

## Important Operating Instructions **CE**

Terra Heat Heating cables are manufactured with highest attention and checked for their efficiency. Please consider the following notes carefully, to receive a long reliability of the heating cable.

1. Before beginning of all kind of work and checks at and with the heating cable, the power supply plug is always to be pulled.
2. Never break, squeeze, pull, shorten or mechanically damage or change the heating cable in any other manner !
3. The heating cable should not be embedded into isolating soil substrates. This are, among other things, dry peat, wood shavings, beech wood chips etc.
4. The terrarium bottom should not be isolated with damming materials such as polystyrene.
5. Heating cable should not remain unprotected; always keep a minimum distance of 3 cm between the individual cable loops.
6. The cable loops shall never cross!
7. The heat discharge must be ensured, otherwise fire risk exists.
8. The links of the heating cable should always be outside of the Terrariums.
9. A regular check for damages of the heating cable is to be made. Particularly within the first 2 months of operation the temperature of the floor in direct proximity of the heating cable should be checked. At too high temperatures a correction is to be made. Damaged or defective heating cables are to be taken immediately out of operation.
10. The heating cable should be never operated unsupervised; using of thermostats and/or other protection facilities is indicated. The use of thermostats can increase the security of the operation of heating cables.
11. The manufacturer grants 6 months warranty on the function of the heating cable, valid starting from purchase date. Purchase voucher and operating instruction are to be kept carefully.
12. Liability for damage of any type, which results from the operation of the product, false transfer and operation or inappropriate handling, does not exist and is expressly excluded.
13. Easily inflammable articles are to be removed from the surrounding field of the heating cable.
14. The manufacturer assumes that the user of the heating cables acts conscientiously and responsible according to the operating instruction in all points.
15. For your own security we recommend the operation of a heating cable only with a FI safety switch.
16. Children and unauthorized persons are to be kept away from heating cables.
17. The user has to ensure that **NOBODY** can make manipulations in any way.
18. The heating cable is to be checked in regular intervals for damages caused by occupants of the terrariums or the feeding animals.
