TROUBLESHOOTING GUIDE

Problem	Possible Cause	Solution
Unable to hear sound.	The RCA audio cables are not connected properly.	Check the connection on your audio/video device. The RCA cables should be connected to the AUDIO OUTPUT jacks.
	Transmitter and/or PC Chair power is not on.	Check to make sure transmitter power is on and the power button on the PC Chair is on with the volume turned up.
	Different channels are selected on the transmitter and control module.	Check to make sure that both the wireless channel on the transmitter and the control module are on the same: 1-1, 2-2, etc.
Transmitter power light does not light up.	Cable not connected properly.	Re-check your cable connections and make sure the outlet you're using works.
PC Chair does not turn on.	The DC power adapter is disconnected from the electrical outlet or the electrical outlet has no power.	Check the plug on the DC power adapter. When properly connected with the volume turned up, the speakers and control module will illuminate. If the PC Chair still doesn't power up, try another electrical outlet.
Unable to connect to the gaming console.	Your video game console has a coaxial cable instead of an RCA audio cable.	Use the instructions provided by the video game console's manufacturer to hook up the video game console to an intermediary device (such as a TV, DVD, VCR, satellite receiver, etc.). Your intermediary device must have both a coaxial input jack (the standard jack for cable TV) and an RCA audio output jack. Purchase an RCA replacement cable directly from the console manufacturer.
	The yellow RCA video cable is not connected properly.	The yellow RCA video cable connects to the VIDEO INPUT jack on the TV. Refer to the instructions from the video game console's manufacturer to connect any other video cables to your TV.
Sound only plays from one speaker.	The RCA audio cables are not connected properly.	Check that all RCA audio connections are correct—red to red, white to white.
	Audio/video device has a single MONO audio output (a common problem when connecting to an older TV or VCR).	If your audio source is mono only, as found mainly on older model TVs and VCRs, an RCA "Y" adaptor (1 male to 2 male, not included) is needed to send the signal to both Pyramat speakers. Please note: the use of this type of adaptor will not produce a true stereo sound. For optimal performance, it is recommended that you connect your PC Chair to stereo outputs only.
Missing or broken cables.		Replace items immediately. Replacement cables can be purchased at your local audio accessory dealer.
Missing or broken power adapter.		Replace immediately with an authorized Pyramat power adapter. Do not use the unit until the damaged power adapter has been replaced by calling the Pyramat service center.
