Your new Hunter® ceiling fan is an addition to your home or office that will provide comfort and performance for many years. This installation and operation manual gives you complete instructions for installing and operating your fan.

We are proud of our work. We appreciate the opportunity to supply you with the best ceiling fan available anywhere in the world.

Before installing your fan, for your records and warranty assistance, record information from the carton and Hunter nameplate label (located on the top of the fan motor housing).

Cautions and Warnings

- Read this entire manual carefully before beginning installation. Save these instructions.
- Use only Hunter replacement parts.
- To reduce the risk of personal injury, attach the fan directly to the support structure of the building according to these instructions, and use only the hardware supplied.
- To avoid possible electrical shock, before installing your fan, disconnect the power by turning off the circuit breakers to the outlet box and associated wall switch location. If you cannot lock the circuit breakers in the off position, securely fasten a prominent warning device, such as a tag, to the service panel.
- All wiring must be in accordance with national and local electrical codes and ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.
- To reduce the risk of personal injury, do not bend the blade attachment system when installing, balancing, or cleaning the fan. Never insert foreign objects between rotating fan blades.
- To reduce the risk of fire, electrical shock, or motor damage, do not use a solid-state speed control with this fan. Use only Hunter speed controls.

Installer's Choice and Optional Accessories

Understanding Mounting and Installer's Choice®

Hunter's patented 3-position mounting system provides you maximum installation flexibility and ease. You can install your Hunter fan in one of three ways, depending on ceiling height and your preference: Low Profile, Standard, or Angle mounting. The steps in this manual include instructions for all three Installer's Choice mounting methods.

Considering Optional Accessories

Consider using Hunter's optional accessories, including a wall-mounted or remote speed control. To install and use the accessories, follow the instructions included with each product. For quiet and optimum performance of your Hunter fan, use only Hunter speed controls.

Low Profile Mounting fits close to the ceiling, recommended for ceilings less than 8 feet high

Standard Mounting hangs from the ceiling by a downrod (included), recommended for ceilings 8 feet or higher

Angle Mounting recommended for a vaulted or angled ceiling

For ceilings higher than 8 feet, you can purchase Hunter extension downrods. All Hunter fans use sturdy 3/4" diameter pipe to assure stability and wobble-free performance.

1 • Getting Ready

4

Installing Multiple Fans?

If you are installing more than one fan, keep the fan blades in sets, as they were shipped.

To install a ceiling fan, be sure you can do the following:

- Locate the ceiling joist or other suitable support in ceiling.
- Drill holes for and install wood screws.
- Identify and connect electrical wires.
- Lift 40 pounds.

If you need help installing the fan, your Hunter fan dealer can direct you to a licensed installer or electrician.

Gathering the Tools

You will need the following tools for installing the fan:

- Electric drill with 9/64" bit
- Standard screwdriver
- Phillips-head screwdriver
- Wrench or pliers

Checking Your Fan Parts

Carefully unpack your fan to avoid damage to the fan parts. Check for any shipping damage to the motor or fan blades. If one of the fan blades was damaged in shipment, return all the blades for replacement.

If any parts are missing or damaged, contact your Hunter dealer or call Hunter Parts Department at 888-830-1326.

Preparing the Fan Site

Before you begin installing the fan, follow all the instructions in the pullout sheet called "Preparing the Fan Site." Proper ceiling fan location and attachment to the building structure are essential for safety, reliable operation, maximum efficiency, and energy savings.

2 • Installing the Ceiling Plate

- 2-1. Drill two pilot holes into the wood support structure through the outermost holes in the outlet box. The pilot holes should be 9/64" in diameter.
- 2-2. Your fan comes with four neoprene noise isolators ("Isolators"). Position the isolators between the ceiling plate and ceiling by inserting the raised areas on each isolator into the holes in the ceiling plate.
- 2-3. Thread the lead wires from the outlet box down through the hole in the middle of the ceiling plate.
- 2-4. Align the slotted holes in the ceiling plate with the pilot holes you drilled in the wood support structure. For proper alignment use slotted holes directly across from each other.
- 2-5. Place a flat washer on each of the two 3" screws and pass the screws through the slotted holes in the ceiling plate into the pilot holes you drilled.

Note: The isolators should be flush against the ceiling.

Tighten the screws into the 9/64" pilot holes; do not use lubricants on the screws. Do not over tighten.

For Angled Ceilings: Be sure to orient the ceiling plate so that the arrows printed on the ceiling plate are pointing towards the ceiling peak.

3 • Assembling and Hanging the Fan

Steps 3-1 – 3-2

You can assemble your fan for standard mounting (steps 3-1 – 3-2) or for low profile mounting (steps 3-3 – 3-4).

- 3-1. To assemble the fan to hang down from a flat or angled ceiling, insert the downrod through the canopy and canopy trim ring. Feed the wires from the fan through the downrod.
- 3-2. Loosen the set screw on the adapter to install the pipe and ball assembly. Note: When the pipe and ball assembly is fully installed, 2-3 threads on the pipe will still be visible; this is normal. Securely retighten the set screw with a wrench or pliers. Skip to Step 3-5.

⚠ CAUTION: The adapter has a special coating on the threads. Do not remove this coating; the coating prevents the downrod from unscrewing. Once assembled, do not remove the downrod.

Steps 3-3 – 3-4

- 3-3. Place the low profile washer (lip up) into the canopy. Be sure the green ground wire is pointing up toward the ceiling.
- Note:** For low profile mounting, the downrod is replaced with the low profile washer. See Steps 3-3 – 3-4.
- 3-4. Align the holes in the washer with the holes in the adapter. Assemble securely with three #8-32 x 3/4" screws.
- 3-5. Raise the fan and place the hook on the ceiling plate through the U-shaped hole in the rim. Go to **4 • Wiring the Fan**.

⚠ WARNING: Fan may fall if not assembled as directed in these installation instructions.

Step 3-5

4 • Wiring the Fan

All wiring must be in accordance with national and local electrical codes and ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.

- 4-1. Disconnect the power by turning off the circuit breakers to the outlet box and associated wall switch location.
- 4-2. To connect the wires, hold the bare metal leads together and place a wire nut over them, then twist clockwise until tight.
- 4-3. Connect the wires as follows:
 - Connect the green ground wire from the fan to the ground wire from the ceiling
 - Connect the white wire from the fan to the common wire from the ceiling
 - Connect the black wire and the black and white striped wire from the fan to the black wire from the ceiling

⚠ CAUTION: Be sure no bare wire or wire strands are visible after making connections.

- 4-4. Push all wires and wire nuts back through the ceiling plate hole into the outlet box.

Wire Nut

5 • Installing the Canopy and Canopy Trim Ring

- 5-1. Holding the canopy, raise the fan off the hook.
- 5-2. Align the slots in the canopy with the tabs on the ceiling plate.
- 5-3. Raise the canopy over the ceiling plate. Rotate the canopy clockwise until the tabs on the ceiling plate totally engage with the slots in the canopy.
- 5-4. Loosely assemble the three canopy screws into the canopy one at a time. Once all three screws are in, tighten them.
- 5-5. Using both hands, push the canopy trim ring up to the top of the canopy. The canopy trim ring will snap and lock into place.

Should you need to remove the canopy trim ring, follow these steps:

1. Locate the tab indicators, small bumps on top of tabs.
2. Press firmly on opposite sides of the ring towards the canopy. The tabs will flex out releasing the trim ring from the canopy.

6 • Assembling the Blades

Hunter fans use several styles of fan blade irons (brackets that hold the blade to the fan).

- 6-1. Your fan may include blade grommets. If your fan has grommets, insert them by hand into the holes on the blades.
- 6-2. Install three blade assembly screws through the the blade iron and blade, into the medallion. If you used grommets, the blades may appear slightly loose after screws are tightened. This is normal.
- 6-3. Remove the blade armature screws and rubber shipping bumpers from the motor. Save the screws for the following step and discard the shipping bumpers.
- 6-4. For each blade, insert one blade armature screw through the blade iron, and attach loosely to the fan. Insert the second blade armature screw, then securely tighten both armature screws.

7 • Installing the Switch Housing

Steps 7-1 – 7-3

Housing
Assembly
Screw

Upper
Switch
Housing

10

Step 7-4

- 7-1. To attach the upper switch housing, partially install two #6-32 x 3/8" housing assembly screws into the switch housing mounting plate.
- 7-2. Feed the upper plug connector through the center opening of the housing.
- 7-3. Align the keyhole slots in the housing with the housing assembly screws.
- 7-4. Turn the housing counterclockwise until the housing assembly screws are firmly situated in the narrow end of the keyhole slots. Install the remaining #6-32 x 3/8" screw into the housing. Tighten all three screws firmly.

8 • Setting the Remote Transmitter and Receiver

Setting Jumper Switches

When two or more fans are located near each other, you may desire to have the receiver/transmitter for each fan set to a different code, so that the operation of one fan does not affect the operation of the other fans.

In the transmitter you can access the jumpers from the battery compartment. The jumpers are very small. You can move them most easily using a small pair of pliers or tweezers. **IMPORTANT!** Before you change jumper switches, make sure the battery is not connected to the transmitter.

You must now set the jumper switches in the remote transmitter and receiver so that they match.

- 8-1. Change the position of the jumper switches in the transmitter and the receiver. Be sure the position of the jumper switches matches. If they don't match, the controller will not function. For instructions on how to set the jumper switches, read the box below.
- 8-2. Install the included 12-volt battery into the transmitter.

⚠ CAUTION: The remote control device complies with part 15 of the FCC rules. Changes or modifications not expressly approved by Hunter Fan Company could void your authority to operate this equipment.

Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

⚠ WARNING: Maximum fan load is 1 Amp; maximum lamp is 100 Watts. Do not use any speed control with this product.

9 • Completing Your Installation

- 9-1. To attach the lower switch housing, connect the plug connector from the motor to the plug connector from the receiver in the lower switch housing assembly.

Note: Both plug connectors are polarized and will only fit together one way. Make sure the connectors are properly aligned before connecting them. Incorrect connection could cause improper operation and damage to the product.

- 9-2. Place the lower switch housing assembly over the upper switch housing. Align the side screw holes in the upper and lower switch housings. Attach the lower switch housing to the upper switch housing with three #6-32 x 1/2" housing assembly screws.

10 • Operating the Remote Control and Mounting the Holder

- 10-1. The remote transmitter has individual buttons for turning the fan off and on and controlling the light and fan speed.
- 10-2. For best operation, start the fan by pressing high, then select your desired speed.
- 10-3. The light button turns the light on to full brightness. To dim the light, hold the light button down until you reach your desired brightness. Push the light button again to turn off the light.
- 10-4. Press the OFF button to turn the fan off.
- 10-5. When necessary, replace the battery with a 12-volt type 23A, MN-21 battery or equivalent.
- 10-6. You can mount the remote holder to any toggle switch plate with the screws already in the switch plate. Or, you can simply mount the remote holder on the wall.

13

11 • Operating and Cleaning Your Ceiling Fan

In warm weather, use downward air flow pattern

In cold weather, use upward air flow pattern

- 11-1. Turn on electrical power to the fan.
- 11-2. Ceiling fans work best by blowing air downward (counterclockwise blade rotation) in warm weather to cool the room with a direct breeze. In winter, having the fan draw air upward (clockwise blade rotation) will distribute the warmer air trapped at the ceiling around the room without causing a draft.
- 11-3. For cleaning finishes, use a soft brush or lint-free cloth to prevent scratching. A vacuum cleaner brush nozzle can remove heavier dust. Remove surface smudges or accumulated dirt and dust using a mild detergent and a slightly dampened cloth. You may use an artistic agent, but never abrasive cleaning agents as they will damage the finish.
- 11-4. Clean wood finish blades with a furniture polishing cloth. Occasionally, apply a light coat of furniture polish for added protection and beauty. Clean painted and high-gloss blades in the same manner as the fan finish.

Problem: Nothing happens; fan does not move.

1. Turn power on, replace fuse, or reset breaker.
2. Loosen canopy, check all connections according to the wiring the fan section.
3. Check the plug connection in the switch housing.
4. Pull the pull chain to ensure it is on.
5. Remove the shipping bumpers.

Problem: Noisy operation.

1. Tighten the blade bracket screws until snug.
2. Check to see if the blade is cracked. If so, replace all the blades.

Problem: Excessive wobbling.

1. If your fan wobbles when operating, use the enclosed balancing kit and instructions to balance the fan.
2. Tighten all blade iron screws.
3. Turn power off, support fan very carefully, and check that the hanger ball is properly seated.

If you need parts or service assistance, please call 888-830-1326 or visit us at our Web site at <http://www.hunterfan.com>.
