16 Channel Digital Video Recorder

User's Manual

Safety Precautions

This label may appear on the bottom of the unit due to space limitations.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of insulated dangerous Voltage within the product's enclosure that may be sufficient magnitude to constitute risk of electrical shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operation and maintenance (servicing) instructions in the literature accompanying the appliance.

WARNING: TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE UNITS NOT SPECIFICALLY DESIGNED FOR

Attention: installation should be performed by qualified service Personnel only in accordance with the National Electrical Code or applicable local codes.

Power Disconnect. Units with or without ON-OFF switches have power supplied to the unit whenever the power cord is inserted into the power source; however, the unit is operational only when the ON-OFF switch is the ON position. The power cord is the main power disconnect for all unites.

“CAUTION: Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer’s instruction.”

Warranty and Service

During the warranty period (one year for Hard Disk), we will repair or replace the hard disk free of charge.

Be sure to have the model number, serial number and vendor stick on hard disk for service representative.

About this document

Before installing stand alone DVR, be sure to thoroughly review and follow the instructions in this Users Manual. Pay particular attention to the parts that are marked **NOTICE**.

Also, when connecting with external application, first turn the power OFF and follow manual instruction for appropriate installation.

Before reading this document

1. This document is intended for both the administrator and users of stand alone DVR Model.
2. This manual contains information for configuring, managing and using stand alone DVR Model.
3. To prevent fire or electrical shock, do not expose the product to heat or moisture
4. Be sure to read this manual before using stand alone DVR Model.
5. For questions and technical assistance of this product, contact your local dealer.

? Strong recommendation on installation of the DVR unit

1. Check electricity at the place you want to install the DVR unit is stable and meets our electricity requirements.

Unstable electricity will cause malfunction of the unit or give critical damage to the unit.

2. Several chips on the main board of the DVR unit and hard disk drive inside the unit generate heat, and it must be properly discharged.

Do not put any objects just beside exhaust port(fan) on the left side of the unit and do not close up an opening (fresh air in-take) on the right side of the unit..

3. Put the DVR unit at well-ventilated place and do not put heat-generating objects on the unit.

When it is installed inside 19 inch mounting rack together with other devices, please check built-in ventilation fan of the rack is properly running.

NOTICE: Sensor input is RECOGNIZED as LOW when alarm signal is on a level with GND, and it is recognized as HIGH when alarm signal is FLOATING or 5V. Following is internal circuit.

Internal Circuit

Thus, there is a danger of damage, when the sensor input goes to a Negative level or voltage higher than 5V.

5) Network Connection

DVR connects to LAN

To view video image on the computer through internet with DVR view software.

6) HDD connection

How to connect single HDD

1. Make sure the HDD is MASTER.
2. Make sure the cable connector is correct.
3. MASTER set up, please check the HDD panel.

How to connect 2 HDD

1. Make sure the HDD is MASTER and SLAVE.
2. Make sure the cable connector is correct.
3. MASTER and SLAVE set up, please check the HDD panel.

Notice:

-The 16 ch DVR provides 2 internal hard drives. We provide one hard disk drive with removable rack; the other one is fixed designed.

-We recommend you to set the Removable Hard Disk as Slave. Set the other one as the Master.

7) Power Connection

Connect the power to the POWER CONNECTION on the Rear Panel of the system, and turn on the switch.

8) Turn on the POWER.

Make sure the adaptor is 12V/5A.

2.) Zoom Mode(Display Enlargement.)

Go to full screen mode with numeric buttons of live or playback mode, then press ZOOM button to display screen Enlargement.

Use button to move position.

3.) Auto Mode

Press (AUTO) button begins to screen auto sequence.

>No auto sequence in 16 / 13 split screen.

>You could active auto sequence function in 9-split, 4-split, PIP or full-screen mode. The 3rd channels will sequence in 9 split screen. 2nd channel do auto sequence in 4-split screen mode.

4.) PIP (PICTURE IN PICTURE)

1.) Press (PIP) button.

2) With button, select the main channel screen, press button to select desired camera channel in small screen.

5.) SEL (Select)

>On the 13 / 9 / 4 split screen, press SEL can change the each channel order.

- Press SEL button to active the selection function.

- Turn the inner-shuttle or ◀ ▶ button to select the desired camera channel in split-1.
- Press  change button to change the split-screen position.
- Press SEL button again to cancel the selection function.

6.) Alarm Sensor Recording

>See the alarm recording setup page

7.) Scheduled Recording

>See the scheduled recording setup page

8.) Motion detection Recording

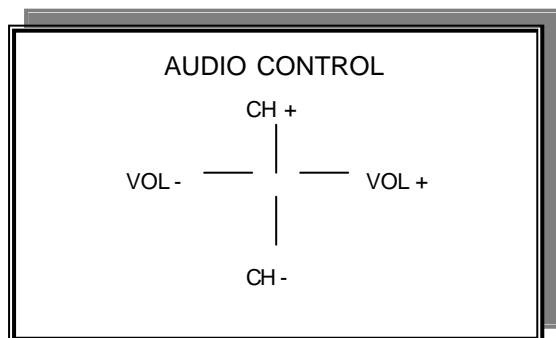

See the motion detection recording setup page

9.) Key Lock function

On the Live or Playback mode, press  (lock),

Only, numeric, freeze, auto, pip, and zoom buttons could work. Press lock key again to enter the login-in window. Enter admin or user password to unlock.

10.) AUDIO BUTTON

CH: choose which audio channel output

VOL: Audio volume values change.

Notice

- 1> Recording is stopped during playback.
- 2> Recording is not possible if no camera is connected.
- 3> DVR must be not on the PLAY mode, if user wants to remote view in the Internet.

Playback

1. Playback Mode

1) Press button to begin playback. (System will playback the images in backward)

2. T-SRH button

1) T-SRH: Playback by time search.

Press T-SRH button to active playback function.

Press direction button UP/DOWN to choose items.

2) EVENT LIST (Alarm List): Event source- Video loss/ alarm trigger

Press direction button UP/DOWN to choose items. Press direction buttons LEFT/RIGHT to choose mode. (PLAY / SORT / DELETE)
Press <> values change button to change page.

PLAY: User press direction button to choose items, then press ENTER to start playback.

SORT: DATE, alarm events sort by date and time. CH, alarm events sort by channel.

TYPE, alarm events sort by type.

Press (SEL) button to change sort.

DELETE: ITEM-delete items by each. PAGE-delete each page. ALL-delete all items.

3) TIME LIST (Playback image by Time-Search): Recorded images list (by hours)

No items or page display limit. Items. DVR recording mode is continued.

Press direction button UP/DOWN to choose items.

Press < > values change button to change to next page.

4) PLAY END: After image playback end, DVR is going to RECYCLE (continue playback) / RECORD (continue record) / STOP (stop record or playback)

5) FIRST: xxxx/xx/xx xx:xx:xx (The FIRST date and time recording display).

If hard disk has recycled record, the first date and time display would different.

6) LAST: xxxx/xx/xx xx:xx:xx (The final date and time recording display).

When user stop record / or go to menu, at that moment is the last record.

7) GOTO: xxxx/xx/xx xx:xx:xx (year / month / day, Hour / Minute / Second)

Press direction button Left/Right to change date and time values position.

Press < > values change button or turn

inner-shuttle to change date and time values.

8) PLAY GOTO TIME

After date and time input, direction move to PLAY GOTO TIME, press ENTER to start playback.

FUNCTION SETUP

LOGIN

4. TCP-IP SETUP

> TCP-IP SETUP

-IP ADDRESS

192.168.192.250 0080 (Factory Default)

-GATEWAY

192.168.192.001 (Factory Default)

-SUBNET MASK

255.255.255.000 (Factory Default)

-MAC ADDRESS

XXXXXXXXXXXX. Machine number, user cannot change.

Press direction buttons up/down/left/right to TCP-IP items position.

Press values change button to change values.

>Network Requirement:

LAN (Local Area Network)

- 1) DVR side input local IP address such as 192.168.0.5, or use the factory default IP.

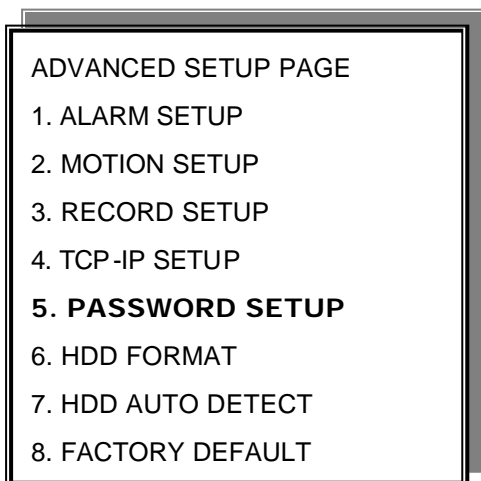

- 2) After DVR network setting, install the remote viewer to computer. Computer network IP also need to setup on local IP address such as 192.168.0.6. DVR and computer IP address cannot equal.
-Always 0080 port.

WAN (World Area Network)

- 1) User apply fixed IP from network, then input IP Gateway, and Subnet mask address to DVR TCP-UP setup.
- 2) Advice user apply network speed Upload 512K / Download 512K, to avoid image data too big influence the remote quality. The network traffic jam always make data transfer slow, it is normal.
- 3) After DVR TCP-IP setup, install the remote viewer to computer. See the remote viewer page.
-Port is depend on network company area, but normally is 0080 port.

5. PASSWORD SETUP

- 1) LEVEL (Log In level ID type setup)
>NONE / ADMIN / USER
-ADMIN is the highest-level ID
-USER is the highest-level ID
-NONE, user does not need to insert password before enter in MENU.

Press direction buttons up/down/left/right to Choose items position.

Press values change button to change values.

- 2) ADMIN password
>44444 (Factory Default)
- 3) USER password
>11111 (Factory Default)

Notice:

Password always 5 character input cannot < 5 characters

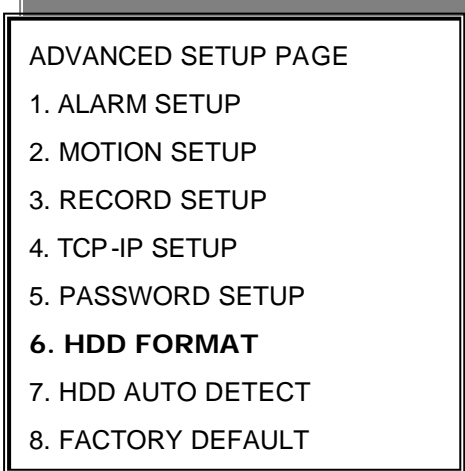

Press direction buttons up/down/left/right to choose items position.

User press 1 ~ 9 numeric to choose password.

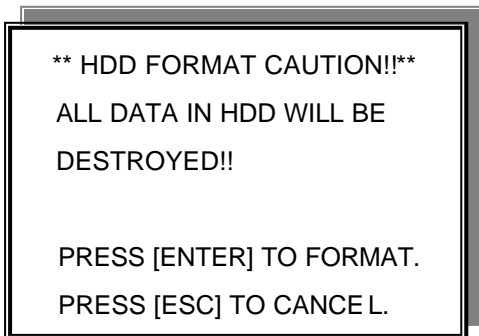

10 ~ 16 no work.

6. HDD FORMAT

Press direction buttons up/down to HDD FORMAT items position.
Press ENTER to in.

→ HDD FORMAT CAUTION!! :

Press ENTER button to format hard disk.

Press ESC button to cancel hard disk format

Press ENTER button to restore.

Press ESC button to cancel.

HDD BAY

1. HDD EXTENSION

Default HDD included in DVR unit.

- 1) 1,2,3,or4 HDD as per customer requirement.
- 2) EIDE, 3.5 inch, 7200 rpm.
- 3) HDD capacity up to 120GB/unit.

Compatibility with up to 120GB confirmed.

2. HDD BAY

HDD Bay (Tera-Tray)

In case 2 HDDs installed in a DVR unit is not sufficient and needs to increase storage capacity, connect HDD Bay to DVR unit.

- 1) Configuration of Bay connection to DVR unit.

Example:

DVR unit(x2 hard disk inside) and HDD Bay(x4 hard disk inside), total is 6 HDDs.

- 2) Very economical way to expand storage capacity

If each of 10 HDD is 120GB in capacity, total HDD capacity connected to a unit of DVR is 1200GB.

We can add huge capacity of HDD storage to a unit of DVR just at the price level of normal EIDE HDD.

HDD BAY

Position order:

Collocation:

1	3
2	4

1, 2 a-team. Master & SLAVE

3, 4 a-team. Master & SLAVE

DVR and HDD BAY IDE interface connecting:

Notice: Before device connecting, user needs to turn of the power of them. After IDE connect, turn on HDD BAY power first, after 5 sec, turn on DVR power and done.

Hard Disk Master / Slave jumper pin define:

HDD Bay , The hard disk jumper pin must be in Master if only one hard disk inside of HDD BAY. Master or Slave jumper pin define must check the each company description. Otherwise it makes DVR hard disk work wrong. 2 HDD Disk installation, one must be Master, another one must be Slave. User needs to make sure the HDD disk installation all correct, if not, DVR system would not detect right position and capacity of DVR. Or might make DVR record and playback function not stable.

1. One Hard disk installation:

Master	

2. Two Hard disk installation:

Master	
Slave	

3. Three Hard disk installation:

Master	Master
Slave	Slave

4. Four Hard disk installation:

Master	Master
Slave	Slave

NOTICE:

- GO to HDD INFORMATION page to make sure the DVR system detect HDD amount and capacity is right or not.

Remote Viewer

General description: TCP/IP option of DVR and enables users to view live pictures, search recorded pictures, far apart from the DVR unit, and users can store selected recorded pictures on HDD of client PC. DVR does not adopted web browser method for access to DVR unit via Internet line, and you must install Remote Viewer software included in the package on client PC before you try to access to DVR unit over IP network.

Notice: Advice monitor resolution to 800x600 or 1024x768

1. Live view via IP network

Click Remove Viewer icon to view live picture via IP network. You will see then following window.

Function of each button in live-view window :

- 1 **Power switch.** Press power switch to quit. Before press power switch button, press disconnect button first.
- 2 **Connect button.** Press connect to connect to DVR unit via IP network to see live pictures of DVR unit. You will see the same live pictures, which are displayed on monitor of DVR unit with a certain time delay depending on transfer rate of IP network.
- 3 **Disconnect button.** Press disconnect button to cut connection to DVR unit via IP network.
- 4 **Screen division button.** You can select to see pictures of any single channel or 4 channels at the same time. You can select channel number from 1 to 4 to see pictures of selected channel. If you selected 4, you will see channel number from 1 to 4 are all activated. channel.
- 5 **Channel number button.** You can select channel number to see live pictures from selected channel.
- 6 **Status window.** It shows Date and Time. Further it displays "connection established" and a circular fan on the left bottom is rotating when connection button is activated, or "Waiting for connection" when disconnection button is activated.
- 7 **Set button.** 3 different set buttons
 - a) **Setting :** It is in the middle of 3 buttons. Press this button to input IP Address and others and to set circular monitoring interval and scan rate, as following dialog box.

System Setting

CONNECTION		OPTION	
LABEL :	INTRANET <input type="button" value="IP load"/>	Circular Monitoring Interval	03 SEC
IP Address :	192 . 168 . 192 . 3	Scan Rate (Fast mode)	8X
PORT :	80	Reconnection Count	3
ID :	ADMIN	<input type="checkbox"/> Run in full screen mode	
PASSWORD :	*	<input type="checkbox"/> Receive Events	
PT TYPE :	HMC250	<input type="checkbox"/> Display PlayTime On Image	
SAVE OPTION			
Set Path to Save Recorded Images	C:\Documents and Settings	<input type="button" value="Browse"/>	
Record Duration	03SEC		
<input type="button" value="OK"/>		<input type="button" value="CANCEL"/>	

- Input IP Address you already input into DVR unit(TCP/IP SETUP) in **IP ADDRESS**.
- Input Port number you already input into DVR unit in **PORT**. Just input 80, which is default port number.
- Input "ADMIN" in **ID**.
- Input the same password you set into DVR unit in **PASSWORD**.
Default password of DVR unit is "1".

ID and PASSWORD are not supported at this time, users do not have to care about it.

- PT TYPE: This function is not available.
- Select **circular monitoring interval** ranging from 0.1 sec to 10 sec. The smaller it is, the faster picture of each channel rotates. The absolute circulation interval is a little different from set value depending on data transfer rate of IP network.
- Select **scan rate** ranging from 1x to 64x. The larger it is, the faster search speed is. The absolute search speed is a little different from set value depending on data transfer rate of IP network.

b) **Scan.** : Press scan button to enter into search window. Using various operation buttons, you can search recorded pictures, save selected pictures on client PC, or print pictures. Refer to following paragraph "3. Search recorded pictures over IP network" for details.

c) **Rotate** : Press rotate button to see live pictures from channel 1 to 4 in rotation. Screen division must be set at 1 to see live pictures one after another in rotation. Speed of rotation shall be as per settings of circular monitoring interval.

- ◆ Run in full screen mode: Full screen monitor display.
- ◆ Receive events: When alarm and motion and video loss, the DVR status will display.

8 PTZ control. This function is not available.

SAVE OPTION:

Choose the hard disk path where you are going to save.

2. Search recorded pictures via IP network

Function of each button in search window:

- 1 : Power switch. Press power switch to quit.
- 2 : Full screen button. Press full screen button to search recorded picture channel by channel in full screen.
- 3 : Quad button. Press Quad button to search recorded pictures in quad screen. 4 pictures from 4 channels at the same time.
- 4 : Time of recording. It indicates when the pictures you see recorded.
- 5 : Channel selection button. Press any one from 1 to 4 to see picture of corresponding channel, if you first chose full screen button (2).
- 6 : Time selection button. You can set time to search by dragging yellow mover to the left or right. See time displayed in green color and find an exact time from which you search.
- 7 : Start and end of recording. It shows time from which recording started and recording ended. Further it shows time from which search will start.
- 8 : Search operation button. You can search recorded data using various buttons useful for searching effectively as follows.

Speed of playback in DVR unit according to scan rate set in 3-7-a).

Scan rate set in 3-7-a)	 or 	 or 
1x	1x	1x
2x	1x	2x
4x	1x	4x
8x	1x	8x
16x	1x	16x
32x	1x	30x
64x	1x	60x

9 : **Command button.** We have 3 different buttons, that are, save, print, and event.

a) Save

During searching recorded pictures, you can save pictures one by one in the folder in client PC by pressing save button. Before press save button, press yellow stop button first. The system will ask you to assign file name and folder to save.

b) Print

During searching recorded pictures, you can print picture, one by one, you see. Press yellow stop button before you press print button.

c) Event

Press event button to see alarm list saved in DVR unit, and you can search recorded pictures based on event list by clicking any one of list.

10 : **Calendar.** You can select date and time to search pictures recorded at selected time and date. You can refer to start and end of recording in **7**.

Notice : We recommend you to click operation buttons one after the other with enough time interval to give long enough time for DVR unit to execute commands from client PC. Too short time interval between two clicks may cause system hang-up in client PC.

Notice : From time to time, connection shall be cut unexpectedly due to conditions of network line. Whenever it is cut, quit search window by pressing power switch(**11**), and then press connect button in live-view window and scan button to enter into search window again, to continue searching.

Notice : Compatibility of Remote Viewer Software with different kinds of operating systems and PC hardware may not be simply specified due to the characteristics of network that it is much related with not only PC hardware and operating system but also other software installed on the client PC and conditions of network(internet) line. Basically, DVR' Remote Viewer Software is compatible with typical Windows operating system from Windows 98 to Windows XP.

Notice : To see continuous live view, we recommend not to select motion recording in RECORD SETUP menu of DVR. If it is set at motion recording in SETUP menu of DVR, image transmission is done only there is motions detected.

Notice : While you search recorded data using client software in client PC, DVR unit to which you access via IP network is in playback mode, and no recording is done as far as you search recorded data. However, while you are in connection with DVR unit via IP network for live view, DVR unit continues to record but at a little low recording rate.

Notice : At this DVR unit networking display, only one user can view the image through Internet.
