Millions of us now work from home—either as a result of a more mobile work force, or the failing economy. The average person doesn't know where to begin when setting up a home office, let alone an efficient and inexpensive wireless network. *WiFi Home Networking* is truly the home businessperson's survival guide for setting up a wireless home network and business.

- Summarizes business expenses and savings to help a prospective user choose an appropriate office setup
- Reviews several WiFi products currently on the market for home use
- Suggests useful networking tools that save money for small-time operators
- Compares wireless versus wired connections in terms of home networking
- Includes practical information about security, viruses, and backing up

RAYMOND SMITH (Ojai, CA) has a degree in telecommunications, and has worked as a News Director and Editorial Writer for several radio stations. He has worked in the field of computer programming and maintenance, with a specialty in data networking. Most recently, he has worked as a Network Administrator for Verizon.
