

INSTALLATION GUIDE

Ver 1.1

WARNING:

Use only modems supported by this monitoring units. Dixell S.p.a can accept no responsibility for possible damage due the usage of not supported modems.

WARNING:

Dixell S.p.a. reserves itself the right to alter this manual without notice. The last version available can be downloaded from the website.

6	Intranet / ethernet connection	66

1 CHECK LIST

- The XWEB 3000 server unit.
- One power cord for power supply connection.
- A couple of brackets.
- Quick reference manual (Fast installation).
- One serial line adapter
- One CD Rom containing the Operating manual and software

2 TO DO LIST

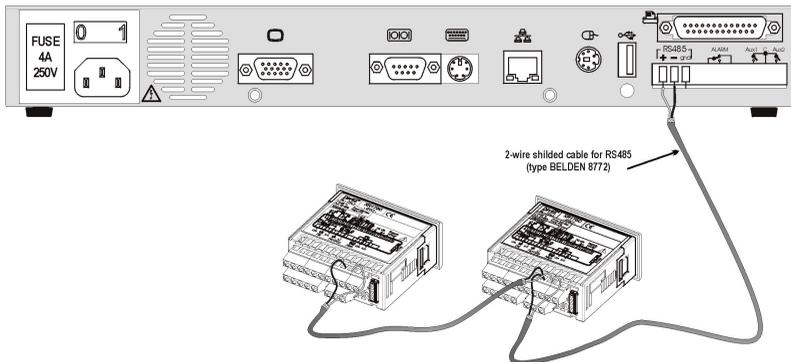

- Check if the power supply line match the XWEB 3000 specification (90~264 VAC 50~60Hz.).
- Connect the serial line RS 485 with the adapter provided.
- Plug-in monitor, keyboard and mouse (if needed) before turning on the unit.
- Plug-in RJ 45 network cable (not provided).

3 RS 485 CONNECTION

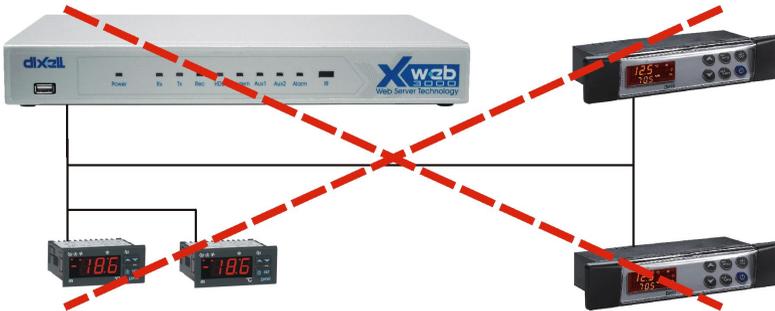

To be connected to the serial line all the Dixell Modbus instruments must be provided with direct RS485 terminals or the “TTL”-RS485 interface (XJRS485 or XJ485). Check the instrument manuals for more information. The RS485 line is mainly based on two polarised terminals. Please beware to respect the right sequence for all the devices connected to the serial line.

Follow these important advises:

- The RS485 serial line must reach all the instruments where they are installed.

- Beware to the wire polarities when screwing them into the instrument terminals.
- The cable must have 2 or 3 wires with shield, minimum section 0,5mm² (eg. the BELDEN 8772).
- From the XWEB 3000 position the cable reaches all the instrument positions.
- Do not execute loops or derivations:

Right connection:*Wrong connection:*

- Always keep the serial cable away from power cables.
- Always keep the serial cable away from Electro-magnetic or frequency sources.
- Do not connect shield to ground.
- Do not connect the “Gnd” terminal.
- Remember to draw a map of the line. This will help you to find errors if something is wrong.
- The instrument with RS485 have “+” and “-” terminals, respect the polarity.
- To keep the line balanced it is necessary a 100 Ohm resistor at the end of the line (you ca use the RS 485+ and RS 485- terminals of the last instrument connected).

3.1 The TTL output

The instrument with RS485 on board do not need any kind of external interface module. For instruments with external interface: keep the TTL cable away from power cables or frequency sources. The XJ485 external interface must be connected with TTL cable to the instrument with TTL compatibility.

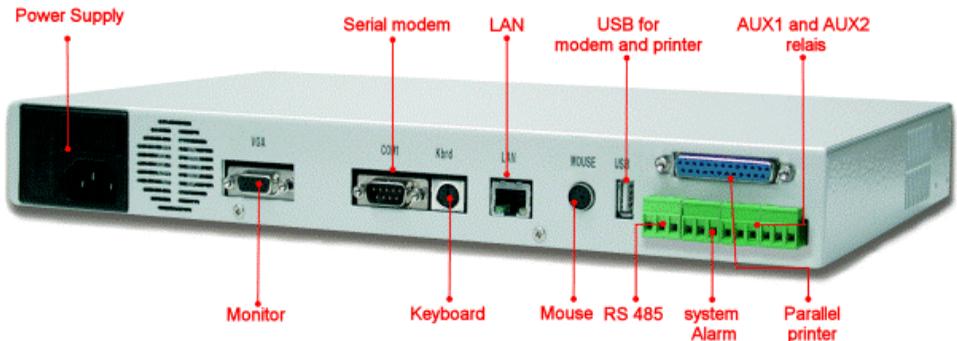

3.2 Serial address of the instruments

Each instrument must be defined by its unique address. Check the address into the **Adr** parameter value. Take reference to the instruction manual of the instrument itself to find the right procedure to enter the programming and set the value. The easiest way to work with the category functions is to set the addresses progressively for similar groups of instruments which have the same application.

4 Local connection with monitor, mouse and keyboard

On the back side, the XWEB 3000 is provided with the sockets for a monitor, a mouse and a keyboard. Please connect all the peripherals before powering-on the unit otherwise the system may fails to recognise them. This means that , for example, if you do not plug the monitor cable now, you won't see anything displayed on it later.

The unit can also work without these three elements therefore if the user intend to work just with the remote, he can definitively remove them after the setup operations. In any case inside XWEB 3000 is loaded a standard browser to allow the user setting up the unit. If necessary check the instructions manual of each device connected to the unit.

The operative procedure to work with XWEB 3000 is the same for all connection method.

It is possible to connect to the unit via a single PC provided with LAN card, by using the net connector RJ 45 (LAN). Due to the PC-client power, this kind of connection is more suitable for the setup procedures.

IMPORTANT: the cable between the Server and the PC must be with crossing wires ("Bridge Cable").

The connection procedure from the remote PC is describe in deep in this guide. You may need some changes to your PC network card, then you will be able to connect to XWEB 3000 via Ethernet line. Once you have finished setting up your network card, connection to XWEB 3000 is established simply by launching the Browser and inserting the default IP number of the unit

http://192.168.0.200 into the address bar.

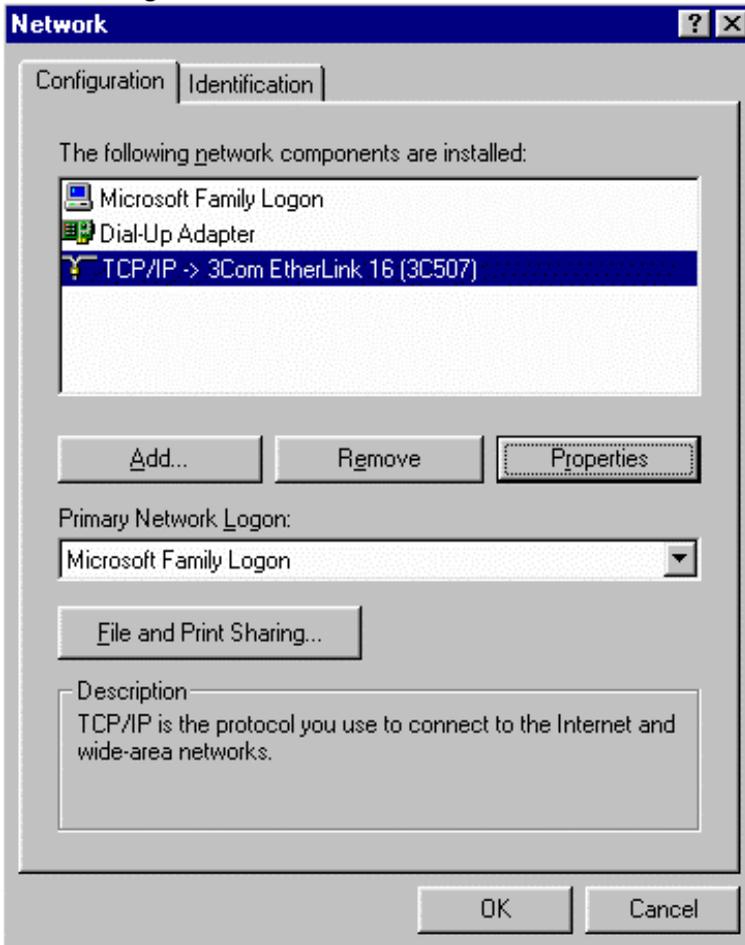

Before going on reading, please take some moments to write down your PC network setup, may be we are going to change it. If the IP address of your PC belong to the hierarchy 192.168.0.XYZ (where XYZ represent a number between 1 and 254), you can reach XWEB 3000 simply plugging in the network cable.

4.1 HOW TO SETUP YOUR NETWORK CARD

Windows 98 and ME TCP/IP Setup	pg.12
Windows 2000 TCP/IP Setup	pg.16
Windows XP TCP/IP Setup	pg.18

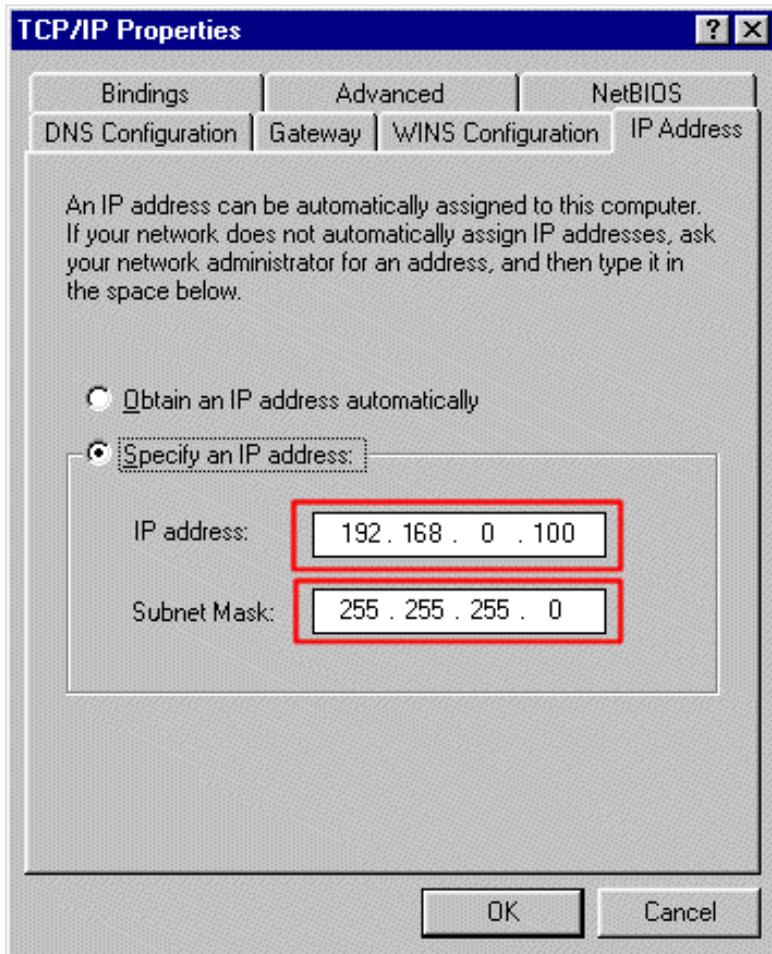

4.1.1 WINDOWS 98 AND ME TCP/IP SETUP

On the desktop, select **My Computer** -> **Control Panel** -> **Network**.
Choose the Configuration tab.

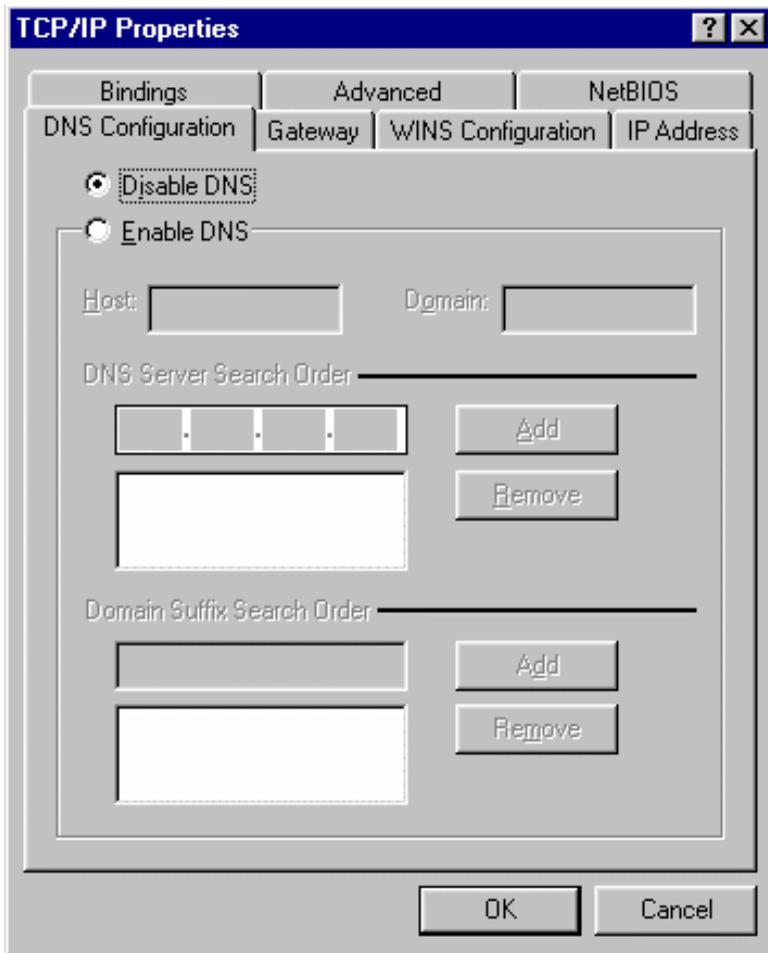

Highlight the TCP/IP associated with your Ethernet card and choose Properties. The TCP/IP Properties window will open. On each tab,

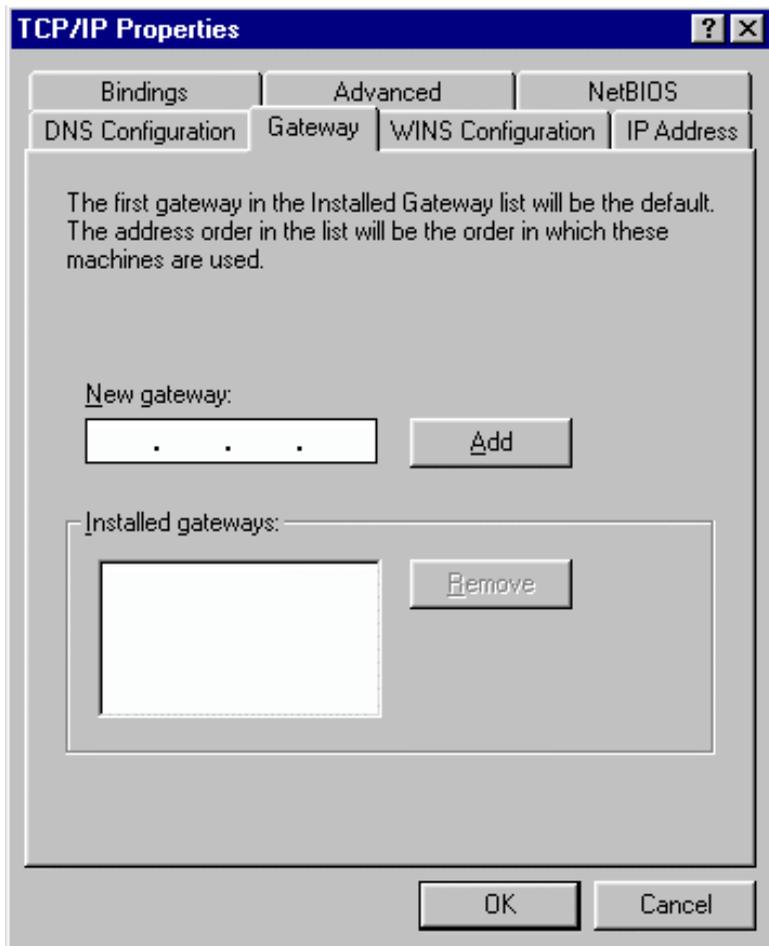

make the following settings.
Choose the IP Address tab.

Select radio button "Specify an IP address" and compile the fields as the image above. Then go to the DNS tab and choose the radio button "Disable DNS".

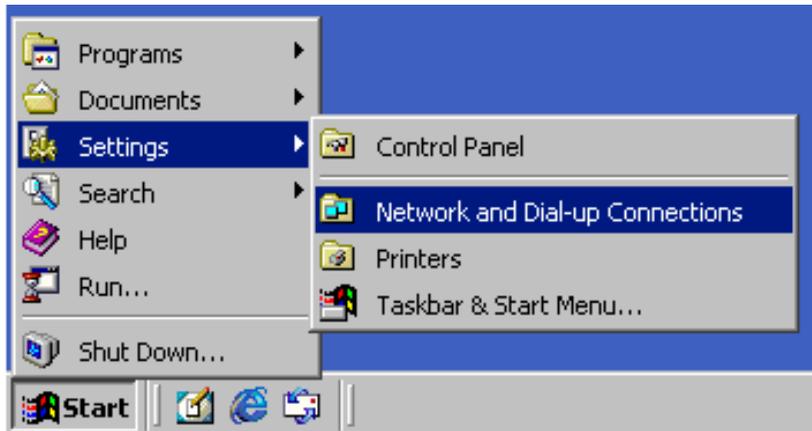

Go to gateway and delete any entry.

Push Ok button, Windows will ask you to make a reboot. Choose ok and wait while system is rebooting.

4.1.2 WINDOWS 2000 TCP/IP SETUP

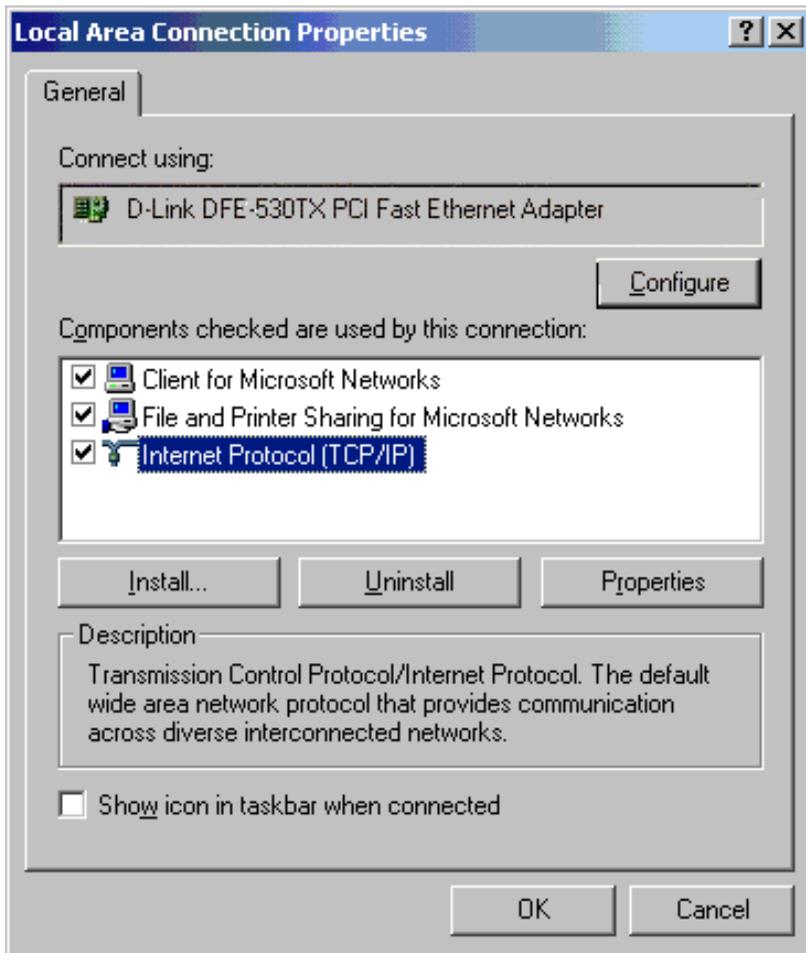

Go to **Start -> Settings -> Network and Dial-up Connections**:

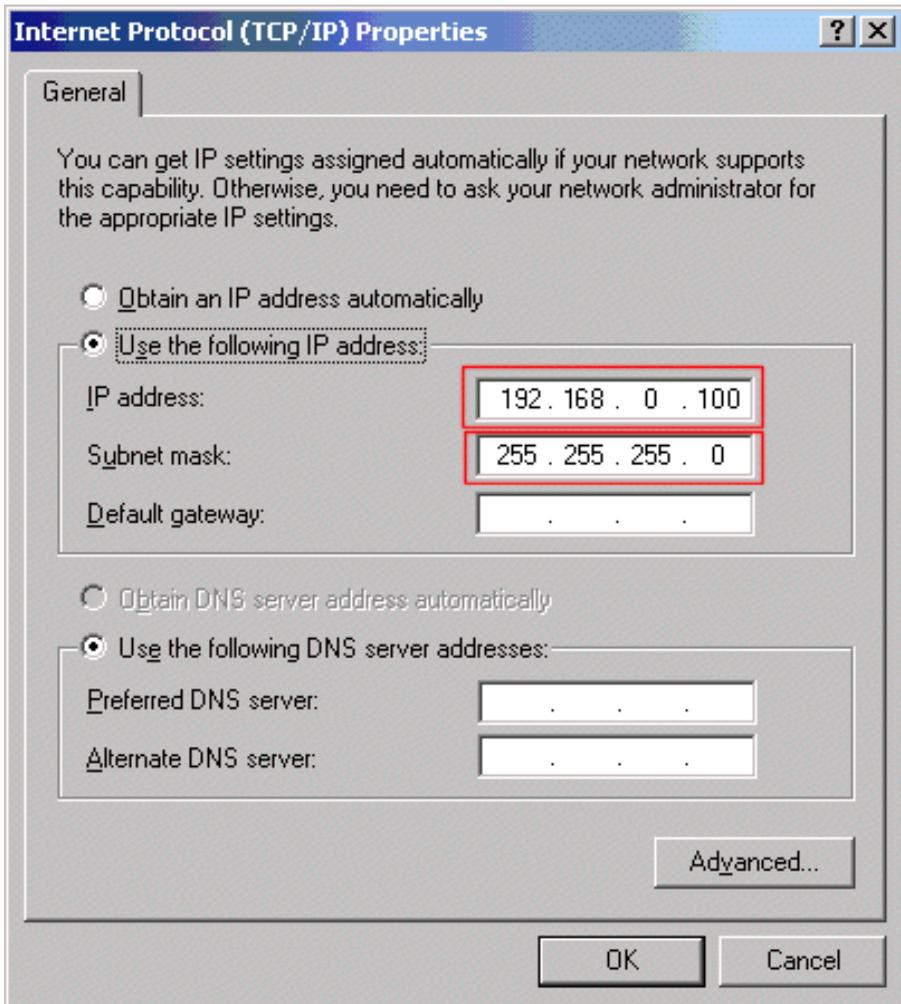

following window should appear:

Right-click the network connection associated with your network card, and then click **Properties**. The following window should appear:

Select "Internet Protocol (TCP/IP)", then properties. The following window should appear:

Select radio button “Use the following IP address” and compile the fields as the image above. Push “OK” button

4.1.3 WINDOWS XP TCP/IP SETUP

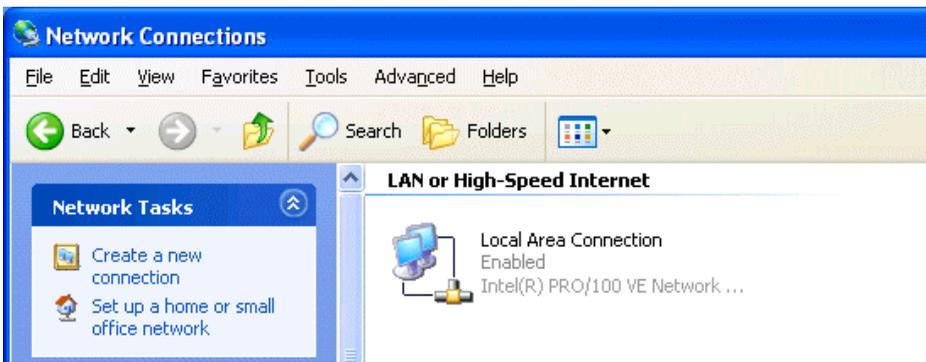

Click on Start button, chose Control panel, click on “Network and internet connections” icon:

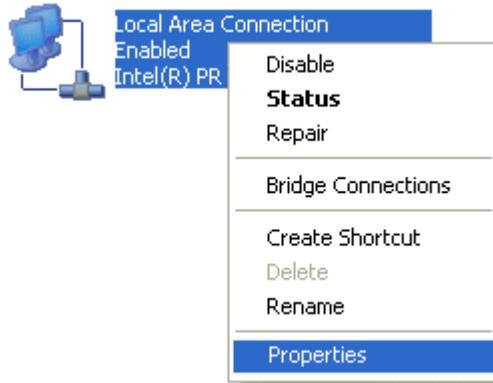

Then chose “Network connections”:

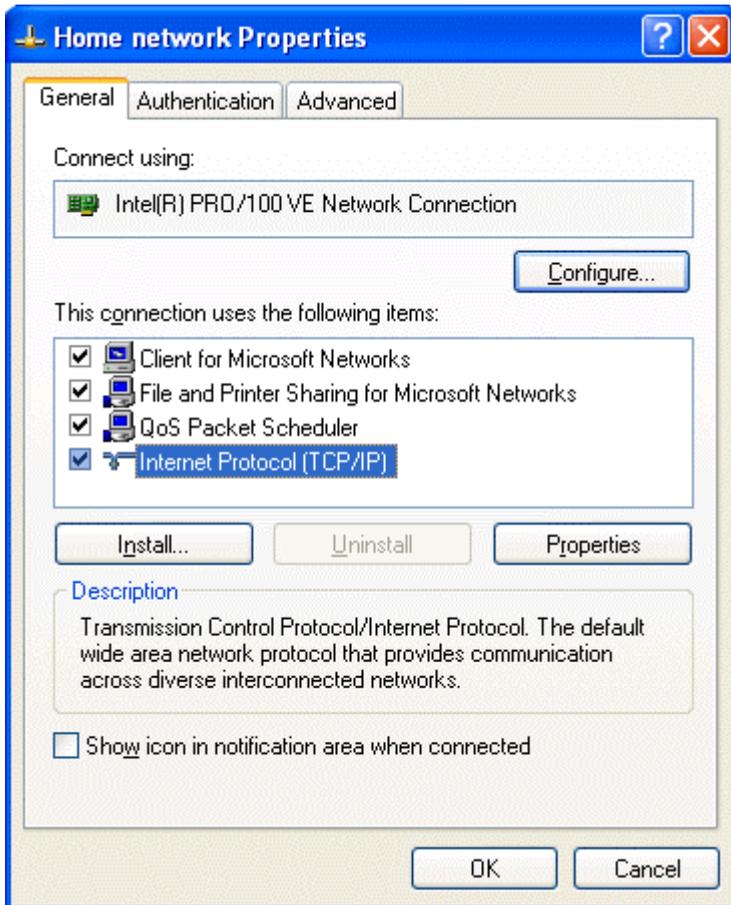

The following windows will appear:

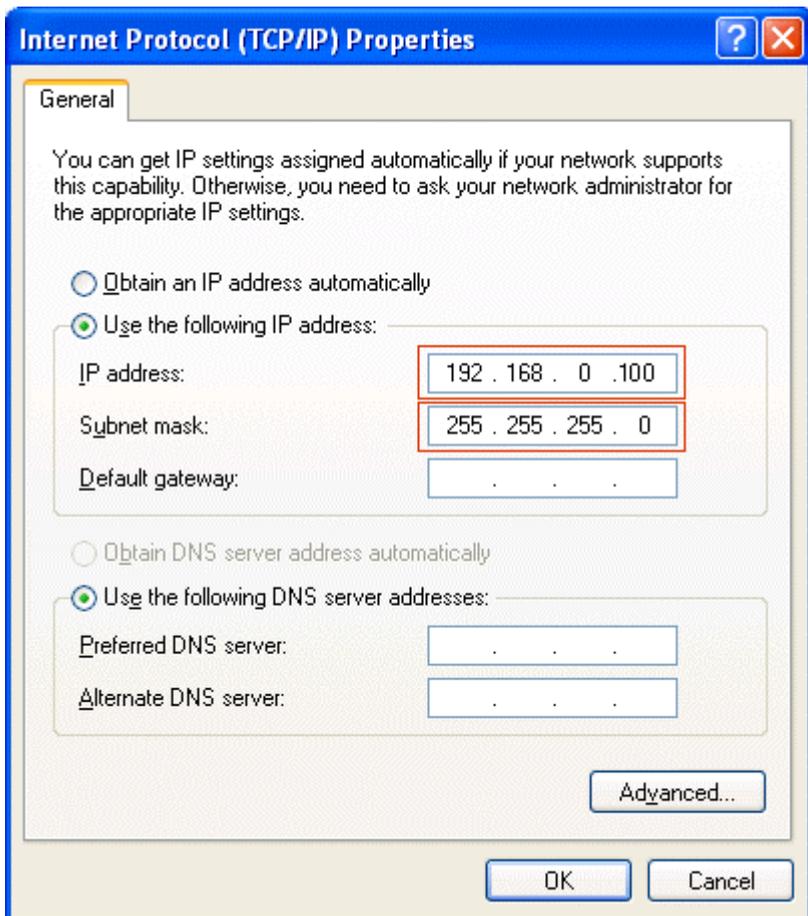

Right mouse click on network interface icon, then chose “Properties”:

The following windows will appear:

Select "Internet Protocol (TCP/IP)", then click on Properties. The following windows will appear:

5 Modem connection (“or point to point connection”)

It represents the most common method where the LAN (intranet / Ethernet / internet) is not available.

It is strongly advised to use a dedicated telephone line.

IMPORTANT: Use exclusively modem devices approved by Dixell.

Remember that many modems are not compatible with Linux.

The list of compatible models can be found under the menu:

Configuration – System - Modem.

USB Modem (recommended).

Connect the USB Modem to the USB Port on the back side using the modem cable commonly included into the modem packaging itself. There is no need to give power supply to the modem because the Server provides it through the USB port.

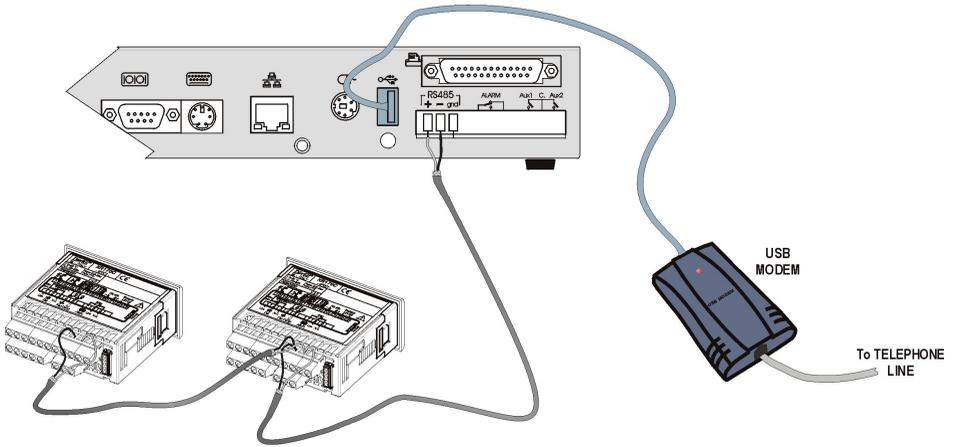

The modem reset is directly controlled by the XWEB 3000 Server through the USB port by turning off and then on the modem device.

Connect the modem to the telephone line with the phone cable included into the modem packaging. Remember to check if there is a switching machine.

The connection procedure is divided in two parts. In the first part it is necessary to create the Remote Access, in your PC, set with the telephone number of the line where the XWEB 3000 is connected to. You have to use Dixell as Username and Password.

The second is the procedure you will ever use: after launching the new Remote Access that will engage the line through the modem, start the Browser from your PC and insert the address

<http://192.168.1.200> into Explorer/Netscape address bar.

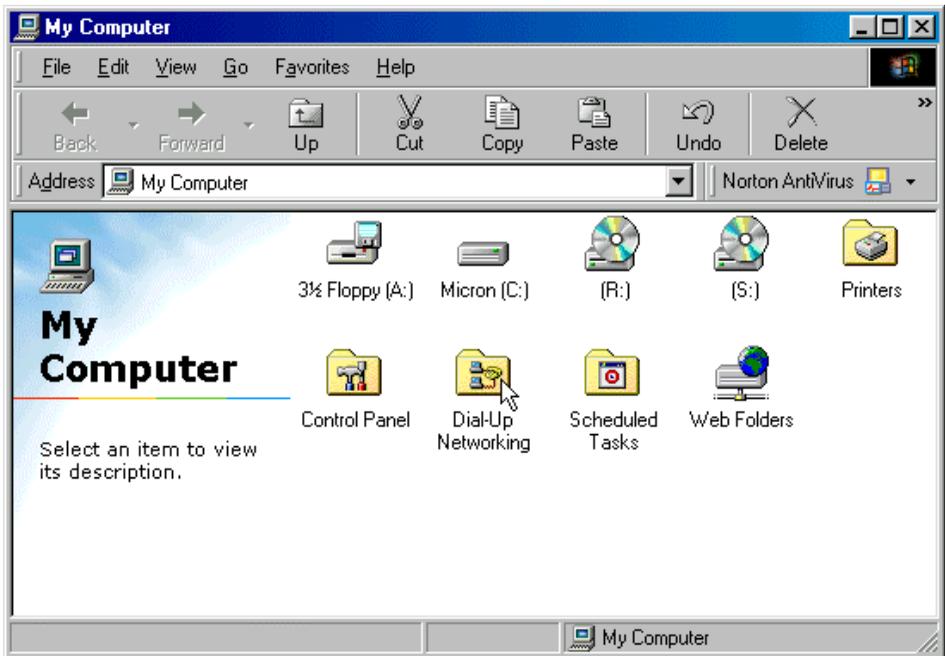

5.1 HOW TO SETUP a dial-up connection

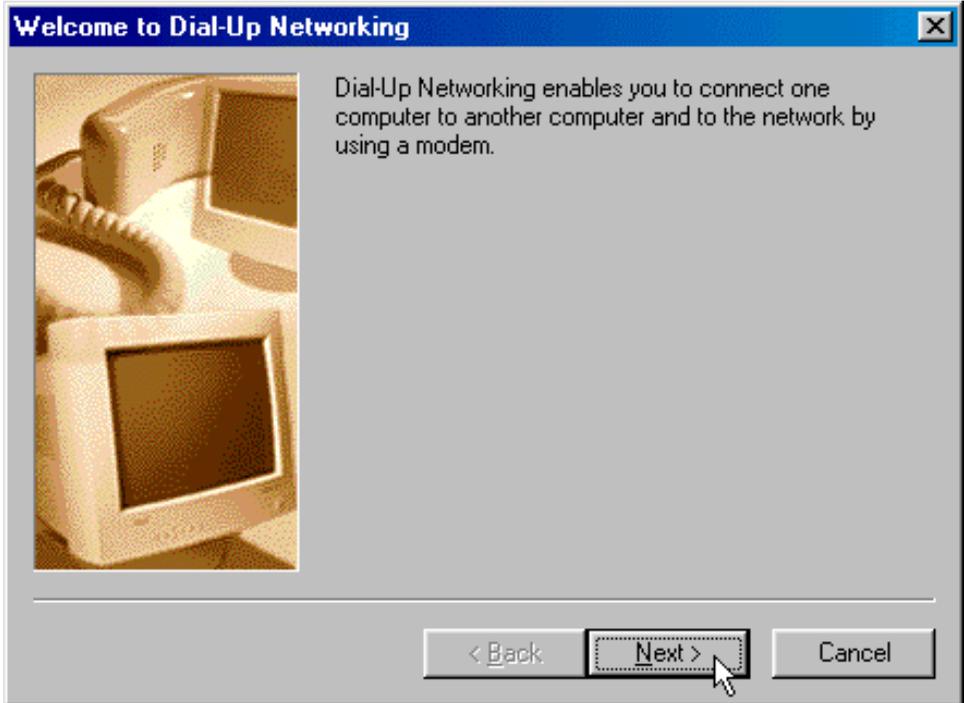

Setting up dial-up connection for windows 98	pg.25
Setting up dial-up connection for windows me	pg.31
setting up dial-up connection for windows 2000	pg.39
SETTING UP dial-up connection for windows XP	pg.52

5.1.1 SETTING UP DIAL-UP CONNECTION FOR WINDOWS 98

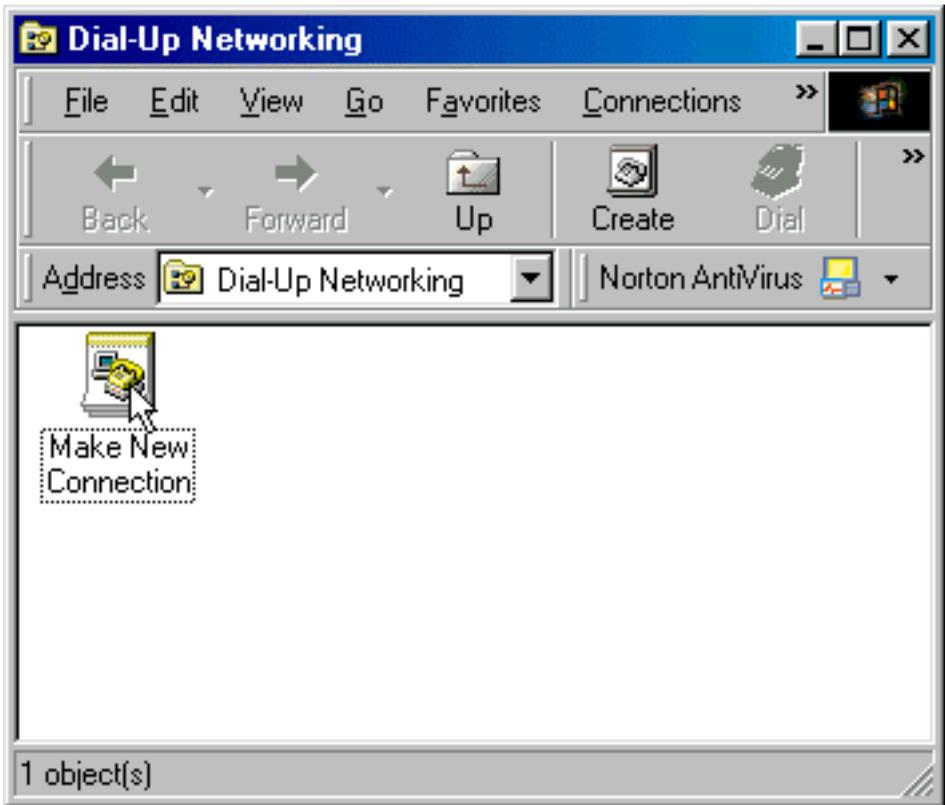

1. Double-click on the "My Computer" icon on your Desktop, then double-click on "Dial-Up Networking".

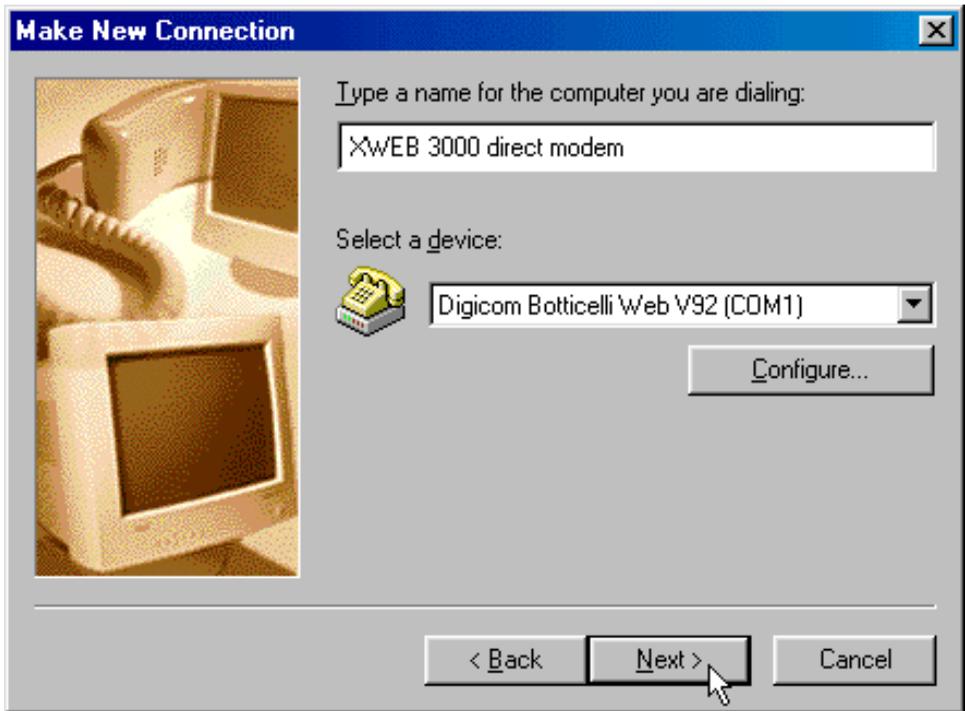

2. If this is the first time Dial-Up Networking has been run, the Welcome screen will open. Click on "Next" and proceed to step 4.

3. If you don't get the Welcome screen, double-click on "Make New Connection".

4. Type "XWEB 3000 DIRECT MODEM" in the first box. When you finish the New Connection wizard, the connection icon will be named " XWEB 3000 DIRECT MODEM ". Chose "digicom Botticelli web" or another modem approved dy Dixell. Click "Next".

5. Do not type the area code, insert telephone number with the area code of XWEB 3000 as a prefix.

E.G: If telephone number is 555789 and area code is 099, put this Telephone number: 099555789.

If there is a switching machine and you have to dial a digit to get the line (0 or 9 for example, it depends on the switching machine), put this telephone number: 0, 099555789 or 9, 099555789. Chose your country.

Click "Next".

Make New Connection ✕

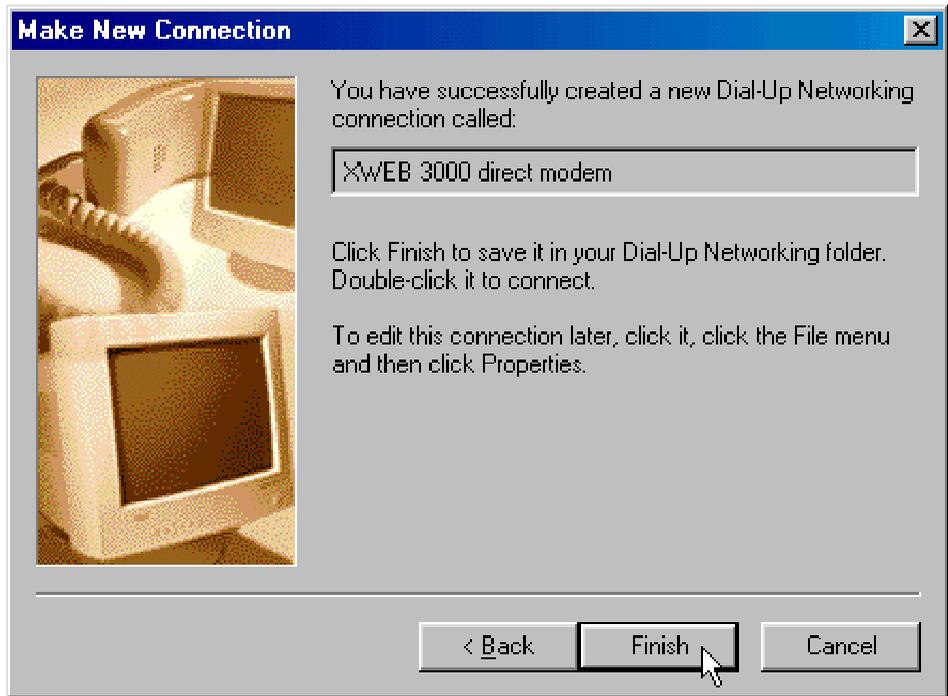

Type the phone number for the computer you want to call:

Area code: - Telephone number:

Country or region code:

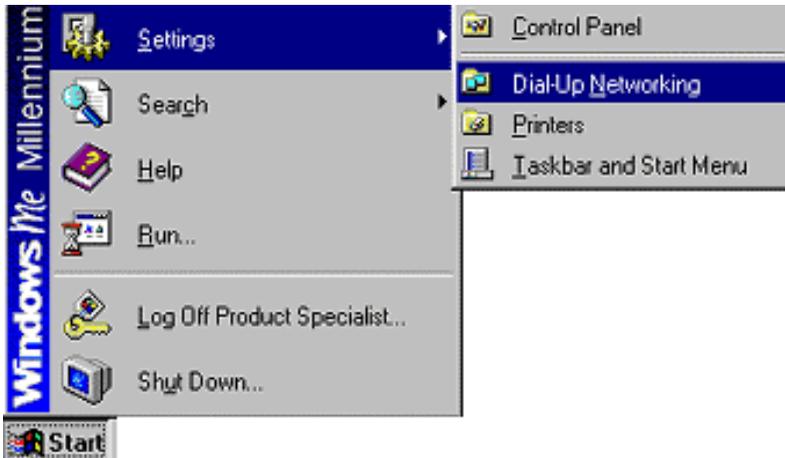

6. Click "Finish".

5.1.2 SETTING UP DIAL-UP CONNECTION FOR WINDOWS ME

1. From the Start menu, click Settings, and choose Dial-Up Networking.

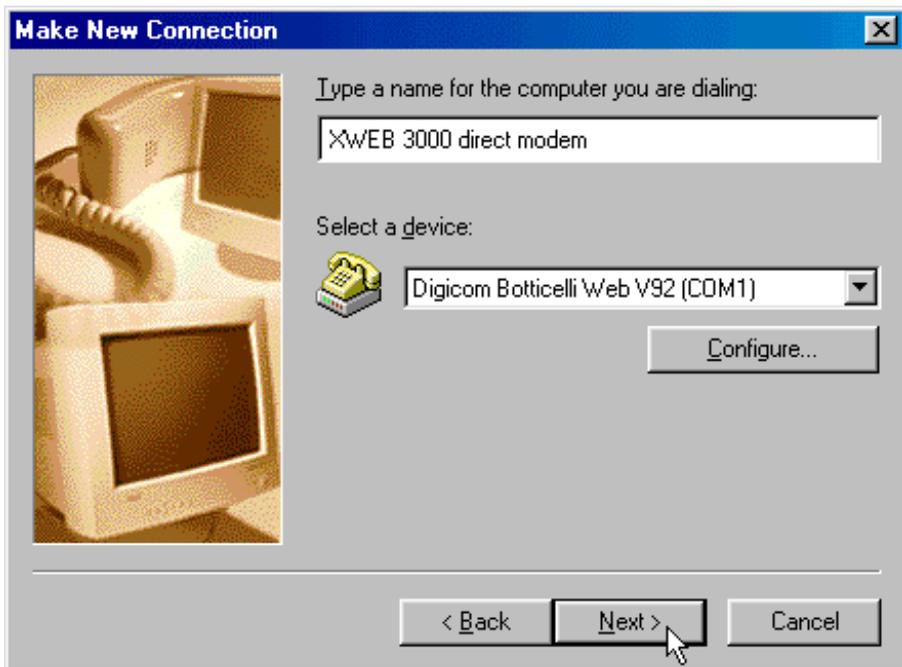

2. Double-click the Make New Connection icon.

3. In the Type a name for the computer you are dialling field, type XWEB3000 DIRECT MODEM.

4. Click the down arrow on the Select a device drop-down list and choose "digicom botticelli web" or another modem approved by Dixell.

5. Click the Next button.

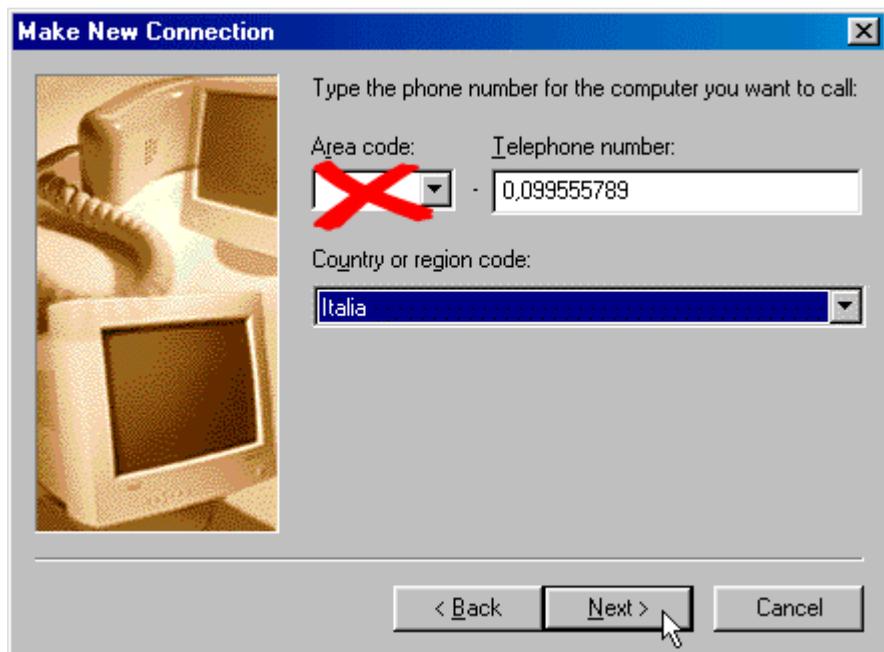

6. Do not type the area code, insert telephone number with the area code of XWEB 3000 as a prefix.

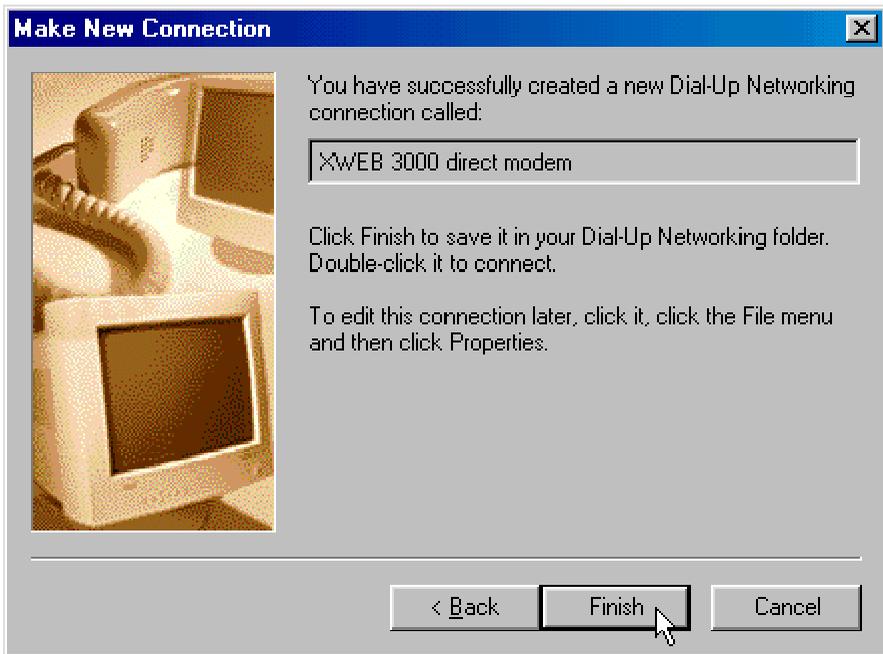

E.G: If telephone number is 555789 and area code is 099, put this Telephone number: 099555789.

If there is a switching machine and you have to dial a digit to get the line (0 or 9 for example, it depends on the switching machine), put this telephone number: 0, 099555789 or 9, 099555789. Chose your country.

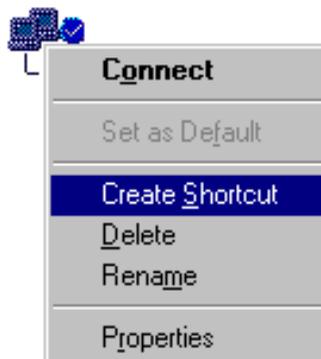

7. Click the Next button.

8. Click the Finish button.

9. Click the XWEB 3000 DIRECT MODEM icon with your right mouse button, then choose Properties.

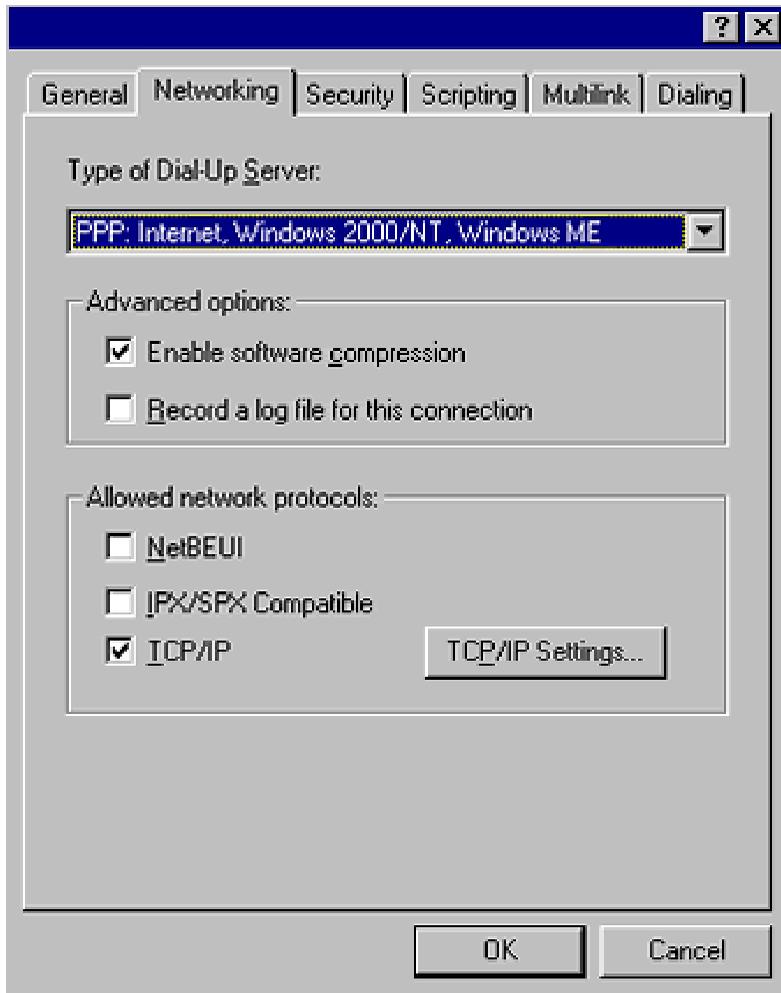

10. Click on the Networking tab.

11. Click the down arrow on the Type of Dial-Up Server: drop-down list and choose PPP: Internet, Windows 2000/NT, Windows Me.

12. Uncheck all the boxes except for Enable software compression and TCP/IP.

13. Click the TCP/IP Settings... button.

14. Select Server assigned IP address

15. Select Server assigned name server addresses.

16. Click the OK button.

TCP/IP Settings [?] [X]

Server assigned IP address

Specify an IP address

IP address: [. . .]

Server assigned name server addresses

Specify name server addresses

Primary DNS: [. . .]

Secondary DNS: [. . .]

Primary WINS: [. . .]

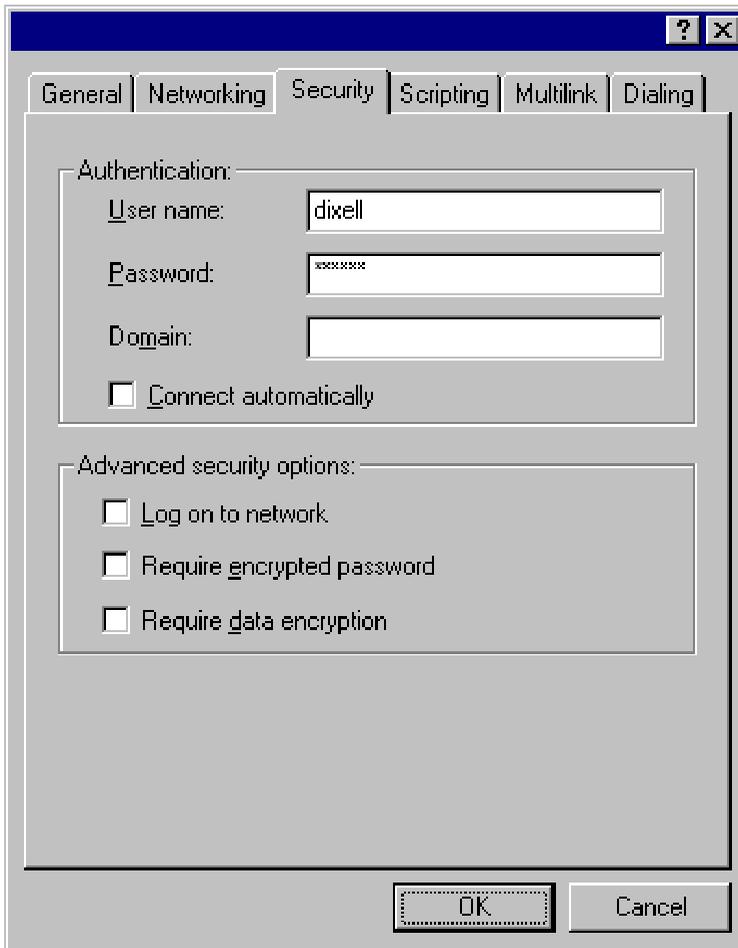

Secondary WINS: [. . .]

Use IP header compression

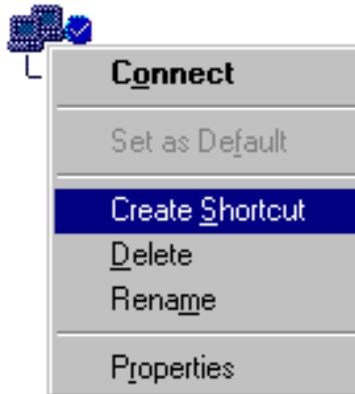

Use default gateway on remote network

[OK] [Cancel]

17. Click on the Security tab.
18. In the User name: dixell
19. In the Password: dixell
20. Click the OK button.

21. Click the XWEB 3000 DIRECT MODEM icon with your right mouse button, then choose Create Shortcut.

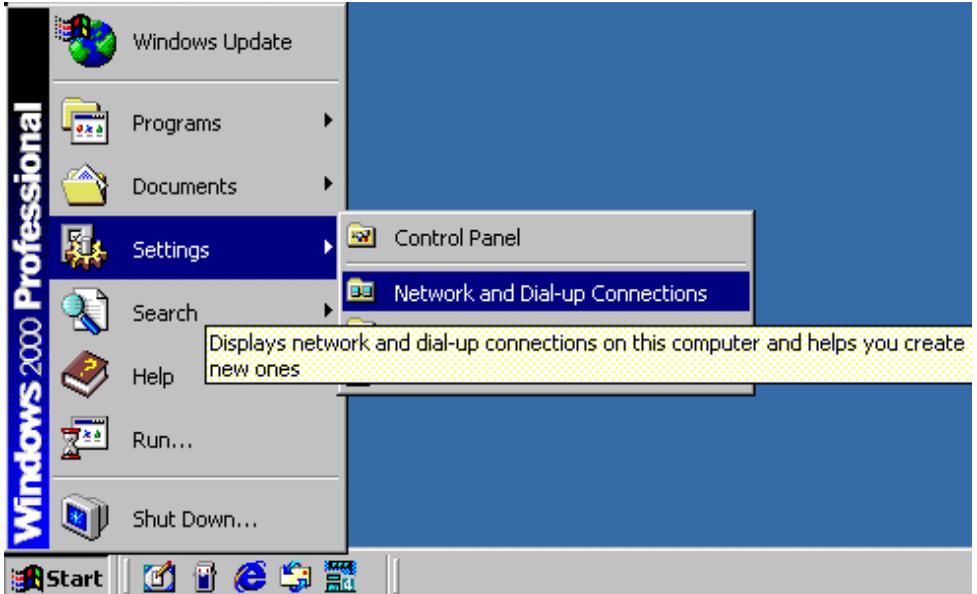

22. Click the Yes button.

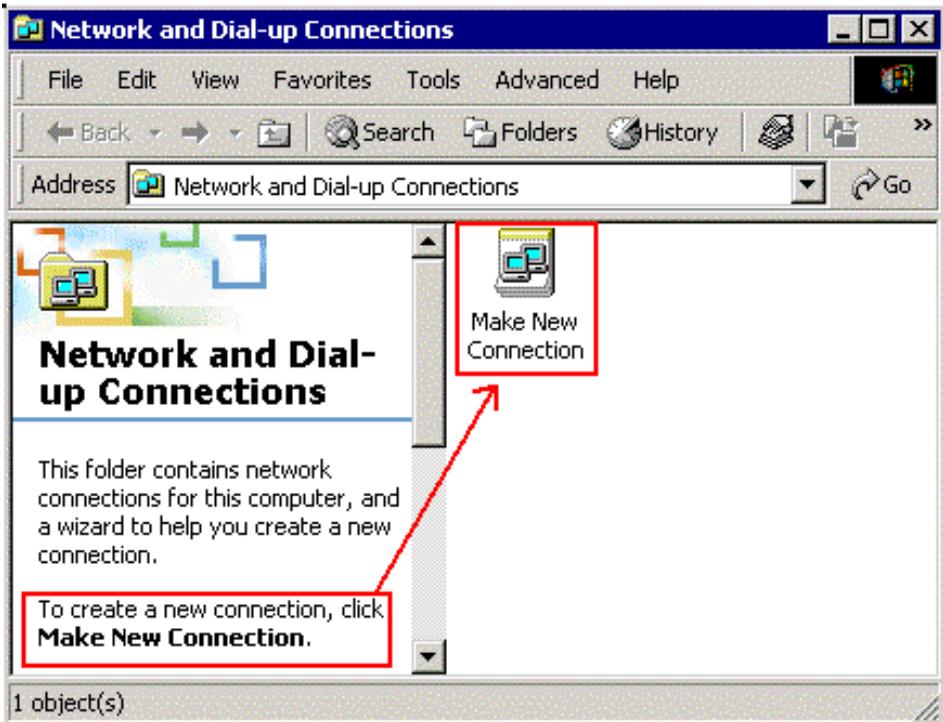

5.1.3 SETTING UP DIAL-UP CONNECTION FOR WINDOWS 2000

Start-Menu "*Settings*", then "*Network and Dial-up Connections*".

Select to "Make a New Connection"

This starts up the "Network Connection Wizard".
Continue with "Next"

Chose "Dial up to the Internet"

Network Connection Wizard**Network Connection Type**

You can choose the type of network connection you want to create, based on your network configuration and your networking needs.

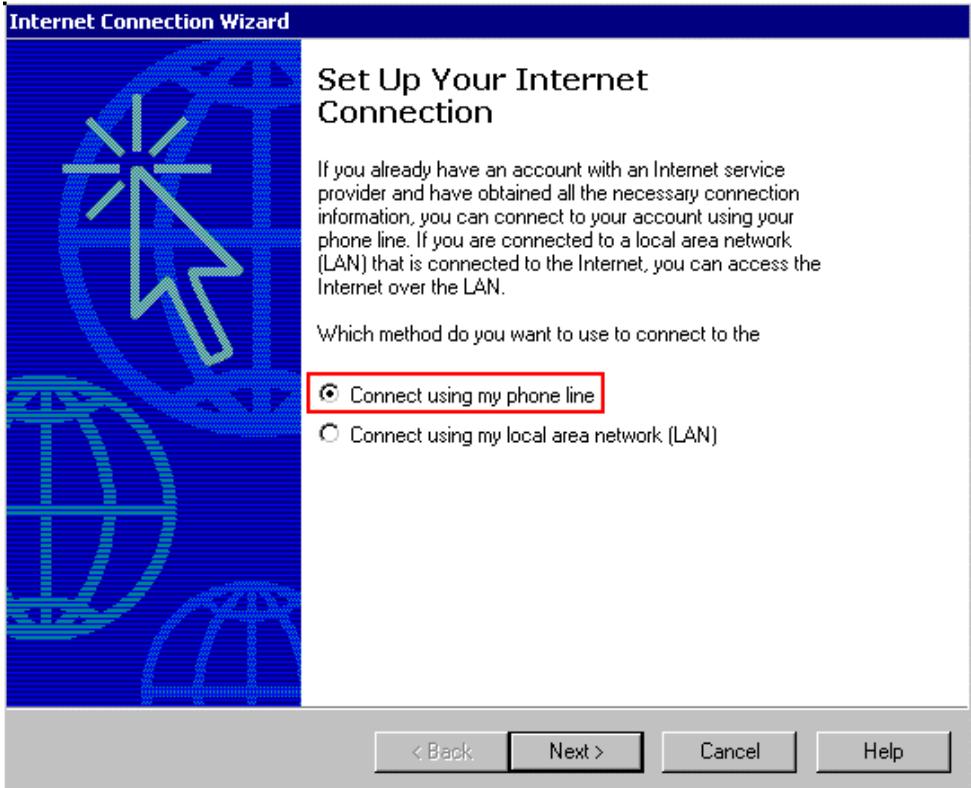

- Dial-up to private network**
Connect using my phone line (modem or ISDN).
- Dial-up to the Internet**
Connect to the Internet using my phone line (modem or ISDN).
- Connect to a private network through the Internet**
Create a Virtual Private Network (VPN) connection or 'tunnel' through the Internet.
- Accept incoming connections**
Let other computers connect to mine by phone line, the Internet, or direct cable.
- Connect directly to another computer**
Connect using my serial, parallel, or infrared port.

< Back

Next >

Cancel

Choose “Connect using my phone line”:

Do not type the area code, insert telephone number with the area code of XWEB 3000 as a prefix.

E.G: If telephone number is 555789 and area code is 099, put this Telephone number: 099555789.

If there is a switching machine and you have to dial a digit to get the line (0 or 9 for example, it depends on the switching machine), put this telephone number: 0, 099555789 or 9, 099555789. Chose your country.

Click the **Next** button.

Internet Connection Wizard**Step 1 of 3: Internet account connection information**

Type the phone number you dial to connect to your ISP.

Area code:

 -

Telephone number:

Country/region name and code:

Dial using the area code and country code

To configure connection properties, click Advanced.
(Most ISPs do not require advanced settings.)

Advanced...

Next >

Cancel

Help

The User name and Password is dixell.

Internet Connection Wizard**Step 2 of 3: Internet account logon information**

Type the user name and password you use to log on to your ISP. Your user name may also be referred to as your Member ID or User ID. If you do not know this information, contact your ISP.

User name:

Password:

As connection name use “XWEB 3000 direct modem”:

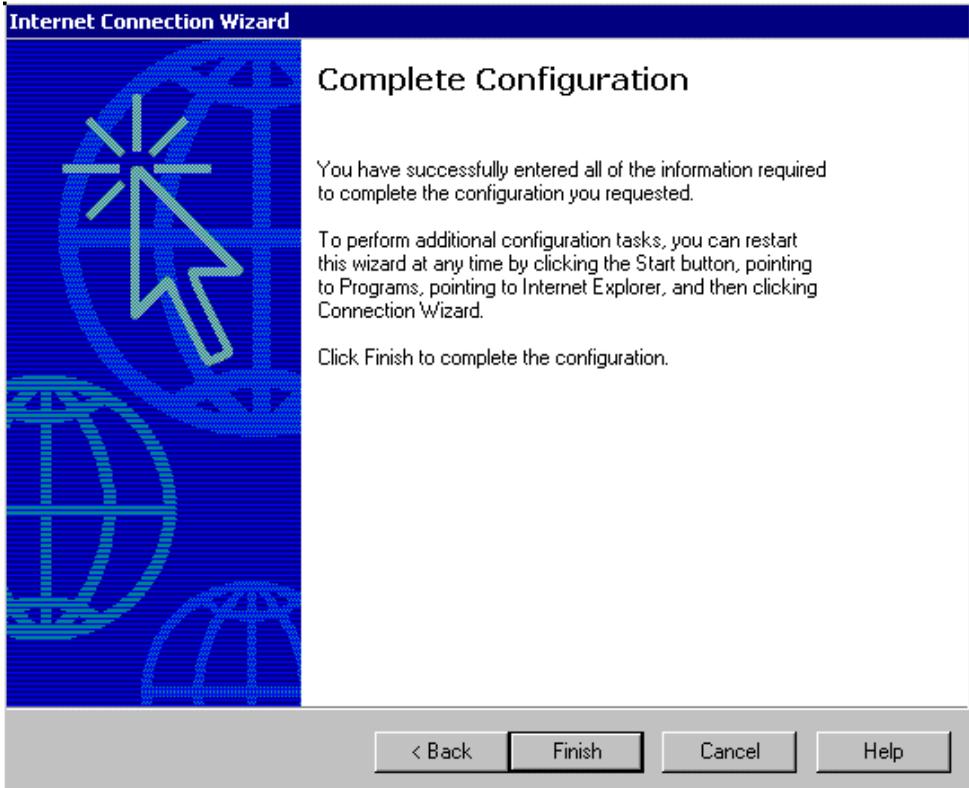

Internet Connection Wizard**Step 3 of 3: Configuring your computer**

Information about your Internet account is grouped together as a dial-up connection and labeled with a name you provide.

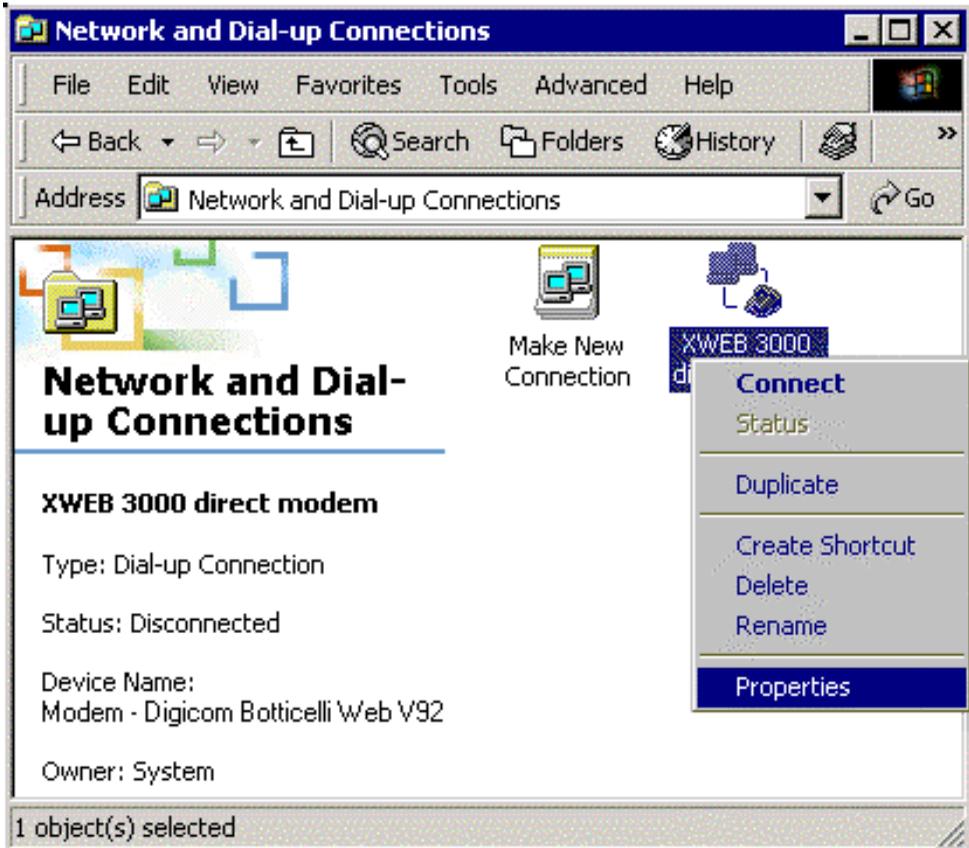

Type a name for the dial-up connection. This can be the name of your ISP or any name you want to use.

Connection name:

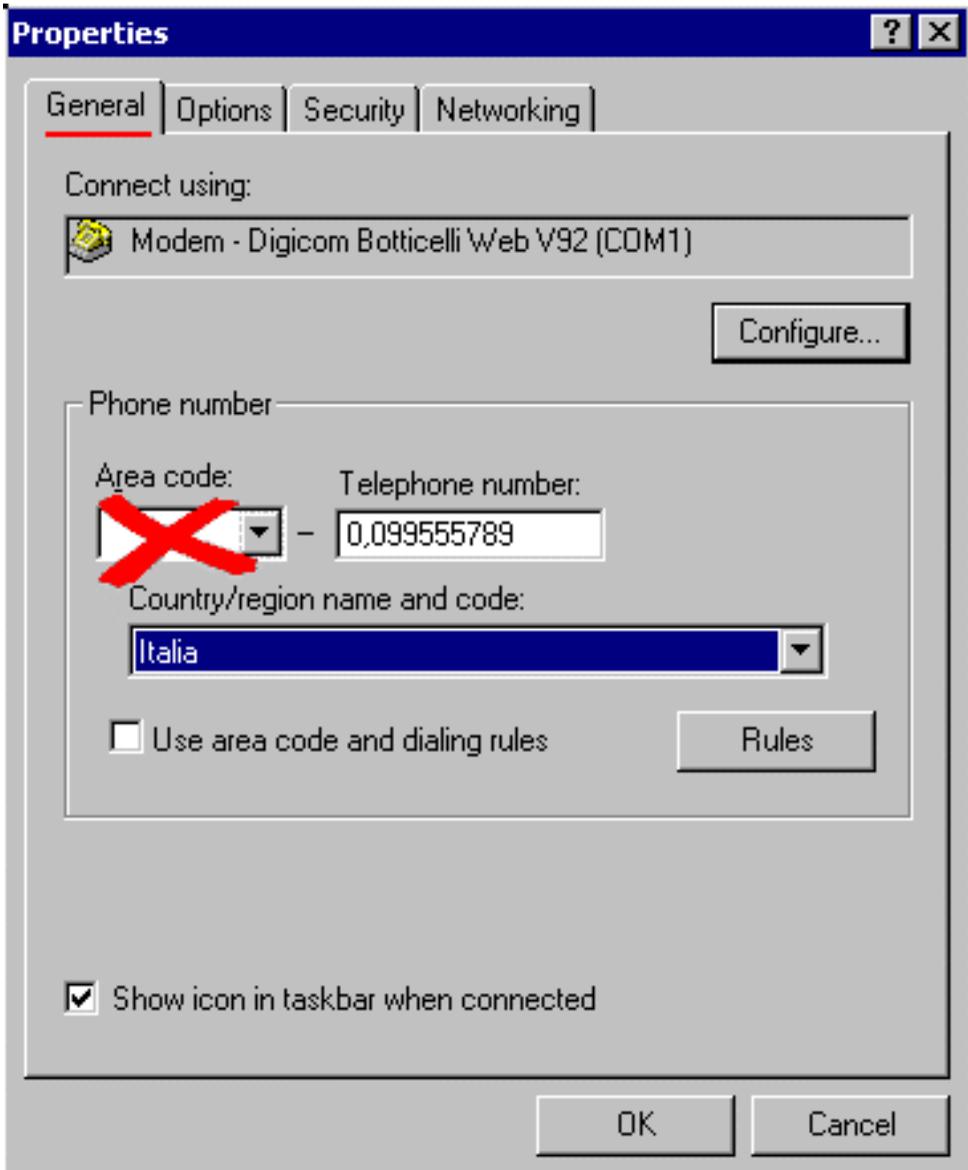

First part is done.

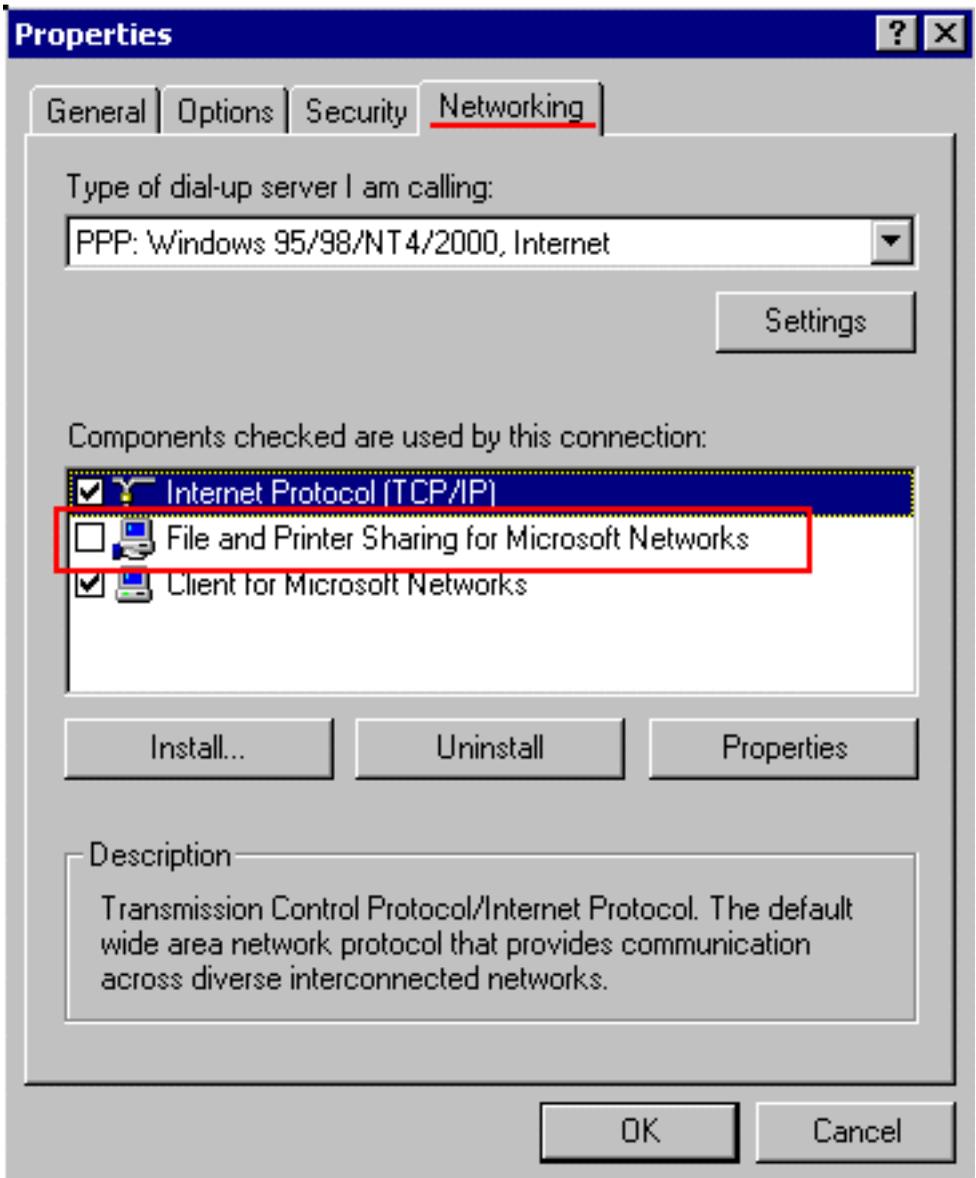

Now you will found a new icon in your network directory:

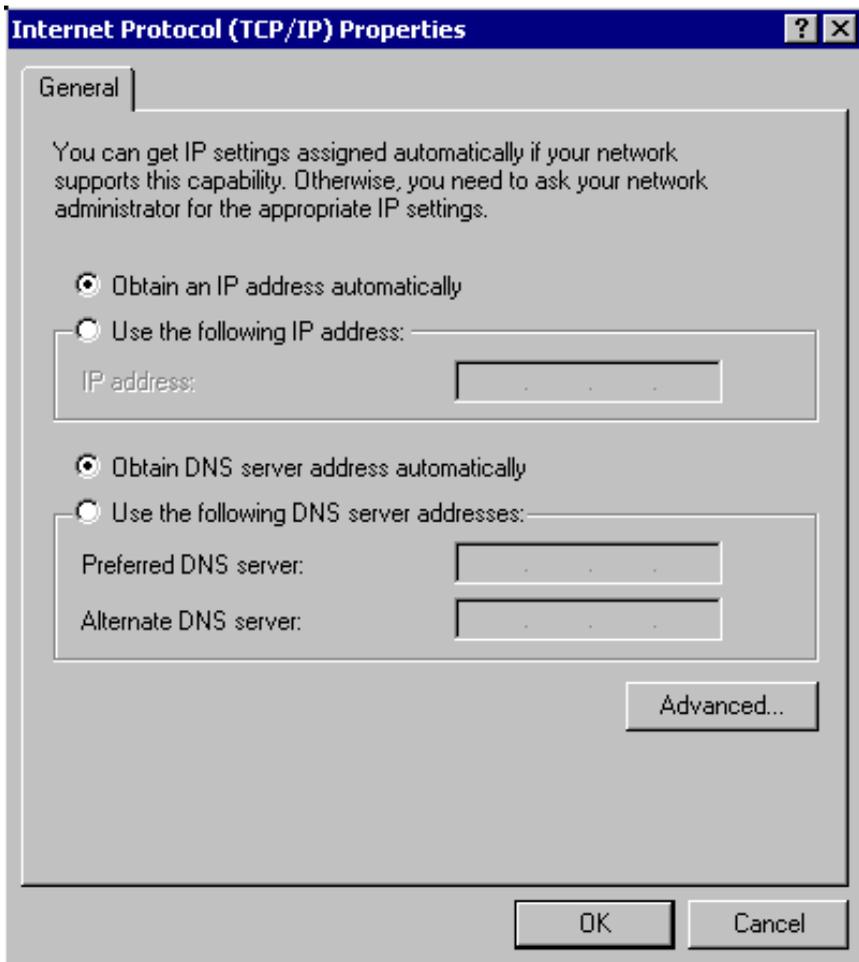

Right mouse click and choose properties:

Let general tab as you compile before in this guide choose "networking" tab:

Select Internet Protocol (TCP/IP) and click on “Properties”:

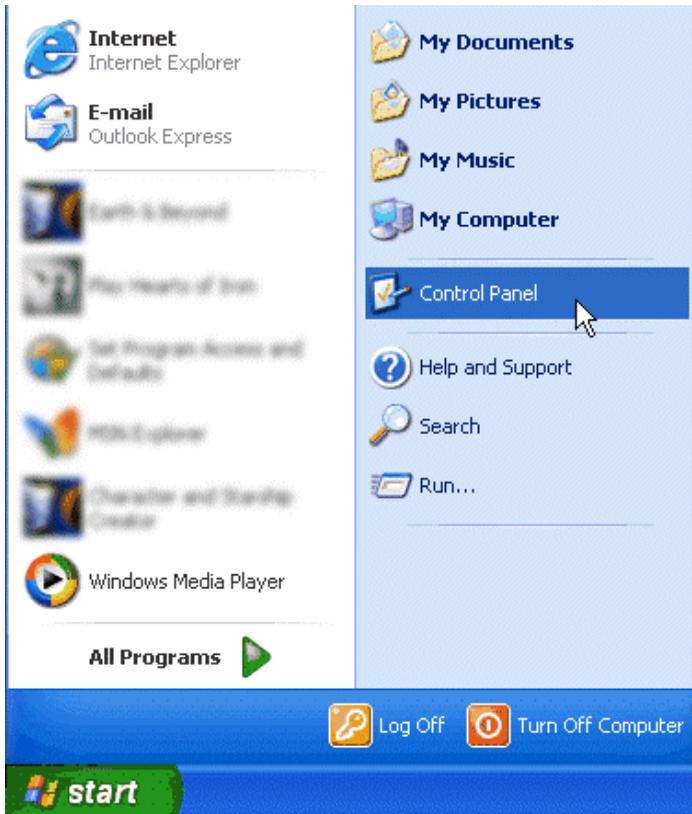

Compile your windows as describe above. Click ok and close all windows.

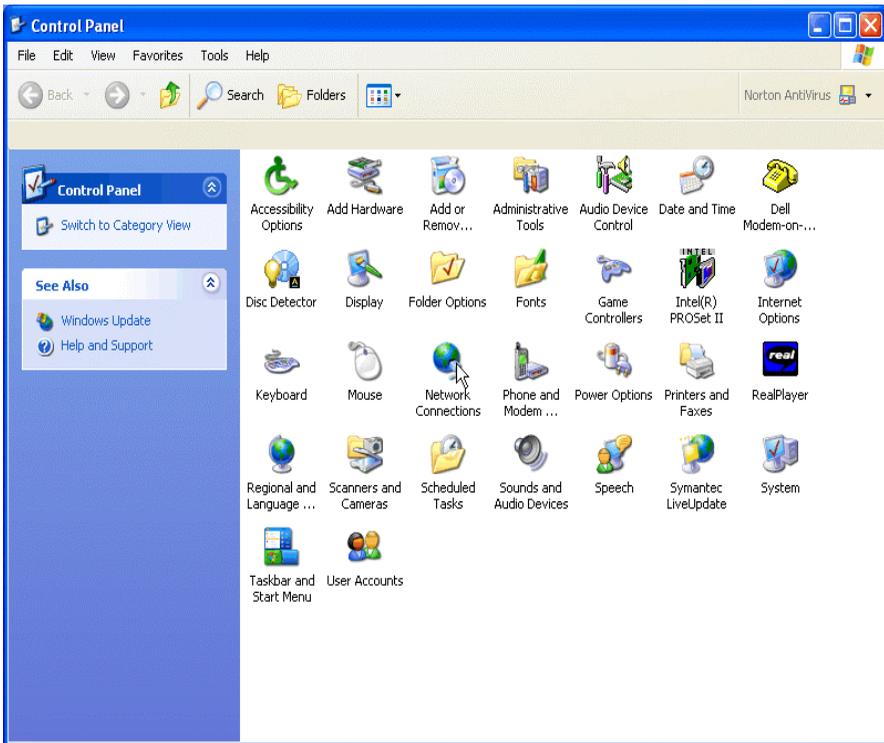

5.1.4 SETTING UP DIAL-UP CONNECTION FOR WINDOWS XP

In Windows XP, you will use the "New Connection Wizard".

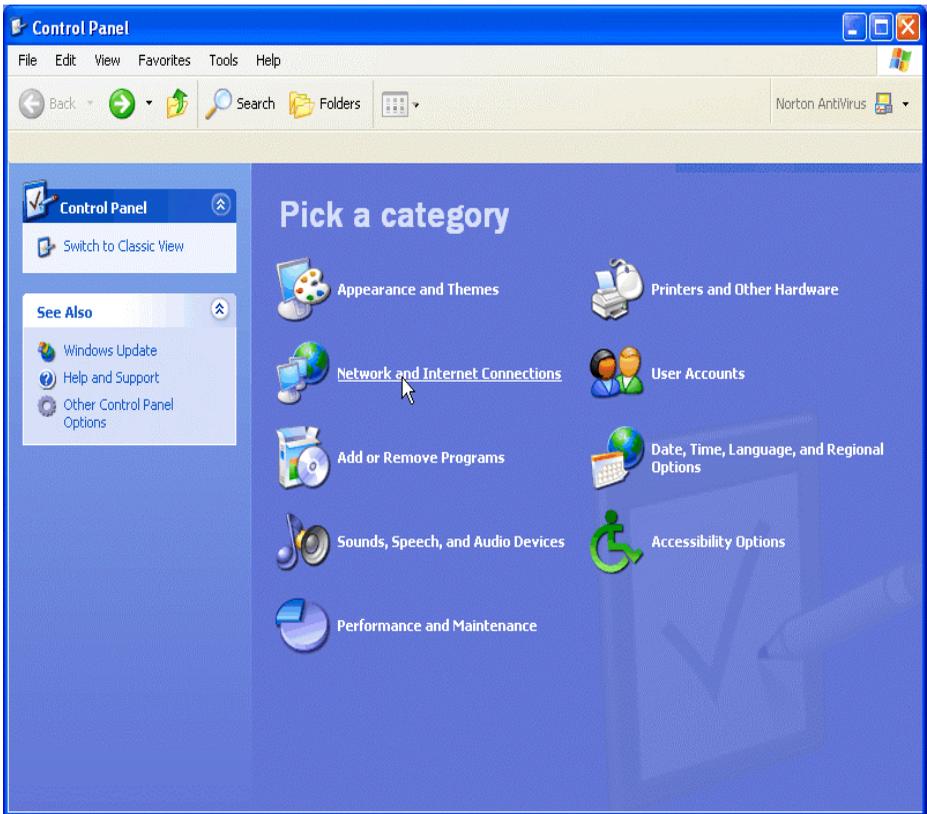

1. From the Start menu, select Control Panel.

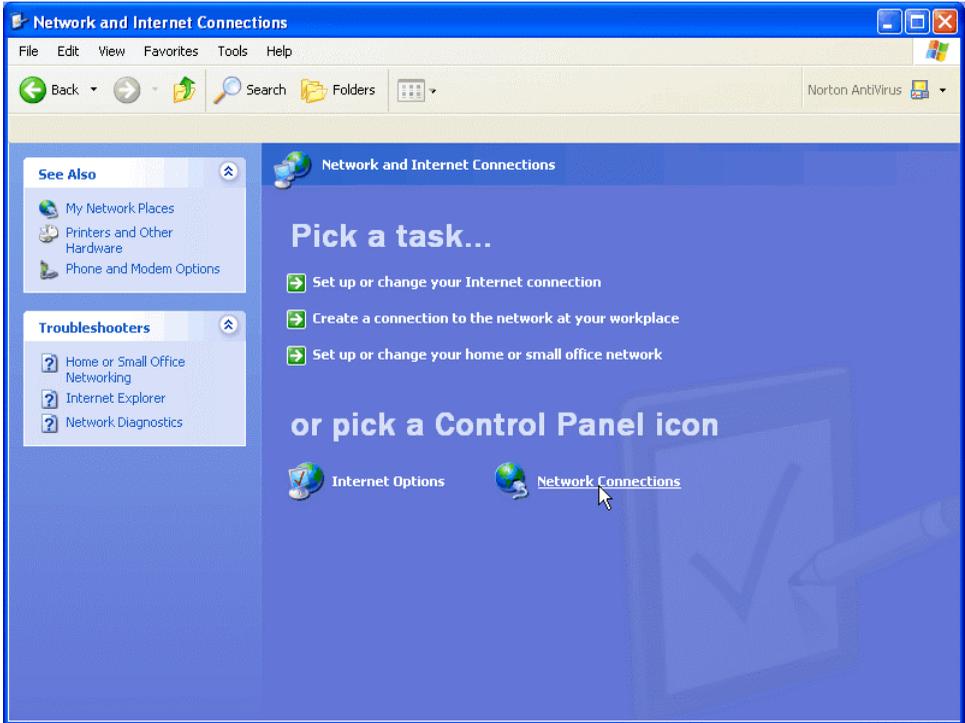

2. If Control Panel is set for "Classic View", double-click on the Network Connections icon.

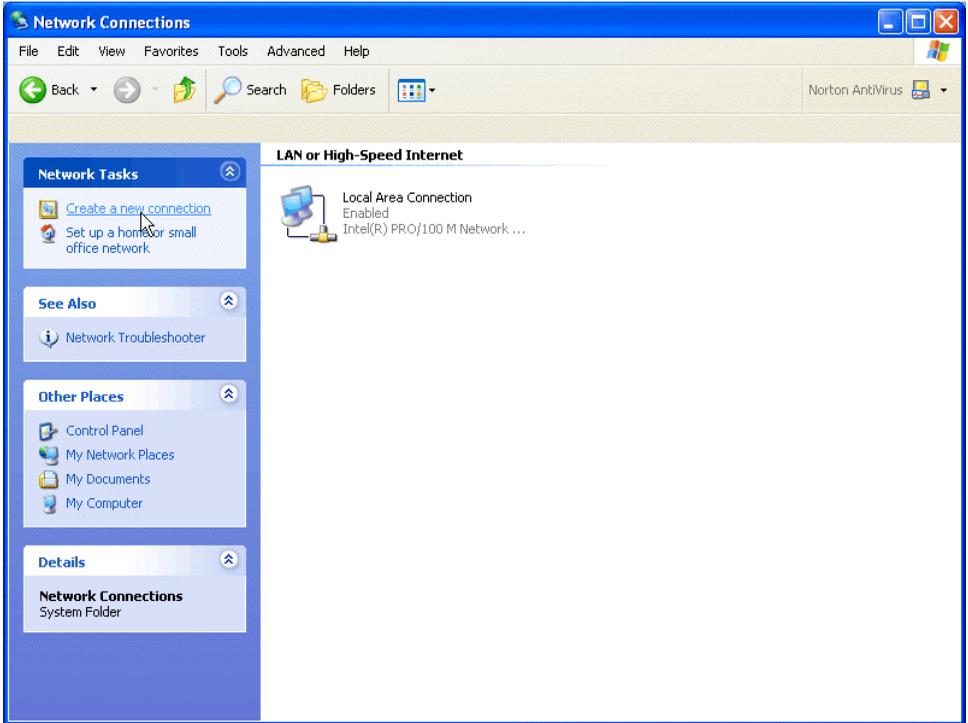

3. If Control Panel is set for "Category View", select the "Network and Internet Connections" category, then double-click on the Network Connections icon.

4. Under Network Tasks, select "Create a new connection".

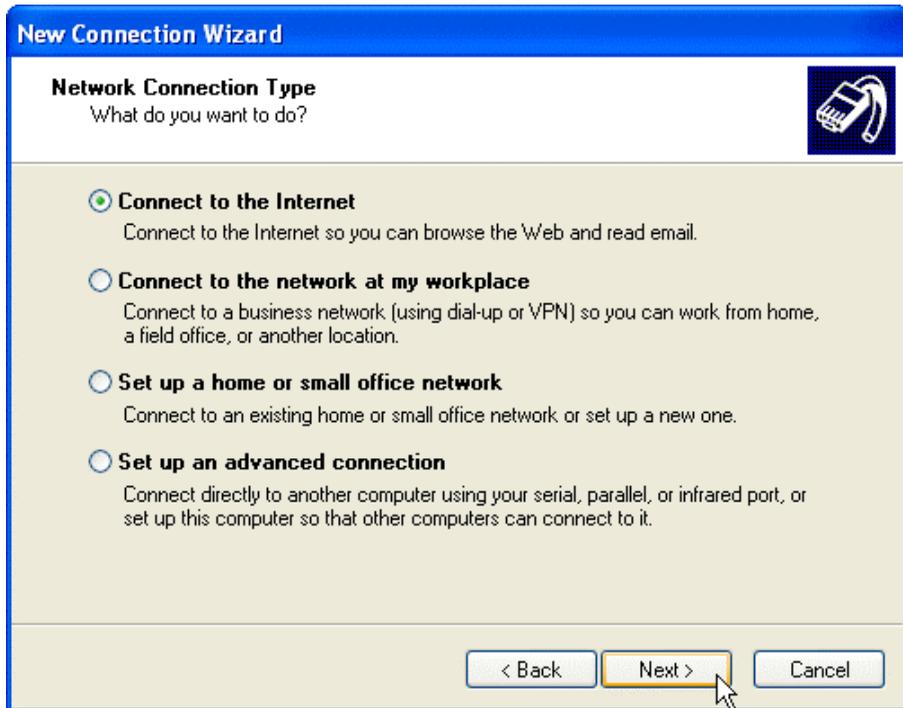

5. Click "Next".

6. Click "Next" at the bottom of this page to continue with the setup instructions.

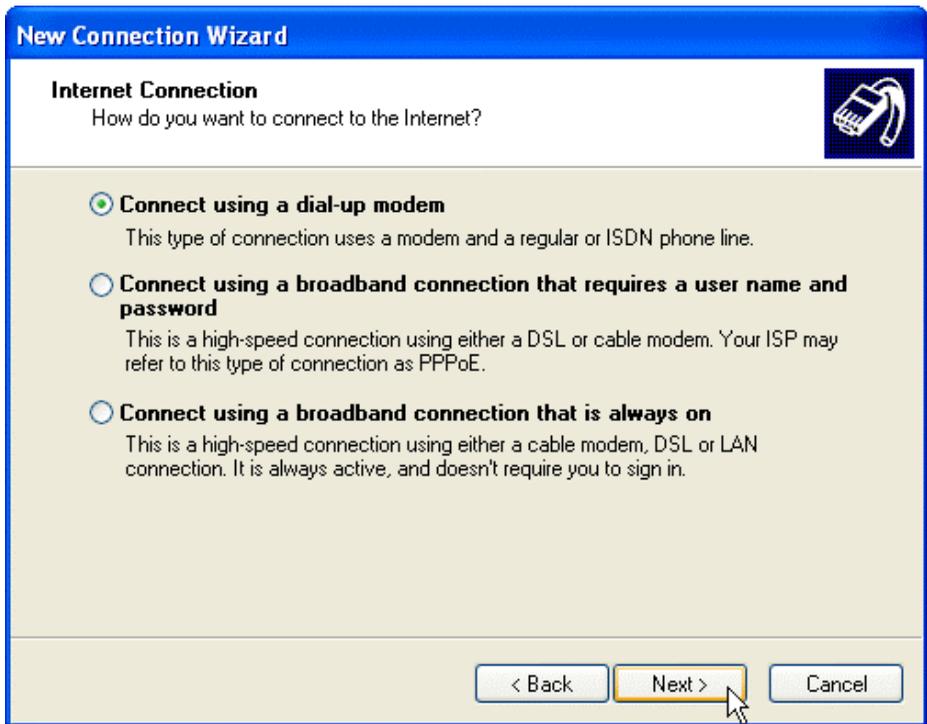

7. Select "Connect to the Internet" and click "Next".

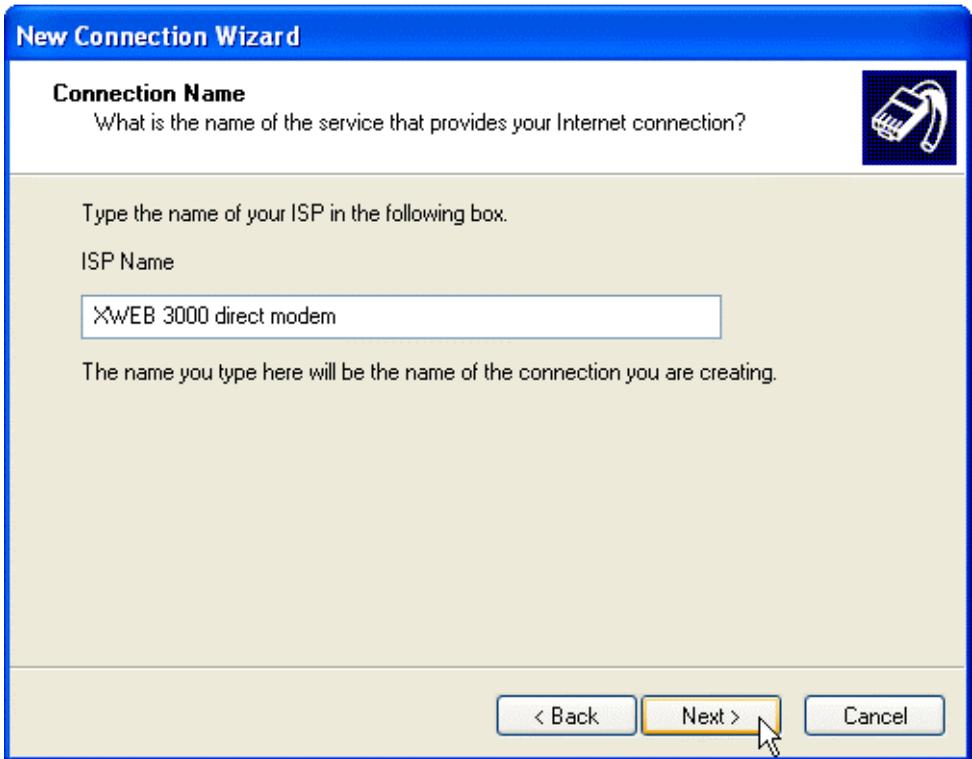

8. Select "Set up my connection manually" and click "Next".

9. Select "Connect using a dialup modem" and click "Next".

10. Type "XWEB 3000 DIRECT MODEM" in the ISP Name box and click "Next".

New Connection Wizard

Connection Name 

What is the name of the service that provides your Internet connection?

Type the name of your ISP in the following box.

ISP Name

XWEB 3000 direct modem

The name you type here will be the name of the connection you are creating.

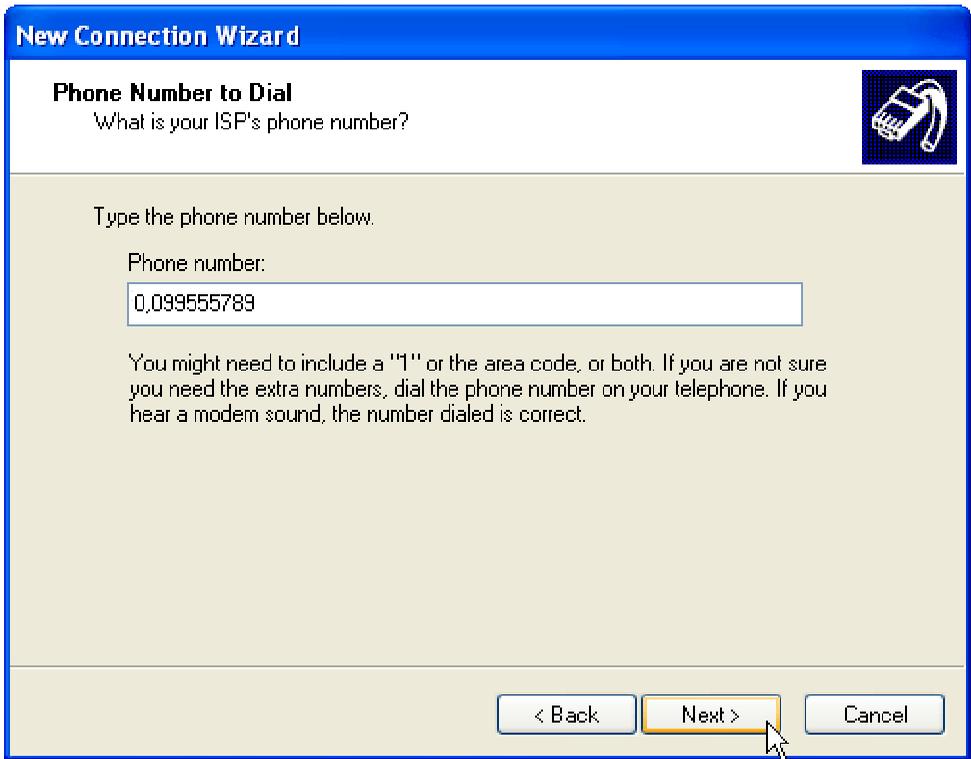

< Back Next > Cancel

11. Type the access number in the Phone Number box.

E.G: If telephone number is 555789 and area code is 099, put this Telephone number: 099555789.

If there is a switching machine and you have to dial a digit to get the line (0 or 9 for example, it depends on the switching machine), put this telephone number: 0, 099555789 or 9, 099555789.

Click "Next".

New Connection Wizard

Phone Number to Dial
What is your ISP's phone number?

Type the phone number below.

Phone number:

You might need to include a "1" or the area code, or both. If you are not sure you need the extra numbers, dial the phone number on your telephone. If you hear a modem sound, the number dialed is correct.

< Back Next > Cancel

12. Type dialup account name **dixell** in the User Name box. Type dialup password **dixell** in the Password and Confirm Password boxes. We recommend that you check the first 2 checkboxes, but not the 3rd box which turns on the Internet Connection Firewall. Click "Next".

New Connection Wizard

Internet Account Information

You will need an account name and password to sign in to your Internet account.

Type an ISP account name and password, then write down this information and store it in a safe place. (If you have forgotten an existing account name or password, contact your ISP.)

User name:

Password:

Confirm password:

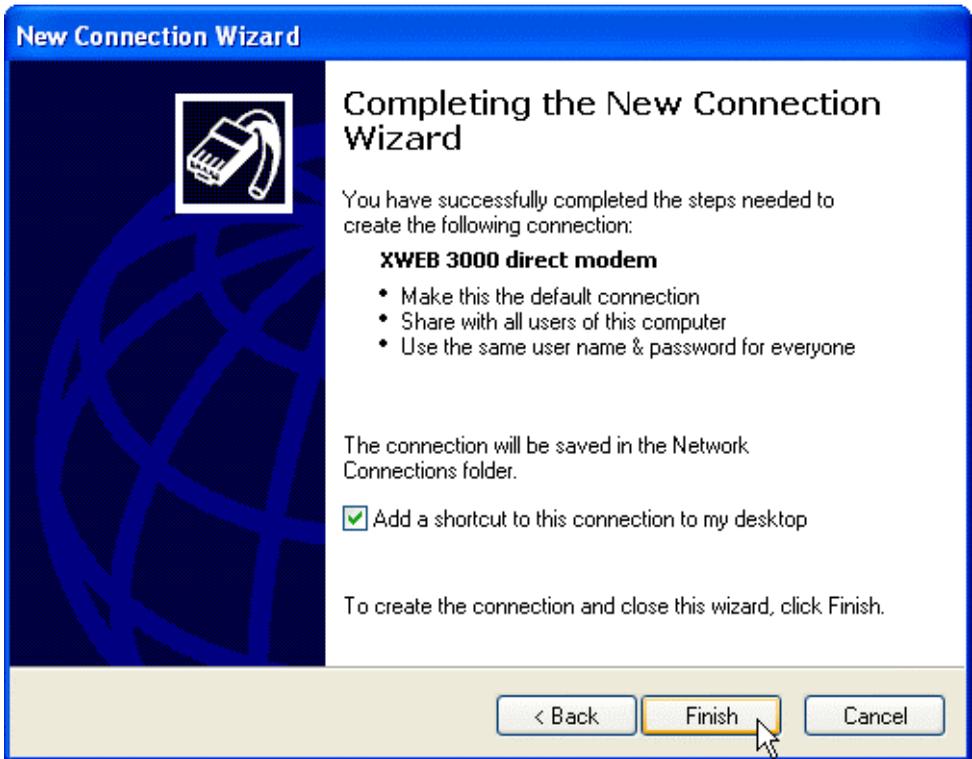

Use this account name and password when anyone connects to the Internet from this computer

Make this the default Internet connection

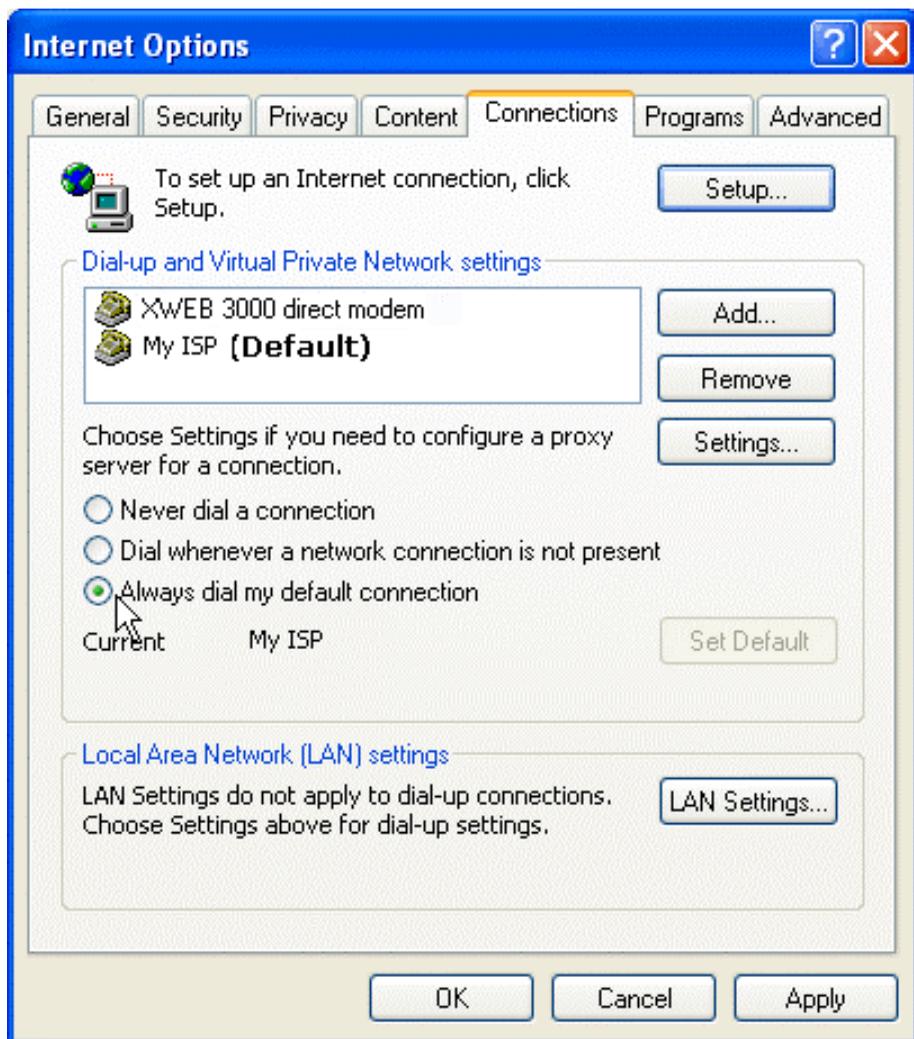

Turn on Internet Connection Firewall for this connection

< Back Next > Cancel

13. Place a checkmark in the box to create a shortcut on your desktop, and click "Finish".

14. You are now ready to connect to your XWEB 3000. If you want to dial your XWEB 3000 DIRECT MODEM connection automatically when you start Internet Explorer, do the following. Start Internet Explorer, and select "Internet Options" from the "Tools" menu. Select the "Connections" tab. Make sure that XWEB 3000 DIRECT MODEM is your default connection (if not, highlight it and click "Make Default"). Make sure that the "Always dial my default connection" option is selected.

Ask your provider for more details about the rent of a the static IP.
This the internet system requirements for the best result:

Wide band connection.

At least 1 static IP addresses for the XWEB 3000.

The internet connection is established through a device called Router that receives and sends the data as interface between an Intranet and Internet. The Provider also assigns the address of the router that is called IP WAN.

Remember that the default value of the IP of the XWEB 3000 is: 192.168.0.200.

Depending on the contract the Provider can also supply the router, otherwise the user can buy it separately.

REMEMBER: ask qualified personnel for the router installation by using this information.

Used ports that are mapped to the LAN side:

80 (used for the http:// access)

22 (used for SSH connection)

443 (used for SSL protected connection)

10000 (used for the internal modules of the system)

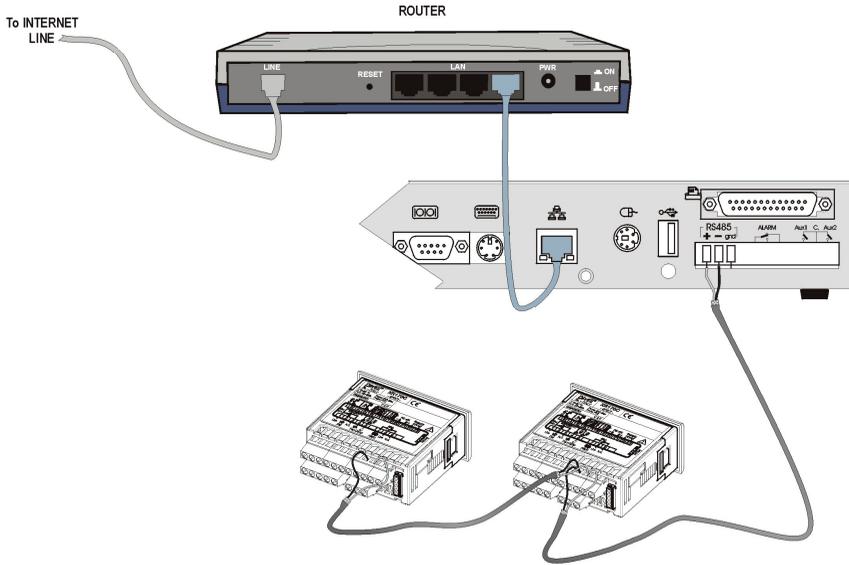

The above ports are all related to the XWEB 3000 IP address 192.168.0.200.

While the ports on the WAN side are:

Telnet (to configure the router from a remote, also via Internet)

http (To access the XWEB 3000)

If working with the router GATEWAY and DNS check your Internet contract details.

Troubleshooting Guide

Problem	Solution
The log-in page doesn't load	Check your browser setup.
My password doesn't allow me to log-in.	Beware to the caps-lock button and capital letters. Is it your password correct?
My browser can't reach XWEB 3000 log-in page	Check cable typology From windows go to Start->Run... ping 192.168.0.200 -t A continuous set of information should be appear.
Someone in the intranet/LAN receive a warning message about an IP conflict.	XWEB 3000 uses the same address of a resource already used in your intranet/LAN. Change XWEB 3000 IP address.

Unit Setup Reminder

Please take some moments to make an hardcopy of this page, then compile it and store it near XWEB 3000 unit.
