2. RFXtrx RF transceiver general information

The RFXtrx transceiver is communicating over one USB port with the application. The RFXtrx enters for 2 seconds the boot loader (red LED is on) and after this it starts the receive/transmit firmware. For developers, the communication protocols over USB are described in the SDK.

2.1. *RFXtrx315 supported protocols*

2.1.1. RFXtrx315 configured for 310MHz

Protocol	receive	transmit
US X10 lighting	Y	Y
US X10 security	Y	Y

2.1.2. RFXtrx315 configured for 315MHz

Protocol	receive	transmit
Visonic CodeSecure	planned	-
Visonic PowerCode	Y	Y

2.2. *RFXtrx433 supported protocols*

Protocol	receive	transmit
X10 lighting X10, Xdom, ebode	Y	Y
X10 security	Y	Y
ARC (address code wheels) HomeEasy, KlikAanKlikUit, ByeByeStandBy, Intertechno, ELRO, AB600, Düwi, DomiaLite, COCO	Y	Y

Visonic PowerCode	Y	Y
Meiantech keyfob cmd	Y	Y
RC5 (IR)	-	planned

2.3. Sensitivity influenced by enabled protocols

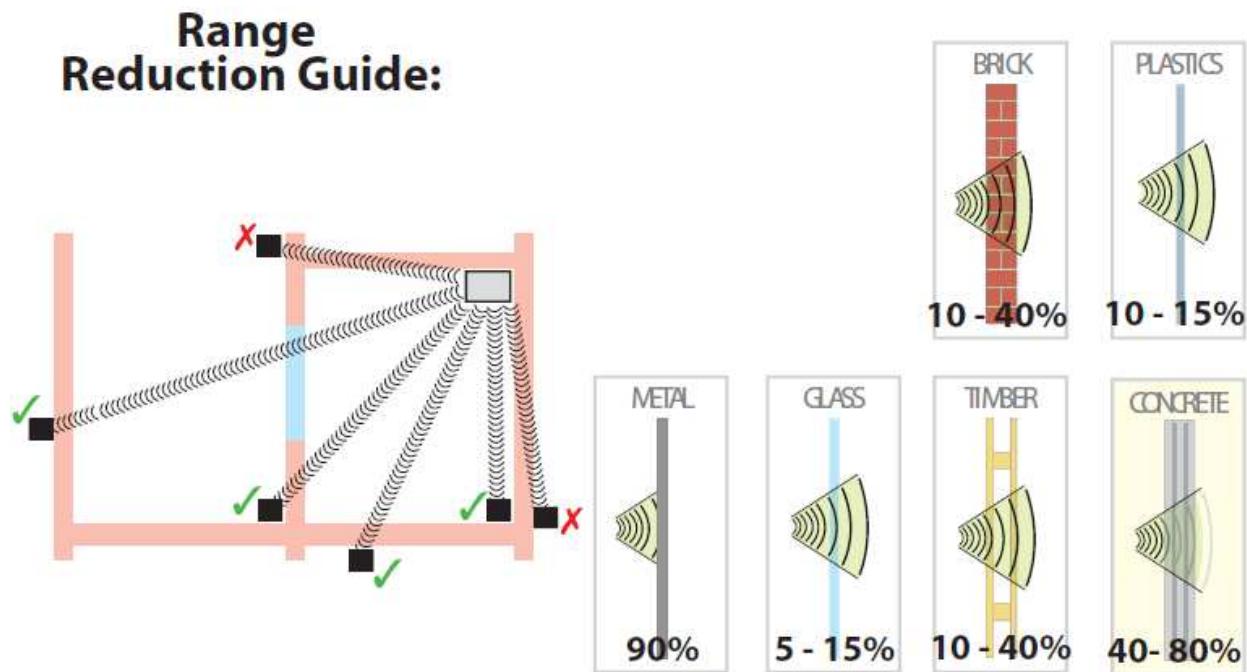

The sensitivity of the receiver part is highly influenced by the number of protocols enabled. Lesser protocols enabled will make the receiver more sensitive for the enabled protocols.

There are a few protocols that will reduce or even eliminate receiving of other protocols if enabled. For example: if the AD (LightwaveRF, Siemens) protocol is enabled it can stop receiving of Meiantech/Atlantic, Oregon, Visonic and Mertik.

	X10	ARC	AC	HomeEasy EU	Meiantech/Atlantic	Oregon	ATI	Visonic	Mertik	AD	Hideki/UPM	La Crosse	FS20	ProGuard	Blinds T0	Blinds T1	AE	Rubicson	FineOffset/Viking	RFU3	RFU4	RFU5	RFU6

2.4. RF range reduction

The RF signals operating distance is reduced when the signal has to pass through walls.

2.5. Home Automation software

For the list of Home Automation software that supports for the RFXtrx see the web site
www.rfxcom.com

2.6. Dimensions

The dimensions of the RFXtrx are: 83.5 x 42 x 15 mm
Total height from bottom to antenna top is 122mm

2.7. Electrical

The RFXtrx is powered by the 5 Volt of the USB interface.

Operating current;

Receive mode: 28 mA (0.14Watt)
Transmit mode: 45 mA

3. Install the USB driver

The RFXtrx has the FTDI FT232R USB interface chip installed.

The USB drivers are available at <http://www.ftdichip.com/Drivers/VCP.htm>

4. Run RFXmngr or RFXflash on Linux under Mono

Open a Terminal screen in Linux (Ctrl-Alt-T)

Execute once:

Install Mono:

[sudo] **apt-get install mono-runtime**

Install VisualBasic support under Mono:

[sudo] **apt-get install libmono-microsoft-visualbasic8.0-cil**

If the USB device is created as ttyACMx you will need to create a link between /dev/ttyACMx and a serial port /dev/ttysx.

This is not necessary if the device is created as /dev/ttyUSBx !!

[sudo] **ln -sf /dev/ttyACM1 /dev/ttys3**

Note: sudo must be entered without brackets []. sudo is required if not running as super user.

Launch the RFXflash.exe program.

[sudo] **mono RFXflash.exe**

OR

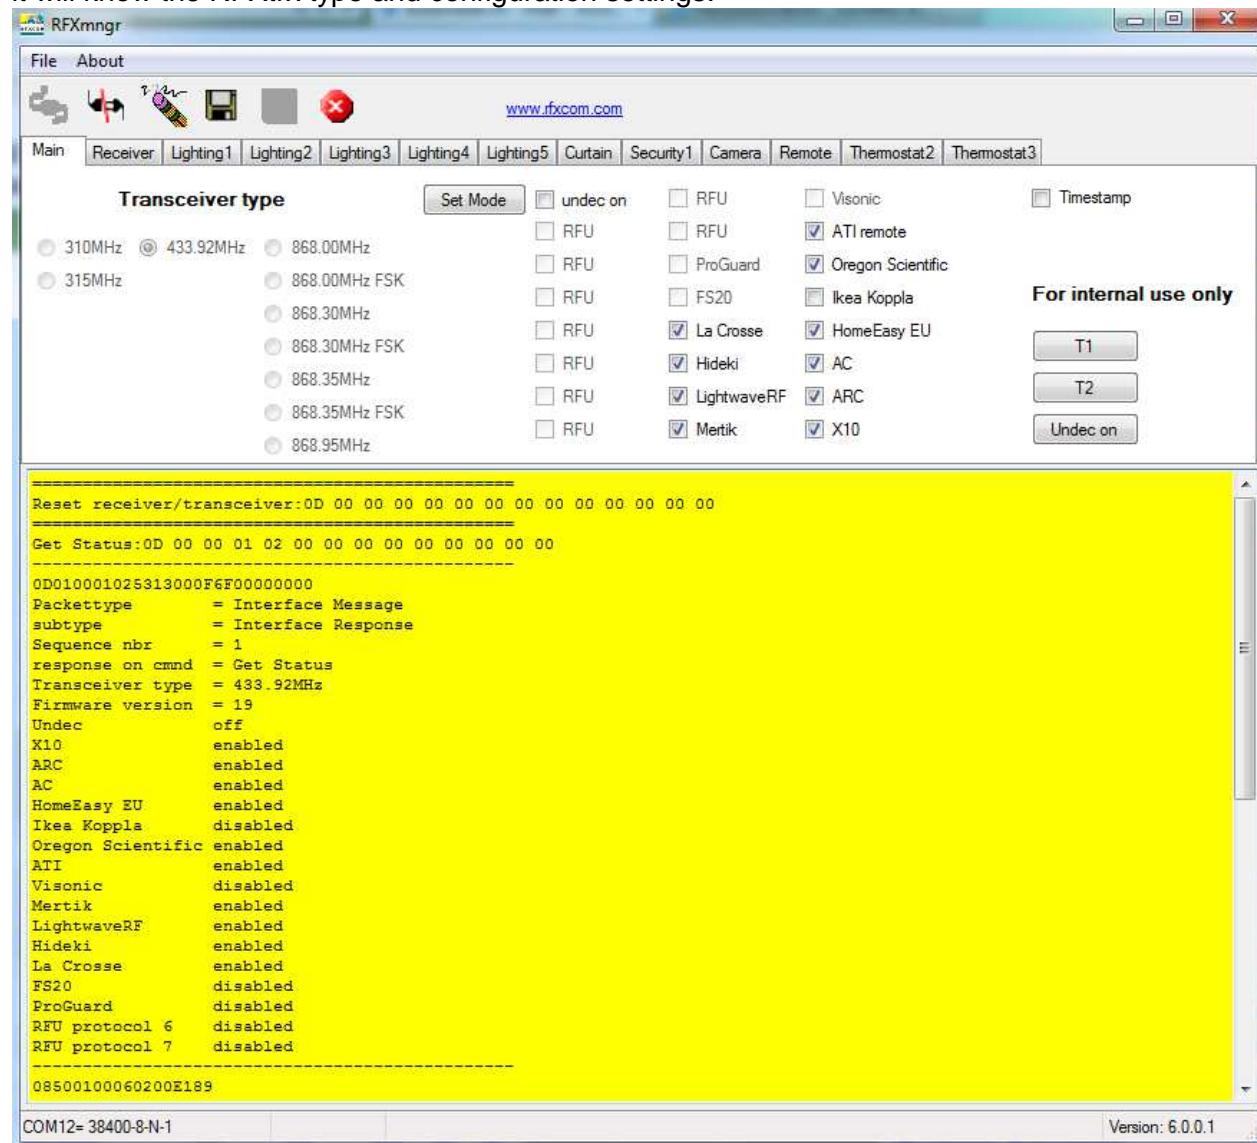

Launch the RFXmngr.exe program.

[sudo] **mono RFXmngr.exe**

5. RFXmngr test program

The RFXmngr program supports decoding of received data and allows you to transmit commands.

After the connection the RFXmngr program transmits a Reset and Get Status command so that it will know the RFXtrx type and configuration settings:

Transmitter protocols are always enabled but receiver protocols can be disabled. This is very useful because the receiver will become more sensitive when protocols not used are disabled. So select only the protocols to be used, click Set mode and on the Receiver tab click Save Settings.

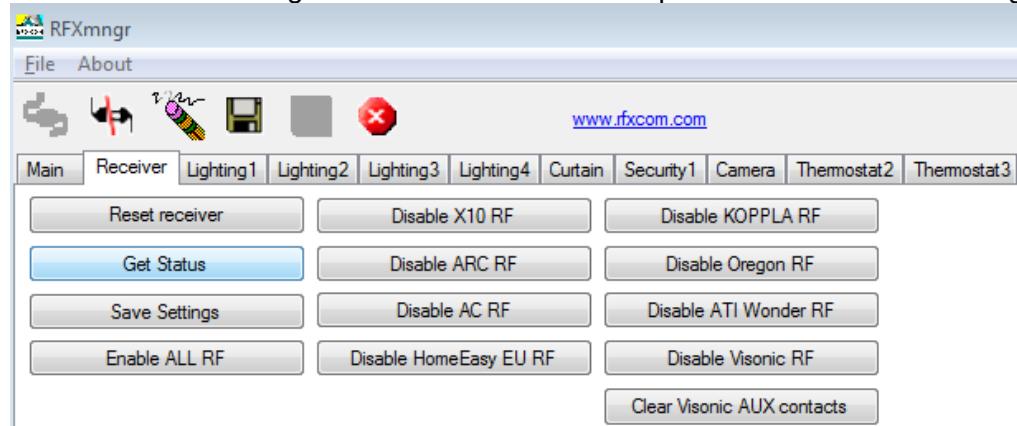

Note that these settings are lost after a firmware update and need to be set again.

5.1. Receiver

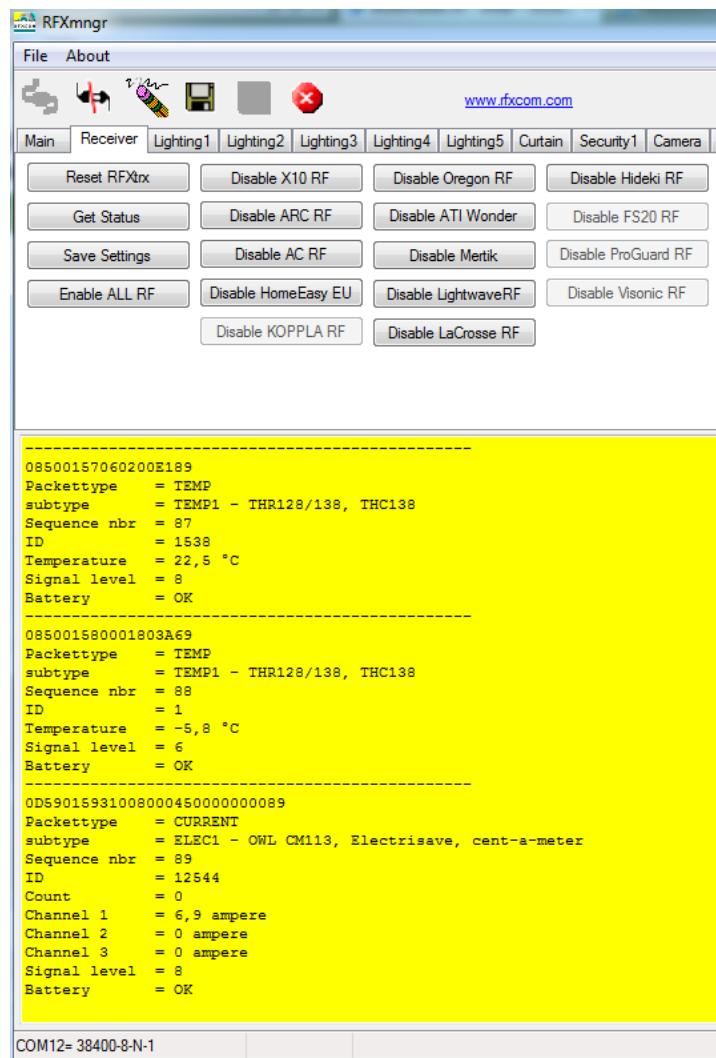

The RF protocols to be received can be configured on the Receiver tab or on the Main tab at Set Mode.

Click Save Settings to save the selected protocols in non-volatile memory of the RFXtrx. This configuration is now restored every time after a power up.

Note that these settings are lost after a firmware update and need to be set again.

The received RF data is decoded and displayed in the yellow window.

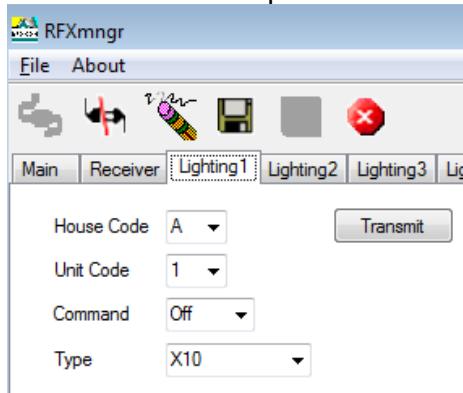

5.2. Transmitter

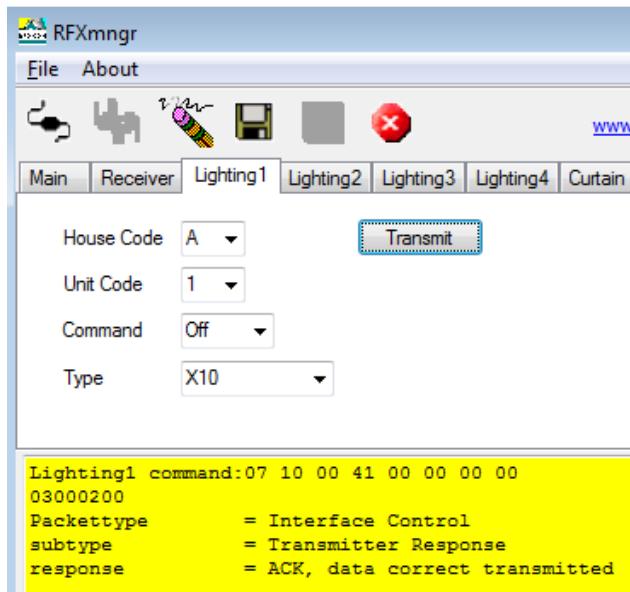

The tabs after Receiver are used to send commands to the transmitter.

For example Lighting1 is used to send X10, ARC and some more.

See the SDK which protocols are supported on the different tabs.

The transmitted commands are displayed in the yellow window including the acknowledge send by the RFXtrx, in the example below the 030000200 = ACK, data correct transmitted.

6. Flash update of the RFXtrx

6.1. *Update firmware in the RFXtrx*

Firmware is flashed in the RFXtrx using this procedure:

1. Depending on the RFXtrx type download the latest RFXtrx315_yy.hex, RFXrec433_yy.hex or RFXtrx433_yy.hex firmware file.
2. Connect the RFXtrx to a Windows system or Linux under MONO
3. Stop any program that is connected to the RFXtrx.
4. Start the RFXflash program (version 4.0.0.0 or higher)
5. Select the USB RFXtrx COM port and click the CONNECT button, (the red LED should switch on now)
6. Load the correct.hex firmware file for your RFXtrx,
7. Click the WRITE button,
8. Click the Normal Execution mode button.

IMPORTANT:

1. Do not interrupt the flash procedure when started.
2. It can happen that the flash procedure ends with a pop-up screen indicating errors. Just disconnect the RFXtrx and start again at step 5 until the flash procedure is finished without errors.

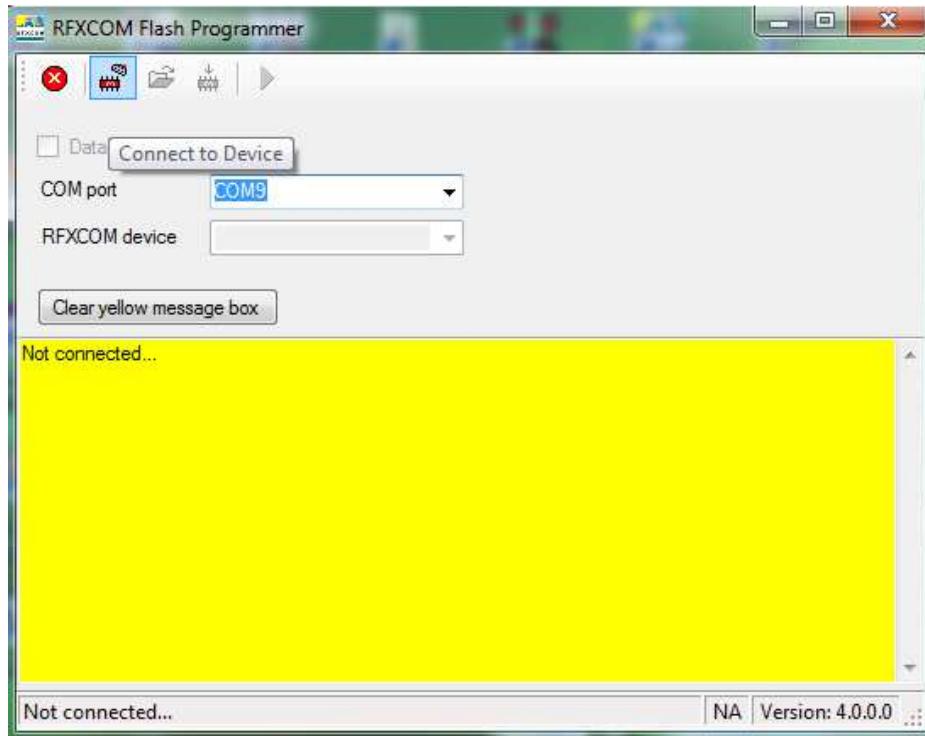

If the red LED does not switch on if you click the CONNECT button:

1. Check if you have selected the correct USB COM port.
2. If you have flashed the RFXtrx before and interrupted the flash procedure it is possible that the RFXtrx does not enter the flash state. Contact support@rfxcom.com for help.

Note: Receiver Settings are lost after a firmware update and have to be set again.

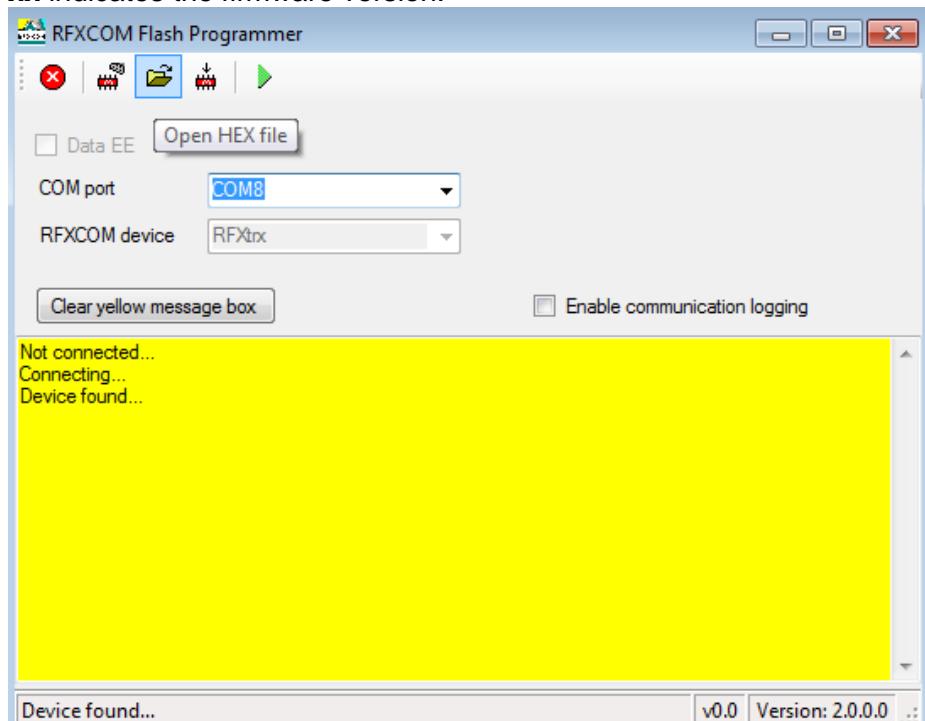

6.2. Update firmware in the RFXtrx step by step

- Click the Connect to Device button.

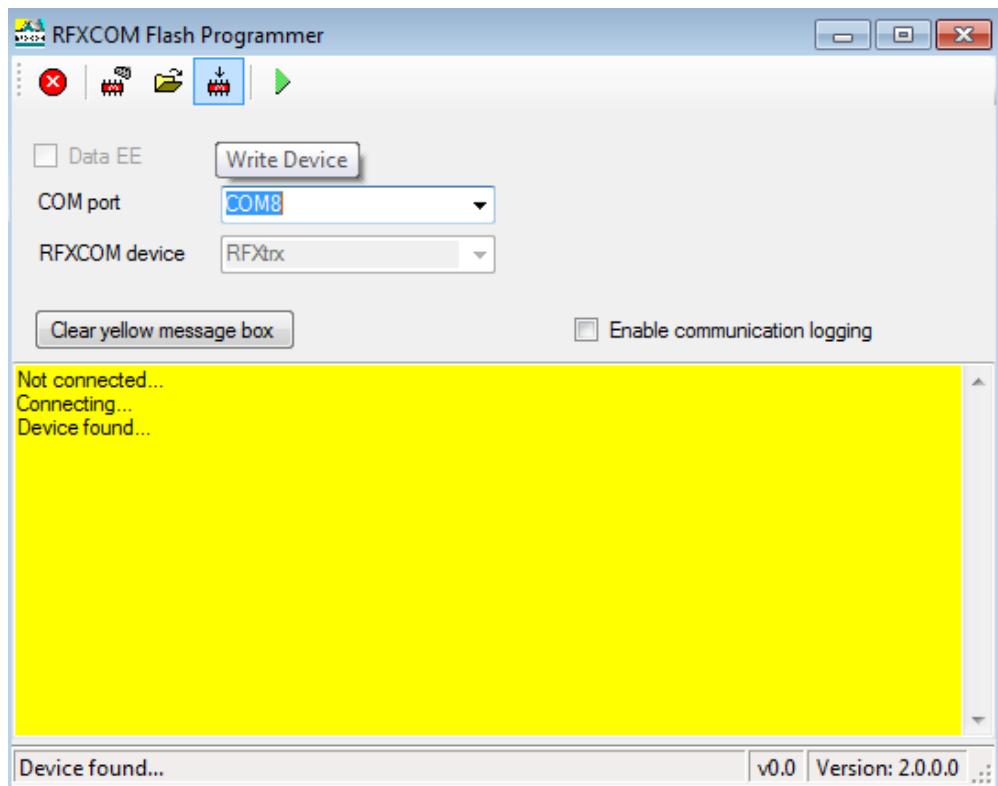

The RFXtrx will automatically switch from normal mode to the bootloader now.

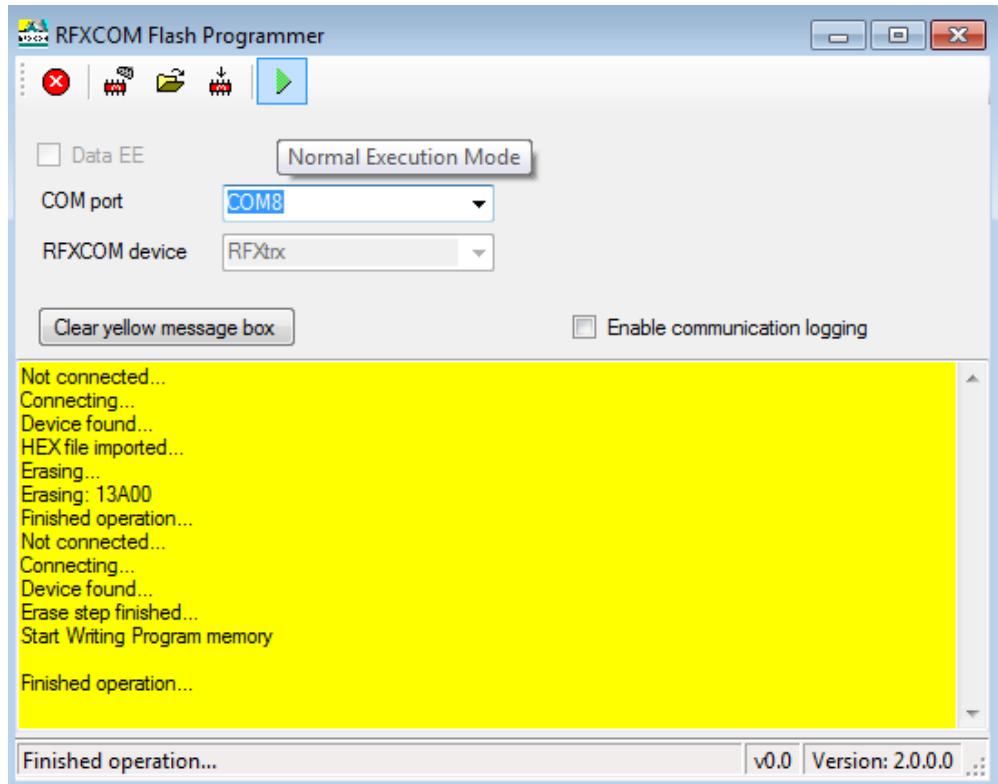

- Click the Open HEX file button and load the RFXtrxyyy_xx.hex file
Be sure to load the latest firmware file for the RFXtrx.
yyy indicates the RFXtrx frequency, so load the RFXtrx433 for an RFXtrx433!
xx indicates the firmware version.

- Click the Write device button and the RFXtrx is flashed.

- Click on the Normal Execution Mode button to set the RFXtrx to running mode.

Note: Receiver Settings are lost after a firmware update and have to be set again.

7.2. Harrison address conversion to switch settings

The address used is converted to the address selected in the Harrison curtain motor using the table below.

switch	1	2	3	4	5	6	7	8
	H	H	H	H	X	X	X	X
A	0	1	1	0	1	0	0	0
B	0	1	1	1	2	0	0	0
C	0	1	0	0	3	0	0	1
D	0	1	0	1	4	0	0	1
E	1	0	0	0	5	0	1	0
F	1	0	0	1	6	0	1	0
G	1	0	1	0	7	0	1	1
H	1	0	1	1	8	0	1	1
I	1	1	1	0	9	1	0	0
J	1	1	1	1	10	1	0	0
K	1	1	0	0	11	1	0	1
L	1	1	0	1	12	1	0	1
M	0	0	0	0	13	1	1	0
N	0	0	0	1	14	1	1	0
O	0	0	1	0	15	1	1	1
P	0	0	1	1	16	1	1	1

H H H H = House code

X X X X = device code

Switch position in the motor:

Up = 1

Middle = not used!!!!

Down = 0

Examples:

If you assign the address E7 (1000 0110) to the curtain motor then set the switches to: 1=up, 2=down, 3=down, 4=down, 5=down, 6=up, 7=up, 8=down

If you assign the address A2 (0110 0001) to the curtain motor then set the switches to: 1=down, 2=up, 3=up, 4=down, 5=down, 6=down, 7=down, 8=up

7.3. Flamingo, AB400, IMPULS switch settings

Note that the HC (House Code A-P) is the house code used in programs and has no direct relation with the A,B,C,D,E buttons on the remotes!

	1 2 3 4	5 6 7 8 9 10	5 6 7 8 9 10	<== switches

	32 1 1 1 1 1 0	64 1 1 1 1 1 1		

Examples:

A1	0 0 0 0 0 0 0 0 0 0
A15	0 0 0 1 1 1 0 0 0
N2	1 1 0 1 0 0 0 1 0 0
N11	1 1 0 1 1 0 1 0 0 0

0 = switch off

1 = switch on

7.4. Phenix, IDK YC-4000S switch settings

Note that the HC (House Code A-P) is the house code used in programs and has no direct relation with the A,B,C,D,E buttons on the remotes!

HC	switch	DC	switch
	1 2 3 4		5 A B C D
<hr/>			
A	0 0 0 0	1	0 0 0 0 0
B	0 0 0 1	2	0 0 0 1 0
C	0 0 1 0	3	0 0 1 0 0
D	0 0 1 1	4	0 0 1 1 0
E	0 1 0 0	5	0 1 0 0 0
F	0 1 0 1	6	0 1 0 1 0
G	0 1 1 0	7	0 1 1 0 0
H	0 1 1 1	8	0 1 1 1 0
I	1 0 0 0	9	1 0 0 0 0
J	1 0 0 1	10	1 0 0 1 0
K	1 0 1 0	11	1 0 1 0 0
L	1 0 1 1	12	1 0 1 1 0
M	1 1 0 0	13	1 1 0 0 0
N	1 1 0 1	14	1 1 0 1 0
O	1 1 1 0	15	1 1 1 0 0
P	1 1 1 1	16	1 1 1 1 0
		17	0 0 0 0 1
		18	0 0 0 1 1
		19	0 0 1 0 1
		20	0 0 1 1 1
		21	0 1 0 0 1
		22	0 1 0 1 1
		23	0 1 1 0 1
		24	0 1 1 1 1
		25	1 0 0 0 1
		26	1 0 0 1 1
		27	1 0 1 0 1
		28	1 0 1 1 1
		29	1 1 0 0 1
		30	1 1 0 1 1
		31	1 1 1 0 1
		32	1 1 1 1 1

8. EC Declaration of Conformity

EC Declaration of Conformity

RFSmartLink declares that the product:

RFXtrx

Brand: RFXCOM Type: RFXtrx433

conforms with the essential requirements and other relevant provisions of the following directives and complies with the following standards applied:

R&TTE Directive 99/5/EC	EN 300 220-1 V2.3.1 (2010-02)
	EN 300 220-2 V2.3.1 (2010-02)
Low-voltage Directive 2006/95/EC	IEC 60950-1 (2005-12)
EMC Directive 2004/108/EC	EN 301 489-1 V1.9.2 (2011-09)
	EN 301 489-3 V1.4.1 (2002-08)

A copy of the original can be obtained from sales@rfxcom.com

9. Warning:

RF signals are possible disturbed and it has not been justified for this equipment at uses in circumstances where life-threatening or dangerous situations are possible.

10. Copyright notice

It is forbidden to use any RFXCOM device, software or protocol as part of an exclusive or patented product without the express prior written permission of RFXCOM.

All materials contained in this document are protected by copyright laws, and may not be reproduced, republished, distributed, transmitted, displayed, broadcast or otherwise exploited in any manner without the express prior written permission of RFXCOM.

11. Revision history

Version 0.0 – August 18, 2011

Initial version.

Version 1.0 – October 30, 2011

RFXflash under Mono added.

Version 2.0 – December 30, 2011

Updated for the production version with FTDI USB chip

Version 2.1 – January 18, 2012

Link for ACM to serial port added in Linux instruction.

EC Declaration of Conformity added

Version 2.2 – February 8, 2012

Protocols overview added

Screen dumps updated

Version 2.3 – February 16, 2012

Novatys planned

Version 2.4 – February 25, 2012

General information updated

Version 2.5 – March 1, 2012

Chapter added how to run RFXmngr or RFXflash on Linux.

Version 2.6 – March 14, 2012

Code tables added

Cresta, UPM added

Version 2.7 – March 15, 2012

Flash procedure updated

Version 2.8 – March 31, 2012

Phenix table added

Version 2.9 – March 31, 2012

AB400 and Phenix address extended

Version 2.10 – April 16, 2012

Linux USB - tty configuration updated

Version 2.11 – May 14, 2012

List of supported protocols updated.

Version 2.12 – June 8, 2012

Chapter added how to run RFXmngr or RFXflash on Mac OS

Version 2.13 – July 15, 2012

List of supported protocols updated

Version 2.14 – August 4, 2012

List of enabled protocols influence added

RFXtrx315 added

Version 2.15 – August 18, 2012

Enabled protocols table changed

Version 2.16 – August 26, 2012

Rubicson stektermometer added

ATI Remote Wonder II added

Version 2.17 – August 28, 2012

Table “sensitivity influenced” updated

Version 2.18 – September 18, 2012

Chapter 2.3 updated: BlindsT0 disables all other protocols

Version 2.19 – September 25, 2012

RFXFlash version required changed to 4.0.0.0

Version 2.20 – September 28, 2012

RF range reduction guide added
