introduction 1

Congratulations on your purchase of the XSports 2400/1. Read this document to learn about the features of the XSports 2400/1, how to use its controls, and apply it to your needs.

XSports 2400

The XSports 2400 is an advanced digital communications product, using leading edge wireless and computer chips to provide you with enhanced audio quality.

Use your XSports 2400 to:

- Communicate with up to 3 (programmable) stored users
- Interface to long haul communications equipment
- Experience clear sound quality
- Full duplex communication
- Enjoy privacy

XSports 2401

The XSports 2401 is an advanced digital communications product that allows the user to connect with others or enjoy your own sounds.

Use your XSports 2401 to:

- Communicate with up to 3 (programmable) stored users
- Interface to long haul communications
- Enjoy full duplex communication
- Experience clear sound quality
- Enjoy privacy
- Listen to your sounds on the go
- Load your sounds for listening on the go

features

2

- Advanced Digital Signal Processing
- Digital noise filtering
- Noise cancellation
- Low power consumption - extended operation time
- Intrusion Protection rating - 67 (IP67)
- MILSTD 810F
- Virtual Networking
- Interface to PMR Communications products
- Software Upgrade capability
- Audio Annunciation
- Lightweight and Compact Design
- Rugged construction
- Removable belt clip
- LED indication
- Automatic reconnect
- Large Push to Transmit Button
- Plug and play accessories
- Powered by Clarinox Blue
- 2 Users stored to caller memory ✱
- 1 Preferred User ✱
- Critical single button control for function access
- Remote PTT capability

✱ If your application requires additional users, models can be software upgraded for up to 100 users and 50 associations with the Push to Transmit button. If you feel your application has these sorts of requirements please contact Phicom for further information and a quotation.

getting started 3

Power Control - 1

A single button press controls either power up or power down. On powering up the unit will flash the red, amber and green LEDs in sequence, and then show a solid amber LED indicating the unit is powering up. Once the unit has completely powered up, there will be an audio tone and the Green LED will flash periodically. Press the power control button again and the unit will turn off.

Volume Control - 2

Volume control is via the volume control button located on the top of the unit. The volume can be either increased or decreased by pressing the plus or minus symbols. When either symbol is pressed and held the volume will be either increased or decreased until the button is released. Single press of the plus or minus will increase or decrease the volume in a single step with each step in the volume a tone will be heard.

Indicators - 3

There are three indicators, red, amber and green. These indicators communicate the status of the battery charger when the unit is switched off and on charge. When the unit is on, the indicators show status and mode of the unit.

Main Connector - 4

The main connector is the single access point to the product providing the following functions:

- Remote push to transmit in and out
- Microphone input
- Mono audio output (differential)
- Stereo audio output (differential)
- Charge input
- USB 2 interface (when optioned)

Function - 5

The function button allows the user to enter and exit Bluetooth programming mode.

Plus - 6

The plus button allows access to special options when supported with software. When the unit is in programming mode this button allows users to be stored to memory.

- 1 Power control
- 2 Volume control
- 3 Indicators
- 4 Connector
- 5 Function button
- 6 Plus Button
- 7 Minus Button
- 8 Play / Pause
- 9 Forward / Skip
- 10 Back / Skip
- 11 Push to transmit

Note - MP3, USB and MicroSD

not included in the XSports[®] 2400 model

getting started

Minus - 7

The minus button similar to the plus button allows access to special features of the unit. When the unit is in programming mode, this button allows users to remove a caller from memory.

Play / Pause - 8

The Play / Pause button in standard mode allows the user to play or pause MP3 sounds.

Forward - 9

The Forward button in standard mode allows the user to skip to the next track or advance through the current track playing. When given a single press the music is advanced to the start of the next track. When pressed and held the unit is advanced through the current or stored music until released.

Back - 10

The Back button in standard mode allows the user to skip back to the previous track. When given a single press the music is advanced to the start of the current track.

- continued

Push to Transmit - 11

The push to transmit button allows, connect, disconnect, accept incoming call waiting and return to MP3 mode.

at a glance

4

Using the XSports 2400 intuitive controls make it easy to talk to other XSports units, disconnect or talk over long distances using the Phicom interface to professional equipment. The controls of XSports 2401 allow all the functionality of the 2400 plus, make it easy to play your sounds and audio books.

To

Turn the unit on or off

Enter programming mode - to search

Enter programming mode - searchable

Enter programming mode - delete user

Exit programming mode

To delete a caller

To store the other party unit ID

To connect to the first user

To connect to the second user

To connect to the third user (or radio)

To disconnect from any caller

Do this

press the power button (⏻)

press function (Ⓜ) - (Amber flashing)

press function (Ⓜ) for 1s - (Amber flashing)

click function twice (Ⓜ) - (Green flashing quickly)

press function (Ⓜ) - (Green flashing slowly- MP3 mode)

press (−) (in programming mode - Green flashing)

press (+) (while talking)

a single press on the (ptt)

two presses on the (ptt) button

press and hold the (ptt) button

double click the (ptt) button or remote PTT switch

Modes

5

Modes of operation

There are two basic modes of operation. Standard mode, or default MP3* player or programming mode. On power up the user will hear two tones indicating the unit has powered up correctly, and the green LED will flash periodically. The unit powers up in standard mode or default MP3 player mode for the XSports 2401 only. The indicator lights show the current mode the unit is in.

Standard Mode

When the unit is in Standard mode the green indicator will flash periodically. This mode allows the user MP3 functionality of the Play / Pause, Advance / Forward, and back function keys. These keys control the MP3 player, and allow the user manage the sounds they are listening to.

Programming Mode

To enter programming mode, press the function button. Programming mode is indicated by a flashing amber light. In this mode the user can store other users to memory, and be accepted by other users into their memory.

The programming of users into your memory or “telephone book” is done in concert with others when programming XSport units IDs into memory.

After pressing the function button (5), the unit immediately enters programming mode indicated by a flashing amber light.

Default Mode

Default mode allows the person to listen to their sounds, accept incoming calls, and call others, and disconnect from calls, all with a the control of a single button (PTT or remote PTT).

* The MP3 player mode is only available in the 2401 models onwards.

Programming 6

The programming mode allows users to set up a virtual network to communicate with peers and access long haul radio communication equipment, with a seamless transition. It is the first truly wireless communications network giving users real wireless access to a range of communication gateways, without the need for infrastructure.

The important thing to remember about programming, is that two units must be programmed at the same time. The programming method allows users to ensure they are connected to the correct person, before allocating that person to a memory location.

Programming mode

The programming mode allows the user to store 3 caller ID's from other units.

Storing a single unit

Programming is performed between two units.

Unit 1

Step 1 - Enter Programming mode by pressing the function button - to search.

The amber light will flash quickly and a tone will sound in the headset. Once the units have been connected, then the user can either program the other caller ID to memory by pressing the plus key, or disconnect from the call with a double click on the PTT.

Step 2 - A single press of the plus button will store the caller ID to the first memory location.

Alternatively if the other unit is not found then a time - out tone will be heard.

The second unit, should at the same time as the first unit, enter programming mode by pressing and holding the function button for 1s. Similarly, the amber light will flash on the second unit and a tone will sound in the headset when its in programming mode.

Unit 2

Step 1 - Press the function button for 1s to enter programming mode - to be discovered.

The amber light will flash and a tone will sound in the headset.

Step 2 - When the user has connected to the caller, they can choose to save the caller ID to a memory location. Pressing the plus button once will store the caller to the first memory location.

If the user does not wish to accept the connection, they can simply disconnect by clicking the push to transmit button twice.

Storing to different memory locations

A user may select where to store a caller ID by simply:

- pressing once for the first memory location
- press twice for the second memory location
- press and hold for the remote radio or communications equipment

disconnecting

Disconnecting

To terminate a call with another user, double click on the Push to Transmit button or the remote Push to Transmit button.

connecting

Connecting

To connect (when not on a call) to a stored user or the remote communications equipment do the following.

Either

A single press of the ptt button to connect to the first stored caller, the user will hear one beep

Or

Two presses on the ptt button to connect to the second stored caller, the user will hear two beeps

Or

A single press and hold on the ptt to connect to the communications equipment, the user will hear a long beep

Clearing Users

Clearing users from memory

The units supports the removal of users from memory. To remove a user from a memory location perform the following operation.

Step 1 - Double click the function button

The green light will flash quickly and a tone will sound in the headset.

Step 2 - Press the minus:

- i) once for the first location
- ii) twice for the second location
- iii) press and hold for the radio or third location.

On removal of the ID in the memory location, a tone will be heard in the headset.

ptt - operation 7

Push-to-Transmit disconnect

The Push-to-Transmit button is designed to provide quick access to a preferred user and equipment, where the user may toggle between long haul radio equipment or a preferred user, or disconnect from a call.

Using the ptt button on the unit or an external ptt button the user can:

- disconnect from any current call
- connect to a stored user
- connect to remote communications equipment
- return the unit to MP3 mode
- connect directly from MP3 mode to a preferred user
- connect directly from MP3 mode to communications equipment
- accept in coming call

Disconnect from any call

A double click on the push to transmit

Connect to a preferred user

A single press on the push to transmit (for the first stored user) or

two presses on the push to transmit button (for the second stored user)

Connect to communications equipment

A single press and hold

Return to MP3 mode

A double click to disconnect and return to MP3 mode.

Connect from MP3 mode to a user

A single ptt press for the first stored unit in memory

two presses on the push to transmit for the second stored unit in memory

Connect from MP3 mode to a remote radio

A single press and hold

Notification of Second Call Waiting

When a person is either listening to their sounds or on a call and someone is attempting to connect to them, they will hear a beeping in the background. They can stop the beeping by clicking the ptt twice, and continue talking, or disconnect from their current call and then call the second call waiting.

To reject the call waiting - double click on the ptt - this will stop the beeping

To disconnect from the current call - double click on the ptt.

NOTE

To change callers or long haul communications equipment, the current call must be disconnected before making another call.

MP3 mode

XSports® 2401

To	Do this
Play	press (▶)
Pause	press (▶)
Go to the next track	press (▶▶)
Go to previous track	press (◀◀)

loading music 9

With your XSports 2401 you can make your own background theme for what ever you might be doing.

The XSports 2400 can be loaded with your own sounds by using your computer.

Simply connect your computer to the XSports 2401 using the USB cable.

When the XSports 2401 is connected, turn it on. The computer will recognise your XSports 2401 as an external drive. Using the windows browser you will notice there are two directories, one for data and one for music.

Using the windows copy and paste facilities to place your sounds into the XSports music directory. You can create different directories for different artists and for albums of that artist.

Once you have finished loading your songs and or data onto your XSports 2401, you will need to close the windows browser and disconnect the external drive.

Failure to disconnect correctly may result in loss of data.

charging

10

When the unit is off and on charge the red and green indicators show the state of the battery condition.

When the unit is charging, the red will be solid.

When the unit has fully charged, the green light will blink.

When the unit is on and connected to the charger, the indicators indicate the state / mode of the unit.

The user may charge their XSports via the supplied charge plug pack or the USB supplied with the XSports 2401.

battery care 11

With care, you can maximize the battery life (i.e. the time your battery will run before it must be recharged) and lifespan of your XSports's battery.

Your New XSports

Be sure to fully charge your XSports when you plug it in for the first time.

Standard Maintenance

For proper maintenance of a lithium-based battery, it's important to keep the electrons in it moving occasionally. Phicom does not recommend leaving your XSports plugged in all the time for charging.

An ideal use would be a person who uses their XSports in their activity, after which plugs it in to charge. This keeps the battery activity flowing.

Long Term Storage

If you don't plan on using your XSports for more than six months, Phicom recommends that you charge your unit and then store.

specification 12

Electrical

Indicators

Charging - Red LED is on continuously
Fully charged - green LED flashes
Bluetooth mode - Amber LED flashes

Operation Time

Unit operation time (fully charged battery)	
Unit shelf time before charge (off state)	4 months
Unit On - connected (talk time)	4 hours
Unit On - Talk time ratio 20% with 80% standby	8 hours

Audio Out Put

Audio standard out - differential 4 ohm 200mW Stereo / Mono
Audio with adapter - single ended 4 ohm / 8 ohm 100mW

Important Notes - Battery

The battery used in this product is a Lithium Ion cell. For health, safety and environmental considerations, the following is to be observed.

The battery must NOT be - incinerated
- disposed of with household or industrial refuse

The battery should be - disposed of at an approved battery recycling centre
- returned to the manufacturer (please see the website for conditions of return)

Mechanical

Height	112mm
Width	25mm (max) 22mm (min)
Length	73mm
Weight	180g (typical) 200g (max)

Environmental

Charging battery	0 to +45 degrees celsius
Discharging battery	-20 to +60 degrees celsius
Maximum humidity	100% condensing
Protection against dust	100%
Protection against immersion	15cm to 100cm (1 hour)
The unit meets MIL STD 810F	

The product meets the European Union (EU) new directives on electrical and electronic equipment in relation to its composition and the levels to which it should be recycled.

The product complies with the directive restricting the use of six hazardous substances in electrical and electronic products and complies with the Waste Electrical and Electronic Equipment (WEEE) directive, encouraging reuse and recycling.

Radiocommunications (low interference Potential Devices) Class License 2000 as amended made under sections 132 and 135 of the Radio Communications Act.
