Getting started

3. Power on/Power off

- Position the device in the vehicle using the suction mount and press the Power button to turn it on. To power off the device press the button again.
- You can also connect the device to the car charger. It will automatically turn on and start recording when the car engine starts. When the engine stops, the device will automatically save the last file and turn off.

4. Language Setting

To switch to other languages you need to do following steps to change the menu to your language:

- Press function button 4 (Menu/back)
- Scroll down to page 5/7 and select "Sprache"
- Choose your language and press "OK"(Function button 7)

5. Charging

- Using the power cable: connect the device to the USB port of a computer/Laptop
- Using the car charger: Connect the device to the car charger. The device will start charging after the car engine is turned on. The device will automatically turn on and start recording. When the engine stops, the device will automatically save the last file and turn off.
- Normally it takes approximately 2-3 hours to fully charge the device. Operating the device while charging with the Car Charger may extend the time of full charge.

Note:

Before using the device for the first time, please, connect it to the PC or notebook using the USB cable provided to fully charge the battery. The battery is completely charged in 2-3 hours.

6. Inserting the microSD-card

- Please follow the direction of MicroSD card insertion to the card slot until it is fixed in the SD card slot.
- To take out the SD card, please gently push in the SD card first to retrieve the SD card out from the slot.

Note:

After inserting the microSD card the device will automatically recognize it as default storage and all the data will be saved on this card.

Cautions:

- When using the SD card please make sure that the SD card is functional.
- Please pay attention to the direction of the SD card insertion. If reversely inserted, it might damage the machine and the SD card.
- Please use the high speed SD card (SDHC class6 card)

7. Recording

- Connect the device to car charger, when the car engine is turned on after 5 seconds, the device will start loop video recording. When the car engine stops, the device will save the last file and turn off after 15 seconds

Notice:

1. Press **OK** button (Function button 7) on loop video recording, the current file will be saved and the device enters to standby mode.
2. When the microSD card is full, the device will delete the first unlocked video file automatically.

8. Taking pictures

- Press the **Photo** button (Function button 6) to select the photo mode
- Press **Photo** button (Function button 6) to take photos, taken photos are saved on microSD Card.
- Press the **Menu** (Function button 7) button in the photo mode, and then press up/down button to set resolution and time.
