Installation:

Install the bottom piece and the magnet using screws, double-sided tape or Velcro. First insert the PCB in the PCB supports and then press the PCB in place on the attachment clip (Fig. 1).

Make sure that the **magnet location mark** is on the side facing the magnet (Fig. 2 and Fig. 3).
These wireless magnet switches can be configured to receivers 1311-1312 and pagers 5016-5032.

Tips
- To prevent an alarm from occurring when you leave the room, first open the door before switching on the receiver.
- Mounting a door switch on a steel door frame can influence the transmission range of the door switch.
- Always test after installation!
