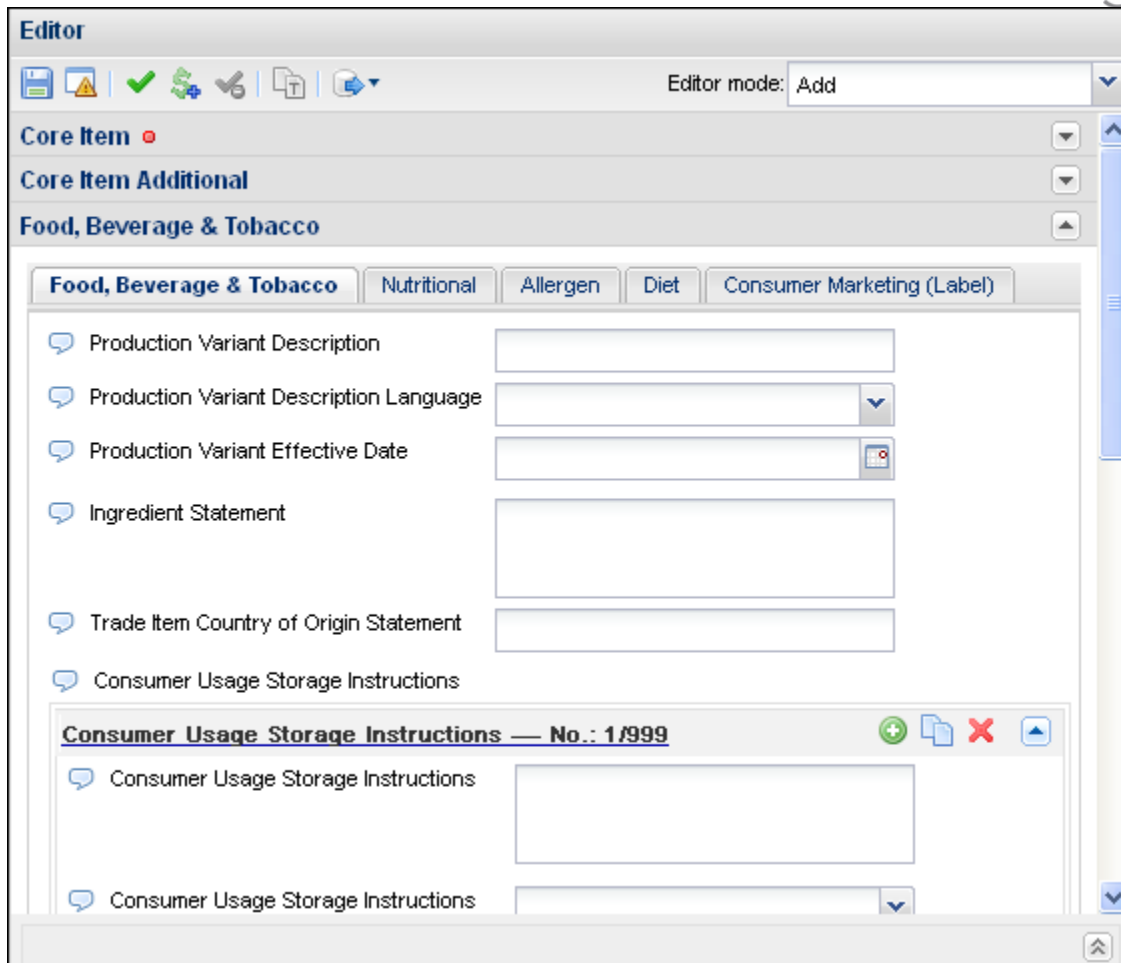

The status line in the supplier item details allows you to navigate through the item data in the hit list without having to go to the hit list or individual supplier item details first. You can jump to the first or last item data record or move to the previous or next record.

### Status line

## Structure and function of the editor

The editor displays the attributes of the item grouped into flex bars and tabs. You can switch between the various attribute groups by clicking the tabs and flex bars where the attribute groups are located.

Structure of the editor - edit form with function bar

The editor has a menu bar below the actual edit form and an area for the validation report which can be hidden if necessary.

## Menu bar

You can use the options provided in the function bar to perform the necessary actions for the displayed item data record

Function bar

## Save

You can use the Save function to save your changes. This will generate a new revision of the selected item.

## Validate

At any time while making entries or changes, you can validate the item data to make sure that it is complete and correctly formatted. The item data check includes the validation of the entered attribute values on the basis of the validation rules defined in the system.

## Release

If you have saved the specified item data without errors, you can now release the item. To do so, click the Release icon.

## Undo Release

If an item is released but not yet published, you can revoke the release and change the item state to a working version. Please note that if the item is already published, you need to revoke the publication before being able to select the undo release function.

## Save Template

If an item is to be used as a basis for other items, it can be saved as a template. Saved templates can be selected from a drop-down menu then in the 'Create Item' dialogue. For detailed description of the template function, please refer to the separate chapter in the documentation

## Export PDF

The item currently opened in the editor can be exported to a PDF file. Simply select this option and choose PDF export. A dialogue will open which allows you to either open or save the PDF.

## Maintain possible publication targets

To add potential recipients of your item you can click this button. A dialogue which allows you to select data recipient(s) will open. If there are retailer specific validations implemented then they will be activated through this function. For more information please see [Select Publication Targets](#)

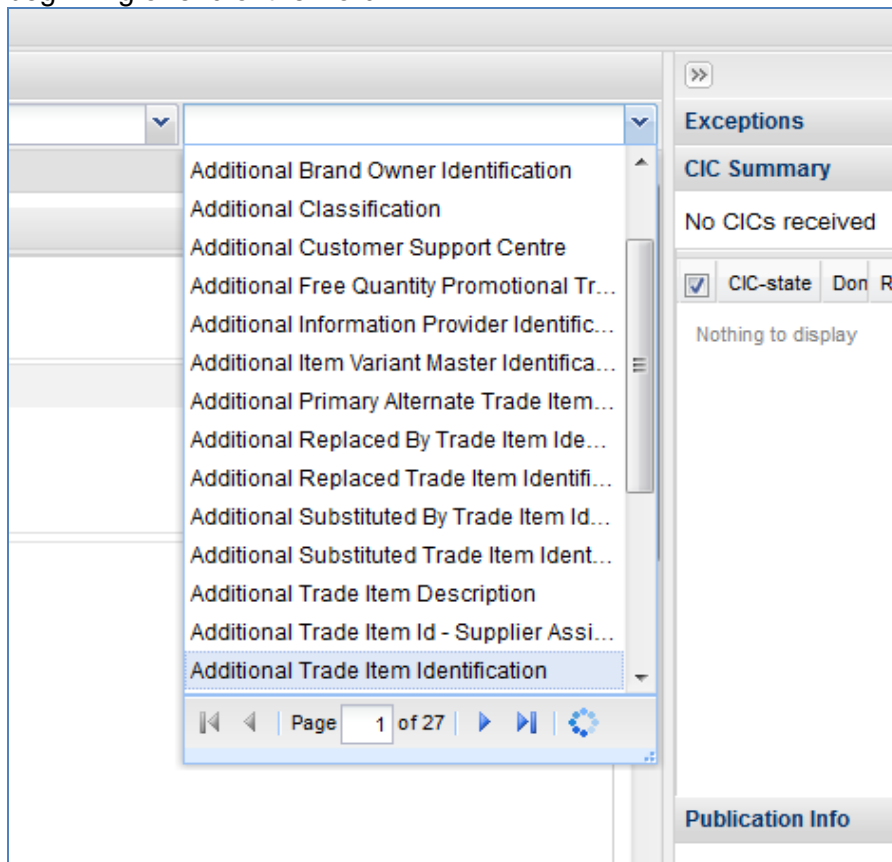

## Attribute finder

Due to the large number of attributes visible in the UI it is not always easy for a user to locate a particular attribute quickly. The attribute finder enables a quick search for attributes from the editor list. To access the attribute finder simply open the drop down menu next to the menu editor mode. Please note that you must be in the item editor for the attribute finder to be visible.

To select an attribute either start typing the name of the attribute you are looking for or select it from the drop down menu. If you are not sure of the exact attribute name, use \* as a wildcard at the beginning or end of the word.

Depending on the view you use, the number of attributes available and the number of pages will differ from the screenshot. To navigate between the pages, use the arrows. Click the attribute you are looking for and the cursor will jump to its position in the UI. Please note that the attribute finder does not include attributes from attribute groups. It will only find the group header. The cursor does not go directly to these attributes; only the tab the attribute group is on is opened.

## Item information and hierarchy information

The widgets in the area to the left of the item editor offer additional information on the selected item. The left-hand area shows the Item Information containing the most important attributes that identify the trade item. This information is displayed regardless of which tab or flex bar is open.

Item Information

Global Trade Item Number (GTIN)
2222222222226

Supplier Assigned Item Id

+ + -

2222222222226

Hierarchy – GTINS below selected GTIN

+ + -

2222222222226

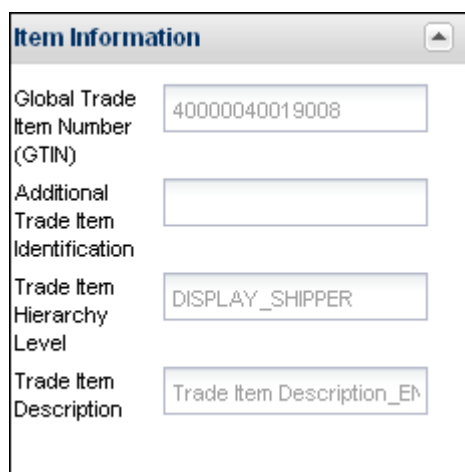

Item 3 of 12

Left-hand widget

## Item information

The Item Information widget displays the most important information that identifies the trade item, regardless of which tab or flex bar is opened. The information displayed here can differ from system to system; it is defined by the customer. However, the GTIN is always displayed here and is always at the top of the screen.

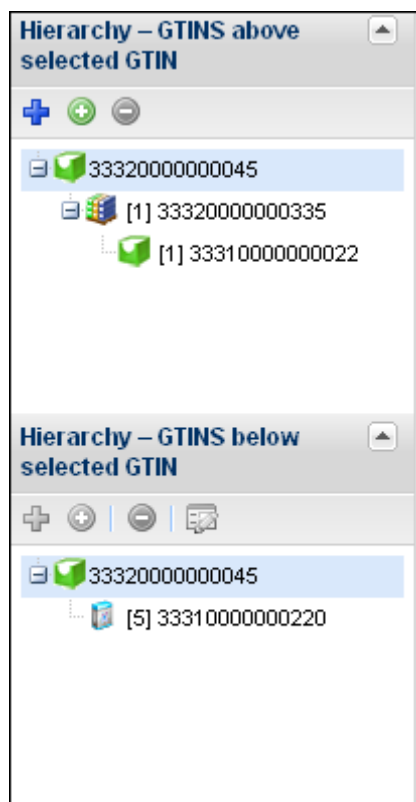

The screenshot shows a window titled "Item Information" with a scroll bar. It contains four input fields with the following labels and values:

Label	Value
Global Trade Item Number (GTIN)	40000040019008
Additional Trade Item Identification	
Trade Item Hierarchy Level	DISPLAY_SHIPPER
Trade Item Description	Trade Item Description_Eh

*Item Information widget – example*

## Navigating through the hierarchical context of the item

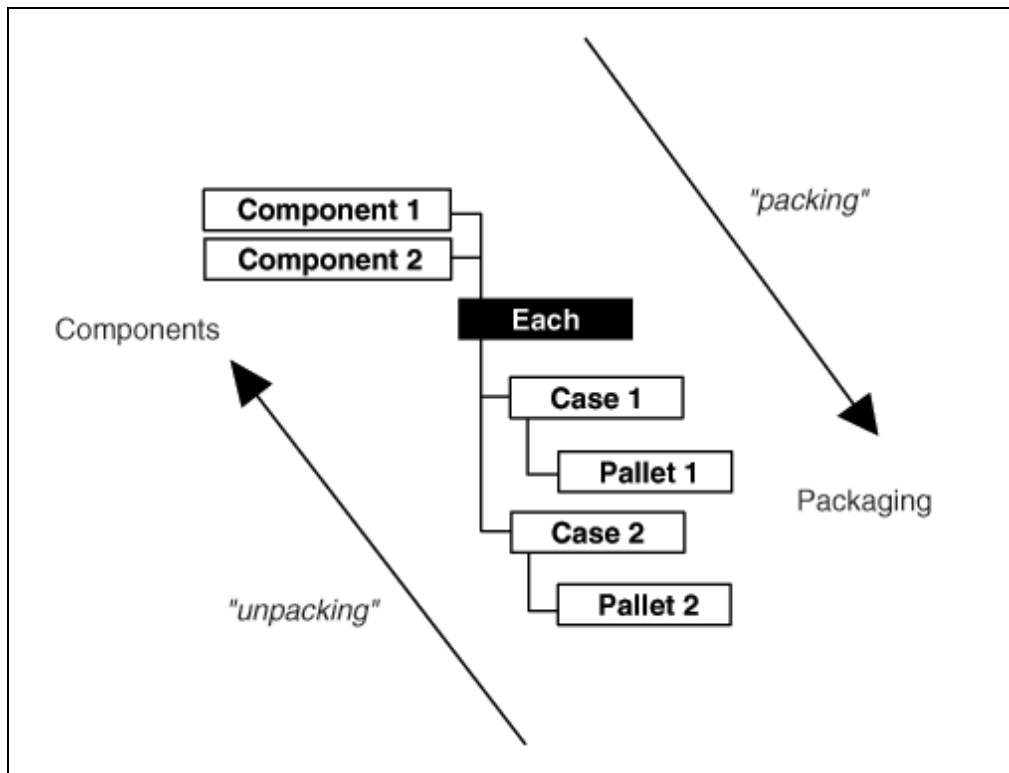

This widget allows you to navigate through the hierarchy of the selected item. The selected item is also the root node for the hierarchies described below. The two hierarchies are displayed in two separate widgets.

*Item Hierarchy Context*

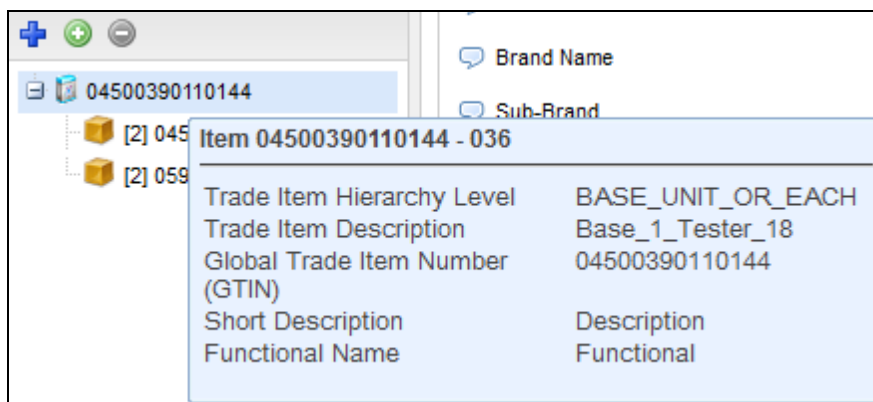

The selection of an item in the Packaging hierarchy widget causes the item to be selected in the Component hierarchy widget, too (and vice versa).

The upper part shows all GTINs above the selected item while the lower part shows all GTINs below the selected item. For example, opening an item marked as a pallet that contains a case and a base item will show the pallet in the upper widget. The lower widget will show the pallet and all lower items.

*Hierarchical context of a selected item - "Each" example*

The Packaging hierarchy area displays the packaging hierarchy to which the selected item belongs. If you position the mouse over an item, additional information is displayed.

The various packaging units are symbolized by different icons.

You can expand or collapse the different levels of the hierarchy tree by clicking the small arrow icons next to each level. Navigate through the hierarchy without having to go back to the hit list and select another item there.

To navigate through the hierarchy, choose one of the following three options:

Click on an item to view the details in the editor. Please note that the focus of the hierarchy will not change. This is useful when working with large hierarchies because it provides a better overview.

Click on an item while holding the left SHIFT key: This not only opens the item details in the editor but also adjusts the hierarchy view. The selected item now becomes the root node in the widget.

Click on the item while holding the left CTRL key: This opens the item in a new tab. The hierarchy tree of the first item opened will remain untouched while the hierarchy of the newly opened item will be adjusted.

You can carry out the following actions in this widget:

You can search for and add an existing component.

You can create a new component and add it to an item.

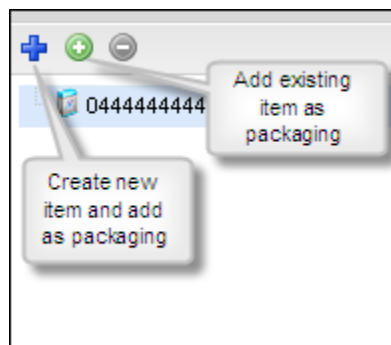

---

## Add a packaging item

There are two ways of adding a packaging item to a hierarchy – either by creating a new item and adding it to the hierarchy or by adding an existing item to the hierarchy.

### Create new item and add as packaging

Please note that this item cannot be a base item; only packaging items can be created from the hierarchy widget. Open the item details and use the hierarchy widget.

*Hierarchy widget*

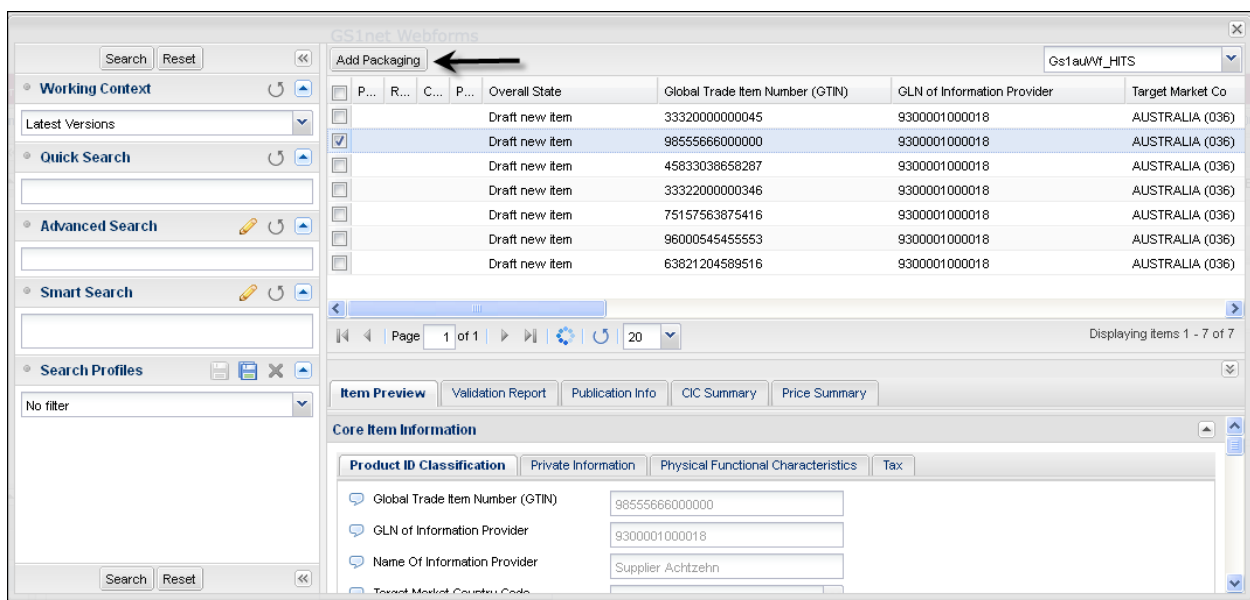

'Create new item and add as packaging' opens the create item dialogue. Enter the GTIN of the trade item. If you want to create the item from a template, select the correct template from the drop down menu. The GLN and target market cannot be edited. The article type is set to packaging item by default. Once the necessary data is populated, click create and the item editor will open. Now populate all necessary attributes and save the item. Once the newly created item is saved, the option Add packaging becomes active in the UI.

Item editor for creating the packaging item

## Add existing item as packaging

To add an existing item as a packaging, select Add existing item as a packaging in the hierarchy widget. A dialogue box with a hit list containing the available item opens. The items can be draft versions, released or published.

Hit list with items to add

Select the item that is to be added and click on Add Packaging.

## Remove a packaging item

You can remove a packaging item from the hierarchy by clicking on the item in the tree and activating the Remove packaging button. This option is deactivated if you have selected the root node of the hierarchy.

### *Remove packaging item*

Removing a packaging is only possible for items with processing status New or Not Released. Packaging items with the status Released, Corrected, or Changed cannot be removed.

A safety prompt will appear confirming this action. If you click Cancel, you return to the supplier item details without removing the packaging. The packaging hierarchy is updated: The removed packing unit and any larger units below it are no longer displayed. The packaging item retains its processing status. The item to which the packaging was assigned remains unchanged.

---

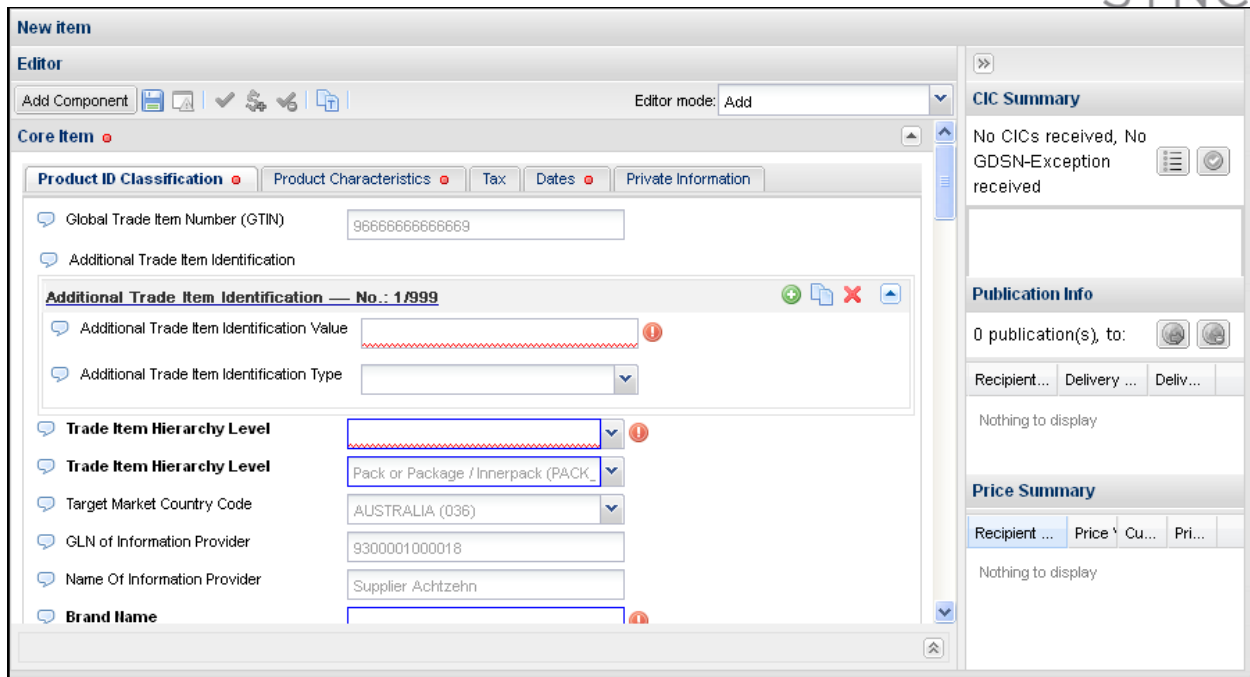

## **Add Components**

You can add a component to a packaging item. Note that you can only add components for items with the processing status New and Not Released. Items with status Released and Published cannot be added as components.

There are two ways of adding a component to a packaging item – either by creating a new component (item) and adding it to the packaging item or by adding an existing item to the packaging item as a component.

### **Create a new component and adding it to an item**

To add a newly created component (package or base item) to an existing packaging item, click Create new item and add as component. The create item dialogue now opens. Enter the GTIN of the trade item and select the article type. If you want to create the item from a template, select the correct template from the drop down menu. The GLN and target market cannot be edited. Once the necessary data is populated, click Create and the item editor will open. Now populate all necessary attributes and save the item. Once the newly created item is saved, the option Add component becomes active in the UI.

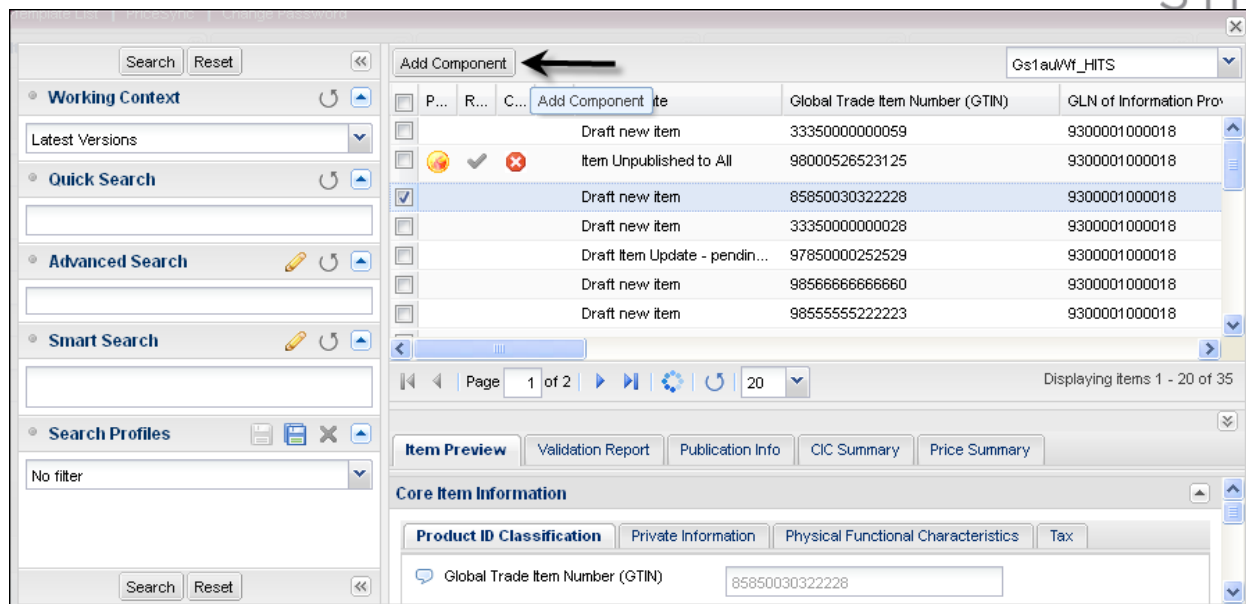

*Item Editor with Add component option*

The dialogue closes. The new item is displayed in the component hierarchy in the item details for the item initially selected. Click the Save option to save the initial item. The component is always saved in the packaging item that contains the component.

## Add an item to an existing component

To add an existing component to a packaging item select Add existing item as component. The hit list opens and allows you to search for and select packaging items and base items. Note that the hit list only displays items with the same GLN and Target Market of the selected item.

Dialogue for selecting an existing item – extract

Select an item from the hit list and click Add component. The dialogue closes. The new item is displayed in the component hierarchy for the item initially selected. Click the Save option to save the initial item. The component is always saved in the packaging item that contains the component.

## Change amount of components

The amount of components contained can be easily changed in the component hierarchy. To do this, select Change amount

The dialogue that now opens allows you to simply enter the number of components contained and select ok. The hierarchy is then updated accordingly.

## Remove Component

To remove a component from the hierarchy, select Remove packaging. Please note that this option is deactivated if you have selected the root node of the hierarchy. Confirm the operation in the safety prompt that now appears. The component hierarchy is updated: The removed packing unit and any larger units below it are no longer displayed. Only items with the processing status New or Not Released can be removed.

---

## Exceptions widget

The Exceptions widget is located on the right hand side. The widget is minimized by default and can be opened by clicking on the arrow symbol.

The information on the GDSN Exceptions received is displayed here. The Exceptions are listed with the exact date and time they were received by the application as well as the type and error details. To access the error details, click on the status icon. This will open a pop-up window with more information about the error if available. Once the error is corrected you can click on the icon Mark as done. This will remove the error status.

---

## CIC Summary, Publication Info

### CIC Summary

The CIC Summary widget displays the number of received CICs and gives an overview of these responses. The most recent CIC for each retailer are displayed here.

The widget shows the CIC status icon, the to do state and the item recipient. Clicking on the status item will open a pop-up window with more information about the CIC if available. Once you have reviewed the CIC you can change the to do state to done by clicking the Mark as done icon.

Please note that only the most recent CIC from each retailer is displayed here. If you have received several CIC from the same retailer and wish to view all CIC, you can open the entire list by clicking on the Show CIC history icon. This list opens in a separate pop-up with more detailed information. For a list of the icons displayed please see chapter CIC state.

## Publication Info

The Publication Info widget displays the number of publications. It indicates the publication target (retailer or target market) as well as the publication date and delivery state.

Publication Info		
1 publication(s), to:		
Recipient Name	Delivery date	Delivery state
Target Market	2013/05/07	

*Publication Info widget*

You can carry out the following actions:

Publish the item. See chapter Publish items for details

'Publish Items'.

Unpublish the item. See chapter Unpublish items for details 'Unpublish Items'.

---

## Input help in the editor

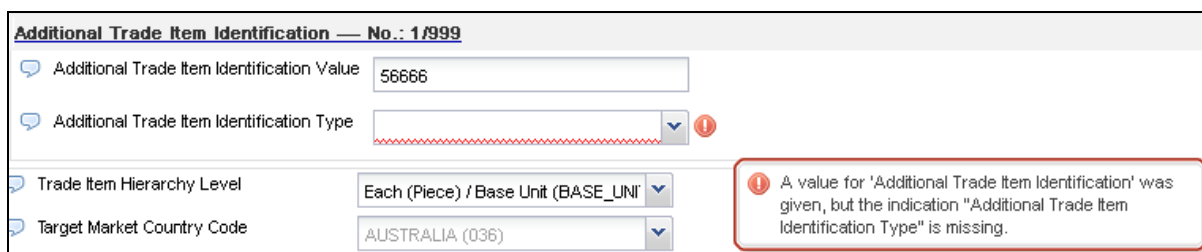

There are a number of input helps integrated into the editor. The following functions are explained in this chapter:

- Attribute validations
- Attribute definitions
- Attribute groups / repeatable attribute groups
- Usage of code lists
- Date selection via calendar function

### Attribute validations

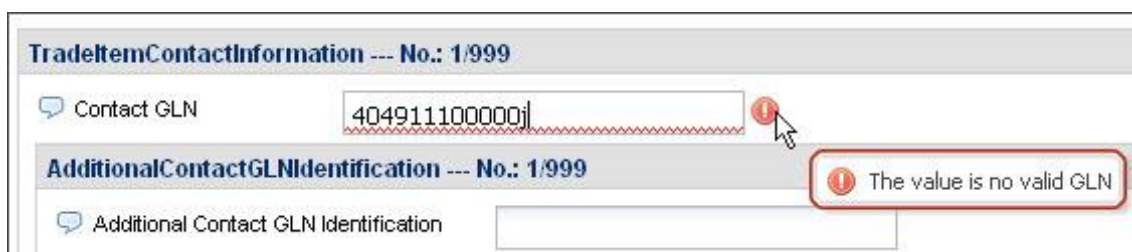

Some attributes will be highlighted in the UI during editing and saving. You will notice an information bubble next to the input field for the attribute that indicates data is missing or incorrect.

Mandatory and conditionally mandatory fields are indicated with an exclamation mark which provides a mouse-over text where the error or the missing data is described.

*Example of a conditionally mandatory attribute field*

Your data is checked while you are actually entering it. Once an incorrect value is entered a warning appears. If you position the mouse over the icon, a message describing the error appears.

*Example of a warning for an incorrect entry*

The values for some attributes, for example the Information Provider, are set by default and cannot be edited. These attributes are displayed in the item editor but are grayed out. The data entry fields for these attributes are not accessible.

*Example of a non-editable selection and input field*

## Attribute definitions

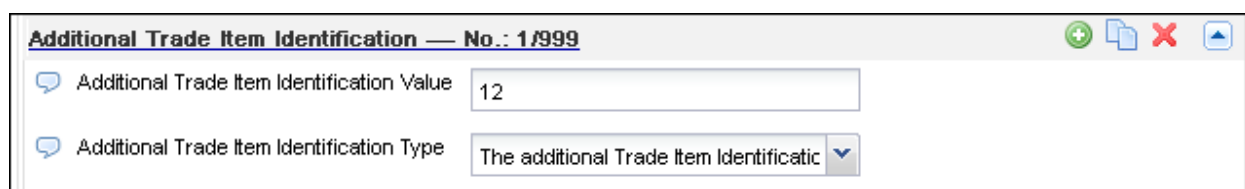

Each attribute has a definition which can be viewed as a mouse-over text in the UI.

*Information text for an attribute*

## Attribute groups / repeatable attributes

Some attributes are part of attribute groups and are grouped together in the UI.

*Example of the display of a structured attribute*

These groups can be repeated, to add a repetition use the icons in the top right hand corner. The  button adds a new repetition. The  button copies the existing attribute, including all values entered. Use the  button to delete an attribute.

## Date selection via calendar function

All attributes that are defined as a date or date-time in the system have the calendar function displayed in the UI. Simply click the calendar icon next to the attribute to open the calendar. Use the arrow buttons to select year and month and then click the required day. The calendar closes and the selected date is displayed in the input field.

*Option for calling the calendar*

*Calendar*

If the attribute is defined as date-time you are also able to specify the time at the bottom of the calendar. Please enter the time first and then select the date. If you enter the date without entering the time, the system will set the time to 00:00 by default. Note: The time zone is determined by the time zone setting of the application.

*Calendar with time selection*

Clicking Today will enter today's date and the current time.

To jump to another month or year

use arrow to the left or right in the title bar to browse month by month,

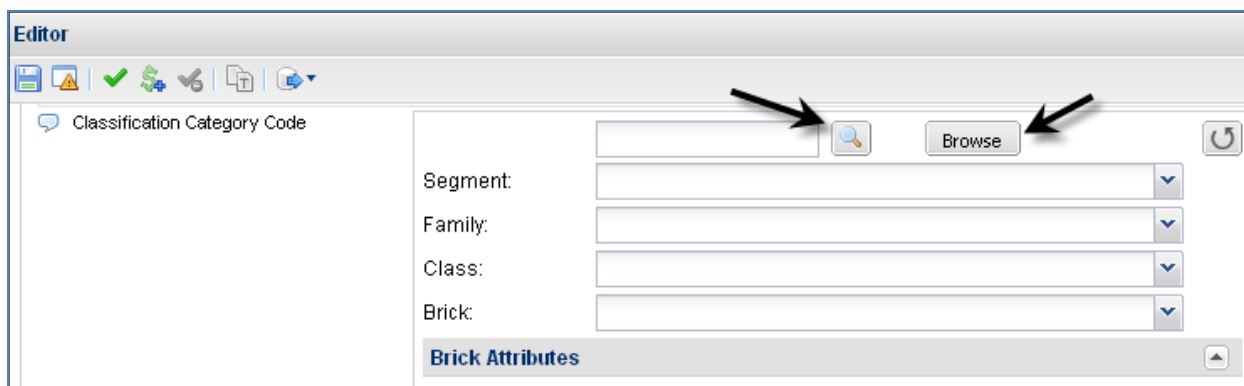

Or click the arrow down to open the second dialogue, where you can directly click on the year and month, confirming with OK (or Cancel).

## GPC Browser

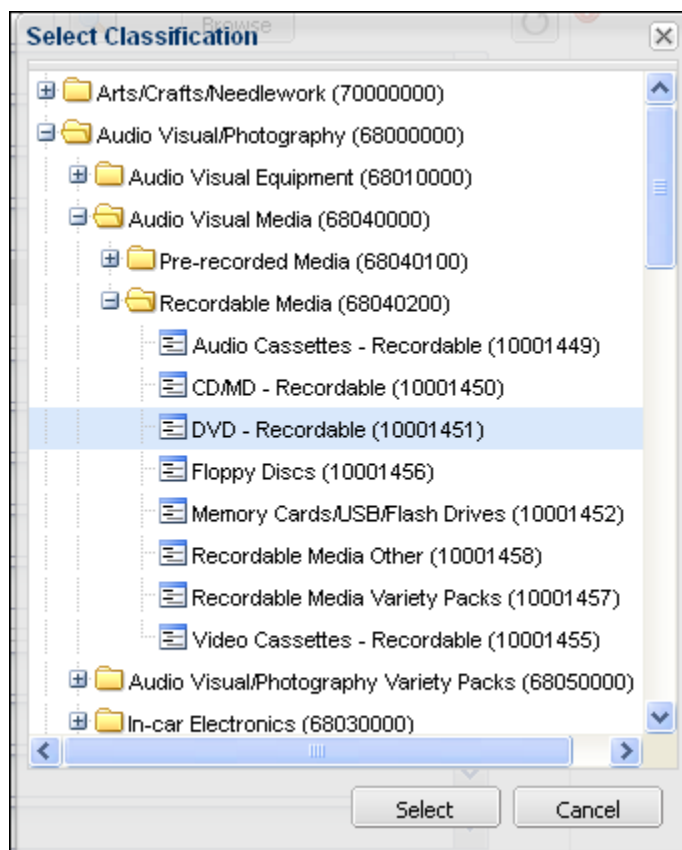

The GPC Browser provides an easy way of navigating the mandatory Global Product Classification. The browser displays the complex hierarchy of the Segment, Family, Class and Brick codes in a hierarchy tree.

You can either enter a code directly or access the browser by activating the browse button

GPC browser

Activating the browse button opens a list of all codes with the respective sub codes displayed. Click the relevant segment and open the tree beneath it, to specify your selection.

*Selection of the code within the GPC*

Click on Select. The system automatically populates all levels – Segment, Family, Class and Brick, of the GPC with the correct codes.

	<input type="text"/>		<input type="button" value="Browse"/>	
Segment:	Audio Visual/Photography (68000000) ▼			
Family:	Audio Visual Media (68040000) ▼			
Class:	Recordable Media (68040200) ▼			
Brick:	DVD - Recordable (10001451) ▼			

*Selected GPC codes*

If you already know the correct code you can enter it directly in the search field and click on the Search button. Depending on the level of the code all fields below will be populated automatically. As shown in the screenshot below, if you enter the code at class level the brick code will still have to be specified. The drop down menu provides only the relevant codes.

Please note:

The entry field on the top level only accepts complete codes. All other fields will automatically provide suggestions if you start typing the code.

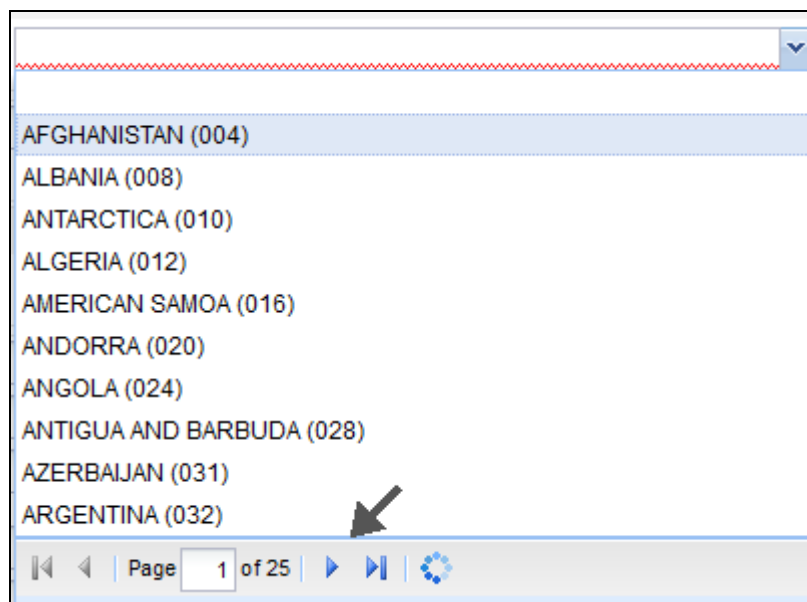

The screenshot shows a web interface for World Sync. At the top, there is a search field containing the code '68040200' and a 'Browse' button. Below this, there are several dropdown menus for 'Segment', 'Family', 'Class', and 'Brick'. The 'Brick' dropdown is open, showing a list of suggestions: 'Audio Cassettes - Recordable (10001449)', 'CD/MD - Recordable (10001450)', 'DVD - Recordable (10001451)', and 'Floppy Discs (10001456)'. The 'DVD - Recordable (10001451)' option is highlighted. To the left of the 'Brick' dropdown, there is a section titled 'Brick Attributes' with a sub-section 'If 8cm DVD-R for Video Cameras:'. Below this, there is a label 'Reading/Recording'.

Code entered in the search field

## Using code lists

Code lists are handled via drop down boxes. To maintain these attributes you can either navigate through the drop down list or type in a search term. To open the drop down list, click on the arrow . Depending on the number of codes contained in a code list, the drop down list can be several pages long. Use the controls at the bottom of the list to navigate through the list.

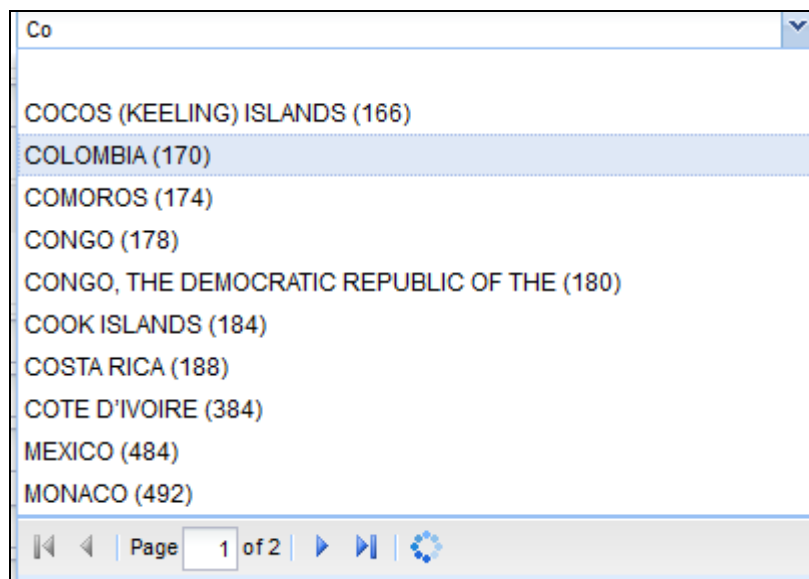

The screenshot shows a drop down list with a search field at the top. The list contains the following items: 'AFGHANISTAN (004)', 'ALBANIA (008)', 'ANTARCTICA (010)', 'ALGERIA (012)', 'AMERICAN SAMOA (016)', 'ANDORRA (020)', 'ANGOLA (024)', 'ANTIGUA AND BARBUDA (028)', 'AZERBAIJAN (031)', and 'ARGENTINA (032)'. At the bottom of the list, there is a navigation bar with buttons for 'Page 1 of 25', 'Previous', 'Next', and 'Refresh'.

Drop down list

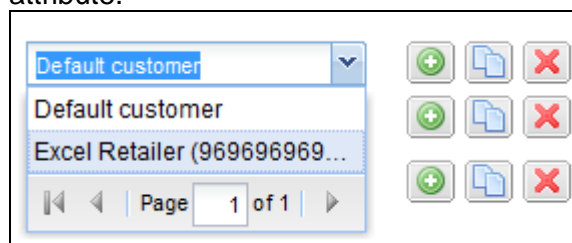

If you know either the code or the description it is easier to simply start typing in the input field. This will activate the search and you will notice the number of codes being reduced with every letter you type. It does matter whether you type the code or the description.

Example of search

## Trading Partner Dependent data

Depending on the system settings, some attributes may be set to trading partner dependent which allows entering different values for individual customers. To populate customer specific values for non-repeatable attributes simply select the customer from the drop down menu to the right of the attribute.

To add a value for a further customer, click , to delete a value for a customer click , to copy the value, click .

To add customer specific values for repeatable attributes, please click  on the right hand side of the screen.

You will be then able to select the customer from the drop down menu which opens in a separate window.

Select add to add the customer. A new data record for the selected customer will be added and can now be populated.

To add a value for a further customer, click , to delete a value for a customer click , to copy the value, click .

## Multilingual attributes

If your system is configured to include multilingual attributes you will see a language selection next to some attributes. The languages can be selected from the drop down menu. Depending on your system settings, the number of available languages can be reduced.

To add another language, click , to delete a value for a customer click , to copy the language and the value, click .

The languages can be selected from the drop down menu. Depending on your system settings, the number of available languages can be reduced.

# Create Items

To create new items open the item hit list. The application offers you the following possibilities

- Using an empty form
- Copying an existing item
- Using a template
- Upload via Excel import

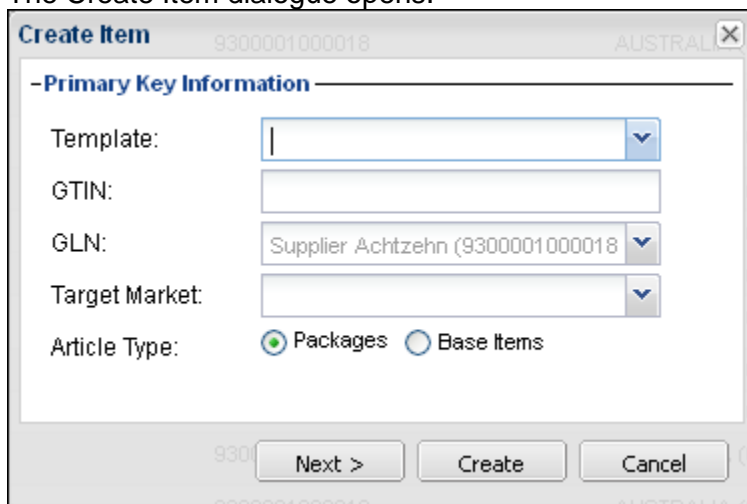

## Create Items using an Empty Form

To create a new item, select the Create option from the hit list function bar

Create Option

The Create Item dialogue opens.

Create Item Dialogue

Leave the Template field empty here, and populate the primary key data. The primary key uniquely identifies the new item. Please make sure you are entering the correct values for this data since it cannot be changed once saved. The primary key consists of three parts:

- the GTIN of the new item.
- the GLN of the item owner is already populated by the system.
- the Target market – needs to be selected from the drop down list

Choose the correct Article Type, in order to define the new item as a Package or a Base Item. The default setting is Base Item, which is the smallest unit of an item hierarchy.

Click Next in order to assign possible data recipients (retailers) the new item shall be published to. This is necessary if you wish to activate any retailer-specific validations.

Click on Create to open the item editor. You will then be able to save the item for the first time. Saving will add the item to the system. Clicking Cancel closes the dialogue without creating a new item.

To complete your item you must at least populate the mandatory attributes. These attributes can be easily identified in the UI by checking for warning icons. Alternatively, click the  symbol to generate a validation report with a list of attributes not populated correctly. Clicking on the attribute in the report will automatically take you to the attribute in the UI. Once the validation report states the item has no errors, it can be released and published.

---

## Create Items by copying an existing item

You can copy an item to create a new one and then make the necessary changes in the item details. Select the item you wish to copy from the hit list. Then select the Copy option in the hit list function bar.

*Copy option*

The dialogue box for the primary key data of the new item now opens and must be populated. The primary key uniquely identifies the new item. Please make sure you are entering the correct values for this data since it cannot be changed once saved. The primary key consists of three parts:

- the GTIN of the new item.
- the GLN of the item owner is already populated
- the Target Market

Clicking Cancel closes the dialogue without creating a new item.

Click Next, in order to assign possible data recipients (retailers) the new item shall be published to. This is necessary if you wish to activate any retailer-specific validations.

Clicking Create generates and opens the new item in the item editor on a new tab. Please note: Except for the primary key, the data contains the values of the copied item. If the copied item is part

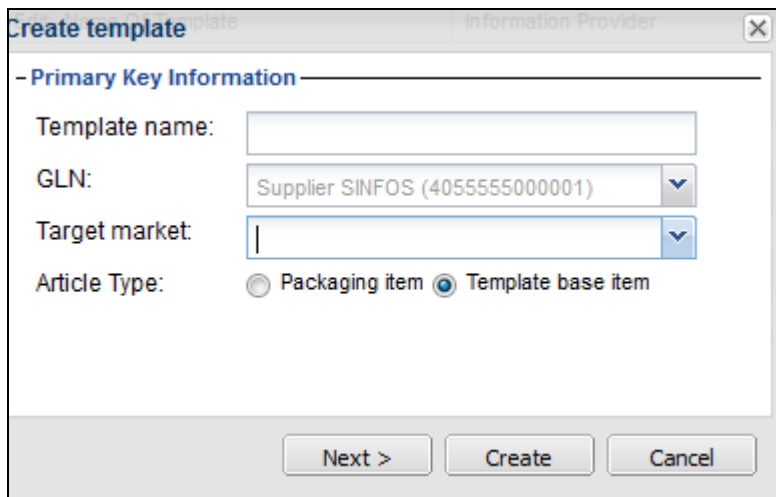

of a hierarchy, the hierarchy is not copied. Only the item itself is copied. The new item is not automatically released and published even if the copied item already has been released and/or published.

---

## Create an item using the template function

You can create and maintain templates (see 'Template List') that can easily be populated when creating a new item.

Templates can be opened and edited from the drop-down menu in the 'Create Item' dialogue.

Create Item Dialogue with Template function

All available templates appear in the template drop-down menu of the 'Create Item' dialogue. Select the template you want to use as the basis for creating the new item. The unique primary key of the new item does not come from the template, and must be entered here additionally:

- the GTIN of the new item.
- the GLN of item owner is already entered.
- the Target Market is to be selected from the dropdown list

Now select the Article Type of the new item to either Package or Base Item.

Clicking Cancel closes the dialogue without creating a new item.

Click Next in order to assign possible data recipients (retailers) the new item shall be published to. This is necessary if you wish to activate any retailer-specific validations.

Finally, clicking Create generates and opens the new item in the item editor on a new tab. Please note: Except for the primary key data entered here it contains the values of the template.

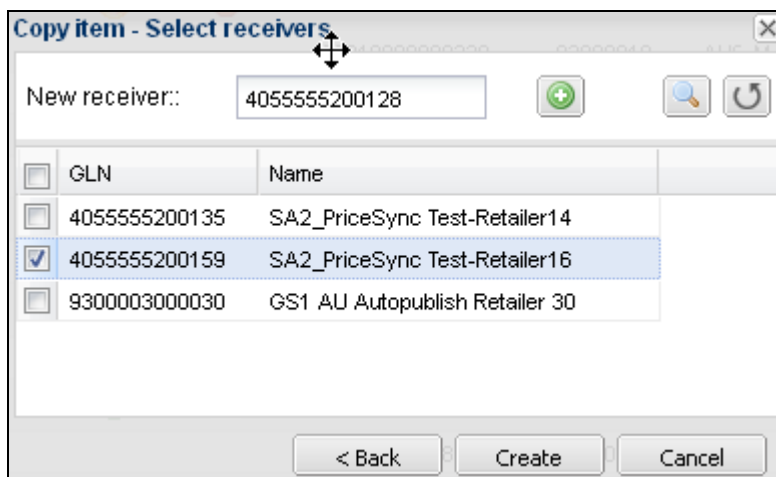

## Retailer specific validations

If this function is enabled, it is possible to assign data recipients (retailers) – this will activate retailer specific validations right at the beginning of data maintenance. The items will be validated against the rules of the selected retailers. The retailer-specific validations will be included in the validation report.

A list of possible recipients set up here will be offered in the publication dialogue when publishing the item. You will be able to choose individual recipients from this list.

In order to assign possible recipients, select Next after entering the GTIN, GLN and Target market in the Create item dialogue.

Then choose your recipients and click create.

GLN	Name
<input type="checkbox"/> 405555200135	SA2_PriceSync Test-Retailer14
<input checked="" type="checkbox"/> 405555200159	SA2_PriceSync Test-Retailer16
<input type="checkbox"/> 9300003000030	GS1 AU Autopublish Retailer 30

Select recipients dialogue

A list of possible recipients set up here will be offered in the publication dialogue when publishing the item. You will be able to choose individual recipients from this list.

## Add possible recipients to existing items

You can add possible recipients to existing items as well. This can be done either from the hit list or from the item editor. Click on the Maintain possible recipients button and proceed as described above.

Add possible recipients from editor

## Edit Items

You can open the item from the hit list and make the necessary changes to the item. Items can be edited regardless of their state (Draft, Released or Published) but please note that items might have to be released again manually depending on their status prior to editing.

### Edit Item in the Item Editor

The following applies to new, released, published or unpublished items:

Select the item(s) you want to edit by flagging them in the list. Then click the Edit option in the function bar to open the item editor.

Alternatively, an item can be opened by double-clicking on it.

The item editor of every item opens up in a separate tab while the hit list remains open in its own tab. This allows you to easily switch between the various items and the hit list

Now make the necessary changes to the item.

Save the item after you have made all necessary changes. Validate, release and publish the item.

*Edit option*

### Edit a Released Item

Select the item(s) you want to edit by flagging them in the list. Then click the Edit option in the function bar to open the item editor.

Now make the changes to the item(s).

An already released item, which has been modified, will be automatically set to status Pending Release. The item must then be released again manually by the user. See section 'Release Items'.

### Edit a Published Item

Select the item(s) you want to edit by flagging them in the list. Then click the Edit option in the function bar to open the item editor

If the item has the processing status Published, the default mode for the edit form is the Change. You can switch the edit form between Change mode and Correction mode in the editor.

#### *Change mode option*

Correct is intended to fix erroneous data whereas Change by refresh is intended as a modification of actual values.

Selecting Change by refresh means you must select a new start validity date.  
Now make the required changes.

Once you have made your changes, save them by clicking the Save icon.

A validation report appears.

The processing status changes depending on the initial status of the item before it was edited.  
Published items have the trade item status Changed or Corrected depending on the editing mode you used.

The publication status is not changed. An already published item, which has been modified, will automatically be set to Pending Release. The item has to be released again manually by the user.  
See section 'Release Items'.

A validation report is displayed in the Report section of the item details area.

## Release Items

An item must have the Released state (Released ready to Publish) in order to be able to be finally published to the data pool and to the business partner(s) (see 'Publish items').

The release state indicates that the item data has been validated successfully and has reached a good quality state, i.e. mandatory data is complete, all data contents have the right format, and content interdependencies are observed and consistent throughout all hierarchies the item belongs to.

Before this minimum data quality has been achieved you are editing the working version of the item which is still incomplete. This also applies to hierarchy inconsistencies. If an item is part of a component hierarchy it can only be released if all the contained (smaller) components are released already. All its relations to other items in this hierarchy are validated, as well, i.e. all items of every hierarchy the item is a part of are validated together.

Please note: Every hierarchy must contain at least one orderable unit. Since a base item is often not an orderable unit, a packaging item then needs to be added before releasing the hierarchy. A hierarchy without an orderable unit will not be sent out by the system.

Items can be released from either the hit list or the item editor.

The release state can be revoked from the hit list, which may have to be necessary for physical deletion of an item (see ['Revoke the Release of an Item'](#)).

Every time you save the item after creating or editing, the system adds a new version storing the current contents in addition to the released version. To view different versions use the working context search.

---

## Release Items from the Hit List

You can release one or more items from the hit list.

First, select the item(s) from the hit list. Note, that selected non-related items may be released separately. If an error occurs that prevents releasing one of the items, the other items may still be released, if free of errors.

Click the Release option in the hit list function bar.

*Release option*

If the item(s) belong to a hierarchy (or hierarchies) the user can determine whether only the item or the entire hierarchy is to be released.

Selecting 'Release Hierarchy' will release all items in the related hierarchies; the related items do not need to be selected separately. If an error occurs in any of the items the entire hierarchy will not be released.

Selecting 'Release Single Item' will release only the items you have selected. Please note that the items of all relating hierarchies are validated together. An error in any of those items will also prevent releasing the single item. Additionally, the selected item will not be able to be released if there is a validation rule that prevents the release of individual items in a hierarchy.

The data is validated to make sure that it is complete, correctly formatted, and consistent. Errors will be displayed in the validation report.

If everything is correct, the most recent version of every selected item is released.

The items are given the processing status Released – Ready to publish.

If an item was already published and later changed, releasing it will change the status from Item update-pending release back to item published.

Please note the following:

We recommend saving base items first and releasing them in a later stage e.g. when the whole item hierarchy has been created and saved. According to the GDSN standard, at least one of the components or the item itself must be an orderable unit. Releasing solely the base item leads to an error as far as this item is not an orderable unit.

---

## Release an Item from the Item Editor

You can release an item from the item editor.

Select the item from the hit list

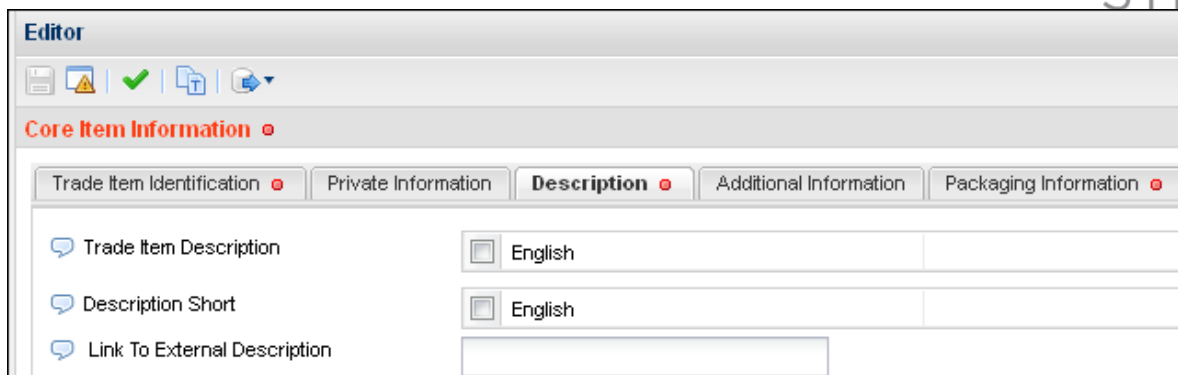

Click the Edit option in the function bar or double click the item in the hit list

*Edit option*

The item now opens in a separate tab.

Click the Release option in the hit list function bar.

*Release option*

Now select whether you wish to select only the item or the entire hierarchy.  
The item is released.

## Revoke the Release of an Item

An item can be unreleased from the hit list or the item editor. Only items that are released but not published can be unreleased.

*Undo option*

To undo the release via the hit list, select the item(s) and click on the undo release button.  
To undo the release from the item editor, choose the item and either click the edit button or double click the item. The item editor now opens.

You will be asked whether you really want to proceed. If an item was released but not published, it will receive the status “Draft new item” after the unreleasing. If you wish to unrelease an item that is already published, you have to revoke the publication first (see [Unpublish Items](#)). Once the publication is revoked, it can be unreleased. The item will now receive the status Unpublished to all-Draft item.

## Publish Items

Item data must be published in order to be sent out to the Source Data Pool. Only from there it is available to the retailers who have subscribed to this data. Data that is not published cannot be transmitted to trading partners.

To ensure quality, item data can only be published with status Released. But for publication, data is validated again to make sure that it is consistent throughout the hierarchy, and that a publication is not done to non-permitted recipients.

Errors are shown in the Validation Report underneath of the hit list or item details, and must be corrected before publishing can finally take place.

An item successfully published receives the overall item state Item Published. (Also see: 'Overall State, Release State and Publication State'). It is marked with the green world icon:

In general, an item should be published only once. For changes or corrections to be sent later on, the new working version needs just to be released, but not published again.

---

## Publishing hierarchies

If an item is part of a hierarchy, the publication must be done on the highest packaging or hierarchy level that is relevant to the respective retailer. Publication will then include all lower item levels contained. If the highest hierarchy level deviates for different retailers, the publication must be done on all these levels, i.e. more than once (see [Publishing an Item as Part of a Hierarchy](#)).

---

## Unpublish

A published item can be unpublished to stop data delivery to the data pool and the respective recipients (see 'Unpublish Items').

If unpublished to all, the item receives the overall item state Item Unpublished to all, and is marked with the yellow world icon:

If the unpublished item is still part of another published hierarchy, it receives the overall item state Item unpublished to all – still sent, and is marked with the yellow/grey world icon:

---

## Select recipients

Publication can be done either from the hit list (see 'Publish Items from Hit List'), or from the item editor (see 'Publish an item from Item Details').

Both approaches use the same publication dialogue to either choose or add the retailer(s) or recipient(s) (see ['Select Publication Targets'](#)).

Item data can be published here to a list of chosen retailers. Of course, it can still be published to additional retailers afterwards.

A list of business partners (= possible recipients or publication targets) is defined for the supplier by administration and is then offered in the publication dialogue. This list could also have been accessed during item creation (see 'Possible Item Recipients'), in order to activate possible retailer-specific validations right at the beginning of data maintenance. Possible recipients could have been added or deactivated, and this selection can now even further be adjusted here.

---

## Publish Items from Hit List

Select the items you want to publish in the item hit list and click the green Publish option in the hit list function bar.

Publish Option in the hit list function bar

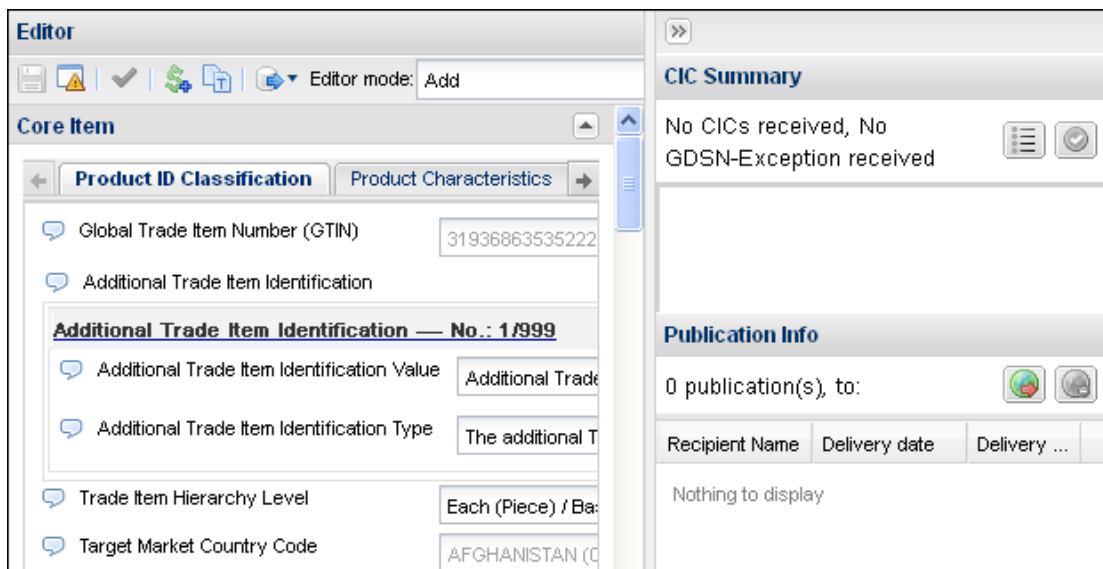

This opens the publishing dialogue to choose or add publication targets. See ['Select Publication Targets'](#) for detailed instructions. Please note: Only items that are already released can be published.

---

## Publish an Item from Item Editor

Select the item from the hit list and open it by either double clicking on the entry or clicking the edit button.

Go to the Publication Info widget on the right hand side, and click the green Publish option.

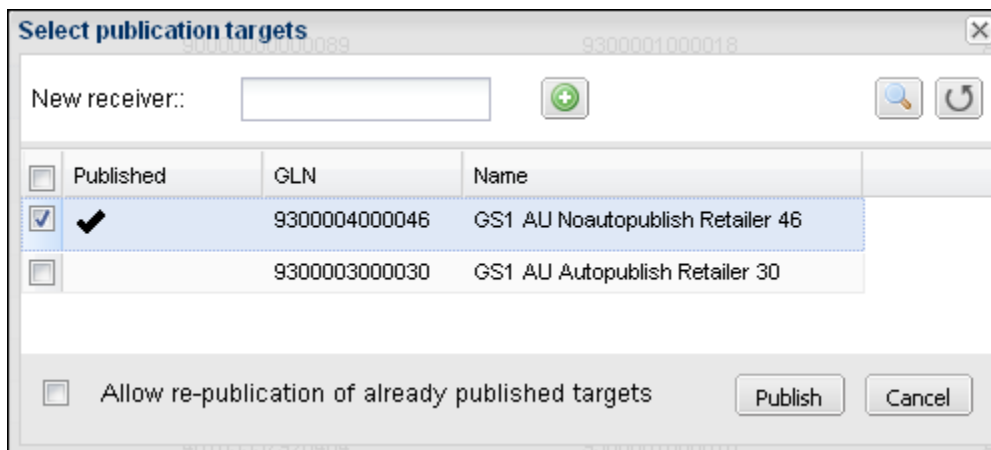

The screenshot shows the 'Editor' window with the 'Core Item' tab selected. The 'Product ID Classification' sub-tab is active, displaying fields for 'Global Trade Item Number (GTIN)' (31936863535222), 'Additional Trade Item Identification' (No.: 1/999), 'Additional Trade Item Identification Value' (Additional Trade), 'Additional Trade Item Identification Type' (The additional T), 'Trade Item Hierarchy Level' (Each (Piece) / Ba), and 'Target Market Country Code' (AFGHANISTAN (C)). To the right, the 'CIC Summary' panel shows 'No CICs received, No GDSN-Exception received'. Below it, the 'Publication Info' panel shows '0 publication(s), to:' and a table with columns 'Recipient Name', 'Delivery date', and 'Delivery ...', which is currently empty.

Item Details Editor with Publish Option to the right

This opens the publishing dialogue Select publication targets. See '[Select Publication Targets](#)' for detailed instructions.

## Select Publication Targets

Clicking on Publish  either in the hit list or item editor opens the publication dialogue Select Publication Targets, where you either choose and/or add the recipient(s) of the item. Publication targets can be added here for already published items:

The 'Select publication targets' dialog shows a 'New receiver::' field with a search icon and a refresh icon. Below is a table with columns 'Published', 'GLN', and 'Name'. The first row is selected and has a checkmark in the 'Published' column. The second row is also visible. At the bottom, there is a checkbox for 'Allow re-publication of already published targets' and 'Publish' and 'Cancel' buttons.

Published	GLN	Name
<input checked="" type="checkbox"/>	9300004000046	GS1 AU Noautopublish Retailer 46
<input type="checkbox"/>	9300003000030	GS1 AU Autopublish Retailer 30

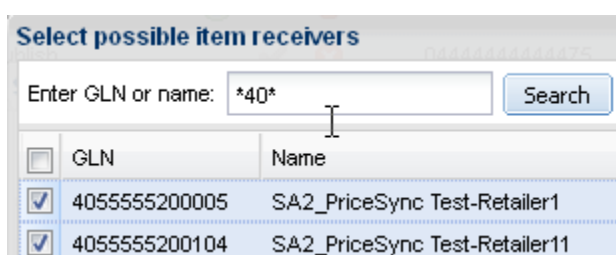

Selection list with retailers

In case there is a list of possible data recipients pre-defined for your user account at item creation (in order to activate retailer-specific validations) (see '[Retailer specific validations](#)'), this list is offered in the dialogue:

Select the publication targets here by flagging the check boxes in front.

Clicking  here will remove the selected targets. Recipients not in the list yet can be added or searched for. To add recipients not yet known to the application, enter the GLN's in the entry field New recipient and click Add. You can only add one GLN at a time. The GLN's will then be added to the list below.

In order to select recipients from a long list of GLN use the Search button to open this list. You can change the sorting here, and navigate through this list using the options in the bottom line. We recommend restricting the list using a filter- or search criterion entered in the search field on top. Select the recipients by flagging the check boxes in front.

<input type="checkbox"/>	GLN	Name
<input checked="" type="checkbox"/>	4055555200005	SA2_PriceSync Test-Retailer1
<input checked="" type="checkbox"/>	4055555200104	SA2_PriceSync Test-Retailer11

*Search dialogue for publication targets*

Clicking Reset selection will remove all selections at once.

Clicking OK closes the search list and adds the selected publication targets - already flagged - to the list in the previous dialogue.

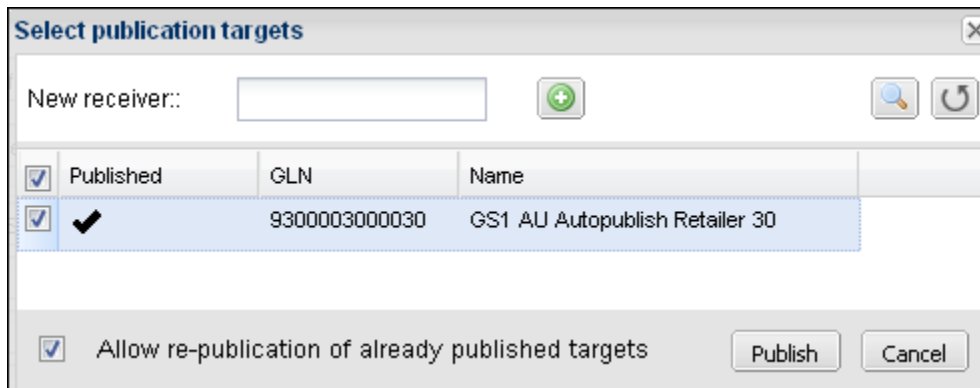

Back on the first page of the publication dialogue you must now click the Publish button to initiate the publication process. If successful, the item receives the publication status Item Published.

## Allow Re-Publication of already published Targets

Sometimes it is necessary to re-publish an item to the same recipient (publication target) once more regardless of whether the previous publication was successful or not. Publishing an item to another target is always possible, and has nothing to do with the respective option explained here.

In order to enable re-publication to the same recipient, flag the checkbox Allow re-publication of already published targets in the dialogue Select publication targets.

This flag will force the re-sending of item data to the Source Data Pool.

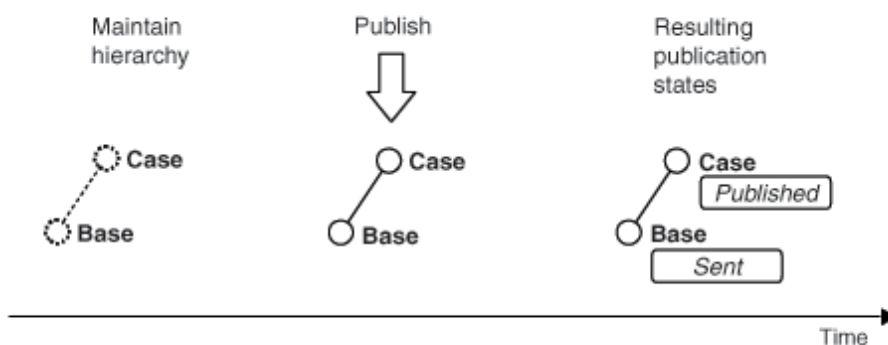

Published	GLN	Name
<input checked="" type="checkbox"/>	9300003000030	GS1 AU Autopublish Retailer 30

☒ Allow re-publication of already published targets

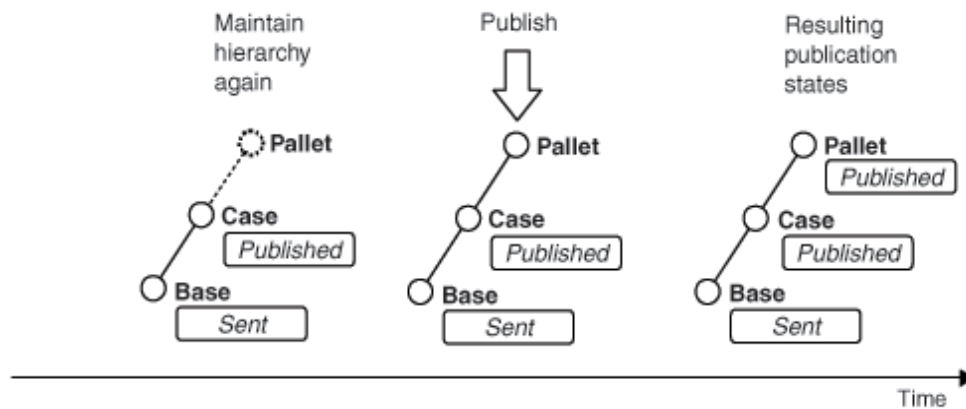

Publication Dialogue

## Publishing an Item as Part of a Hierarchy

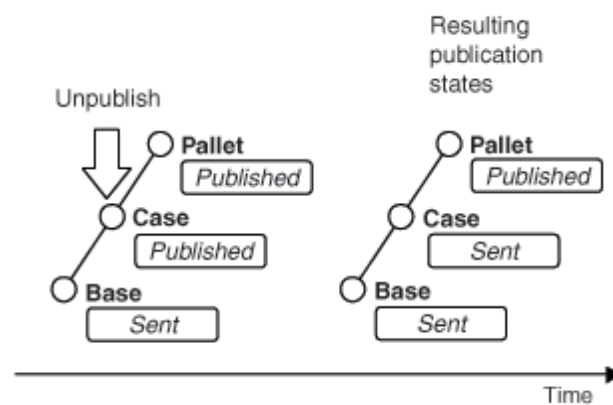

When a released item is part of a packaging hierarchy, it must not necessarily be published separately in order to be sent to the source data pool and from there to the retailers. In most cases it is not published itself, but sent out as a part of the hierarchy. The examples below clarify the status changes applied to items which are part of a hierarchy in which an item is published or unpublished.

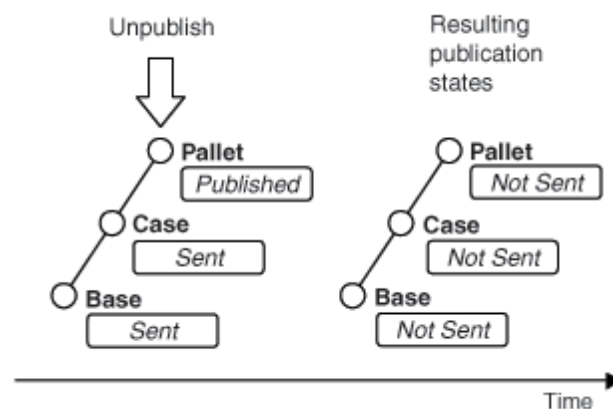

Editing and publishing of a simple hierarchy

*Enhancement of subsequent publishing of the simple hierarchy*

*Revocation of publication of a part of the hierarchy*

*Revocation of publication of the entire hierarchy*

## Unpublish Items

If you want to revoke the publication of a published item - e.g. for a specific retailer - you can 'unpublish' it.

If an item has been unpublished to all, it receives the overall item state 'Item Unpublished to all'.

You can unpublish items from the hit list or the item editor.

From the hit list:

Select the required items from the hit list.

Click the Unpublish option in the function bar.

*Unpublish option*

The Publication Info widget will then display the number and list of publications indicating the recipient GLN, the name, the publication date and the CIC status of every publication. From here you can revoke the publication of the item.

Click the Unpublish option in the Publication Info widget function bar to open a dialogue box that lists all publication targets the item has been published to.

Publication Info		
1 publication(s), to:		
Recipient Name	Delivery date	Delivery state
Edeka	2011-06-30	

*Publication Info widget*

*Unpublish option*

Select all publication targets for which you wish to revoke the publication of the selected items. The list contains a list of the publication targets for all selected items. In the case of items that are selected but not published, this operation will simply be ignored.

Click OK to complete the operation. Click Cancel to return to the hit list without revoking the publication.

The previously selected publication targets for the items are removed from the corresponding recipient lists.

The items - which no longer have the status Published - are given the processing status Released again.

To unpublish items from the item editor, select the item from the hit list. Click on the edit button or double click the item in the hit list. The item editor now opens, where you can select the unpublish button. Proceed as described above.

## Import and Export Items

The application allows you to carry out mass uploads and downloads of trade item data using Excel files. You can download item data, change it and then upload the data again. This is especially recommended for mass-updates. You can also download an Excel template that you can use to create new item data. The system supports both Excel 97/2003 (xls) and Excel 2007 (xlsx) formats. The data can be released and published during the upload process. The file can contain single items or hierarchies.

### Download your Data in Excel

To export item data, proceed as follows:  
First, select the item(s) from the hit list.  
Click the Download option in the hit list function bar.

*Download function*

The download menu offers you four different options.

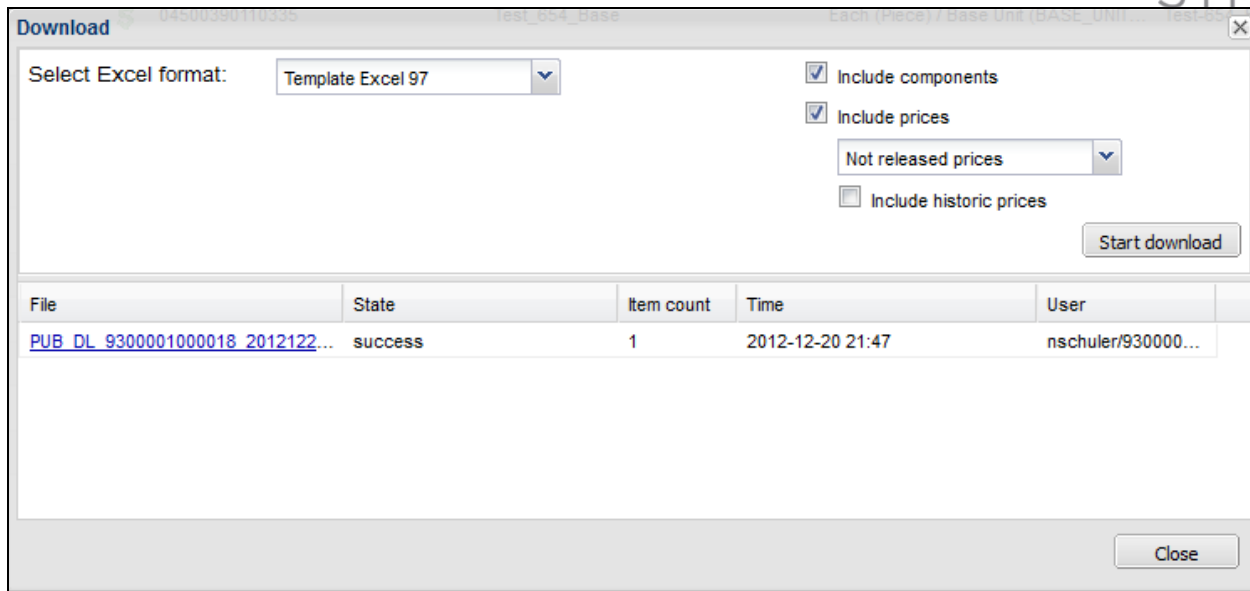

- Download an empty Excel template (xls format)
- Download an empty Excel template (xlsx format)
- Download item data in Excel
- Download item data as Pdf

*Download options*

To download items in Excel flag the items in the hit list and select “Item download in Excel”. For details on templates see [Download Excel Template](#).

The download dialogue now opens which allows you to select the required export format – either Excel 97/2003 (xls) or Excel 2007 (xlsx) file. Please note that the appearance of the dialogue may differ depending on which browser you use.

File	State	Item count	Time	User
<a href="#">PUB_DL_9300001000018_2012122...</a>	success	1	2012-12-20 21:47	nschuler/930000...

*Download dialogue*

Specify whether you wish to export just the selected item or its components as well. Then click the option Start download.

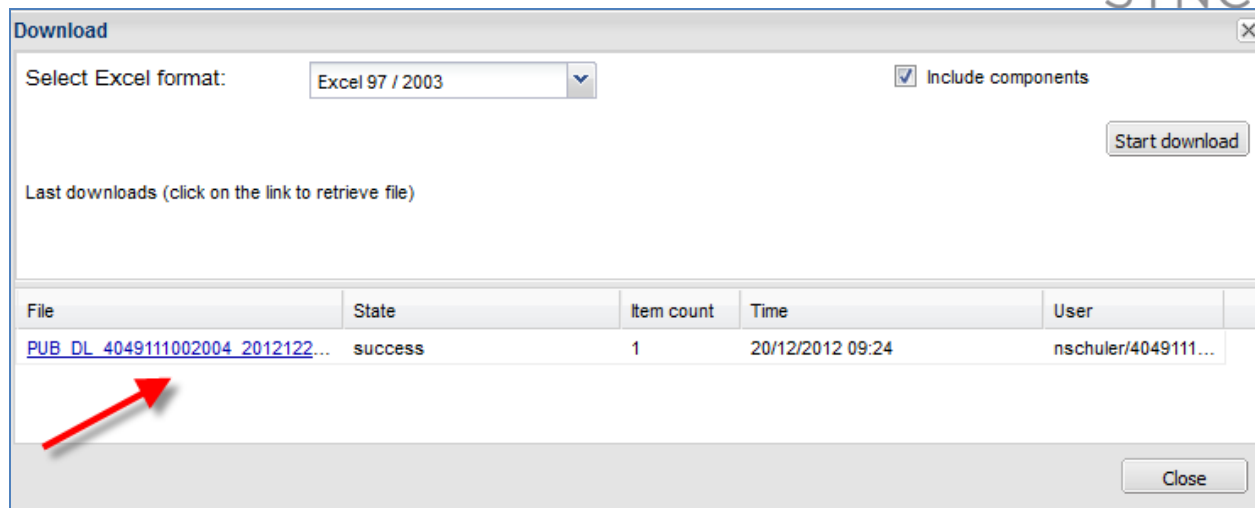

The excel file will appear in the Last download area at the bottom. When the Column State shows 'Initialized' the export is still in progress. Depending on the number of selected items, it may take some time to process the Excel file. The download is prepared in the background. You can close the download window and continue with other tasks. If you open the download menu later you will notice that the Excel file has been created and has now the status "success" and can now be downloaded by clicking on the file name.

The Excel file contains all selected items and - depending on the specifications you made previously - may also contain the corresponding components linked with the items and their components, including historical price items.

Due to the size restrictions (no more than 65536 lines are allowed) of Excel 97 we do not recommend using this format for mass exports. If you wish to export a large number of items, please use Excel 2007.

## Download History (Last Downloads)

The bottom part of the Download dialogue displays a list of the last downloads to be carried out. In addition to the file name and number of exported items, this area displays the time of the export and the user who triggered it as well as the amount of the items included in the download file. The State column tells you whether the export was successful.

The most recent download is always displayed at the top of the list. If the maximum number of entries for the list is reached, the oldest entry is removed.

To download a copy of an Excel file generated during a previous download, proceed as follows:  
Open the Download dialogue.

Click the required file name in the download history.

A dialogue box opens; it allows you to either open the file or save it to your computer. Please note that this dialogue may differ depending on your browser settings.

## Download Excel Template

You can also download an empty Excel file which you can then use as a template for creating new items.

To export an empty Excel file, click on the download option and select the file format you wish to have the template (xls- Excel 97/2003 or xlsx -Excel 2007).

*Download Excel Template option*

A window opens which allows you to choose a download location for the export file here.

The Excel file is created. Its structure is the same as the structure of an Excel export file, but this file is empty.

The Excel template contains all attributes, both at Base Item and Packaging Item level.

## Importing Items from an Excel File

When entering data for the Excel upload, it is of crucial importance to have the correct format in the excel cells. Please see detailed information in chapter '[Restrictions and Format Regulations](#)'. It is strongly recommended that you familiarise yourself with these rules before working with the Excel Interface.

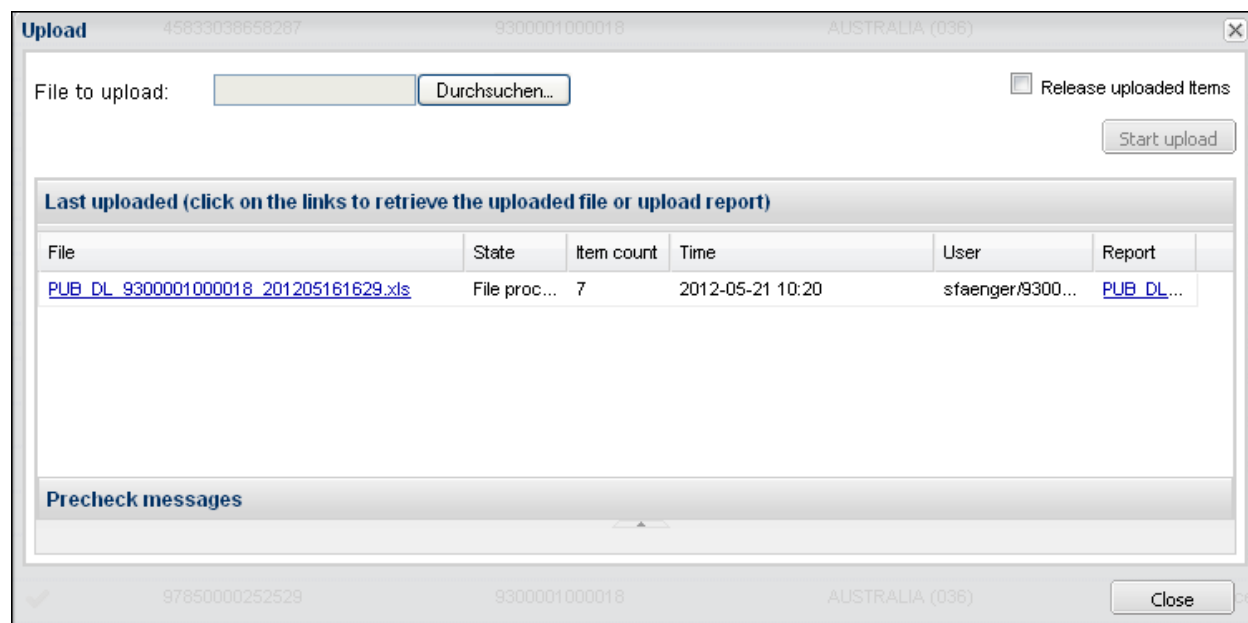

Please note that the dialogue window can differ slightly depending on the browser used and its language settings.

To import items using an Excel file, proceed as follows:  
Click the Upload option in the hit list function bar.

*Upload option*

A dialogue opens; you can select the prepared Excel file. To do so, click Choose file. This will open the browser.

Upload 45833038558287 9300001000018 AUSTRALIA (036)

File to upload:   ☐ Release uploaded items

**Last uploaded (click on the links to retrieve the uploaded file or upload report)**

File	State	Item count	Time	User	Report
<a href="#">PUB_DL_9300001000018_201205161629.xls</a>	File proc...	7	2012-05-21 10:20	staenger/9300...	<a href="#">PUB_DL...</a>

**Precheck messages**

97650000252529 9300001000018 AUSTRALIA (036)

*Upload dialogue*

Specify whether you want the uploaded items to be released automatically following the import. To do so, activate the relevant checkbox. If you have populated the work sheet Publishing, the items will automatically be published once you flag this option.

Click Start upload.

Before importing the items into the system, the system carries out a preliminary check to make sure that the format of the Excel file is correct.

Any errors in the file - such as wrong file format or incorrect format for data- will be listed under pre-check messages.

❗	Product 1998392945913/5355477913007/040 must be defined on every sheet. It is missing on sheet 'ID Classification Des(1)'.
❗	Product 19983929459136/5355477913007/040 must be defined on every sheet. It is missing on sheet 'Hierarchy Dimensions (2)'.

If the file is correct, you will see the following message:

ℹ	Your selected excel file is syntactically correct and will now be processed. You will receive a detailed report by mail.
---	--

A number of pre-checks are performed upon upload that check:

- whether the primary keys are included on each sheet
- whether the item is included on each sheet
- whether each attribute is defined only once in the document
- whether attributes unknown to the system are included in the file
- whether all required attributes are populated
- whether there are major hierarchy consistency violations

## Upload report

Following the import, a report is generated.

To access the upload report, please click on the link in the column report and you will be able to open or save the report directly.

impl\_ws2\_structure

The top part of the report lists the general data for the upload such as when it was started and the file name.

The second part lists details about the item, i.e. whether it was stored, released and lists the exact number of items contained in the file, the number of items that were updated with the upload or if errors and/or warnings occurred.

The last part of the report gives more detailed information about possible errors and/or warnings and indicates whether the trade item was stored in the system. The column Type indicates whether there is an error or a warning. Please refer to the error message for possible steps that need to be taken to correct your data.

## Upload History (Last uploaded)

The bottom part of the Upload dialogue shows the uploaded Excel files and corresponding upload reports for the last imports as links in a list. In addition to the file name and number of imported items for each upload, the import time and user who triggered the import are displayed. The State column tells you whether the import was successful.

The most recently imported file is always displayed at the top of the list. If the maximum number of entries for the list is reached, the oldest entry is removed.

## Restrictions and Format Regulations

It is crucial that any file uploaded to the application complies with certain format rules; otherwise they will not be processed. The application will always create Excel files which fully comply with these rules (e.g. Excel template and Excel download file).

## ***Excel Versions***

The following Microsoft Excel formats are supported:

- MS Excel 97 (XLS)
- MS Excel 2000 (XLS)
- MS Excel 2003 (XLS)
- MS Excel 2007 (XLSX)
- MS Excel 2010 (XLSX)

## ***Rows and Columns***

Excel 97/2003

All excel file formats prior to 2007 have a maximum of 65536 rows and 256 columns (A to IV) that can be transmitted.

Excel 2007

No restrictions regarding rows and columns.

## ***Format***

When entering data for upload it is of crucial importance to ensure the correct format is selected for the excel cells. Please do not split or merge cells within the excel file.

The use of Excel formulas is **not** supported.

Please use the format which is given in the excel template in the first row populated with data (only the first row is formatted correctly due to technical restrictions in Excel). You can copy the row to keep the correct formatting. This is row 10.

When exporting an excel file, all populated rows are formatted correctly as well. You can use this file as well to ensure an error free format.

B9      fx      858587474742					
A	B	C	D	E	F

First or following rows formatted correctly

## Rules for upload file

Please only use the Excel master template to upload item data. Uploading data using another file will result in a failure of the upload process.

The following basic rules apply to all Excel files.

- The primary keys (GTIN, GLN, TargetMarket) must be repeated on EACH worksheet in columns B, C and D respectively.
- The values that are to be transmitted must be entered in row 10 and lower. There must be one row per GTIN. Due to size constraints in an empty template only row 10 is formatted correctly. Please make sure to format all following cells correctly. In an Excel download of data stored in the data pool only the rows containing values are formatted correctly for the same reason.
- The first column of the uploaded file must always remain empty. Any data entered in this column will interfere with the correct processing of the file.
- The uploaded values always overwrite the content already stored in the data pool. Transmitting an attribute with no value will result in the stored values being deleted from the data pool. A deletion of a column with an attribute which was populated before means that the values in the new version in the data pool will remain unchanged

The worksheets correspond to the flex bars in the UI. Columns and/or worksheets that are not needed can be deleted as long as they do not contain mandatory or system and/or process relevant data, e.g. the worksheet Components. However, it is absolutely mandatory that the structure of the data remains intact. E.g. a value and corresponding unit of measure must both be transmitted together. Any change to the structure of the file will result in an error.

## Structure of an Excel File

A worksheet with trade item data has 8 fixed rows containing attribute information.

	A	B	C	D	E
1					AdditionalTradeItemIdentification[0]
2					
3		GlobalTradeItemNumber	InformationProvider	TargetMarketCountryCode	additionalTradeItemIdentificationVal
4	Localized name	Global Trade Item Number (GTIN)	Information Provider	Target Market Country Code	Additional Trade Item Identification
5	Definition	(GTIN) is used for the unique identification of trade items worldwide. A trade item is any item (product or service) for which there is a need to retrieve pre-defined information and that may	Location number that uniquely identifies the data owner/information provider (e.g. manufacturer, supplier, broker, distributor, etc.). (informationProvider)	indicates the country in which the information provider will make the GTIN available to buyers. This indicator does not in any way govern where the buyer may re-sell the GTIN to consumers.	The information provider's internal number for the trade item, used to cross-reference to the GTIN in a one-to-one relationship. (additionalTradeItemIdentificationValue)
6	Comment	Component of the Primary GDSN Data Key comprised of GLN+GTIN+TM.	Must be GLN. Component of the Primary GDSN Data Key comprised of GLN+GTIN+TM.	Component of the Primary GDSN Key comprised of GLN+GTIN+TM.	AdditionalTradeItemIdentification
7	M-O-D	Mandatory	Mandatory	Mandatory	Optional
8	Field type	Integer; 14	String; 13	Country Code List	GDSN_DES_AdditionalTradeItemId
9		04006381333689	9300001000018	554	

Do not make any changes to the data in the first eight rows.

The first three lines are color coded according to the cardinality of the respective attributes:

Mandatory attributes or attribute groups = blue

TargetMarketCountryCode	IsPackagingMarkedReturnable
Target Market Country Code	Is Packaging Marked Returnable

Optional attributes or attribute groups = green

AdditionalTradeItemIdentification[0]	AdditionalTradeItemIdentification[0]	AdditionalTradeItemIdentification[1]
additionalTradeItemIdentificationVal	additionalTradeItemIdentificationType	additionalTradeItemIdentificationVal

Dependent attributes or attribute groups = yellow

SuggestedRetailPriceEffectiveStart	SuggestedRetailPriceEffectiveStart

The Excel template and the Excel download files contain different kinds of sheets.

#Release Notes	Core Item(1)	Core Item Additional(2)	Food, Beverage & Tobacco(3)	Liquor Industry(4)	Healthcare
----------------	--------------	-------------------------	-----------------------------	--------------------	------------

## Trade Item Sheets

These sheets contain the actual trade item data. The data in the Excel file is organized in number of work sheets. The structure corresponds to the GUI.

A trade item is uniquely identified by the combination of the GDSN attributes

GlobalTradeItemNumber, InformationProvider and TargetMarketCountryCode. These three attributes must be included and populated on every sheet. There is one row per item in the sheet.

## Publishing sheet

Populating this sheet allows you to publish data via Excel upload. Please see [Publish items via Excel Upload](#) for details.

## Types of Attributes

### Repeatable attributes

To upload repetitions of an attribute, please copy the entire column for the attribute and enter the next highest number in the square brackets []. The default value is "[0]" for the attribute. To create a repetition, enter [1], [2] for the second repetition etc. The maximum number of repetitions is defined in the data structure. Please note that repetitions must always be transmitted together and in the correct order. Any change to the order of the repetitions or splitting them up in the Excel file will lead to an upload failure.

Example: Two repetitions of Trade Item Feature Code

TradeItemFeatureCode[0]	TradeItemFeatureCode[1]
tradeItemFeatureCode	tradeItemFeatureCode
Trade Item Feature Code	Trade Item Feature Code
A code depicting a distinctive functionality offered as a special attraction to the trade item for example built-in alarm clock. (tradeItemFeatureCode)	A code depicting a distinctive functionality offered as a special attraction to the trade item for example built-in alarm clock. (tradeItemFeatureCode)
Optional	Optional
String; 70	String; 70
AUTO_CHANNEL_SETUP	FLICKER_FREE

The same applies to entire attribute groups – here the entire group must be repeated and the numbers must be consistent within a group. Example – Season – last attribute from the attribute group and the first three attributes of the first repetition.

BR	BS	BT	BU
Season[0]	Season[1]	Season[1]	Season[1]
		SeasonName[1]	SeasonParameter[1]
seasonalAvailabilityEndDate	isTradelItemSeasonal	seasonName[de]	seasonParameter
Saisonale Verfügbarkeit gültig bis	Saisonartikel	Saisonbezeichnung	Saison: Parameter
Dieses Feld gibt das Enddatum der saisonalen Verfügbarkeit für diesen Artikel an. (seasonalAvailabilityEndDate)	Information, ob dieser Artikel nur zu bestimmten Jahreszeiten angeboten wird oder zu bestimmten Anlässen. (isTradelItemSeasonal)	Dieses Feld gibt die Saison für die Verfügbarkeit des Artikels an. (seasonName)	der Artikel verfügbar ist, bzw. Zuordnung zu einem der folgenden Zeiträume: Frühjahr/Sommer, Herbst/Winter oder das ganze

If the season name is to be repeated within the first repetition of the entire group it would look like this:

BS	BT	BU
Season[1]	Season[1]	Season[1]
	SeasonName[1]	SeasonName[2]
isTradelItemSeasonal	seasonName[de]	seasonName[en]
Saisonartikel	Saisonbezeichnung	Saisonbezeichnung
Information, ob dieser Artikel nur zu bestimmten Jahreszeiten angeboten wird oder zu bestimmten Anlässen. (isTradelItemSeasonal)	Dieses Feld gibt die Saison für die Verfügbarkeit des Artikels an. (seasonName)	Dieses Feld gibt die Saison für die Verfügbarkeit des Artikels an. (seasonName)
GDSN_DES_IsTradelItemSeasonal	GDSN_DES_SeasonName[70 CHA	GDSN_DES_SeasonName[70 C
true	Herbst/Winter	Autumn/Winter

### ***Multilingual attributes***

The language code is transmitted in square brackets [] after the name of the attribute. There must be one column per language. The code must be entered in lower case letters.

Example: Ingredient statement for English and French

H	I
IngredientStatement[en]	IngredientStatement[fr]
Ingredient Statement	Ingredient Statement
Information on the constituent ingredient make up of the product specified as one string. (ingredientStatement)	Information on the constituent ingredient make up of the product specified as one string. (ingredientStatement)
Optional	Optional
String; 5000	String; 5000

### ***Trading partner dependent values***

It is necessary to copy the column of the attribute in question and add the GLN of the trading partner to the header. There must be one column per trading partner. The neutral value is entered in the column with no GLN specified.

Example: a neutral Start Availability Date and a TPD value

StartAvailabilityDateTime	StartAvailabilityDateTime[4049111006040]
Start Availability Date Time	Start Availability Date Time
The date from which the trade item becomes available from the supplier, including seasonal or temporary trade items. (startAvailabilityDateTime)	The date from which the trade item becomes available from the supplier, including seasonal or temporary trade items. (startAvailabilityDateTime)
These fields are optional, but if one field is invoked than "Publication Date", "Effective Date"	These fields are optional, but if one field is invoked than "Publication Date", "Effective Date" and "Start Availability Date Time"
Mandatory	Mandatory
Date Time	Date Time
2011118	20111215

## Upload components

It is possible to add components via Excel Upload in one step.  
 To upload components the worksheet Components must be populated.

The columns headed RelatedItem[0] need to be populated to indicate the hierarchy connection.

Related Item[0]	Related Item[0]
gtin	amount
GTIN of next lower item	Amount of next lower level items
-	-
-	-
Mandatory optional	Mandatory optional
String; 13	Number
19983929459136	2

For gtin enter the GTIN of the related item, i.e. the next lower level item. For amount enter the amount of times this item is contained in the next higher item of the hierarchy. Please ensure that the data is entered in the correct row.

To add more than one relation for the same item, copy the columns and adjust the number in the brackets, i.e. for a second related item Related Item [1] etc.

Related Item[0]	Related Item[0]	Related Item[1]	Related Item[1]
gtin	amount	gtin	amount
GTIN of next lower item	Amount of next lower level item	GTIN of next lower item	Amount of next lower level item
-	-	-	-
-	-	-	-
-	-	-	-
Integer; 14	Number	Integer; 14	Number
24317711157009	1	24317711157016	5

Once the data is uploaded, the system is updated with the new trade items and components.

## Publish items via Excel Upload

It is possible to add, release and publish newly created items via Excel Upload in one step. Additionally, already released items can be published, published items can be unpublished. To publish items, the worksheet Publishing must be populated.

When uploading the item(s), the option Release uploaded items must be flagged if you wish to release the item(s) with the upload. Once the item is uploaded and has no errors, it will automatically be released and then published if this option is set.

The worksheet needs to have the primary keys – GTIN, GLN and Target Market – populated. They must be identical on all worksheets. In addition, the Action Code is mandatory for publication as well as the publication target. Only the following values are allowed for the action code – ADD (for publication), DEL (for unpublish).

Please note that both the column Publish to Target market and the column Publish to GLN must be included in the file. Deleting one of the columns will lead to an error in the upload process.

### ***Publish released items***

The work sheet Publishing must be populated with the primary key, publication target(s) and action code ADD. The item is published to the target entered after upload. It is not necessary to flag the option Release Uploaded Items in the upload dialogue.

### ***Publish to Target Market***

To publish to target market, enter the target market code in the column headed PublishToTargetMarket. Do not enter the name of the target market, only the three digit country code. Note that the column PublishToGLN must be empty.

ActionCode	PublishToTargetMarket	PublishToGLN[0]
-	-	-
-	-	-
-	-	-
String; 3	String; 3	String; 13
ADD	276	

### ***Publish to GLN***

To publish to a GLN enter the GLN in the column PublishToGLN[0]. Note that the column PublishToTargetMarket must be empty.

E	F	G
ActionCode	PublishToTargetMarket	PublishToGLN[0]
-	-	-
-	-	-
-	-	-
Mandatory	Mandatory optional	Mandatory optional
String; 3	String; 3	String; 13
ADD		5355477913007

To publish to more than one GLN, enter a different GLN in each column with the header and the number in brackets. By default the publishing worksheet has three columns for publishing to GLN. If you wish to publish to more than three GLN copy the column and enter a higher number in the brackets, i.e. PublishToGLN[3] for a further GLN, PublishToGLN[4] for the next one etc.

ActionCode	PublishToTargetMarket	PublishToGLN[0]	PublishToGLN[1]
-	-	-	-
-	-	-	-
-	-	-	-
String; 3	String; 3	String; 13	String; 13
ADD		4055555000001	4000004000002

### ***Unpublish items via Excel***

To unpublish items via Excel populate the Publishing sheet with the primary key and the publication target. The column ActionCode must be populated with the code DEL. After the successful upload the item will have the status Unpublished.

ActionCode	PublishToTargetMarket
-	-
-	-
-	-
String; 3	String; 3
DEL	276

# Template List

The Template List allows you to perform all functions related to template maintenance in one central area of the application. Templates can be very useful if your items have a lot of data in common. New items can be easily added using a template that contains predefined data that is already populated. The Template List has the same structure as the item hit list.

The following functions are available:

- Creating, copying and editing templates.
- A hit list displaying all templates with a template preview similar to the item hit list
- A validation report that validates the data filled in the template
- A Quick Search and an Advanced Search

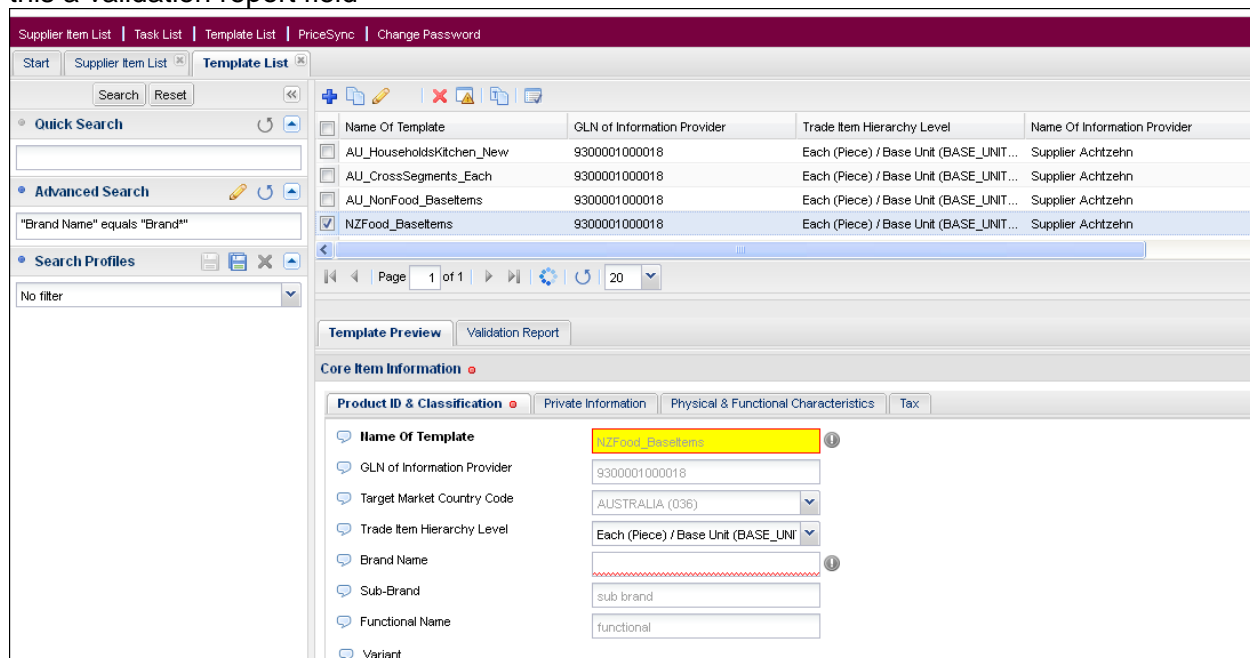

## Structure of the Template List

The structure of the Template List is divided into 3 Areas:

The hit list, where all saved templates are displayed

A search section, where the templates can be retrieved via a Quick and an Advanced search with the option of saving search profiles

A preview of the data populated in the template, where validation errors are displayed and beside this a validation report field

The screenshot displays the 'Template List' application interface. At the top, there is a navigation bar with tabs: 'Supplier Item List', 'Task List', 'Template List' (selected), 'PriceSync', and 'Change Password'. Below the navigation bar, there is a search section with 'Quick Search' and 'Advanced Search' options. The 'Quick Search' section shows a search criteria of '"Brand Name" equals "Brand"' and a 'Search Profiles' section with 'No filter' selected. The main area displays a table of templates with columns: 'Name Of Template', 'GLN of Information Provider', 'Trade Item Hierarchy Level', and 'Name Of Information Provider'. The table lists four templates, with 'NZFood\_BaselItems' selected. Below the table, there is a 'Template Preview' section with tabs for 'Core Item Information', 'Private Information', 'Physical & Functional Characteristics', and 'Tax'. The 'Core Item Information' tab is active, showing fields for 'Name Of Template', 'GLN of Information Provider', 'Target Market Country Code', 'Trade Item Hierarchy Level', 'Brand Name', 'Sub-Brand', 'Functional Name', and 'Variant'. The 'Brand Name' field is highlighted in yellow and contains the text 'NZFood\_BaselItems'.

Name Of Template	GLN of Information Provider	Trade Item Hierarchy Level	Name Of Information Provider
AU_HouseholdsKitchen_New	9300001000018	Each (Piece) / Base Unit (BASE_UNIT...	Supplier Achtzehn

## Create Template

To add a new template, click the Create button

The image shows a 'Create template' dialog box. On the left, there is a vertical list of checkboxes, with the top one checked and an arrow pointing to it. The dialog box has a title bar with a plus icon and the text 'Create template'. Below the title bar is a section titled 'Primary Key Information'. It contains the following fields: 'Template name:' with a text input field; 'GLN:' with a dropdown menu showing 'Supplier Achtzehn (9300001000018)'; and 'Article Type:' with two radio buttons, 'Package Templates' (selected) and 'Base Item Templates'. At the bottom of the dialog box are three buttons: 'Next >', 'Create', and 'Cancel'.

Create Template Dialogue

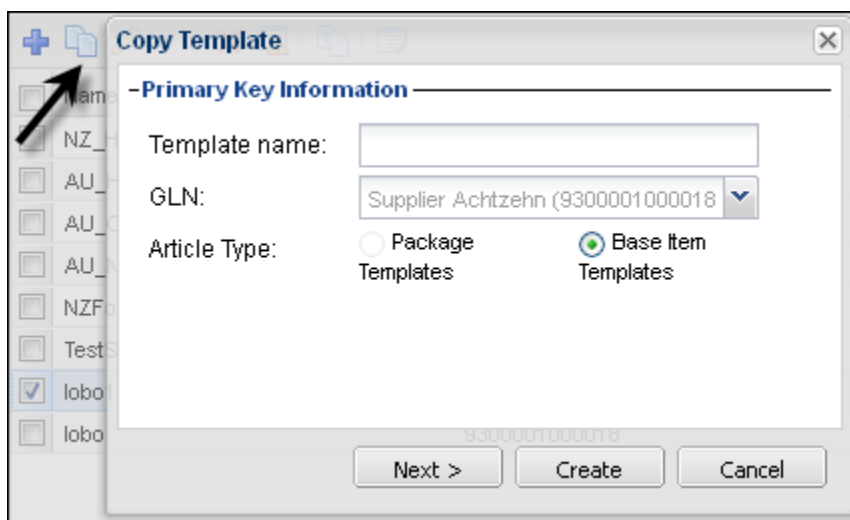

Enter a template name. The Article Type allows you to specify the nature of the item that the template will be used for. Similar to the creation of an item, indicate whether this is a template for packaging or for base items

By clicking on Create the editor will open. When the template is saved for the first time, the data entered will be validated. Any further validation must be initiated manually.

The template name must be populated in order to be able to save the template. All other missing data does not prevent the template from being saved. Stored templates are available for selection from the drop down menu; the user can correct the item data at a later stage.

## Copying a Template

To copy a template, select a template in the hit list and click the Copy option in the function bar. Please note, that when highlighting more than one template, the Copy button is inactive.

*Copy Template Dialogue*

The filled data in the copied template can now be modified in the Editor before saving the template.

## Edit Template

Click the Edit option in the function bar to edit one or more templates.

*Edit Template*

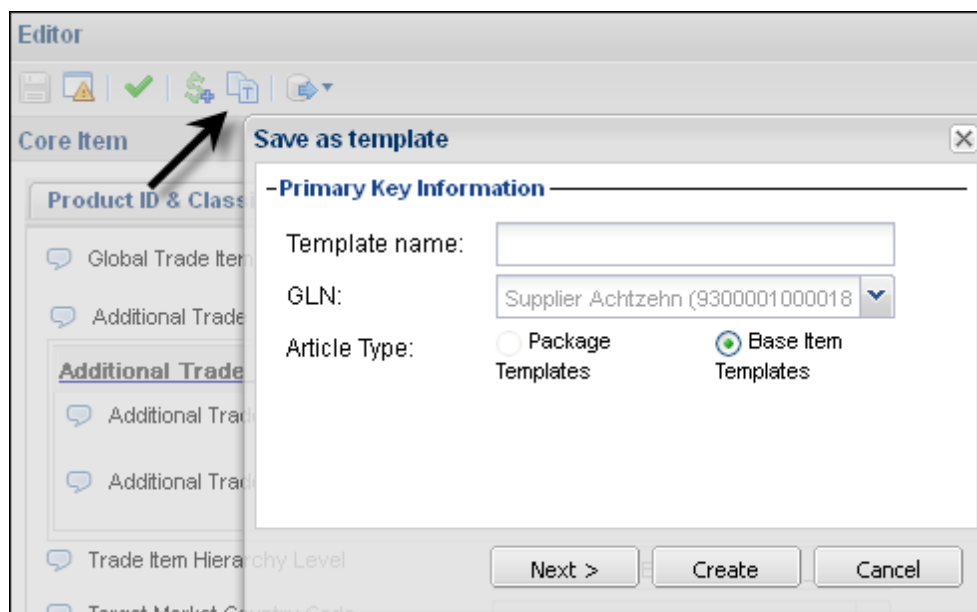

Clicking the button directly leads to the Editor with the template.

Edit the template and click save. The template will be validated automatically and an error report will be generated.

## Save an existing item as a Template

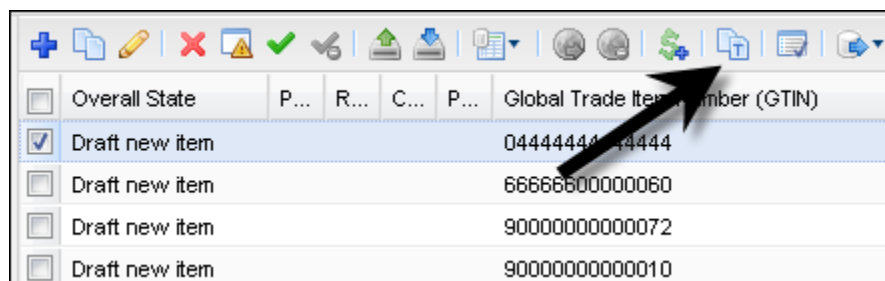

There are two ways of saving an existing item as a Template.

If the item is already opened in the editor, simply click the Save as template button. The template creation dialogues now opens, enter a template name and chose the article type.

*Save Template Dialogue*

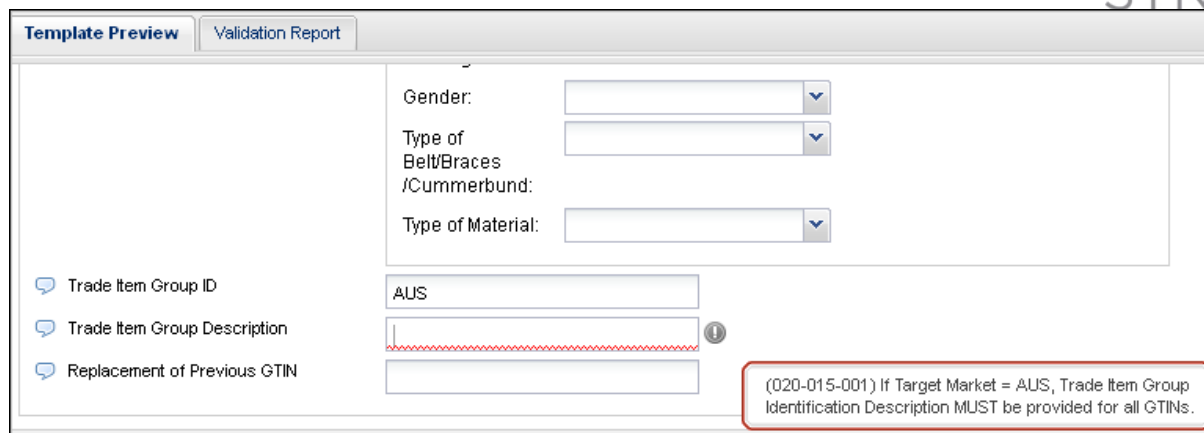

To save an item as template from the hit list flag the item and click the Save as template button in the function bar. Please note that only a single item can be saved as template at a time.

*Save Template from hit list*

## Template Preview and Validation Report

The preview is meant to provide a quick overview and displays only a limited set of attributes. It is provided in a read-only mode. The data cannot be modified but validation errors are displayed.

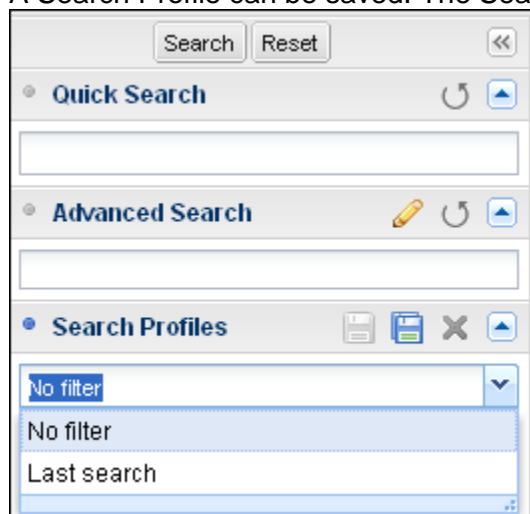

Preview with validation error in read-only mode

The Validation Report is displayed in a separate tab. The validation must be activated manually through the 'Validate' button in the function bar. You can validate more than one template; the validation reports for all templates will be displayed together. The validation report is not saved. When clicking another item or another tab the report will disappear

## Searching for and finding Templates

The search section of the 'Template List' is located in the widget on the left-hand side. A Quick Search and an Advanced Search is provided here to retrieve the templates. Searching and navigating with both search options is done the same way as the search works for items in the Supplier Item List. For details see section 'Find Items with the Quick Search function' and 'Find Items with the Advanced Search Function'.

A Search Profile can be saved. The Search profile works the same way as in the item list.

Search option widget

## Create new Item from Template

The template list function bar provides a functionality to create an item directly from a template. Click the 'Create item from template' button and the 'Create Item' dialogue will open with the corresponding template selected.

*Create item from template*

For further information on creating of an item from a template, please refer to 'Create Items using the Template Function'.

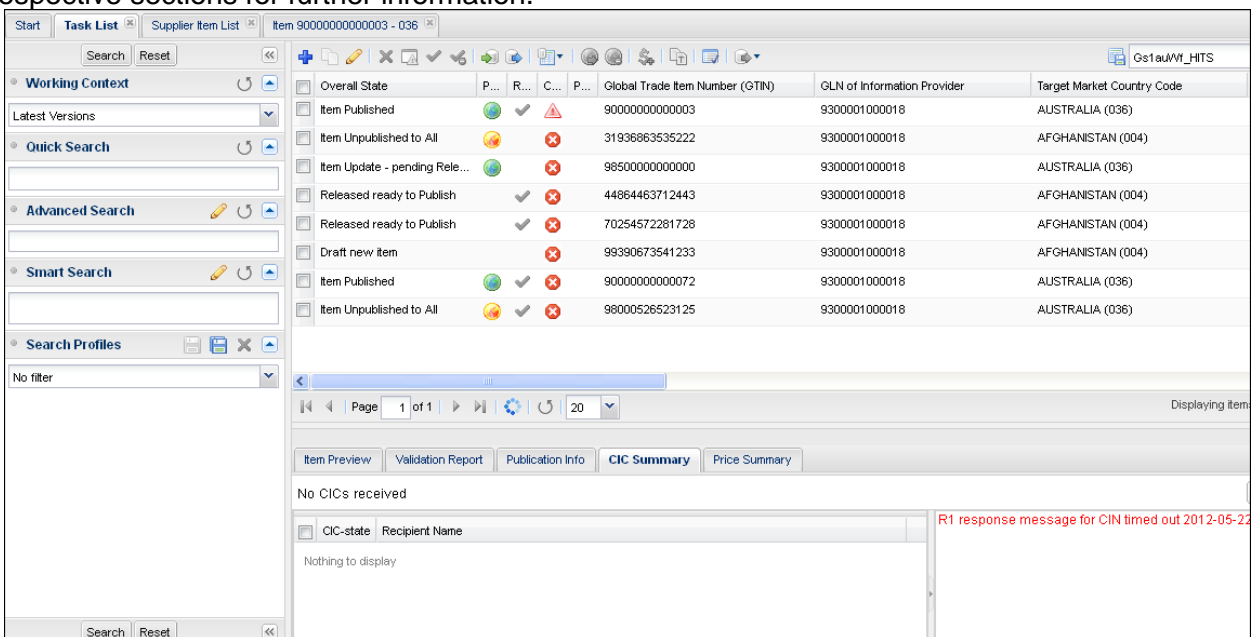

You can also create items from templates if you click on the Create button in the item list. Choose the template from the drop-down list. Templates assigned by the community owner are bold.

## Task List

The Task List provides a separate area for managing incoming tasks via Catalogue Item Confirmations. Items with a To Do state as a result of CICs with state REVIEW or GDSNExceptions are listed here.

The handling of the Task List as well as the available functions is consistent with the Supplier Item List. The search section on the left-hand side and the function bar are identical. Please refer to the respective sections for further information.

Overall State	P...	R...	C...	P...	Global Trade Item Number (GTIN)	GLN of Information Provider	Target Market Country Code

Item Unpublished to All					98000526523125	9300001000018	AUSTRALIA (036)

Task List

## Working on items with To Do status

There are two different reasons why items appear in the Task List:

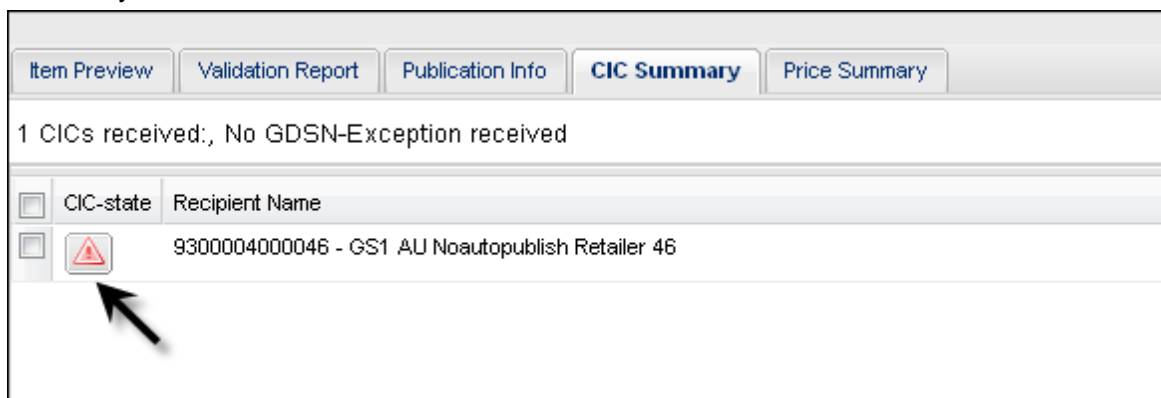

A retailer's request for the review of a certain item. The feedback from the retailer will be handled through a CIC Review message which references an item and contains review details.

A GDSNException sent by the source data pool is an immediate feedback if the publication failed.

The CIC Review is indicated with a  sign. For more information on the CatalogueItemConfirmation in general and its status please refer to section 'CIC State'.

The GDSNException, displayed with a  sign, is displayed in the CIC Summary tab as well. Please note that only items with either the To Do state CIC review or GDSNException are displayed here.

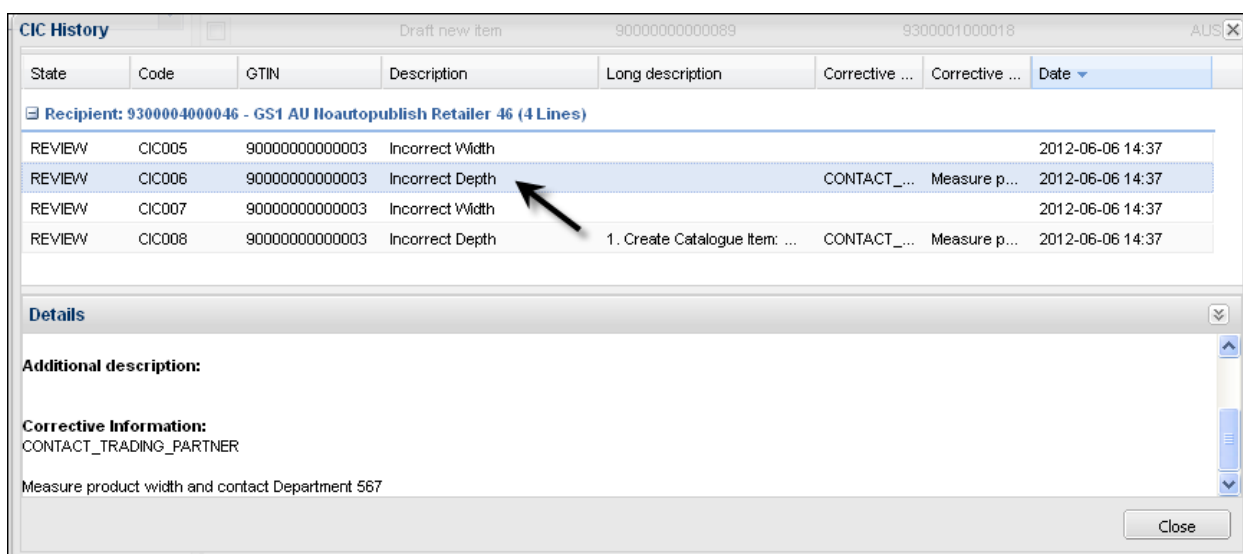

Further information on the nature of the data that needs to be reviewed can be viewed in the CIC Summary tab beneath the hit list.

CIC-state	Recipient Name
	9300004000046 - GS1 AU Noautopublish Retailer 46

*CIC Summary Tab*

When clicking on the Review sign a window opens, specifying the data that is not accepted by the recipient. Click on the icon to open the detailed error report. Please note that this information is provided by the data recipient.

State	Code	GTIN	Description	Long description	Corrective ...	Corrective ...	Date
<b>Recipient: 9300004000046 - GS1 AU Noautopublish Retailer 46 (4 Lines)</b>

Close

*CIC History with corrective information from the recipient*

Select the item from the hit list and edit the affected data. Please see section 'Edit Items' for further details.

## Close a To Do from Task List

The user can tick off the 'CIC REVIEW' entries and mark them as 'done'. This action does not depend on the status of the item, the user can mark the Review as done whether he has edited the item or not. This option is provided by the CIC Summary widget.

As soon as either the CIC-status is marked as done or the item has been released again after the data was modified, it disappears from the task list.

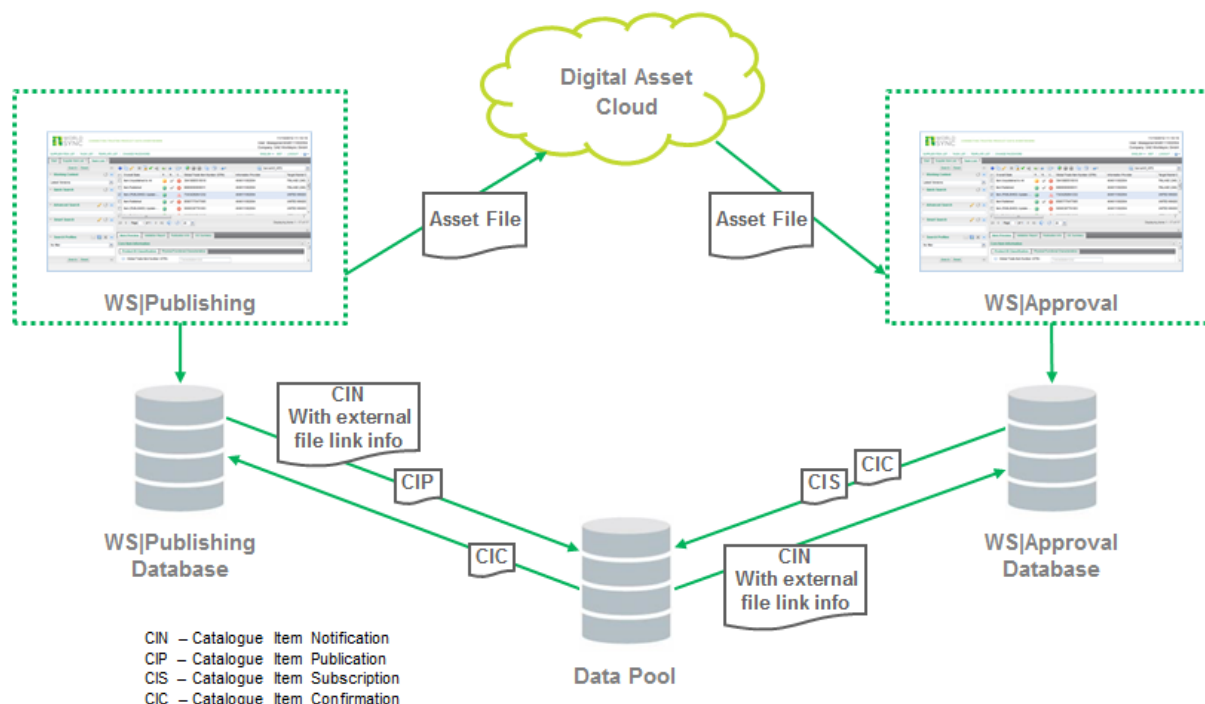

# Digital Asset Management

WS|Publishing provides suppliers with the ability to store digital assets referring to their products and to exchange trade item data with attachments as images or documents. These digital assets should be made available to retailers.

This chapter describes the functionalities of the user interface and the process of maintaining digital assets.

## System Context

The supplier uploads digital assets by means of the WS|Publishing application. The WS|Publishing application stores the asset in an external cloud. The cloud returns the reference to the stored object. The returned reference and all meta data are stored in WS|Publishing. As soon as a trade item with digital assets is sent to the data pool, a reference is transferred to the *external file link information* of the trade item. This ensures that the digital asset reference and its meta data are synchronized with the retailer according to the GDSN choreography. The retailer is able to access the digital asset via the delivered reference to the asset within the cloud.

## GDSN representation of digital assets

The following GDSN attributes will be used to exchange digital asset information as the object reference to the external digital asset cloud as well as the meta data.

GDSN attribute	Description	M/O/D <sup>1</sup>	Dependencies
Type of Information	Code identifying the purpose of the information contained in the external file. Example: Image of product label, marketing information, planogram.	M	
File Name	The name of the file that contains the external information.	O	
Content Description	Free form description of the content of the file.	O	
Content Description Language	Language in which the content description is expressed	D	If "Content Description" is populated, this attribute is required
File Format Name	The name of the file format. Examples: PDF; JPEG; BMP	O	
Uniform Resource Identifier URI	Simple text string that refers to a resource on the internet; URIs may refer to documents; resources; people; etc.	O	
File Effective Start Date Time	The date upon which the target of this external link begins to be effective for use.	O	If the file is an image, the "File Effective Start Date Time" must be populated if the "Uniform Resource Identifier" is populated
File Effective End Date Time	The date upon which the target of this external link ceases to be effective for use.	O	
File Version	A description of the terms used by the manufacturer to denote the version of the digital asset.	O	
File Size	The size of the file as it is stored in an uncompressed format.	D	If "File Size" is populated, this attribute is required
File Size UOM	The unit of measure associated with the file size.	O	
File Pixel	The number of pixels along the vertical	O	

<sup>1</sup> M – Mandatory, O – Optional, D - Dependent

Height	axis of the image.		
File Pixel Width	The number of pixels along the horizontal axis of the image.	O	
File Print Height	The maximum measurement along the vertical axis of a printed representation of the file.	O	
File Print Height UOM	The unit of measure associated with the file print height	D	If "File Print Height" is populated, this attribute is required
File Print Width	The maximum measurement along the horizontal axis of a printed representation of the file.	O	
File Print Width UOM	The unit of measure associated with the file print width	D	If "File Print Width" is populated, this attribute is required
File Aspect Ratio	A description of the aspect ratio used to determine how a digital asset fits on a page or monitor.	O	
File Colour Scheme	The type of colour scheme used in the digital asset.	O	
File Camera Perspective	A description of the angle of perspective used by the camera in the capture of the digital asset.	O	
File Camera Perspective Language	The language associated with the file camera perspective	D	If "File Camera Perspective" is populated, this attribute is required
Is File Background Transparent	An indicator of whether or not the background used in the file is transparent. Having a transparent background would allow a recipient to place the file into any setting necessary.	O	
Is File for Internal Use Only	An indicator whether or not the file is intended for internal use only and not for general publication.	O	
Can Files Be Edited	An indicator of whether the user or recipient of the digital asset can edit it prior to use or as a function of using the asset. Some digital assets are designed such that the recipient can edit the asset to meet the needs of a final output.	O	
Is Talent Release on File	An indicator whether or not the owner of the asset has a talent release on file. This applies to files where talent or a model is used.	O	
File Usage Restriction	A description of any restrictions on the ability of the recipient's to use of the asset.	O	

File Usage Restriction Language	The language associated with the file usage restriction	D	If "File Usage Restriction" is populated, this attribute is required
Intended Publication Country	The country/countries in which the digital asset is designed to be used.	O	
File Copyright Description	A description of any copyright notice which pertains to the digital asset.	O	
File Copyright Description Language	The language associated with the file copyright description	D	If "File Copyright Description" is populated, this attribute is required
File Disclaimer Information	A description expressing any disclaimers which pertain to the Media object. (e.g. Item may be smaller than appears)	O	
File Disclaimer Information Language	The language associated with the file disclaimer Information	D	If "File Disclaimer Information" is populated, this attribute is required

## Digital assets in WS|Publishing

The informative value of trade item data will be improved if business to consumer data aspects are taken into account as well. Suppliers want to attach images or documents to trade items such as product images, instructions of use or organic certificates and want to make them available to retailers.

The WS|Publishing application supports digital asset handling by the supplier. The digital asset management component enables the supplier to create and attach, detach, update and search for digital assets. The digital asset management module must be assigned by the administrator.

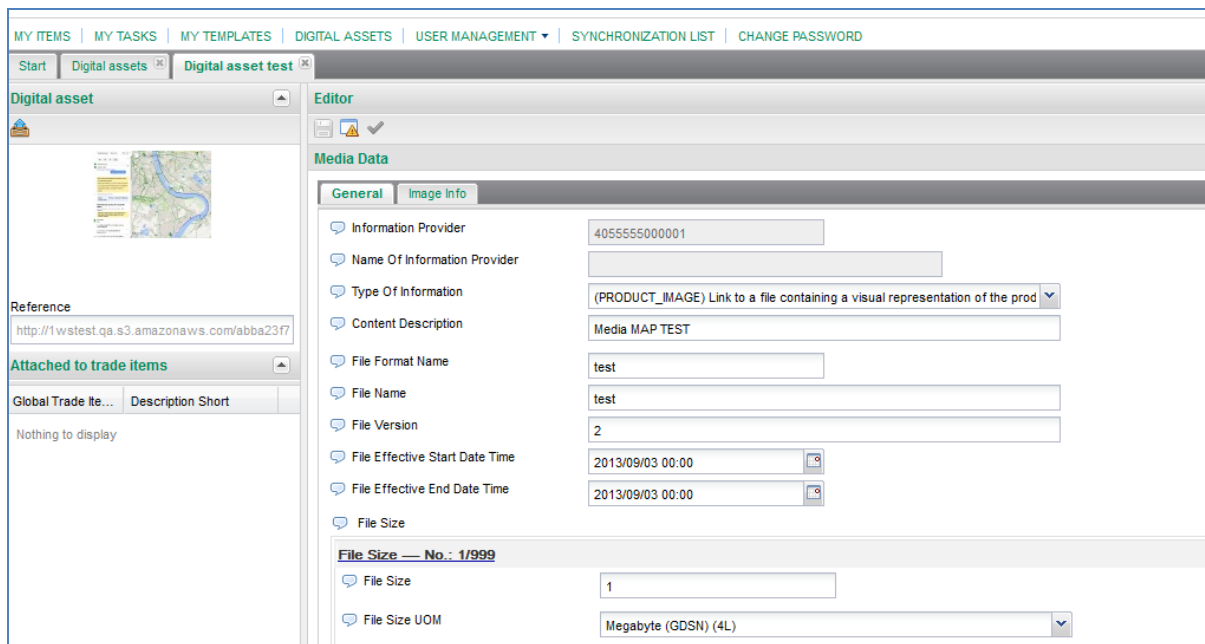

To access the digital asset management component, click the tab "Digital Assets" in the main menu bar on the top. On this tab, all stored digital assets of the supplier are listed.

Tab Digital assets

## Digital assets editor

Selecting a digital asset will result in opening the editor.

Digital asset editor

The editor enables the supplier to update, save and release digital assets.

The digital asset file widget on the left upper side displays the thumbnail or icon of the asset file and the reference to it in the cloud. The reference is not editable. The toolbar of the file widget contains the "Upload" button.

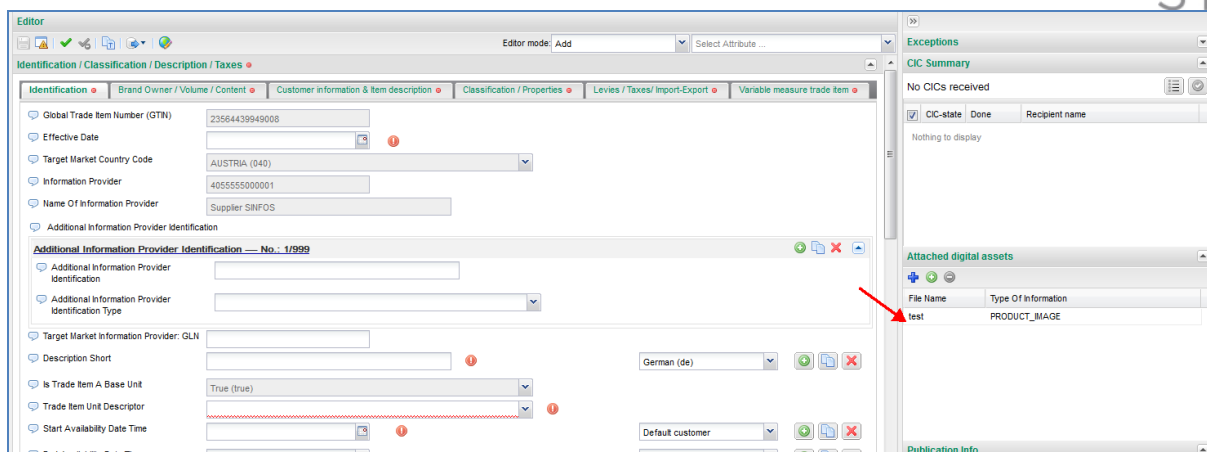

Press this button to change the actual digital asset file or replace the current file.

The trade item list widget on the left lower side lists all trade items the digital asset has been attached to. Double clicking one of the listed trade items will open the trade item editor for the given trade item.

## Trade Item Editor

If an item is opened in the detail view, an additional widget is displayed on the right side of the screen with the attached digital assets.

## Create digital assets

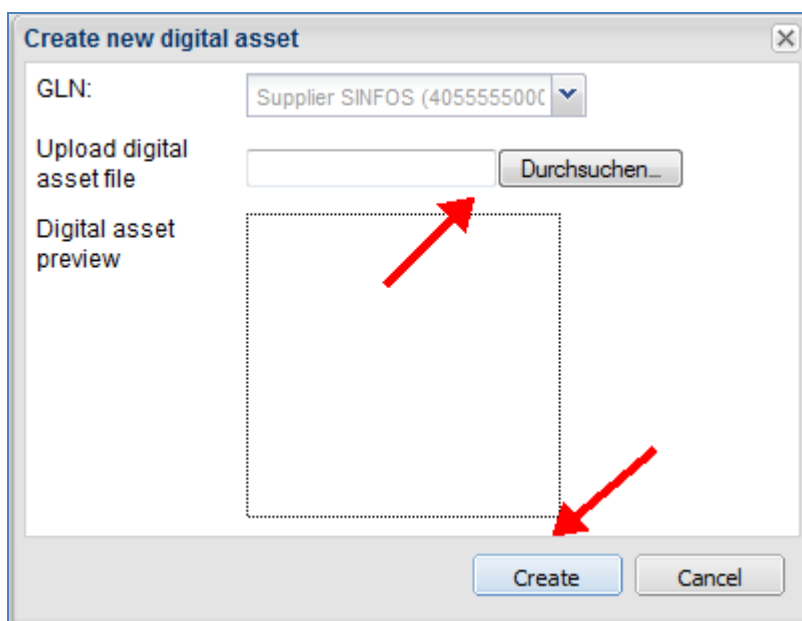

To create a digital asset, open the tab Digital assets. The hit list is displayed. Different actions can be carried out via the buttons on the function bar. The available options are always visible. Options that are not active are grayed out. All digital assets created here are initially stored locally and are later assigned to the respective items. (See [Attach Digital Assets](#))

Now select the option *Create a new digital asset* by clicking the  button.

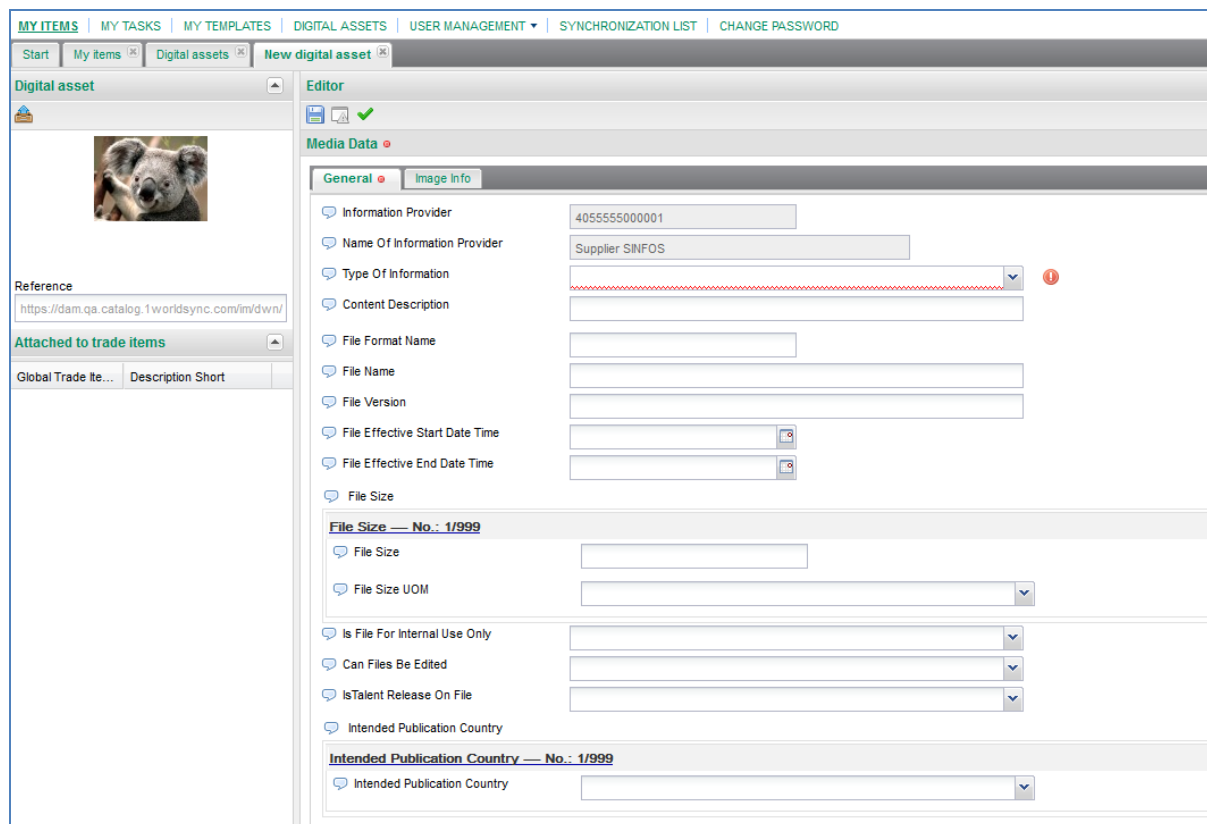

[A file selection dialog will appear.](#) Upload the file from the desired source and then click *Create*.

[Selection dialog](#)

This operation opens a dialog with input fields for all possible digital asset attributes and pre-fills the thumbnail/icon on the left side.

Editor for creating a digital asset

Fill in the required information to classify the digital asset created and ensure that the mandatory data is entered correctly.

To complete the process, save the asset. Before the digital asset can be assigned to an item, it first must be released. WS|Publishing stores the digital asset as working revision.

If a digital asset is attached to a trade item and this trade item is released and published to the data pool, then all changes to the digital asset must be sent to every affected retailer because not the actual digital asset is distributed but only the trade items to which it is attached. Release the object with the respective button and confirm the following notification with “Yes”.

WS|Publishing stores the digital asset as *working revision*. The asset is created.

## Attach digital assets

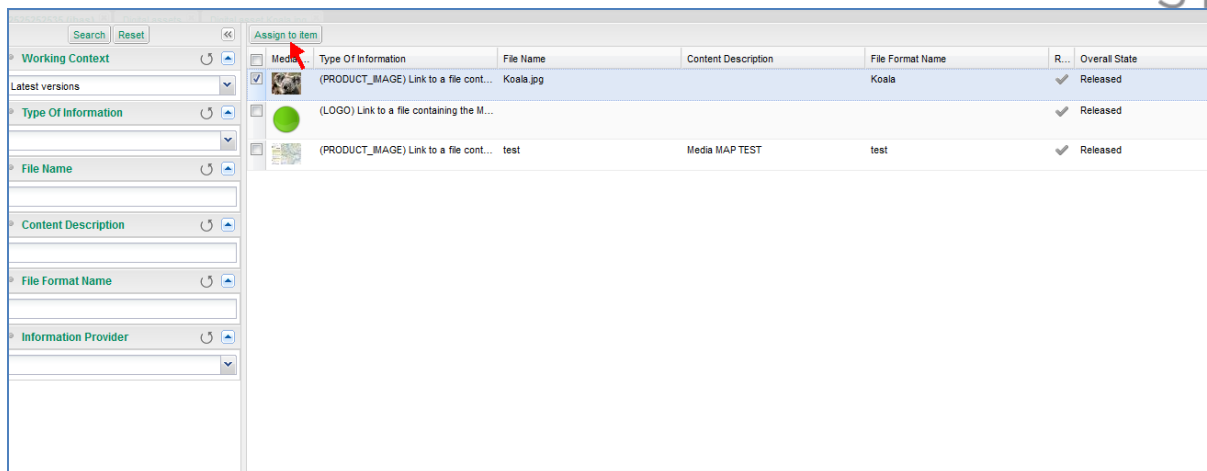

Attaching a digital asset to a trade item will create a relation between both. This relation can be seen as similar to hierarchy relations. It won't be possible to release a trade item if a digital asset is attached which has no released revision. A released trade item revision will always refer to the particular released revision of the attached digital asset.

To attach digital assets to items open "My Items" from the menu bar on the dashboard. Now select the item by double clicking the box in front of the line on the item hit list. The item is opened in the detail view. To attach an existing digital asset click the  button in the widget on the right side of the screen.

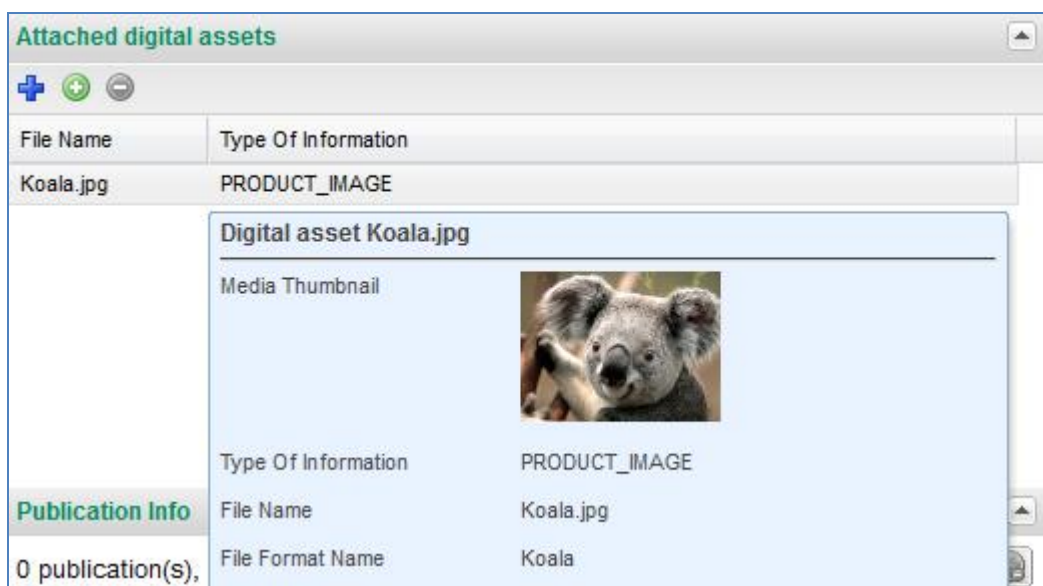

Widget attached digital assets

On the entry screen now displayed all available digital assets are listed with their *File name* and the *Type of information*. The selection of a digital asset can be effected via the search function or via click in the box in front of the line of the respective digital asset. By using the option  the asset is assigned to the corresponding item.

Overview: Assign to an item

As a result of this process the attached digital asset is listed in the widget on the right side of the screen. If you move the mouse over the line, a brief message appears with information on the digital asset and displays a *thumbnail*, the *Type of Information*, the *Content description*, the *File Name* and the *File Format Name*.

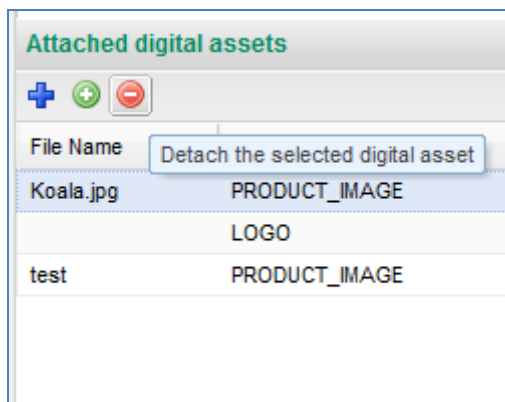

Mouse over additional information

## Detach digital assets

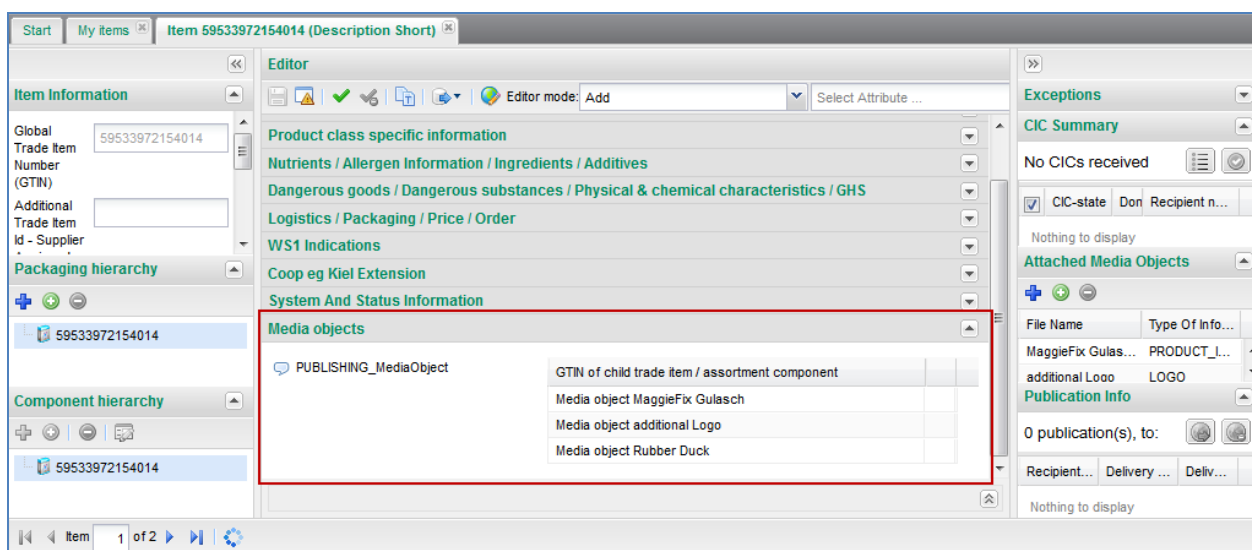

In the course of a product cycle it is sometimes required to upgrade or replace a digital asset. For this the digital asset must be detached from the item. The digital asset itself is not deleted but only the connection between item and digital asset in the cloud is removed.

In order to detach a digital asset, first open the item in the detail view. In the widget *Attached digital assets* on the right side all digital assets which are attached to the item are listed. To detach the connection, highlight the digital asset and use the  button to *detach the selected digital assets*. WS|Publishing detaches the asset from this trade item.

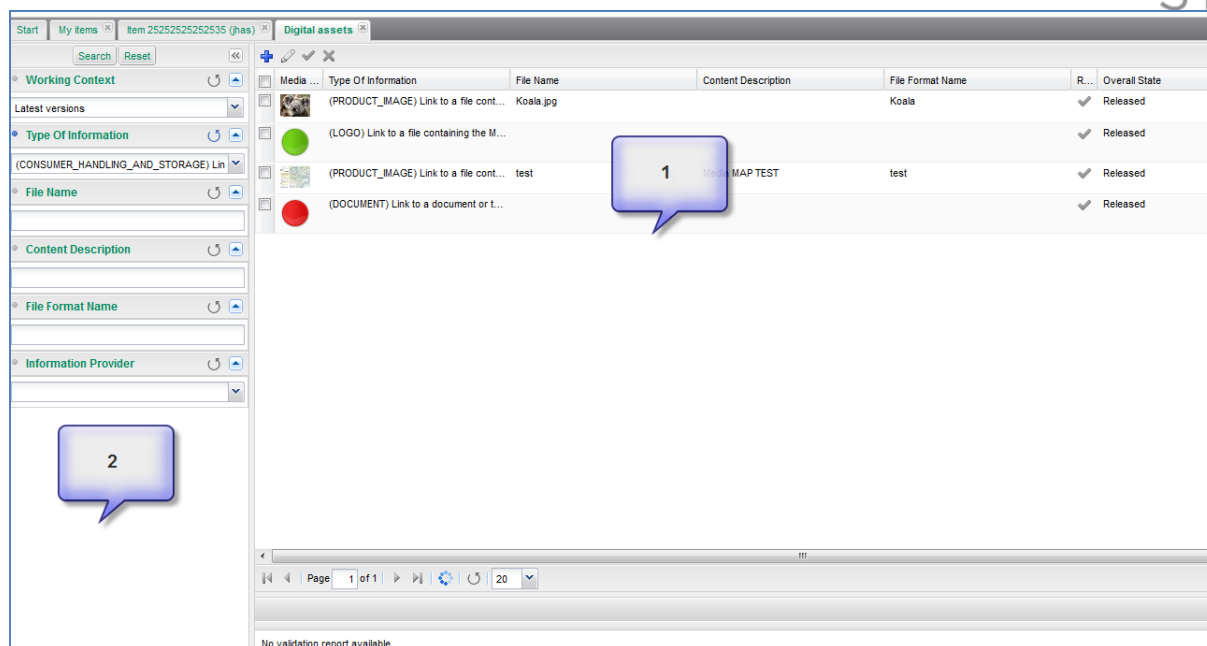

An overview of the digital assets attached to an item is also available in the item detail view on the flexbar "Digital assets".

## Search for digital assets

If the supplier wants to get an overview of existing digital assets, they can be filtered by using the Search option.

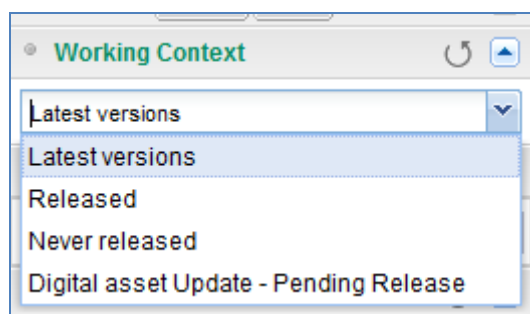

Proceed as follows: open the tab Digital assets in the main menu bar on the top.

The hit list (1) displays all stored digital assets, the widget on the left side contains the Search parameters (2).

To search for digital assets use the following Working Context:

- Latest versions
- Released
- Never released
- Digital asset Update – Pending Release

Via the widget on the left side you can narrow the search results. Select the *Type of Information* or fill in *File Type* or *Content Description* or *File Format Name* or *Information Provider*. The Working context is set to latest versions by default. Clicking Reset  will clear the entry fields. Proceed to the Search function by clicking the “Search” button.

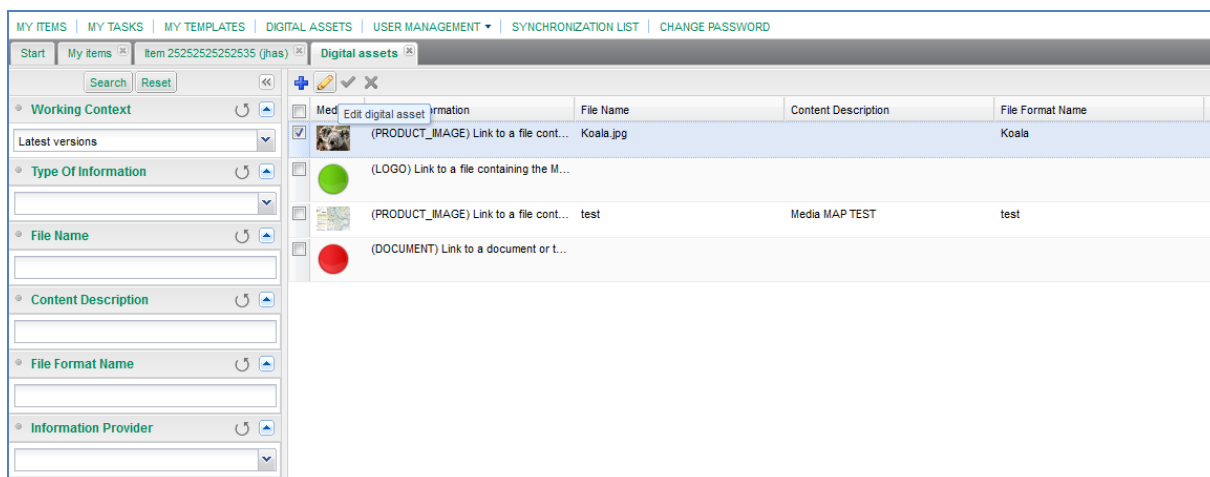

WS|Publishing determines the matching digital assets. The digital asset hit list is displayed.

## Search Parameter

Parameter	Type	Mandatory/Optional	Description
Working context	Combo box with "Latest", "Released", "Never Released" and "Pending Release", default = "Latest"	Optional	The working context determines which digital asset revision should be displayed. If the user opens the released revision of a digital asset which has a working revision as well, the digital asset editor shows the revision in read-only mode.
Type of information	Combo box with all possible types	Optional	Code identifying the purpose of the information contained in the external file.
File name	Text field, default = empty	Optional	The user may narrow the result set by specifying the file name of the digital asset file.
Content description	Text field, default = empty	Optional	The user may narrow the result set by specifying the description of the digital asset file.
File format name	Text field, default = empty	Optional	The user may narrow the result set by specifying the file format name of the digital asset file.
Information Provider (GLN)	Combo box with all possible types	Optional	The user may narrow the result set by specifying a trade item GLN.

## Maintain digital assets

Open the detail view of the selected digital asset by using the Edit-button.

The screenshot shows the 'Digital assets' section of the 1WorldSync application. On the left, there are search filters for 'Working Context' (set to 'Latest versions'), 'Type Of Information', 'File Name', 'Content Description', 'File Format Name', and 'Information Provider'. The main area displays a table of digital assets with columns for 'Information', 'File Name', 'Content Description', and 'File Format Name'. The first asset is 'Koala.jpg' with a 'Media MAP TEST' description. Below the table, there are buttons for 'Add', 'Edit', and 'Delete'.

After editing the General information and the Image Information, it is possible to validate the digital asset to test it for correctness. By clicking the Validate Icon , the validation procedure can be activated anytime without saving the data. Correct the errors, and if possible also the contents that cause warnings.

After validation, the object must be saved to secure the changes and additions. WS|Publishing creates a working revision upon saving. The digital asset must now be released again. The released revision of the trade item with the digital asset attached must be resubmitted to the data pool and the retailer.

The meta data and the URL of the released digital asset revision will be included in the submitted CIN.

## Distribute digital assets

Once a digital asset has been created, released and assigned to an item, it will be delivered as a part of a CIN to the retailer. The digital asset itself is stored in the digital asset cloud and only the reference is sent to the retailer within the CIN message.

A trade item may have several digital assets attached. After finalizing the edit process the trade item will be released. If the trade item has already been published to at least one retailer or is part of a published hierarchy, the trade item data will be sent to the data pool as well and synchronized with the retailers who have subscribed the trade item.

The meta data and the URL of the released digital asset revision will be included in the submitted CIN. If one of the attached digital assets has only a working revision, the trade item won't be releasable.

The trade item data of the released revision will always be sent. If a trade item has only a working revision no CIN will be transmitted.

# Synchronization List

The Synchronization List is a module within the WS|Publishing application that allows users to access information on the publication status of items in relation to their subscription status. The synchronization list represents the status of synchronization according to the publication and subscription list.

Suppliers can publish items to either a target market or (a) specific retailer(s). Data not only needs to be published but also subscribed to by retailers for items to be exchanged between trading partners. Items can be published without existing subscriptions or there may be subscriptions for items not yet published.

The data pool matches published data to subscriptions and maintains a list of all publications of supported suppliers and all subscriptions that affect trade items hosted by it, regardless of which data pool hosts the subscribers. As soon as a trade item matches a subscription the data will be sent. This combination, known as the pub-sub match, is the prerequisite for data synchronization. If there is no pub-sub match, no data is transmitted.

Once a retailer deletes a subscription, new trade items matching this subscription will no longer be sent out. All previously matched items will continue to be synchronized. To completely stop synchronization, a supplier must send a reject confirmation message.

Working with the synchronization list

You access the synchronization list by clicking on the tab in the menu bar

SYNCHRONIZATION LIST

The list loads automatically. It displays a predefined set of data for all items of the user's GLN. If data for more than one GLN can be maintained, the user can select the GLN in the search menu.

The synchronization list provides the information on a read only basis, it is not possible to download and/or edit data displayed here. You can remove columns or rearrange the order they are displayed in. For a detailed description of how to customize the hit list, please refer to the chapter [Customize the hit list](#)

The Synchronization List itself has a predefined set of attributes that provide the following information:

- Date of creation
- Action Code of the last CIN sent to the retailer
- GLN of the trade item

- GTIN of the trade item
- Status of last message
- GLN of recipient
- Date when the last CIN was sent to the retailer
- Synchronization status
- GPC Brick Code
- Reload indicator of the last CIN sent to retailer:
- Target Market Country Code

The entry false for the Reload indicator indicates that the retailer has reactivated the previously rejected trade item.

Items sent to the retailer are marked as 'sent'. If an item that was already sent to a retailer is modified by the supplier this will create a new entry in the subscription list with the status new. Please note that the status new always indicates that the item still has to be sent to the retailer. Once an item is sent, the status changes to sent.

Status of last message	Synchronization status	GLN of recipient
ACCEPTED	SENT	4388840000005

The search functions on the left allow you to narrow the number of results or search for particular subscriptions. The search criteria available are:

- GPC brick code
- GLN of the trade item
- GLN of recipient
- Target Market Country Code
- GTIN of the trade item
