# **Firmware Upgrade Instruction**

## 1. Save firmware file to <u>SD-Card</u> or <u>internal memory.</u> (Please select one.)

#### 1.1 If want to upgrade firmware from SD-Card.

Save firmware file (\*.bin ) to **SD-Card**, then insert SD-Card into card-socket.

#### 1.2 If want to upgrade firmware from built-in memory.

Save firmware file (\*.bin ) to internal memory via USB cable.

### 2. Go to service menu to upgrade firmware.

Power on your unit. Press **"DELETE**" then **"ZOOM**+" in sequence on the keypad (Pic 1). You will see Service menu shown on the screen. Then select ISP - Firmware Upgrade mode.(Pic 2)

# 3. Choose Firmware version

If you save the firmware file properly, the unit will detect new firmware version automatically. Then select "Yes" button to upgrade firmware. (Pic 3 taking DC260 as example)

Notes : If two more firmware files coexist in the SD card / internal memory, the unit always detects the latest version.

## 4. Restart unit when firmware upgrade finished

After firmware upgrade is success, your will see below window and please restart your unit. (Pic 4)

Upgrade Success	
Please Restart Machine	Pic 4
	PIC 4

## 1.5 Check firmware version

Go to OSD menu to check the firmware version. (Pic 5)
