# Overview

## Project goals

The computer system described here (after also *platform*, or *Web contractor*) allows an unlimited number of users (of type *Site administrator*) to create and publish online a website consisting of a navigation menu and a set of html pages.

The task of the websites creation is made in full autonomy and freedom, including the ability to insert media components in html pages and allows unlimited changes later.

System allows site administrators to choose between different graphic themes preloaded to be applied to the site contents.

A new website is instantiated on the platform by a user of type *Network administrator*, who has the ability and responsibility to manage the sites and their *Site administrator*.

The platform is a *Web application*, which is installed on a *web server* and is accessible to users through the Internet using a standard *web browser*.

The use of the functionality offered is made very easy by a simple and intuitive graphical interface.

The system has been designed to be easily usable by anyone, thanks to a simple and intuitive graphical interface: design has aimed to provide to the users only the strictly necessary functionality, while allowing the possibility to incorporate new features in the future.

In this guide, the topics are presented in a modular way and with increasing complexity, rising gradually from the description of the basic concepts to the sections where all the available operations are accompanied with detailed examples and *screenshots*.

Such users *Site administrator* can read the chapter "Network Administrator Features" in order to have a complete knowledge of the platform, but this chapter is not necessary for the management tasks that these users have to perform.

In the last chapter is presented a real case study, describing the sequence of all operations that users need to accomplish for the creation of a new website from scratch.

## Technical notes

System is based on the popular and proven platform *CMS (Content Management System)* WordPress v3.9.1, an open source software can be freely used and distributed also in commercial and professional environments.

This CMS is suitable for use in many fields of application and an accurate configuration and customization allows to achieve the results described in this document, hiding to the user any unnecessary complexity.

On the platform there is a unique user of type *Administrator*, who has the necessary permissions to modify the configuration of the system down to the smallest detail. For normal activities described in this guide is not never need to use this user.

The design and implementation of the system, with the goals described here, it was very complex, requiring accurate configurations and also the development of components that do not exist before. The platform, as we said in the previous paragraph, allows implementation of any new functionality: the user *Administrator* be used for this purpose, but only by qualified personnel because of the potential danger of the authorizations held on the whole system.

## Types of users

This chapter describes the types of available users on the platform; keep in mind that users are presented here in descending order of authorization, in the sense that, for example, the *Administrator* has, in addition to their own, even all the authorizations held by the *Network administrator*, but not vice versa.

### **Administrator (also referred as *Admin*)**

There is only one user on the system of this type and has all the permissions that allow you to change the platform in every detail.

This user during normal use of the platform, it is never necessary because to other users are already exposed all the functionality needed to fulfill their job of site management and publication.

All the information needed to carry out the management of the Wordpress platform beyond the scope of this guide and are readily available online, for example, by referring to the official documentation, starting from the following link: [WordPress Codex](#).

### **Network Administrator (also referred as *NetAdmin*)**

- There is only one user on the system of this type and has permissions to manage the platform in the normal workflow.
- This user can create, edit and delete web sites. Concurrently with the creation of a new website is created on the user type *Site administrator*.
- The *NetAdmin* have the rights to the manage themes that a *Site administrator* can choose for the creation of websites; he can insert, delete, and set "not available" an unlimited number of themes.
- As indicated in the general concept shown in the head of this chapter, the user *NetAdmin*, in case of necessity, it can also perform editing operations on all web sites present on the platform, assuming the capacity of a *Site administrator*.
- Brief list of permissions:
  - Site management
  - User management
  - Graphic themes management

## **Site Administrator (also referred as *SiteAdmin*)**

On the system there may be an unlimited number of users of this type and have permissions to manage your own website.

This type of user can create, modify, and delete an unlimited number of html pages that, graphically positioned in the central part of the site, represent the content to publish. In these pages may be present multimedia content. Each page is made accessible via a menu item.

For his website, *SiteAdmin* can create, edit and delete an unlimited number of menu items on the left, right or on the top bar of the site, depending on the theme graphic set. These entries represent the links through which can reach the individual html pages created, as well as any links leading to external sites.

Finally, for his site, a *SiteAdmin* can create, modify (in the name and description) and delete an unlimited number of multimedia content (eg, images, graphics, sounds, videos) that can be included in one or more html pages.

Brief list of permissions:

- Page management
- Navigation menu management
- Media library management
- Selecting a graphic theme

## **Guest**

This user can view all websites on the platform, in addition to the public pages of the platform.

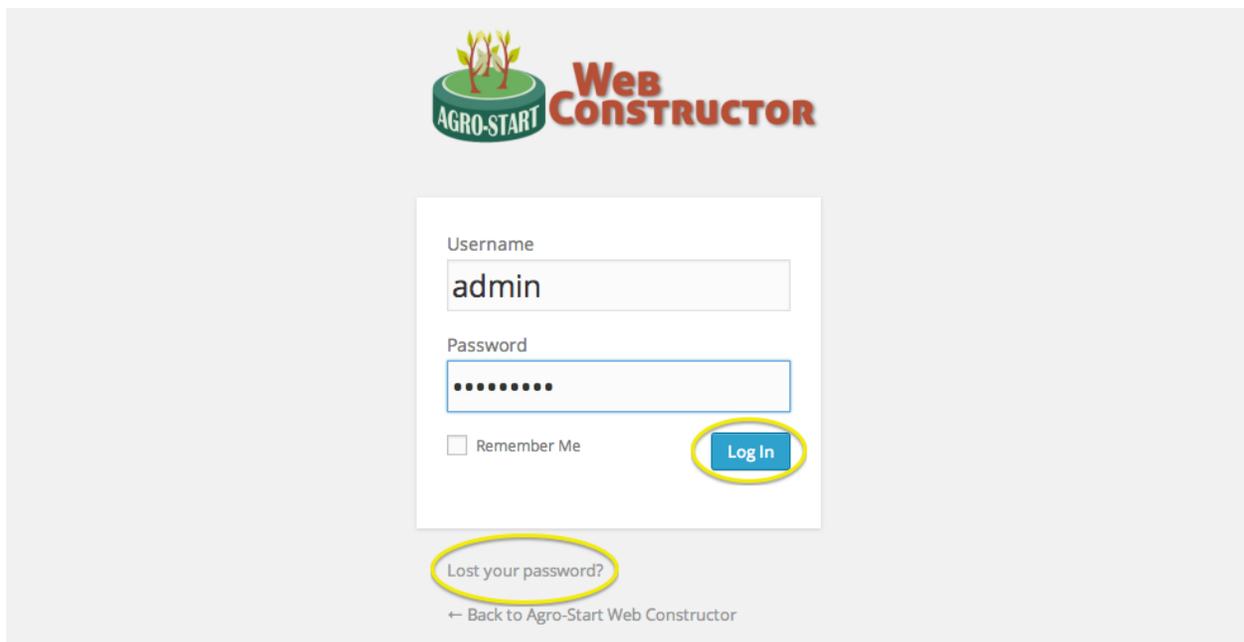

On a page of the *Web constructor* there is a complete list of online sites.

## Access to the system

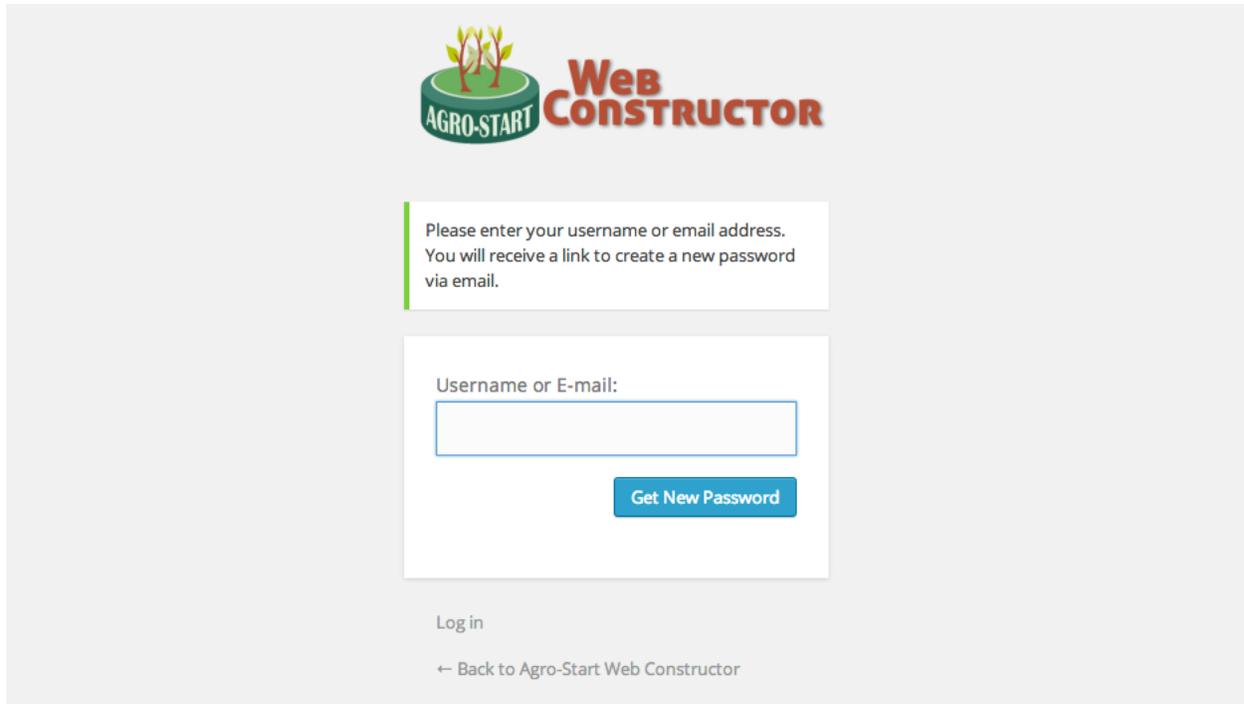

Excluding the *Guest* type, all users needs to log in to the system (with *username* and *password*) to perform any operation described. The login page is accessible from a link on the home page of the platform, as shown in the figure:

The link takes you to the login page, common for all types of user:

The highlighted link "Lost your password?" takes you, if need be, to a password recovery page: you can simply indicate your email or username and the system will generate a new temporary password that will be sent to the user's email address. This feature is available for all types of users of the platform:

The screenshot shows a web page for "AGRO-START Web CONSTRUCTOR". At the top left is the logo, which consists of a green circular base with the text "AGRO-START" and three stylized green plants growing from it. To the right of the logo, the text "Web CONSTRUCTOR" is displayed in a bold, red, sans-serif font. Below the logo and title, there is a white rectangular box containing the following text: "Please enter your username or email address. You will receive a link to create a new password via email." Below this text is another white rectangular box. Inside this box, the text "Username or E-mail:" is positioned above a single-line text input field. To the right of the input field is a blue button with the text "Get New Password" in white. Below the input field and button, there is a link that says "Log in". At the bottom of the page, there is a link that says "← Back to Agro-Start Web Constructor".

# Network Administration

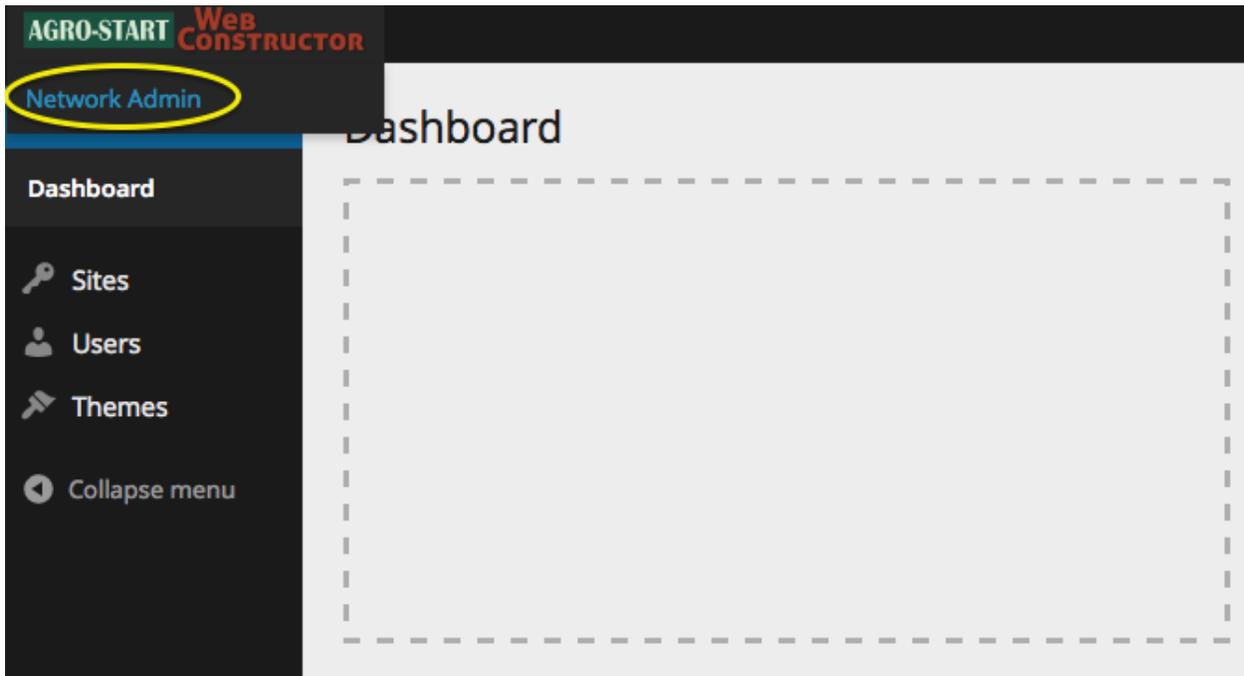

## Network administration

The administration page for the user *NetAdmin* looks like in the picture:

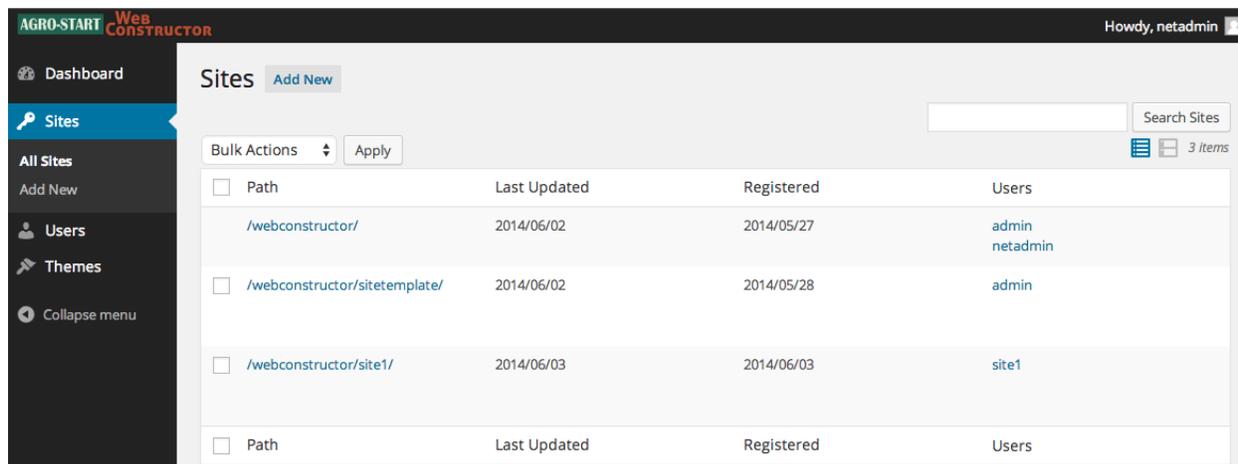

On the left you can see the three main menu items through you can perform management tasks described in this chapter.

Via the link shown in the figure below, you can quickly return to this screen, for example, after exceptionally modified page to a website:

## Sites management

The "Sites" menu item on the administration page takes the user to the site management page, where you can find the full list of sites on the platform:

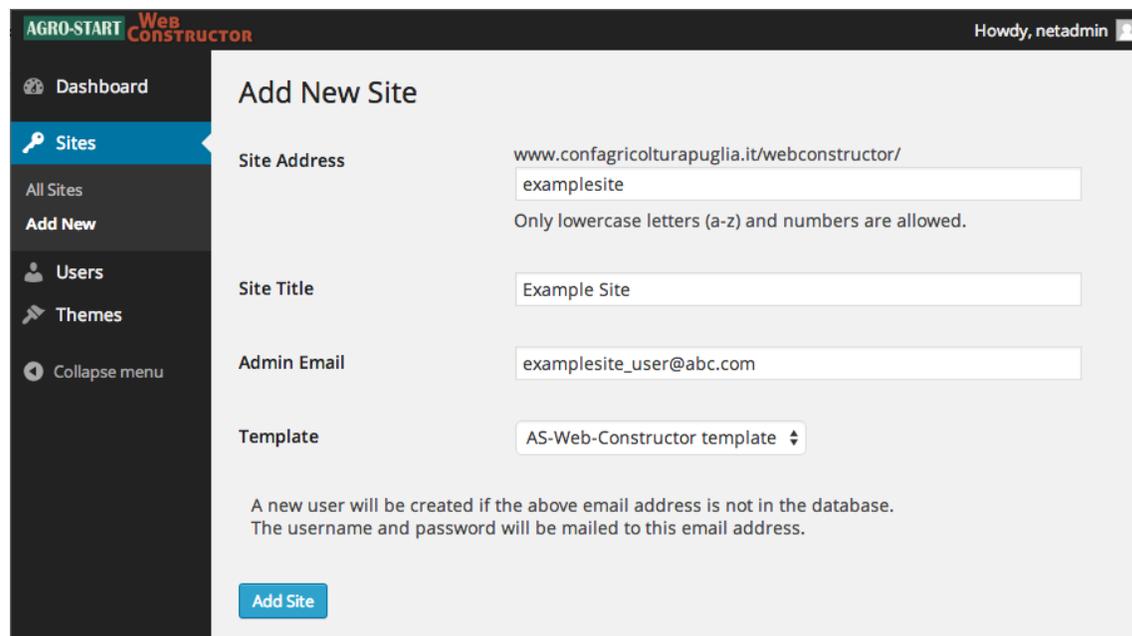

<input type="checkbox"/>	Path	Last Updated	Registered	Users
<input type="checkbox"/>	/webconstructor/	2014/06/02	2014/05/27	admin netadmin
<input type="checkbox"/>	/webconstructor/sitemplate/	2014/06/02	2014/05/28	admin
<input type="checkbox"/>	/webconstructor/site1/	2014/06/03	2014/06/03	site1
<input type="checkbox"/>	Path	Last Updated	Registered	Users

The first item in the list is the *Web constructor* site, the second is a model from which platform derive new sites created. Of these two items the *NetAdmin* should not be cured. The third item in the picture is a sample site, created by the function "Add New" button, visible on the left in the menu and at the top of the page, as described in the next section.

## New site creation

The creation of a new site begins by clicking on the menu item "Add New"; the link leads to the creation page shown here:

**Add New Site**

Site Address:   
Only lowercase letters (a-z) and numbers are allowed.

Site Title:

Admin Email:

Template:

A new user will be created if the above email address is not in the database.  
The username and password will be mailed to this email address.

As you can see from the example screen, you simply provide the following information:

- **Site Address**  
The address of the new site, which is appended to the main address of *Web constructor*. In the example, specifying "examplesite", the full address will be `www.confagricolturapuglia.it/webconstructor/examplesite`;
- **Site Title**  
The name of the site, which will appear at the top of each page and it will be changed later by *SiteAdmin*;
- **Admin Email**  
The email address of the new user type *SiteAdmin*, which will be the site administrator. At this address will be sent, after clicking on the "Add Site" on the bottom left, an email containing a temporary password to access the platform. The new *SiteAdmin*, once had access to the administration panel, can change the password;
- **Template**  
Of this item, as preset in the figure, the NetAdmin will not heal: it is the "model" that will be copied to create the new site.

### Activities on existing sites

In the admin sites page, hovering close to the name of each site you can make out of it some management tasks.

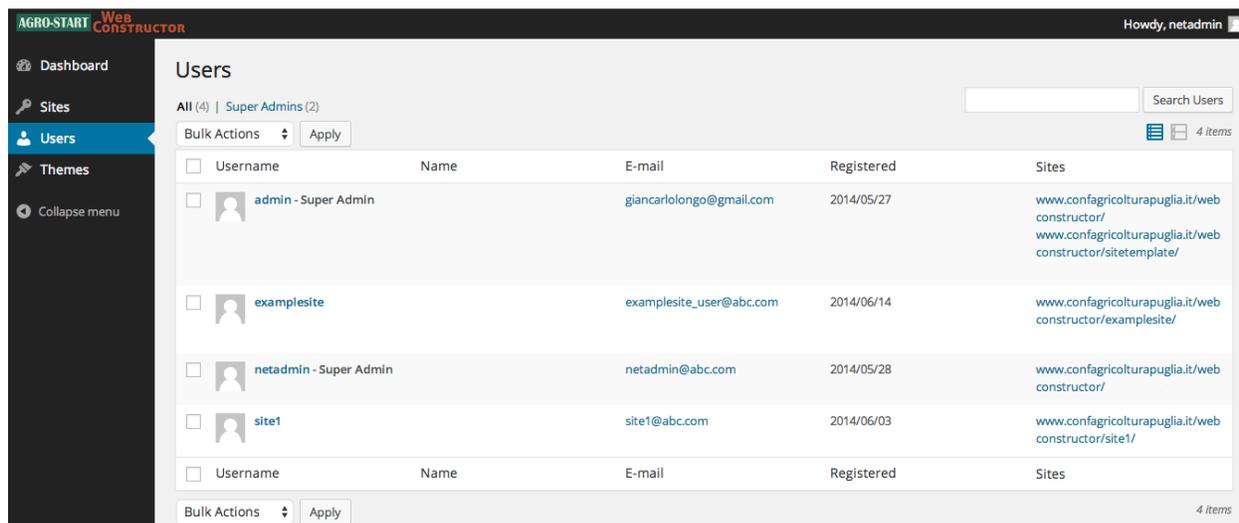

The screenshot shows the AGRO-START Web Constructor admin interface. The top navigation bar includes the logo, the text "Web CONSTRUCTOR", and the user name "Howdy, netadmin". The left sidebar contains navigation links for "Dashboard", "Sites", "All Sites", "Add New", "Users", "Themes", and "Collapse menu". The main content area is titled "Sites" and includes an "Add New" button. Below the title, there is a search bar and a "Search Sites" button. A table lists the sites with columns for "Path", "Last Updated", "Registered", and "Users". The site "/webconstructor/examplesite/" is highlighted, and its management options are circled in yellow: "Edit", "Dashboard", "Deactivate", "Archive", "Spam", "Delete", and "Visit".

<input type="checkbox"/>	Path	Last Updated	Registered	Users
<input type="checkbox"/>	/webconstructor/	2014/06/02	2014/05/27	admin netadmin
<input type="checkbox"/>	/webconstructor/sitetemplate/	2014/06/02	2014/05/28	admin
<input type="checkbox"/>	/webconstructor/examplesite/	2014/06/14	2014/06/14	examplesite
<input type="checkbox"/>	/webconstructor/site1/	2014/06/03	2014/06/03	site1

Some of these (*Dashboard* and *Edit*) compete directly with *SiteAdmin* but, as mentioned above, even the *NetAdmin* can have access to for security reasons. The other activities are specific to a *NetAdmin* as these are closely linked to the management of any situation you do not want, for example, to disable or completely remove a site from the platform (*Deactivate*, and *Delete*).

## User management

The "Users" option on the main page takes the user to the user management page, where you can find the full list of users on the platform:

Username	Name	E-mail	Registered	Sites
<input type="checkbox"/> admin - Super Admin		giancarlolongo@gmail.com	2014/05/27	www.confagricolturapuglia.it/web-constructor/ www.confagricolturapuglia.it/web-constructor/sitetemplate/
<input type="checkbox"/> examplesite		examplesite_user@abc.com	2014/06/14	www.confagricolturapuglia.it/web-constructor/examplesite/
<input type="checkbox"/> netadmin - Super Admin		netadmin@abc.com	2014/05/28	www.confagricolturapuglia.it/web-constructor/
<input type="checkbox"/> site1		site1@abc.com	2014/06/03	www.confagricolturapuglia.it/web-constructor/site1/

This screen is of marginal importance as users on the platform coincide with sites created, then there is no activity that *NetAdmin* should do, except for the change password and email described below.

Although any user can change their email and password in autonomy and the platform provides the procedure for recovering passwords directly from the login panel, you may need to accomplish this task by the *NetAdmin*, for example, if a user *SiteAdmin* no longer has access to his email.

It should click on "Edit" under the user to modify:

AGRO-START Web CONSTRUCTOR

### Contact Info

**E-mail (required)** examplesite\_user@abc.com

Website

### About the user

#### Biographical Info

Share a little biographical information to fill out your profile. This may be shown publicly.

**New Password**

If you would like to change the password type a new one. Otherwise leave this blank.

**Repeat New Password**

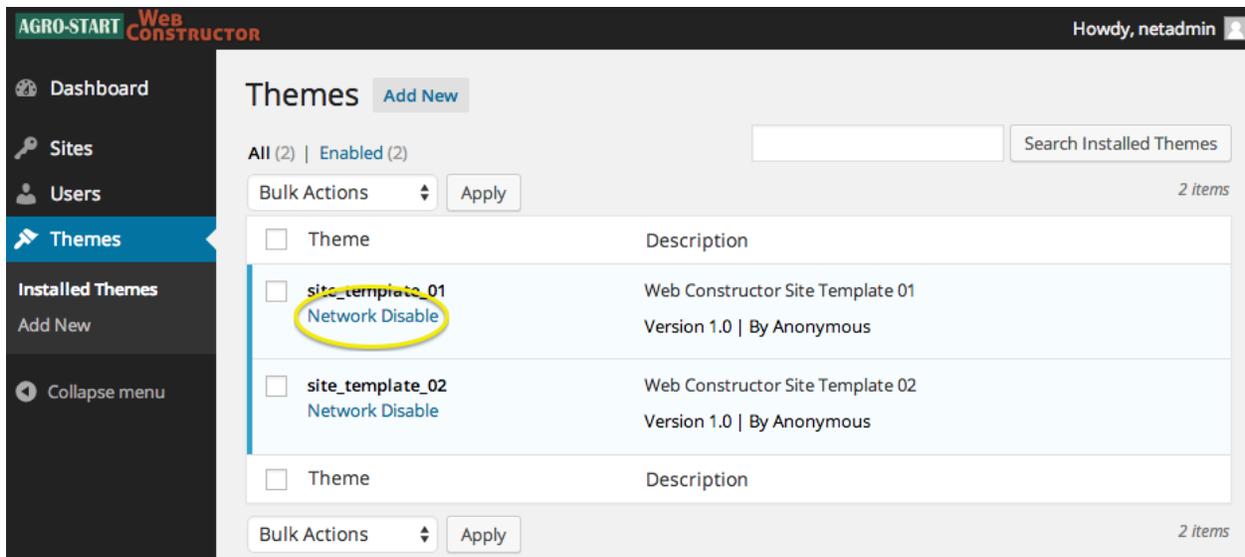

Type your new password again.

Strength indicator *Hint: The password should be at least seven characters long. To make it stronger, use upper and lower case letters, numbers, and symbols like ! " ? \$ % ^ & ;.*

Update User

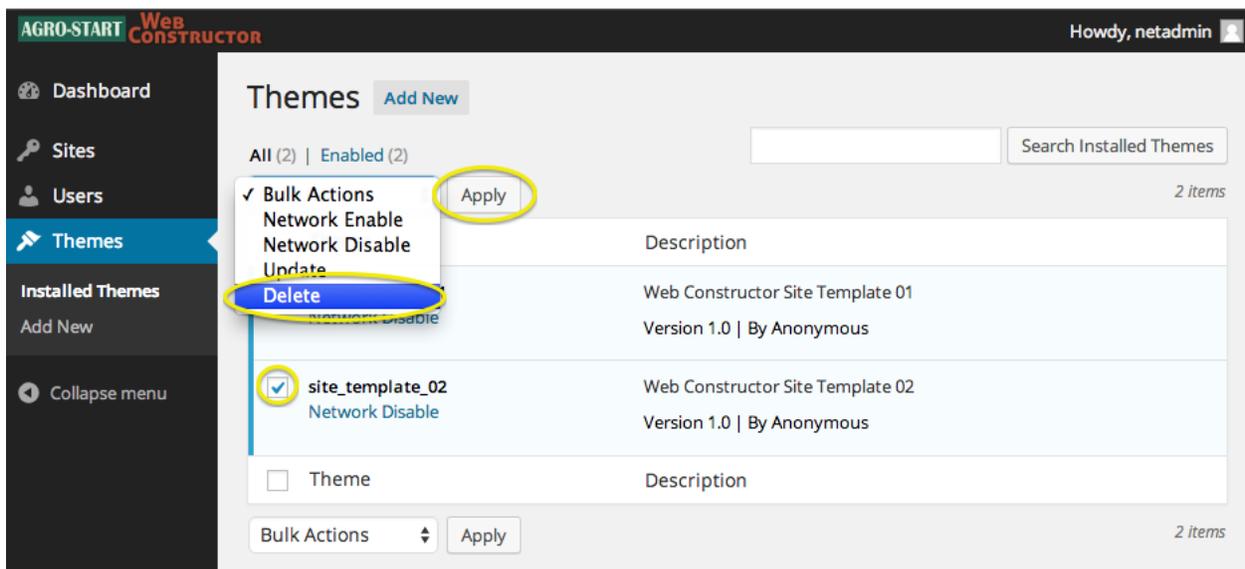

## Themes management

The "Themes" option on the main page takes the user to the themes management page, where you can find the complete list of graphic themes available on the platform, from which *SiteAdmin* users can choose for their website:

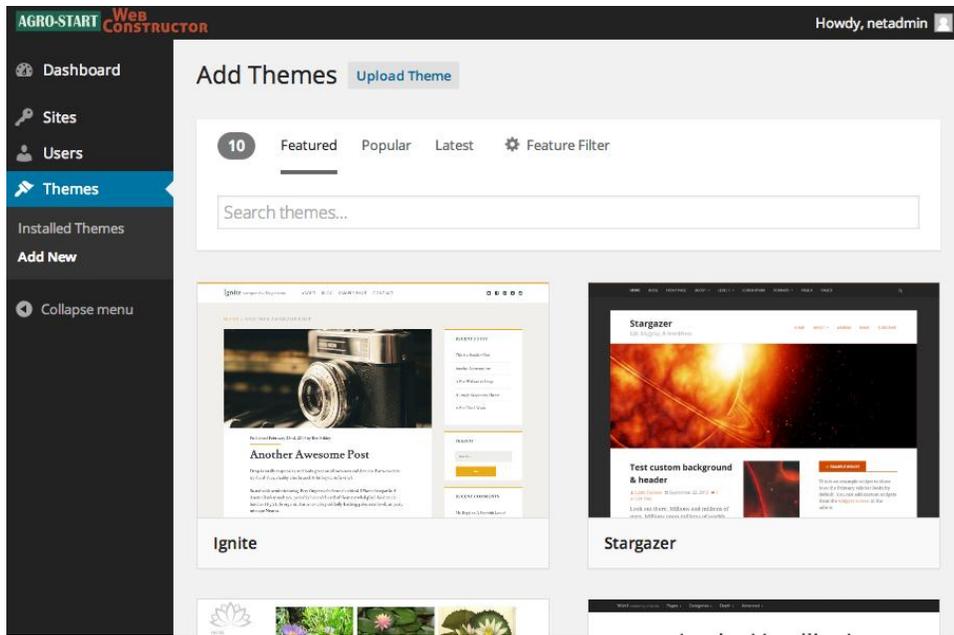

By clicking on the link shown in the figure, you can disable a theme: in this way will no longer be available for *SiteAdmin* but it will not be removed.

If you want to delete a theme, select it using the checkbox next to the name, select "Delete" from the "Bulk Actions" and click on the "Apply" button:

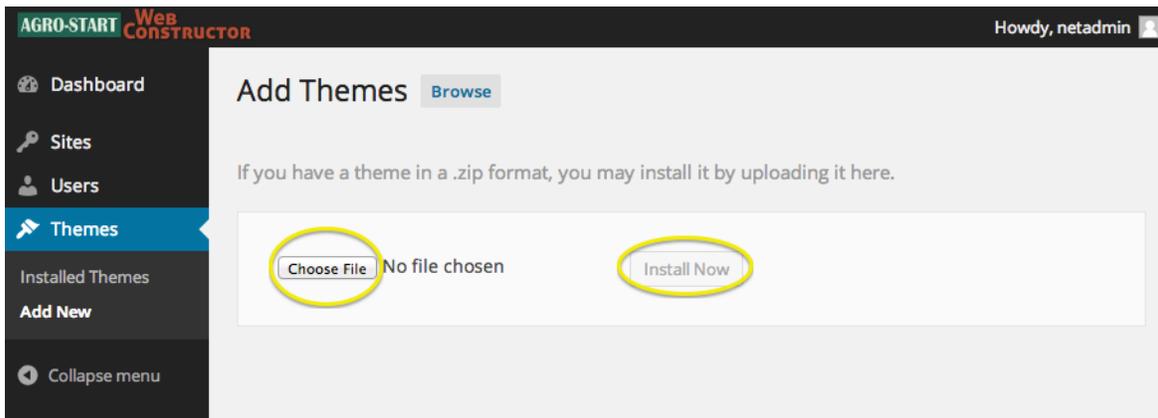

Care should be taken to use these functions: removing a theme that is used by one or more sites may cause display errors until user select a new graphic theme.

By clicking on the menu item "Add New", just below "Themes", you get the following screen:

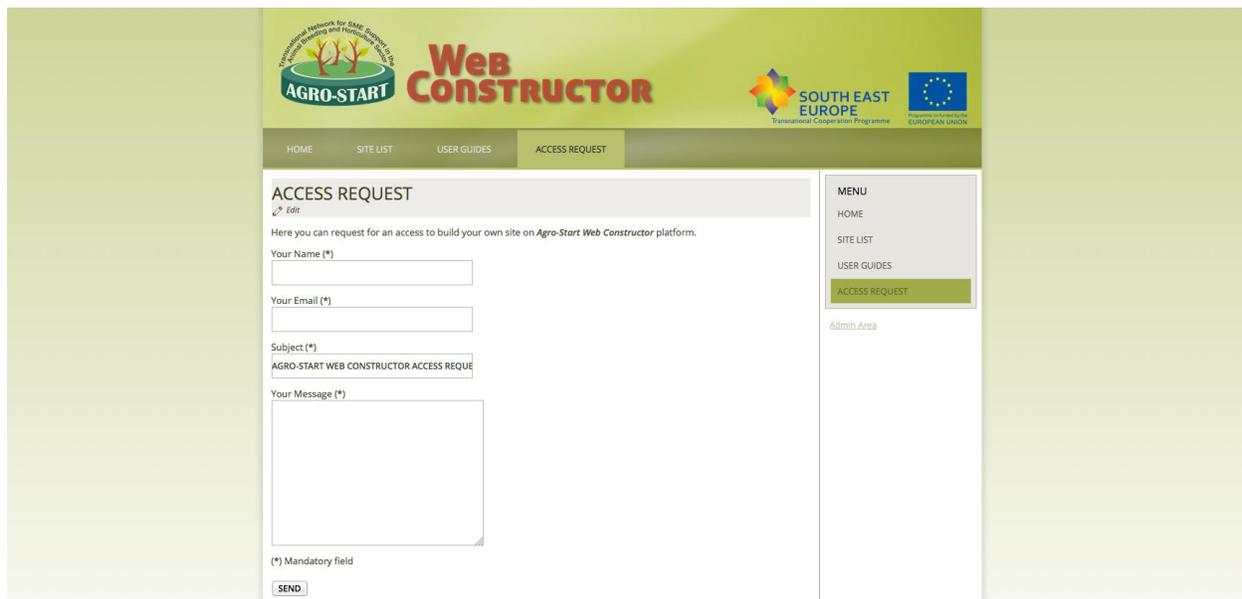

From here you can select a new theme to be installed on the platform, making it available to the *SiteAdmin*. In the figure there are themes available for download from the Wordpress site. To load on the platform a complete custom theme you must click on the link "Upload Theme", which is visible at the top of the figure above. This takes you to the screen below where you can upload, by clicking "Choose File", a zip file containing the new graphic theme, and install it permanently by clicking on "Install Now".

# Site Administration

## Account request

Users not yet registered that want to publish their own website, the platform provides a form to request the activation of a new account. By clicking on the link "Request Access" on the main site, you go to a screen that allows you to send a request to *NetAdmin*, which receives it by mail:

The screenshot shows the 'ACCESS REQUEST' page of the Agro-Start Web Constructor platform. The page features a green header with the Agro-Start logo (Professional Network for SME, Cooperatives and Start-ups), the 'Web Constructor' title, and logos for South East Europe and the European Union. A navigation bar includes links for HOME, SITE LIST, USER GUIDES, and ACCESS REQUEST. The main content area is titled 'ACCESS REQUEST' and contains a form with the following fields: 'Your Name (\*)', 'Your Email (\*)', 'Subject (\*)' (with a pre-filled value 'AGRO-START WEB CONSTRUCTOR ACCESS REQUE'), and 'Your Message (\*)'. A 'SEND' button is located at the bottom of the form. A sidebar menu on the right lists 'MENU', 'HOME', 'SITE LIST', 'USER GUIDES', and 'ACCESS REQUEST' (which is highlighted), along with an 'Admin Area' link.

## Site administration

The administration page for the user *SiteAdmin* looks like the following figure.

On the left you can see the main menu with five items which perform management operations described below.

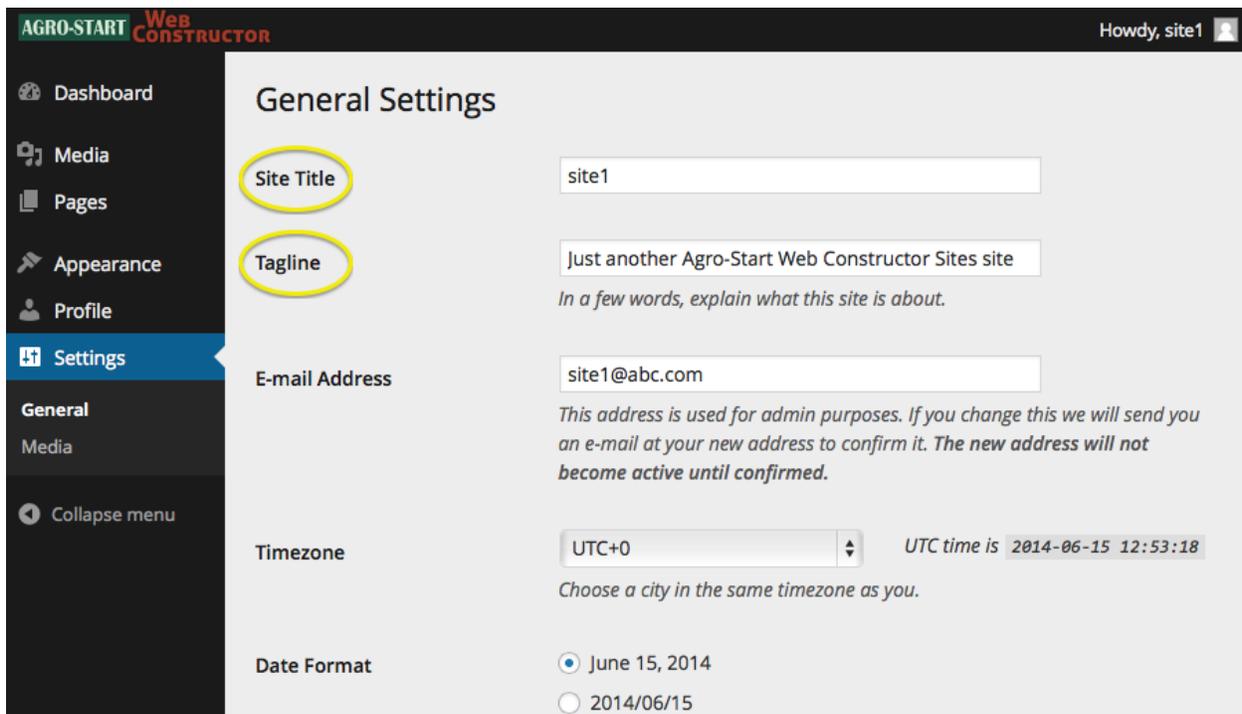

Through the link "Site admin", represented in the figure below you can quickly return to the main administration screen, while with the link "Visit Site" you can quickly switch to viewing the site you are creating:

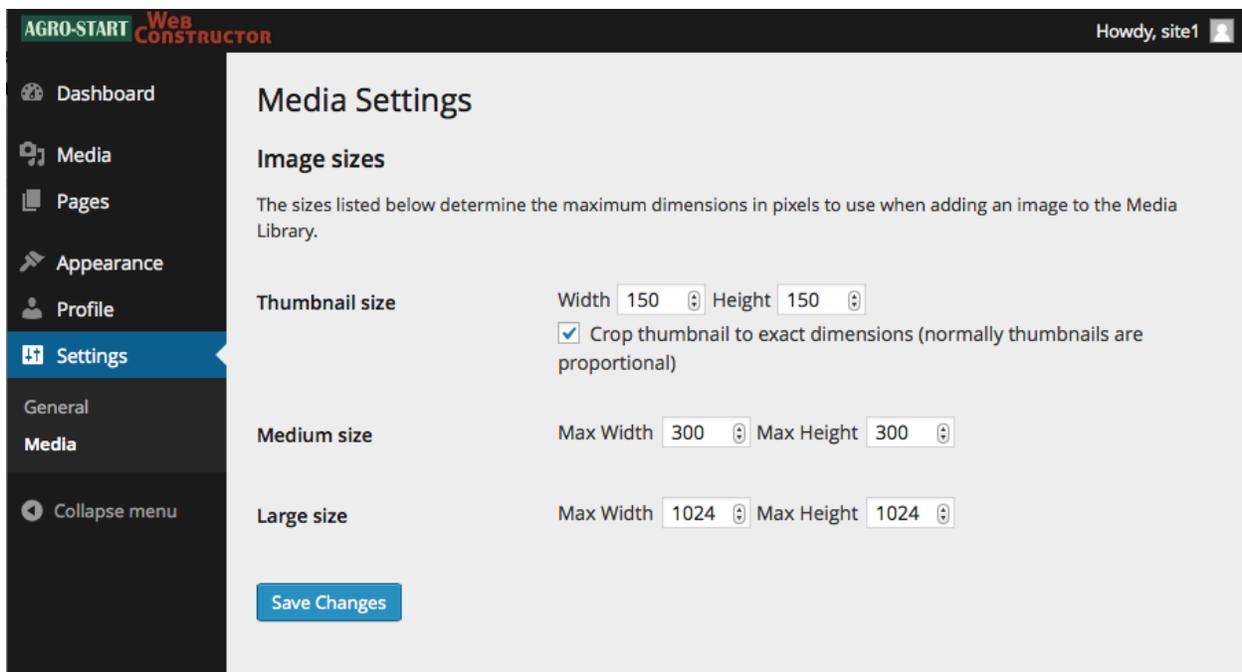

While editing your site from the admin panel it is advisable to maintain a separate browser window on the actual site view, to see quickly, with a refresh, the effect of the changes made. In the following paragraphs is not presented the effect of the changes made, as it may vary depending on the theme selected by the user.

### General settings

Menu item "Settings" on the main page allows the user to modify some general parameters of the site. The most important are shown in the following figure and are, respectively, the title and subtitle of the site, which appear at the top of every page published:

In settings page "Media", visible in the menu, you can change parameters for multimedia content that the user can upload and which constitute the "Media Library" (described later).

The platform, for each media item was added, in addition to the original file, stores three additional versions of the same file, but with smaller size. On this page *SiteAdmin* can set this size, that'll end up as an option when try to include the image in a page.

## User profile

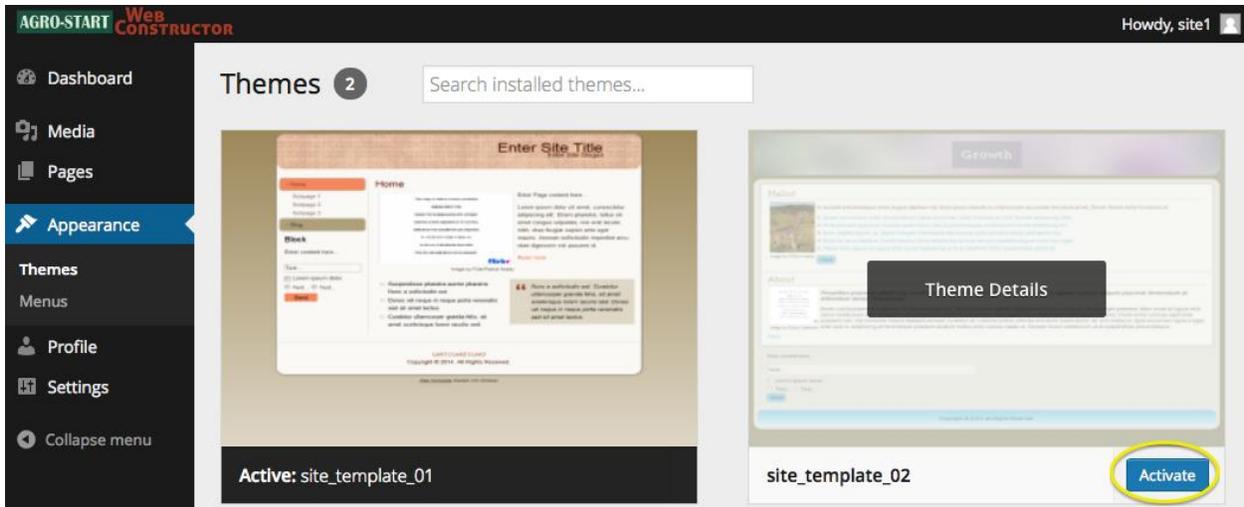

The page "Profile" allows the *SiteAdmin* to change some preferences related to his user, such as the color for the admin interface.

The most important of these options are email and password change, as shown in the following figure:

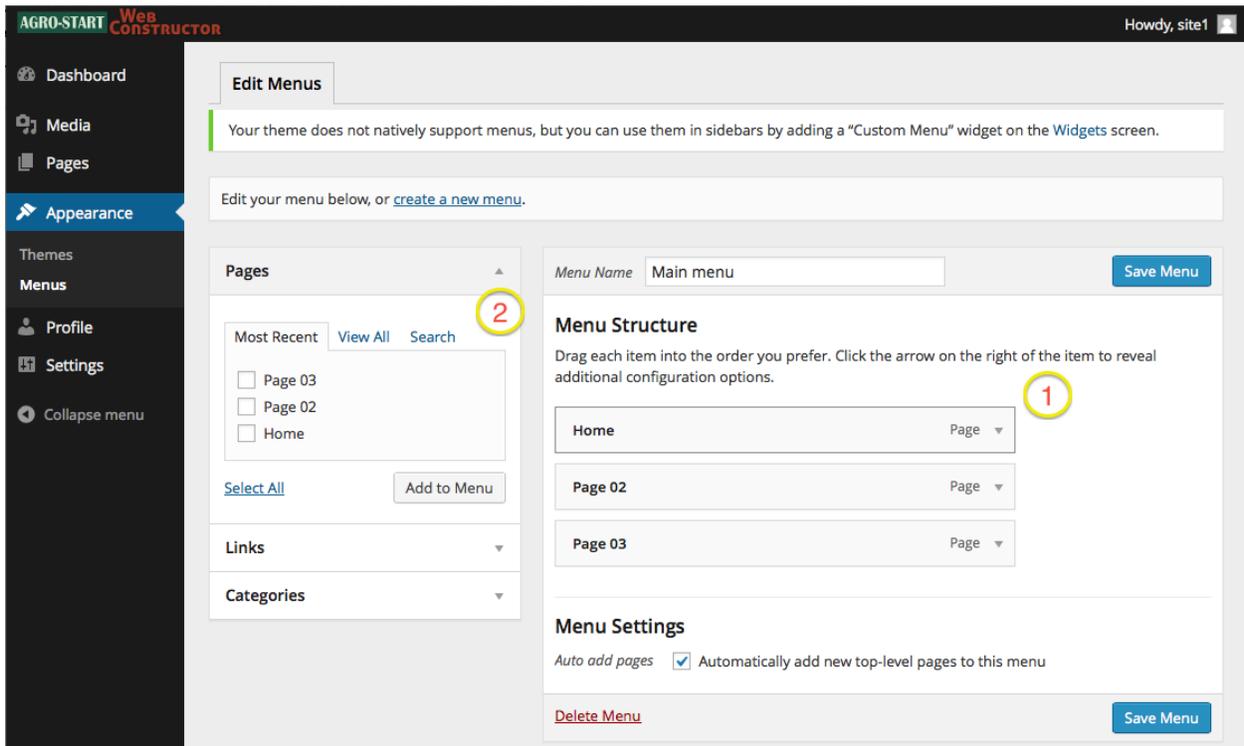

The screenshot displays the user profile management interface. The left sidebar lists navigation options: Dashboard, Media, Pages, Appearance, Profile (highlighted), Settings, and Collapse menu. The main content area is titled 'AGRO-START Web CONSTRUCTOR' and shows the user's profile information. The 'Contact Info' section includes an 'E-mail (required)' field with the value 'site1@abc.com' and a 'Website' field. The 'About Yourself' section includes a 'Biographical Info' text area. Below this is a 'New Password' field, a 'Repeat New Password' field, and a 'Strength indicator' box. A 'Hint' box provides instructions on password strength. The 'Update Profile' button is at the bottom.

## Graphic themes

The menu item "Appearance" takes *SiteAdmin* to a screen that allows him, with just one click on the "Activate" button, to change the theme and feel to his site, selecting from among those made available by the *NetAdmin*:

The "Menu" item, under "Appearance", leads to the management page of the menu navigation of the site:

We can distinguish two important areas:

1. Here is the menu shown on the website; in the example, this is made up by links leading to all pages of the site. You can sort the menu items simply by dragging them above or below. Finally, the "Auto add pages" option allows the automatic addition of a menu item when each new page created.

2. From here you can add new menu items that link to the site pages ("Pages") and to external links ("links").

At the end of the work you need to press the "Save Menu" button to save and publish your changes.

## Media library

The menu item "Media" allows *SiteAdmin* to manage the "Media Library" where are listed all the media elements available for website.

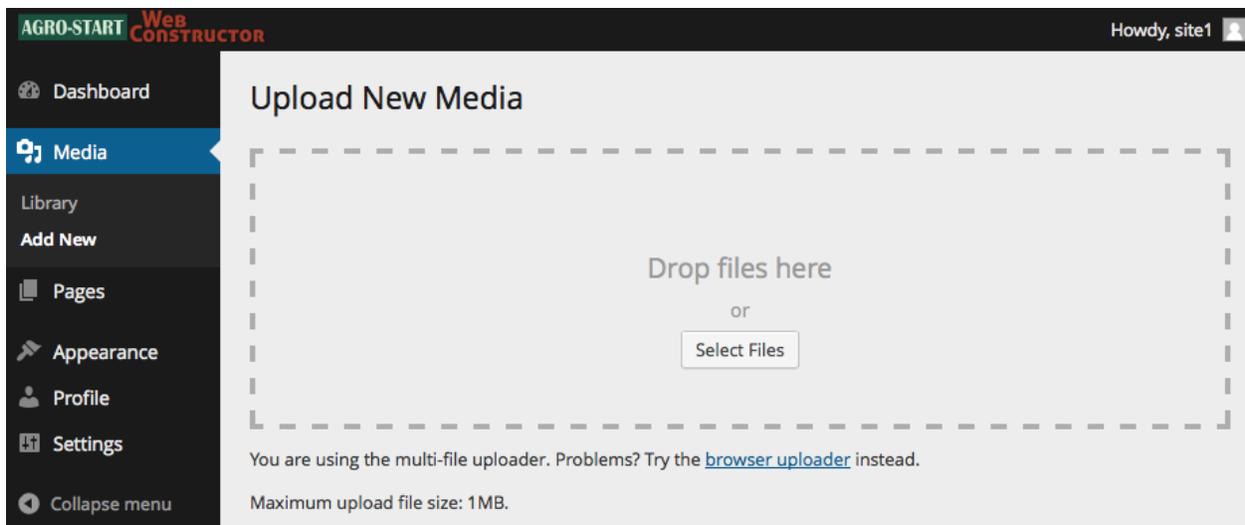

Keep in mind that the presence of a media item in the library does not mean that this has been published, since this is necessary to place it in one (or more) pages of the site.

The screenshot displays the 'Media Library' interface. The sidebar on the left contains the following menu items: Dashboard, Media, Library, Add New, Pages, Appearance, Profile, Settings, and Collapse menu. The main content area is titled 'Media Library' and features an 'Add New' button, a search bar, and a table of media items. The table has columns for 'File', 'Author', 'Uploaded to', and 'Date'. Two items are listed: '75297.JPG' and '5A- edward-munch-lurlo-1893-oslo-munchmuseet.JPG'. The 'Delete Permanently' link for the second item is circled in yellow.

File	Author	Uploaded to	Date
 75297 JPG	site1	(Unattached)	44 mins ago
 5A- edward-munch-lurlo-1893-oslo-munchmuseet JPG <a href="#">Delete Permanently</a> <a href="#">View</a>	site1	(Unattached)	44 mins ago
File	Author	Uploaded to	Date

In the figure we note the presence of two links, passing the mouse over each image: "Delete Permanently" and "View".

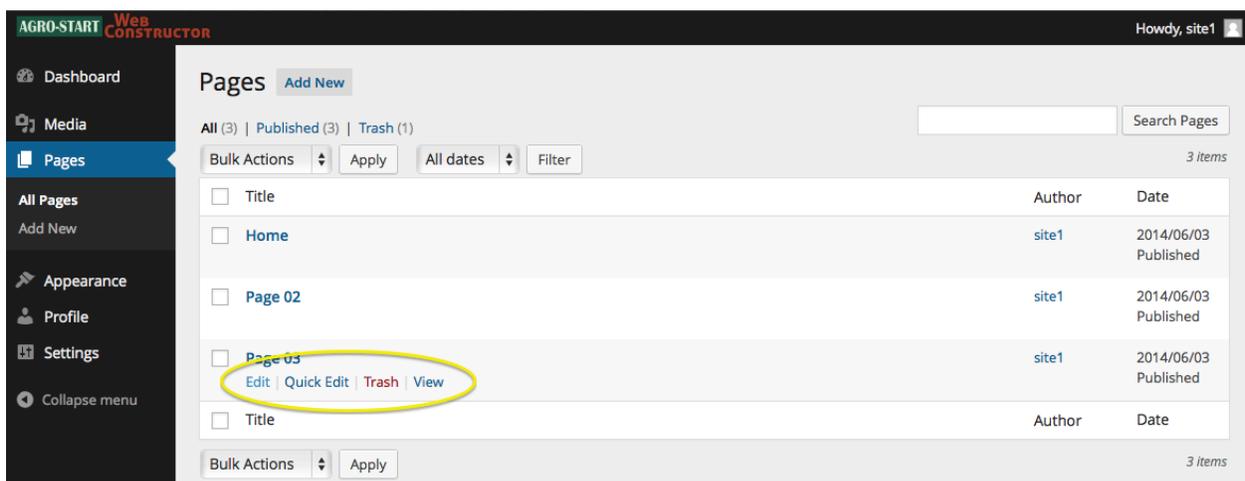

By clicking on the menu item "Add New" under "Media" or on the link "Add New" button on the "Media Library" page, you can upload a new media item on the platform:

From here you can simply drag a file from your file system to the web page to cause the automatic uploading on the platform.

## Pages management

The "Pages" section leads to the management of html pages on the site:

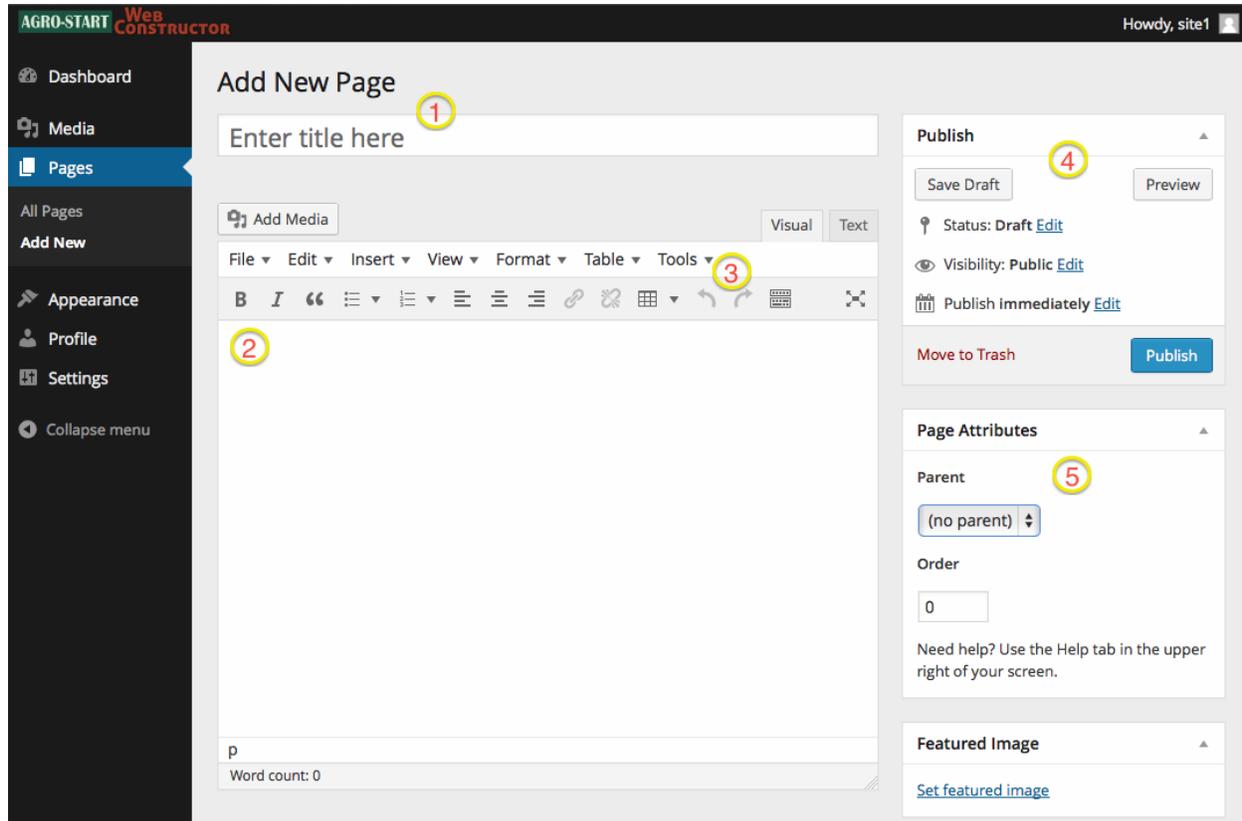

As in other management pages, again passing the mouse over an item you can make some activities:

- *Edit*: modification of the page;
- *Quick Edit*: fast mode of editing the page;
- *Trash*: Move the page to the trash. Trashed pages are displayed by clicking on the link "Trash" at the top;
- *View*: display the page in the format of publication on the website.

## Creating and editing a page

By clicking on the menu item "Add New" or on the link "Add New" at the top of the management page, you can create a new html page. You will see the following interface:

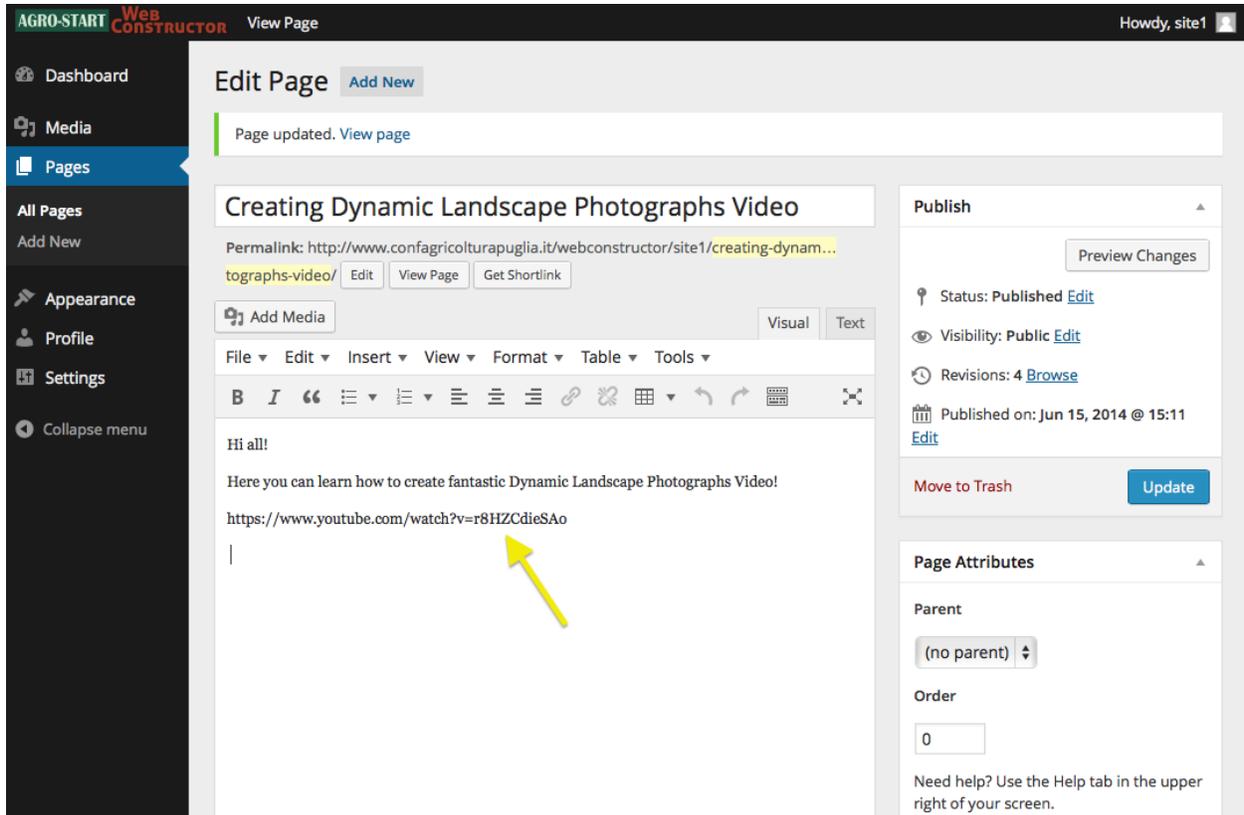

Below there is the description of the five major sections of the page.

1. *Page title*: appears at the top of the page and as an entry in the navigation menu of the site;
2. *Editing area*: *SiteAdmin* inserts here the text and any multimedia elements to be published on the page;
3. *Editing tools*: the platform incorporates a number of tools that allow you to easily attach to the text and to other page elements your preferred style; You can change font, size, alignment, color, style, enter data tables, lists, etc.. Despite the use of these tools is very simple and intuitive, for a complete description of the editing tools, please refer to the official documentation, which is located within the following online page: [TinyMCE Advanced](#).
4. *Publication*: is available here the state of the page and you can change this if, for example, the page should be placed temporarily offline. The link "Move to Trash" removes the page and places it in the trash (see previous paragraph).

5. *Page Attributes*: here you can determine the hierarchy of the page you are editing, positioning it such as "child" of another page, indicating the page "parent" via the drop-down menu "Parent": in this way, in navigation menu, the current page is located at a sub-level compared to the "parent".

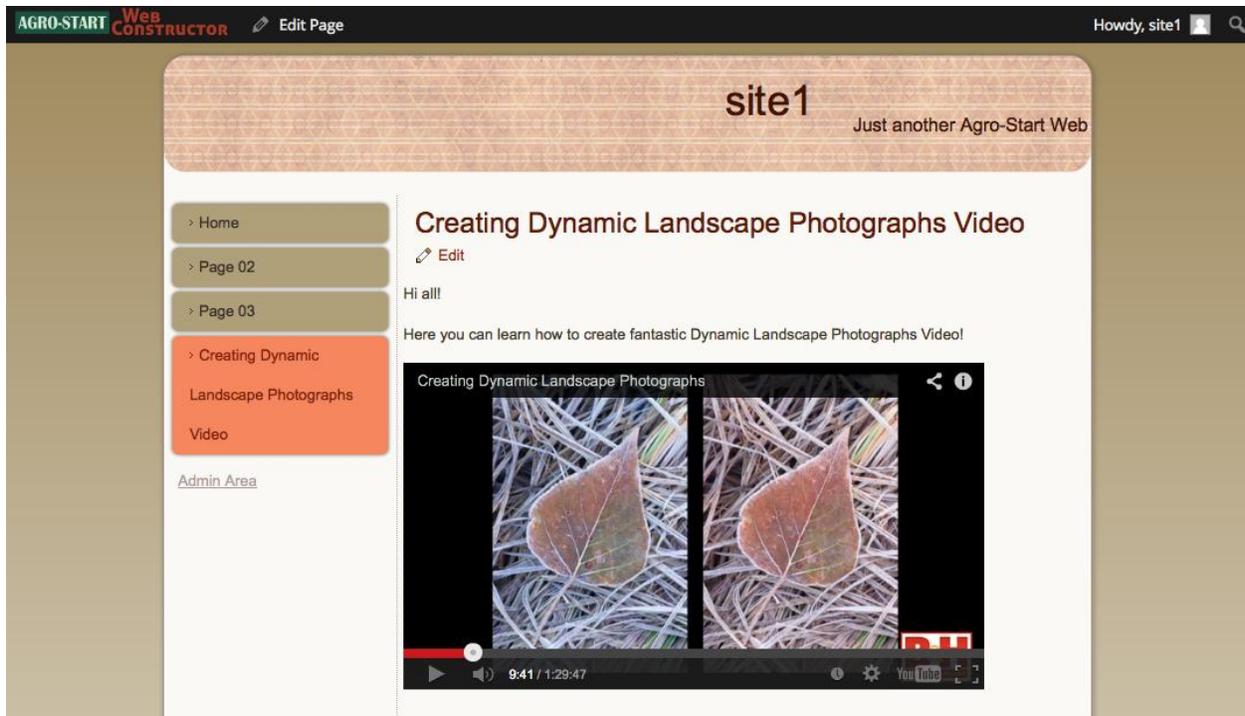

## Inserting a *youtube* video on a page

To insert a youtube video on a page simply copy and paste the link like the image below:

The screenshot shows the 'Edit Page' interface of the AGRO-START Web Constructor. The page title is 'Creating Dynamic Landscape Photographs Video'. The content area contains the text 'Hi all!', 'Here you can learn how to create fantastic Dynamic Landscape Photographs Video!', and a YouTube URL 'https://www.youtube.com/watch?v=r8HZCdieSAo'. A yellow arrow points to the URL. The right sidebar shows the 'Publish' section with 'Status: Published', 'Visibility: Public', and 'Revisions: 4'. Below that is the 'Page Attributes' section with a 'Parent' dropdown set to '(no parent)' and an 'Order' field set to '0'. The 'Update' button is highlighted in blue.

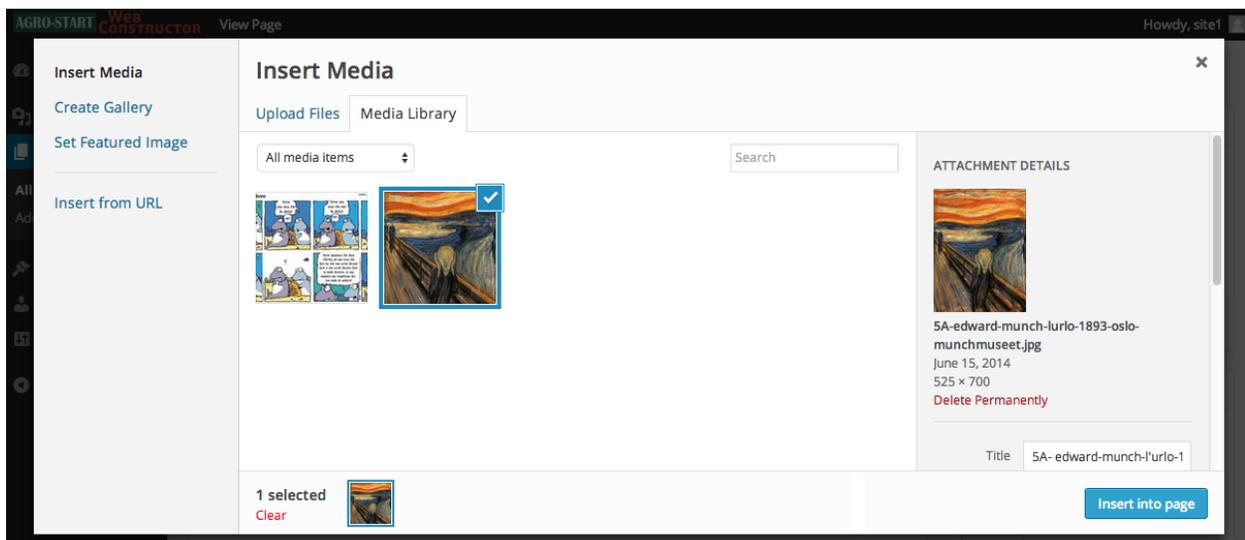

By clicking on the "Preview Changes" you can watch the preview as in the following image, while a click on the "Update" button will make the changes take effect and the modified page becomes publicly accessible.

## Inserting a media element in a page

Let us assume that you have uploaded an image in the Media Library (see previous paragraphs). To insert this image in the page that you are creating, just press the button "Add Media" button, select the desired item and press the "Insert into page".

In addition, the selection window, by clicking on "Upload Files" you can upload a new file on the fly: in this way there is no need before to access the feature "Media Library".

# A study case

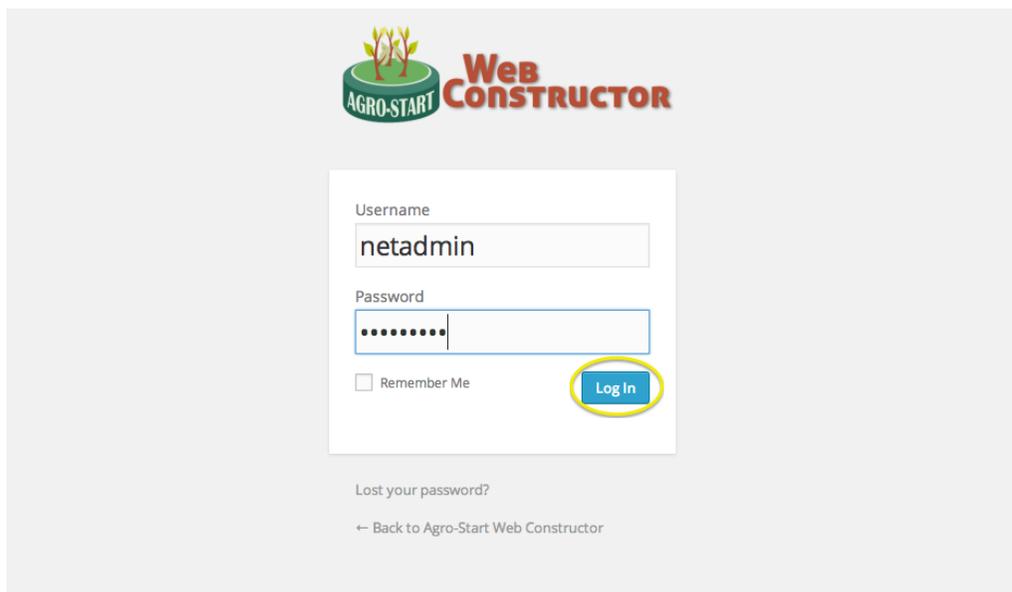

## Access to the system (*Network Administrator user*)

Let's Assume that *NetAdmin* has received by mail a request for a new site, and then want to prepare the platform.

From the platform home page you must click on the highlighted link:

The link takes you to the login page where you must enter the username and password of the user *NetAdmin* and click on the button "Log In":

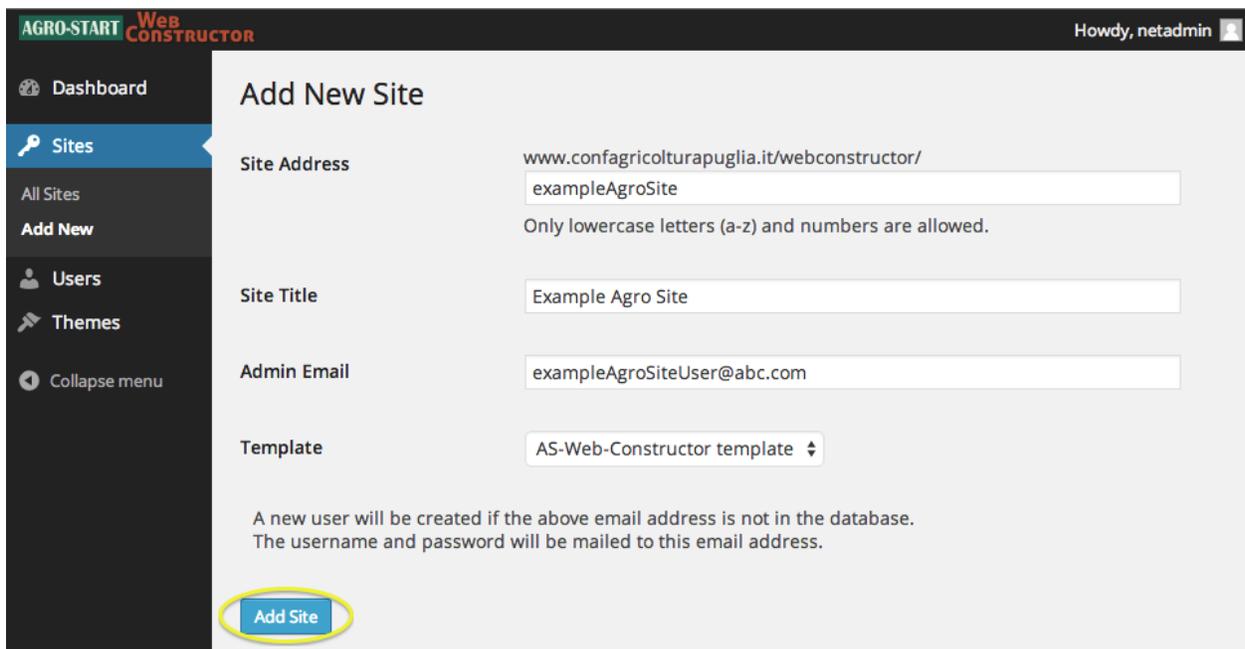

## Site and user activation

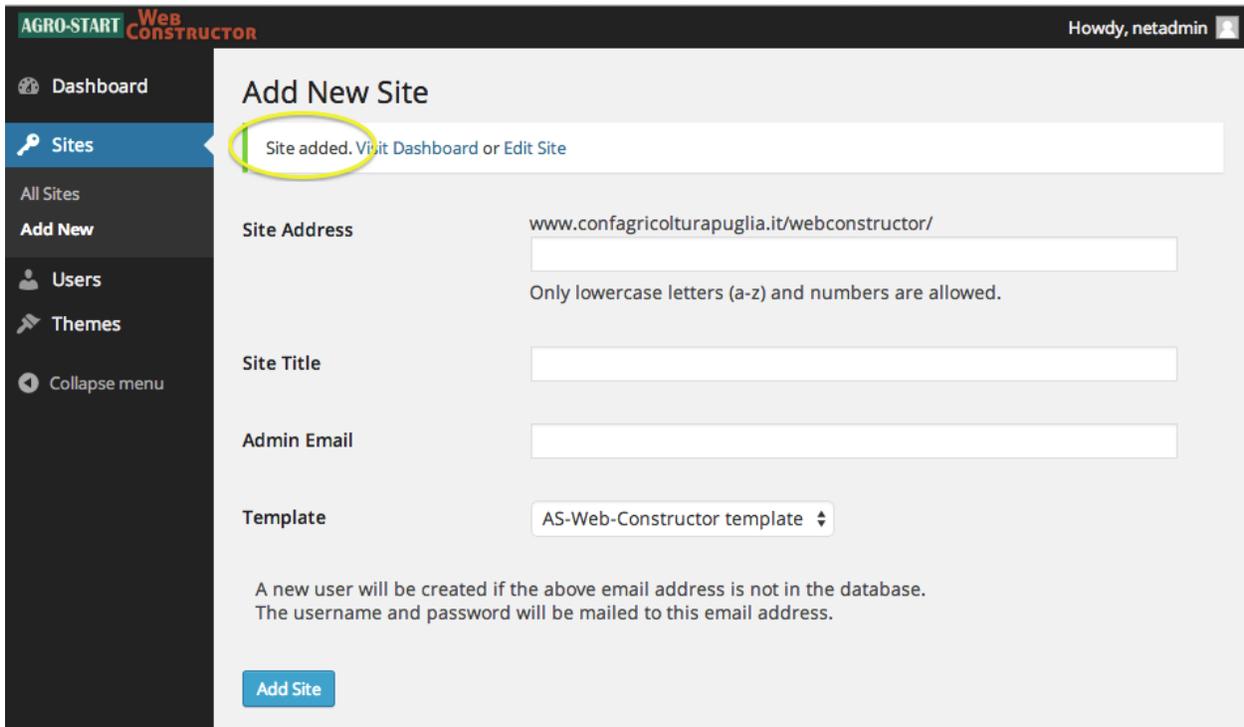

Once logged into the system you need to click on the highlighted link below:

This link leads to the site creation page where you must fill in the required fields and click the button "Add Site"; following are some sample data:

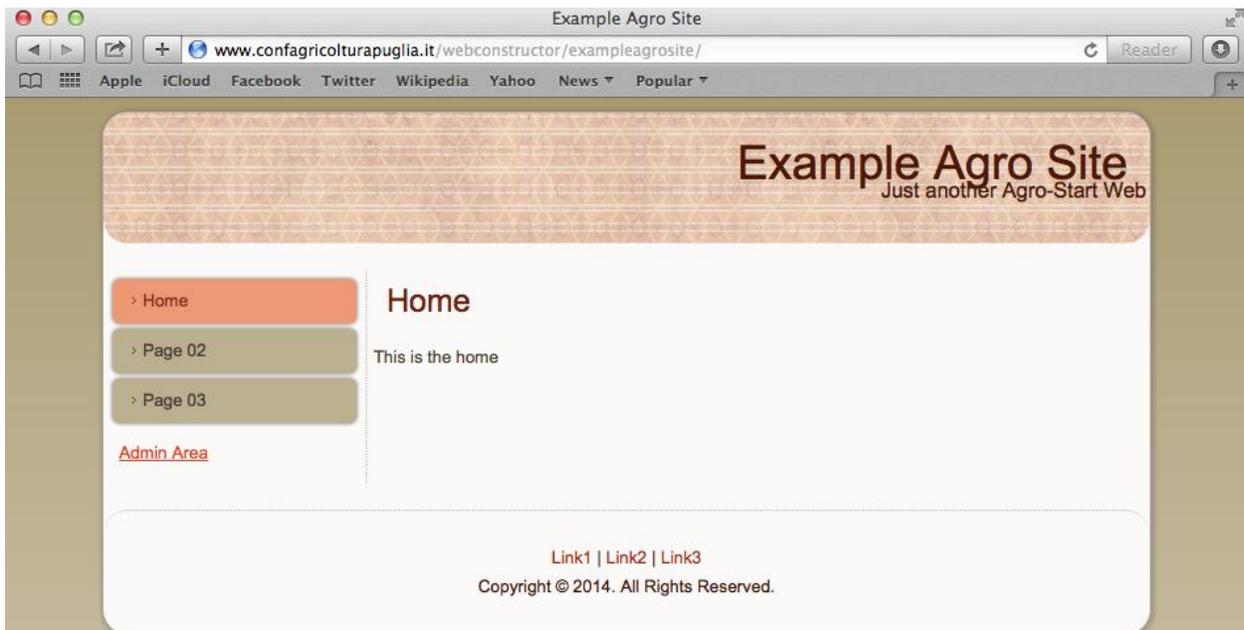

A confirmation message warns the user that the procedure was completed without errors:

At this point, new website will be immediately activated and public; accessing it with a browser at

<http://www.confagricolturapuglia.it/webconstructor/exampleagrosite/>

you can see the result:

Note that you have created a site with some sample content: a home page, two pages and the html navigation menu. We will see in the next sections how to delete the sample data and create new pages.

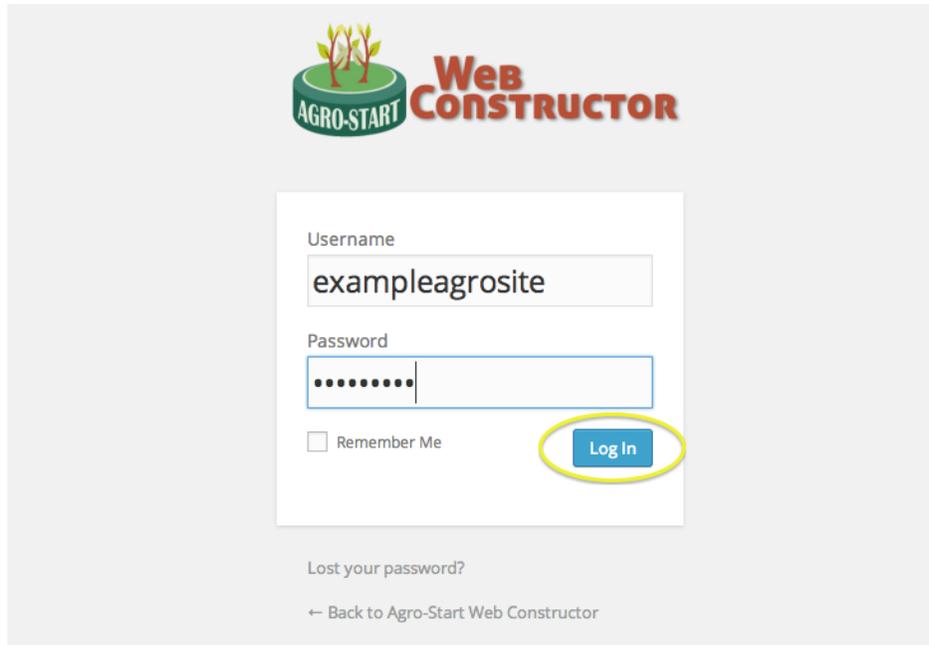

### Access to the system (*Site Administrator* user)

The new user you just created with the web site, of type *SiteAdmin*, with username equal to the name of the site (*exampleagrosite*), will have received an email containing username and password.

From any page of the platform you must click on the highlighted link. We chose the page "Site List" to point out that in the list of sites now appears the new one:

The link leads to the login page where you must enter username and password of the user *SiteAdmin* and click on the button "Log In":

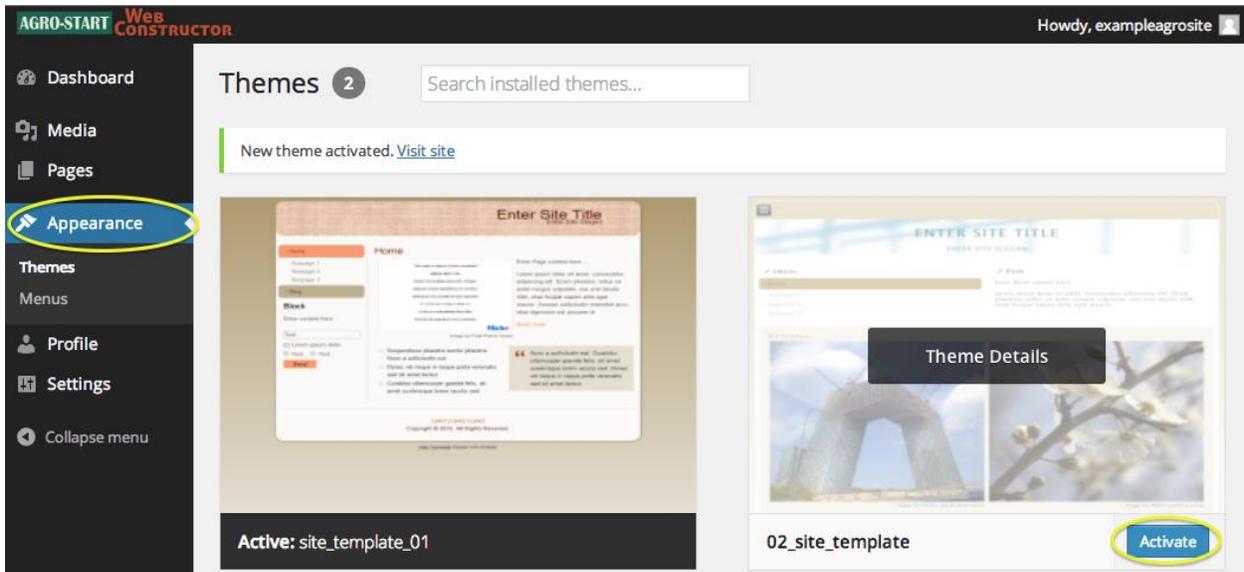

When properly logged in, to the user is presented the main screen of site management:

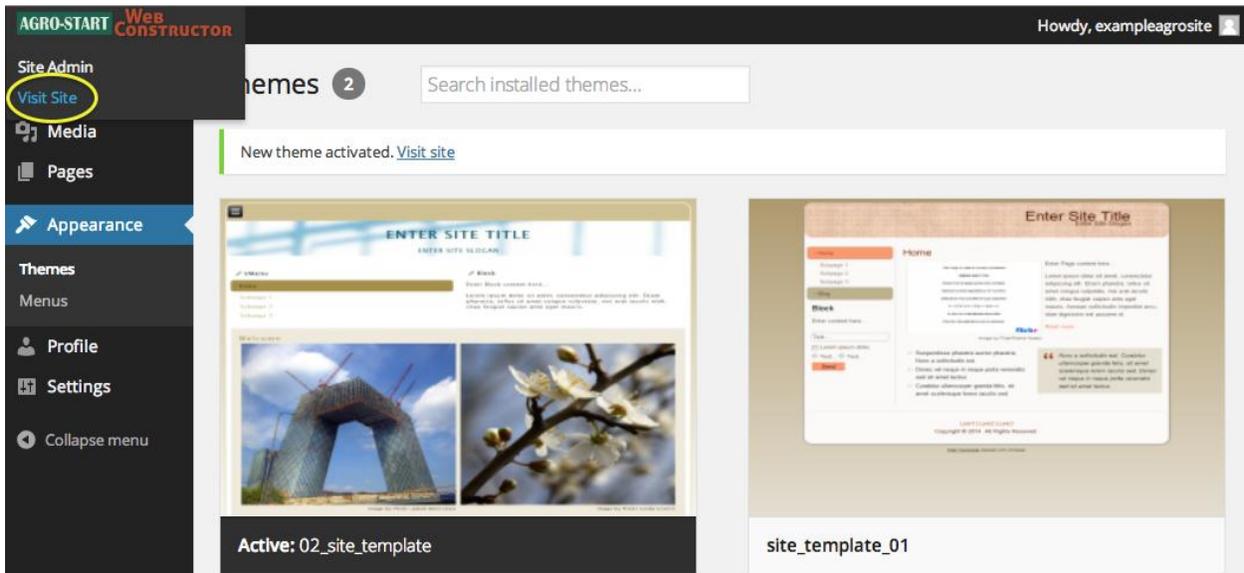

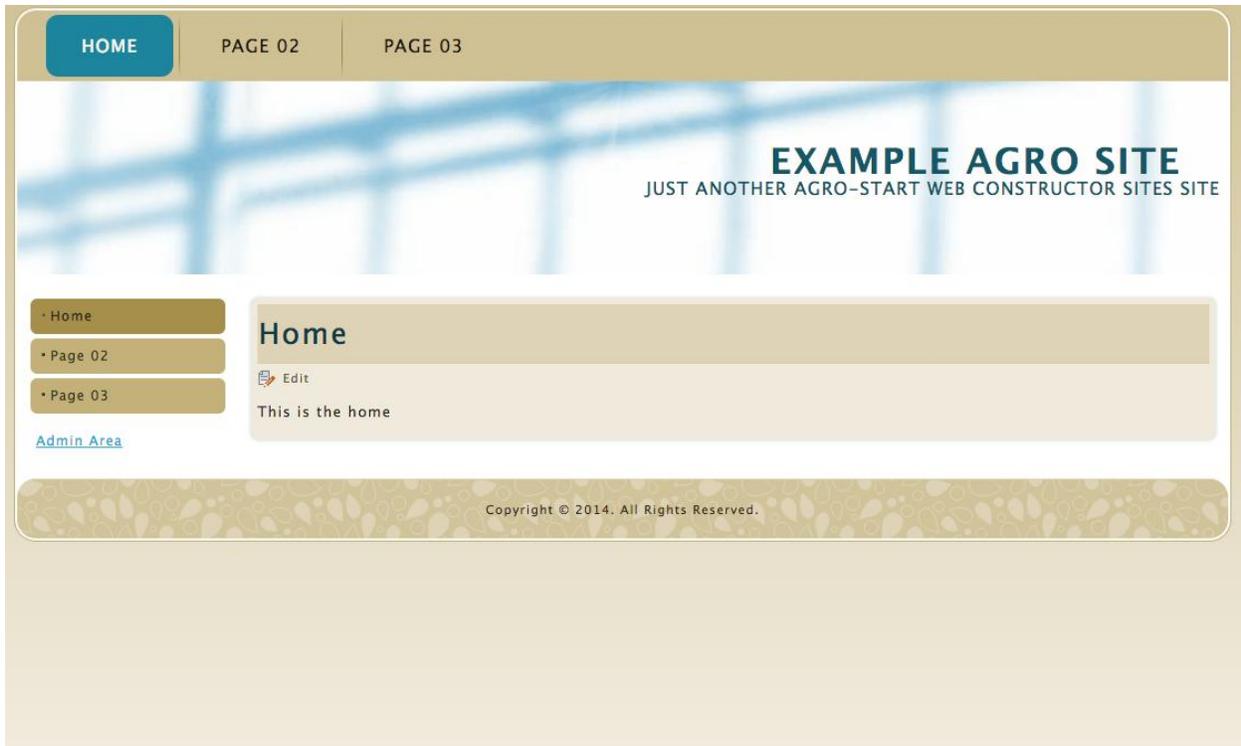

## Selecting a graphic theme

To change the graphical theme set by default at the creation of the site, you need to click on the menu item "Appearance" and, on the next screen select the preferred graphical theme by clicking the "Activate" button:

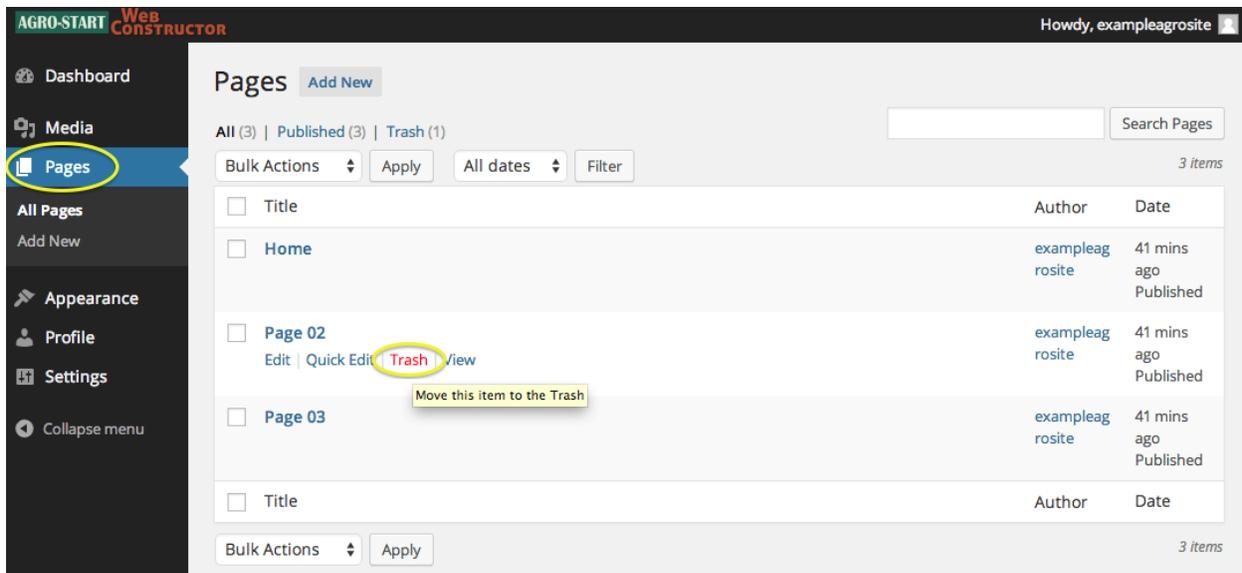

By clicking on the link "Visit Site" you can check the result:

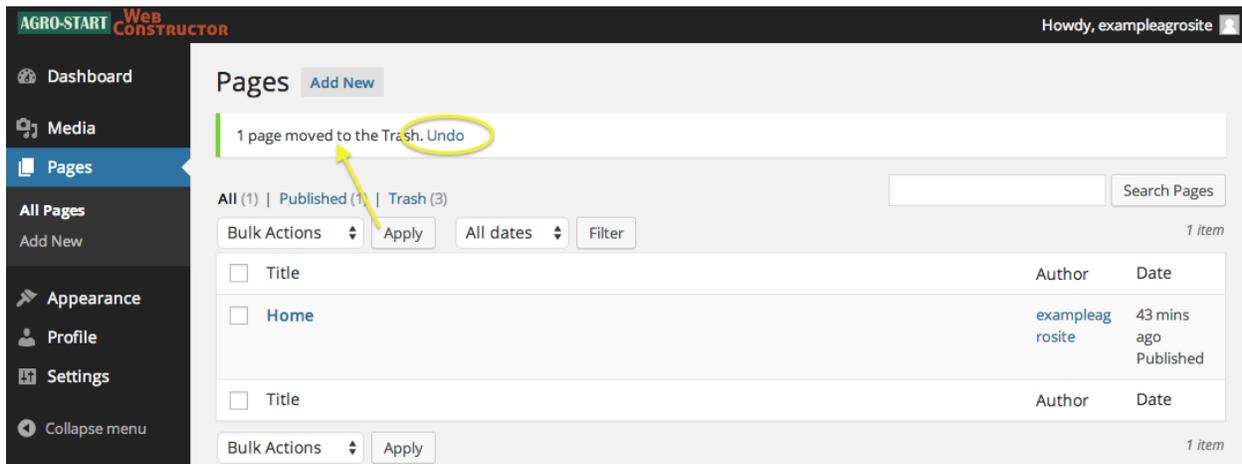

## Deleting sample pages

To delete the sample pages created by default with the site you need to click on the menu item "Pages" and in the next screen click on the link "Trash", at the two pages to be deleted "Page 02" and "Page 03 ":

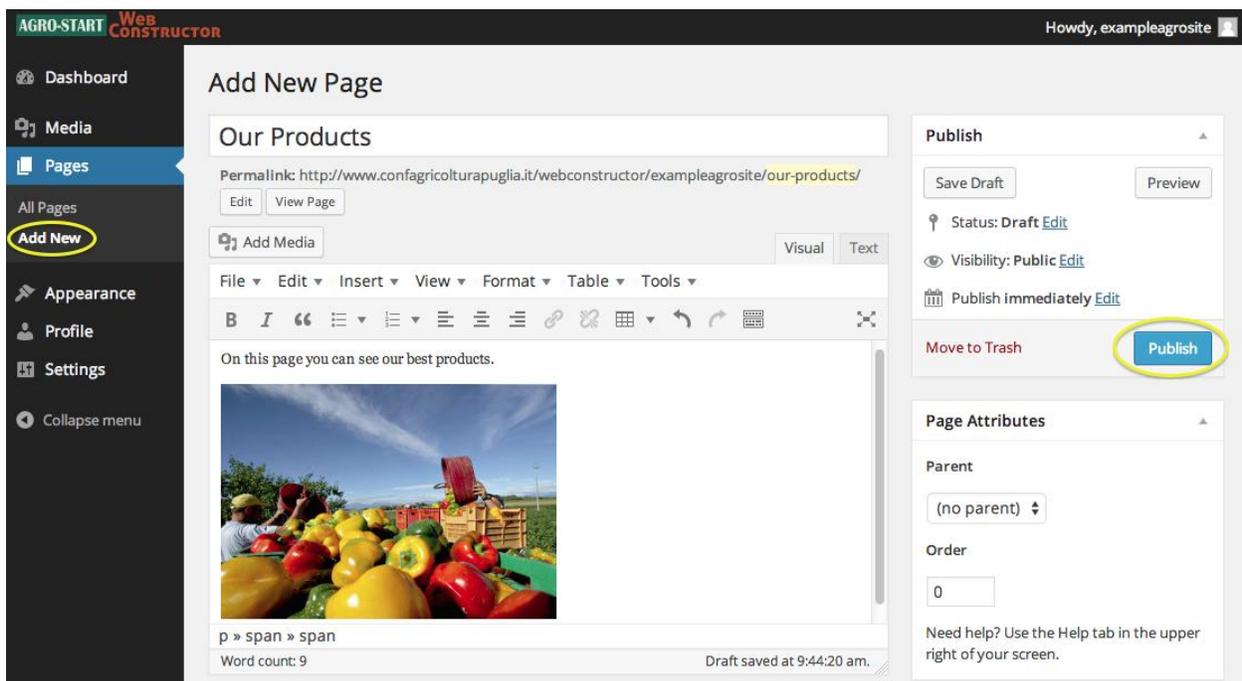

After performing the two operations, the pages management screen will look like this (note the delete confirmation message and a link to cancel the operation):

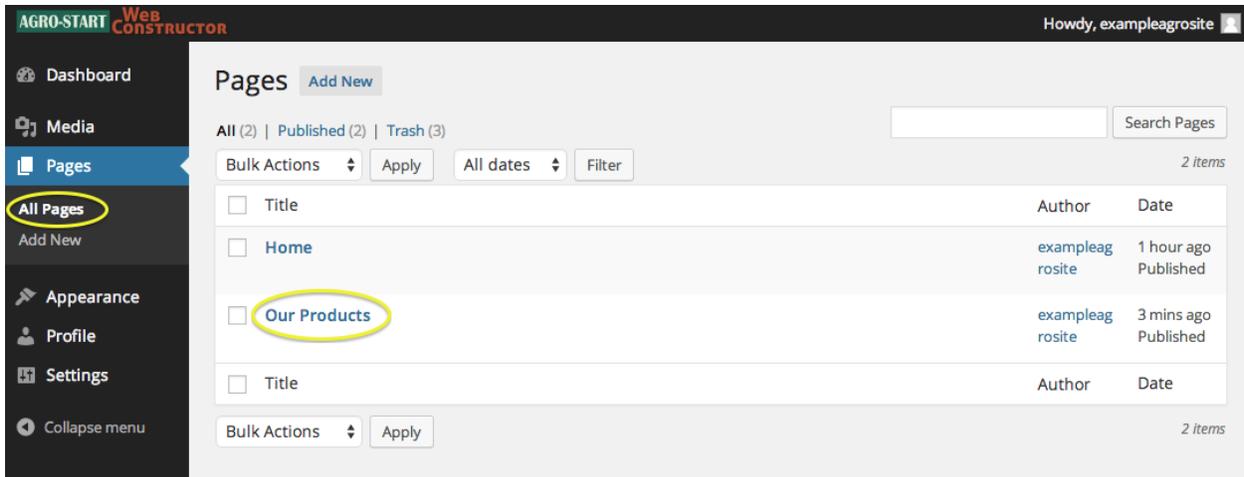

## Creating a new page

To create a new page you must click on the menu item "Add New" under "Pages", place in designated areas the title and the content, and then click the button "Publish":

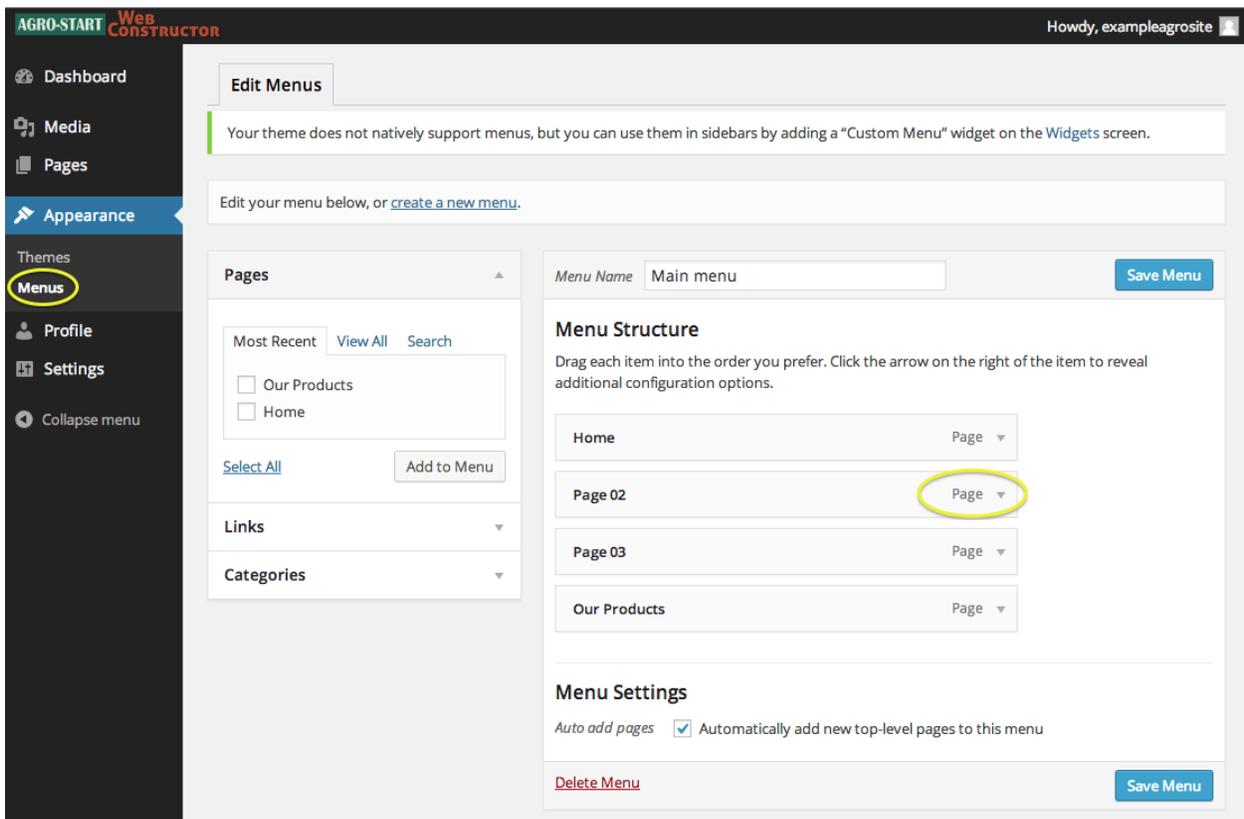

After the creation process, we can verify by clicking on "All Pages" that the page appear in the full list:

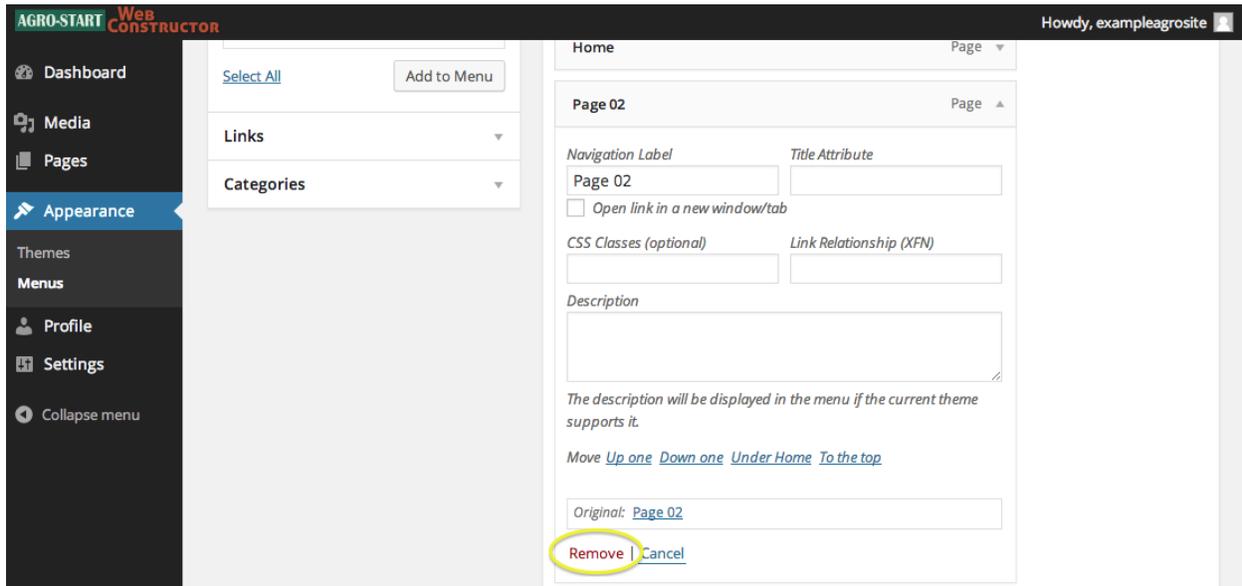

## Navigation menu management

Now we access the menu management section, clicking on the menu item "Menus", under "Appearance". On the next screen we can see that they are still present the menu items for the two deleted sample pages, "Page 02" and "Page 03": we must eliminate these. Let's click on "Page" as shown below:

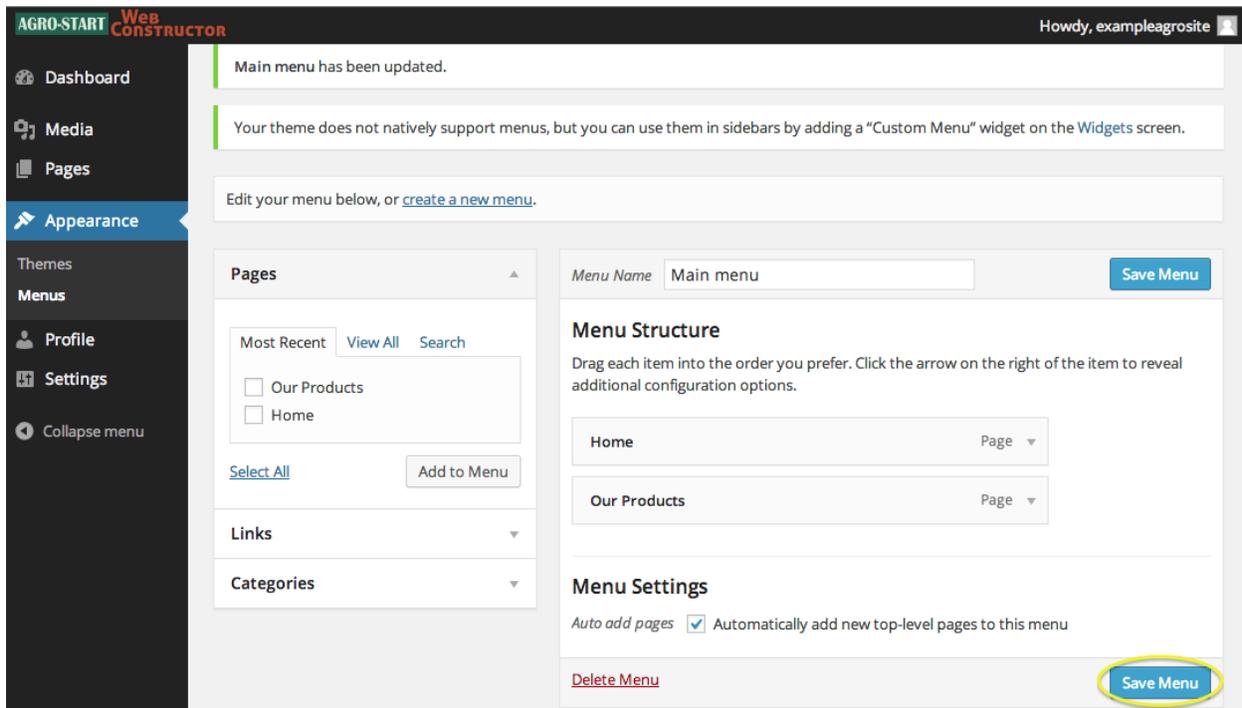

The system show to the user the properties of the selected menu item, enabling you to edit them. We are interested to permanently delete the item, by clicking on the red link "Remove":

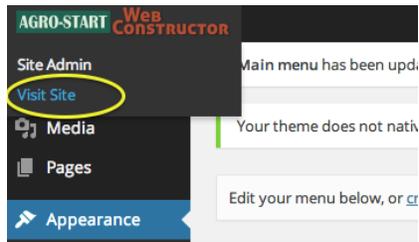

It should also do this action with the other menu item "Page 03".

At the end of the changes is necessary to click on the button "Save Menu" to publish the new version of the menu:

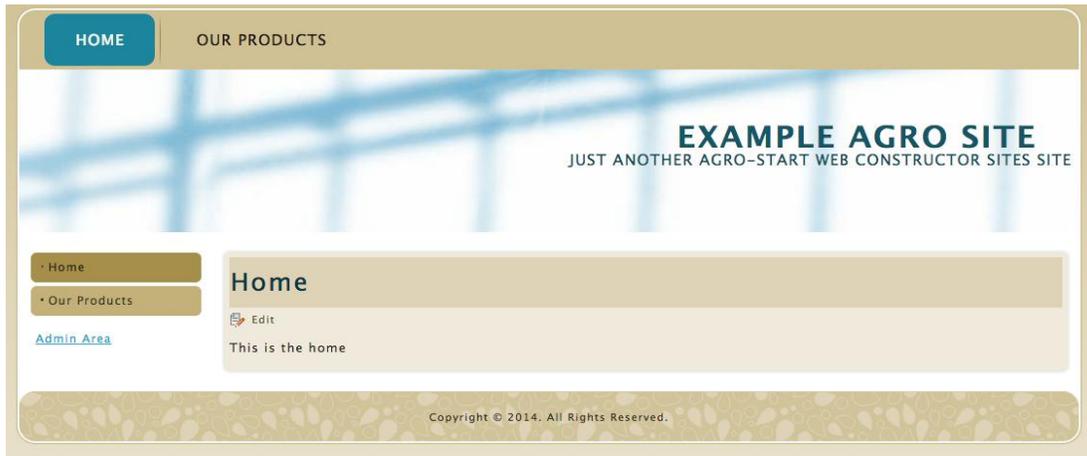

## Visit the website

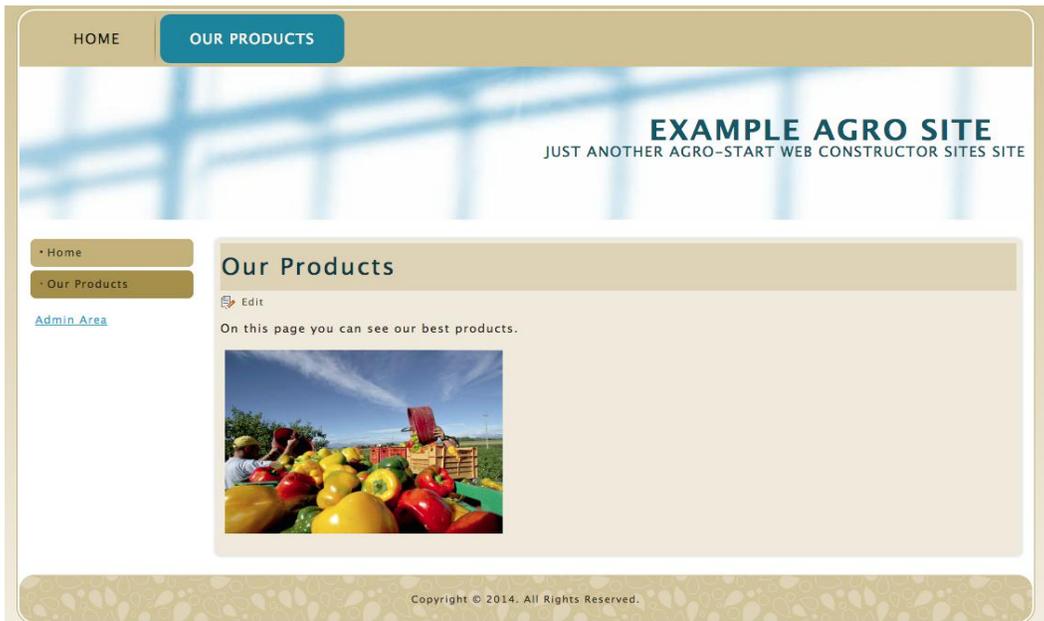

By clicking on the quick link "Visit Site" you can verify that the changes made are online:

Here we see the home page:

And here the newly created page:

This publication is edited by Confagricoltura Puglia under the  
“Transnational network for SME support in the animal breeding and horticulture sector – AGRO-START Project”
