WHAT IS ISDN?

UNPACKING

In the box you should find following items:

- | | |
|--------------------|-----------------------|
| P Telephone | P Handset cord |
| P Handset | P User guide |
| P Line cord | |

Please contact your retailer, if an item is missing or damaged.

CONNECTING

- P** Connect the handset cord to the telephone and the handset.
- P** Connect the line cord to the telephone and to the ISDN wall socket. The ISDN wall socket could be a PBX, NT, router or something alike.
- P** Lift the handset and check the tone.
- P** Set the day, time and prefix, see next page.

Beyond this installing there is several more to facilitate the phone call .

SET DAY AND TIME

P Press the function button  .

P Press the button  or  until the display show "**Service ?**".

P Press the **OK** button. The display show "**PIN-code >>**".

P Press 0 0 0 0 0 (five zero).

P Press the **OK** button.

P Press the button  or  until the display show "**Date/Clock ?**".

P Press the **OK** button *twice*.

P Enter the topically year (four digits), then press the **OK** button.

P Enter the topically month (01-12), then press the **OK** button.

P Enter the topically day (01-31), then press the **OK** button.

P Confirm the setting by press the **OK** button.

P Finish the setting by press the  button three times.

SET PREFIX

The prefix told for the telephone which digit/digits the abroad calls and national calls (area code) begins on. This is important for the telephone should show correct phone number in the caller identity and make calls.

The reason that you must give a prefix is that the PTT will not send out this information. If your DORO Kronos is connected under a PABX, you maybe not need to give a prefix.

The national prefix is "0" (zero).

The abroad prefix is depending on which PTT you use. Telia, you enter "009" as a prefix, for Tele2 you enter "007" etc. Take contact with your PTT if you are unsure on the prefix.

P Press the function button .

P Press on button  or  until the display show "**Service ?**".

P Press the **OK** button. The display show "**PIN-code >>**".

P Press 0 0 0 0 0 (five zero).

P press the **OK** button.

P Press on button  or  until the display show "**INT./NAT. Prefix ?**".

P Press the **OK** button.

P Press on button  or  until the display show "**INT. Prefix ?**".

P Press on the **OK** button. The display show "**Prefix Number >>**".

P Enter the abroad prefix with the digit button.

P Press the **OK** button.

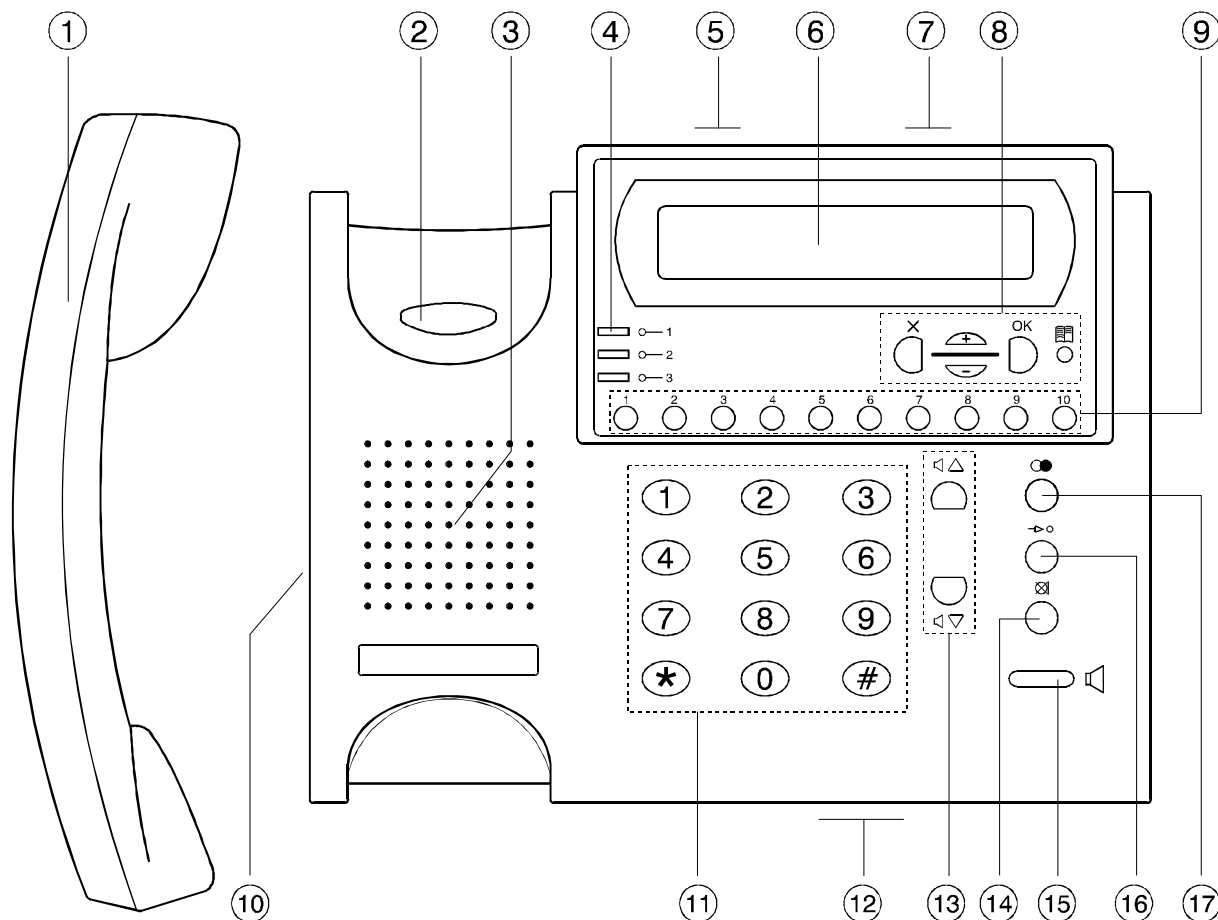

P Press on button  or  until the display show "**NAT. Prefix ?**".

P Enter the national prefix with the digit button.

P Press the **OK** button.

P Finish the setting by pressing several times on the  button.

Dial a number from the phone book.

MUTE BUTTON (14)

Turns off/on the microphone. The indicator to the right is on then the mute-function is activated.

LOUDSPEAKER BUTTON (15)

Activate/deactivate the phones loudspeaker function. The indicator on the button is on then the function is activated.

THE DISPLAY

The display consist of two lines with 20 character per-line. In standby mode the display show topic date and time. Then you use the phone the display show the dialled number and receiver, call timer, caller identity for incoming calls, instruction for programming, etc.

CALLER IDENTITY

For incoming calls the display will show number or name. For show name, the name must be stored in the phone book.

The phone number will be stored in the caller identity memory and you can scroll between them at any time. For more information about the caller identity and how you read the incoming number, see page 24.

MSN-NUMBER

MSN-number is that number the caller have dialled for to come to you. Because your ISDN line could have several phone number it could be practical to see which of the number the caller has dial.

This will shows with the three indicators under the display. Then the phone is ringing, the indicator for that number will begin to flash. To programme the number the different indicators should have, see page 28.

ANSWER A CALL

You answer a call by lift the handset or press on the loudspeaker button.

IGNORE CALL

You can also ignore a call (the phone will stop ring) if you don't want to answer.

P Then it's ring the display will show "**Accept ?**".

P Press button  or  .
The display show "**Reject ?**".

P Press the **OK** button to ignore the call.

P The phone stop ringing.

TO MAKE A EXTERNAL CALL

You can make a call in two different way:

TO MAKE A CALL WITH THE HANDSET

P Lift the handset and wait for signal.

P Dial the phone number.

P Finish the call by put back the handset.

If you wish, you can change to loudspeaker mode under a call, press the loudspeaker button  and put back the handset. In loudspeaker mode you talk to the other part from the microphone in the front.

TO MAKE A CALL WITH THE LOUDSPEAKER MODE

P Press the  button. Loudspeaker mode will now be activated and you will hear the ton. The indicator on the loudspeaker button goes on.

P Dial the phone number.

P Press the  button again to finish the call.

- P Choose the function "**Check CF Status ?**".
- P Choose which forwarding type you want to control: "**Check CFU ?**", "**Check CFNR ?**" or "**Check CFB ?**".
- P The display show topically status.

SHOW OWN NUMBER

With this function caould you choose if your phone number should be displayed on the receivers caller identity then you make a outgoing call. You can also choose to show any of the stored MSN number.

- P Open and choose "**CID Send/Not Send ?**" in the menu system.
- P Choose whicked function: "**CID Send ?**", or "**CID Not Send ?**".
If you choose to not send, the programming will return to head menu.
- P Choose which of your MSN number you want to be displayed (MSN 1-3).

EXPLANATION

With the phones caller identity can you see how is calling you before you answer. Then it's ringing the display will show from which number the call is from. If the number is stored to the phone book, the name will be displayed instead of the number. Incoming number will be stored in a memory together with date and time. The memory have place for 50 phone number.

INDICATION OF NEW NUMBER:

Then the phone has received a new incoming call, the number will be stored in the memory. To indicate that there is new number in the memory, the display show how many number there is and how many new number (not reading) there is..

As long there is number that not has been reading in the memory, the indicator will be displayed.

READ THE CALLER IDENTITY

P The display indicate that there is new number to read.

If there not are any new number can you scroll to the caller identity menu system (see page 15).

P Press the **OK** button.

P The display show information about the newest phone number in the memory, ex:

15/06/1999 Mån 20:04
03:Johan Ek N

above example have Johan Ek called clock 20:04 the 15 of June 1999. The call is number 3 in the caller identity memory. The Letter "N" indicate that the number has not been reading, it's a new number.

- P Scroll between the number with the function button  or .
- P If you scroll to the top or the end of the list, the display will show "End of CID List!".

ERASE NUMBER:

- P Scroll to which phone number/name.
- P Choose the which number by pressing on **OK** button.
- P Press on button  or  until the display will show "CID Delete?".
- P Confirm the delete by pressing the **OK** button twice.

TRANSFER NUMBER TO THE PHONE BOOK

The phone number that are stored in the CIDs memory can easily be transferred and stored to the phone book.

- P Scroll to which number/name in the CIDs memory.
- P Choose the which number by pressing on the **OK** button.
- P Press on button  or  until the display show "CID Store?".
- P Press the **OK** button.
- P Now the phone book will open and ask you to input the receiver's name.
- P Press the **OK** button.
- P Choose position for the new receiver.

DIAL UP FUNCTION

You can easally dial a number there is in the CIDs memory.

P Scroll to whiched phone number/name in the caller identity memory.

P Lift the handset or press on the loudspeaker button. The phone number will now automatically dials.

IF THE MEMORY BECOME FULL

The caller identity memory fit 50 phone number. If the memory become full, will the oldest number be replaced of the new.

DUPLICERINGSFUNKTION

If one number make more then one call without reading the memory, the number will just be stored in one position.

A indication puts in to told you how many times the number has called. The display show date and time from the first time the number was calling.

18/03/1999 Tis 22:44
08:Anna Björk N 3

The digit "3" in the example above means that Anna Björk have called three times, and the first time was clock 22:44 the 18 of maars 1999.

EXPLANATION

This chapter explains the phones setting and how this could be changed. We recommend that you first get to know with the phone and the usually functions before you change any setting.

PIN CODE:

All setting is protected with a PIN-code. The code remain of five digits and in delivery it's set to "0 0 0 0 0". If you forgot the PIN-code, can you erase the phone, see page 35.

SETTING MENU:

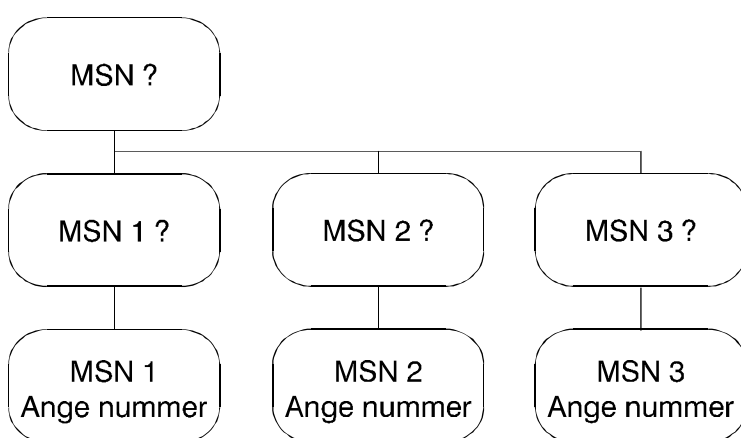

At this time you should now very well how the phones menu system work. The explanation about the phones setting is just a schematic picture and a explanation over what the setting is for.

- P Open and choose "**Service ?**" in the menu system.
- P The display show "**Pin-code > >**".
- P Enter your five digits PIN-code.
- P Press the **OK** button. If the code was wrong the display will show "**Incorrect PIN!**", try again.
- P You can scroll now between the different setting with button  and .
- P Press on button **OK** to choose the setting the display show.
- P Follow the schematic picture that is shown for every setting.

MSN-NUMBER

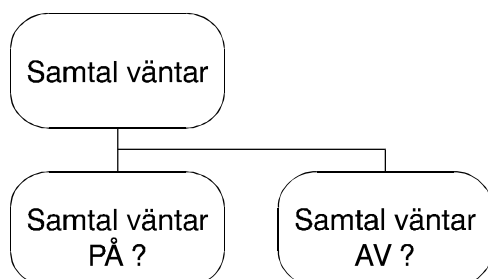

You can have several different number and this number is named MSN-Number (Multi Subscriber Number). Depending on which type of ISDN connection or subscription you have can you have different amount of MSN-numbers

Then someone is calling to you, the phone will indicate which number the caller have dialled. This will indicate with one of the three indicators on the phone (see page 6) will start to flash. Every indicator represente a MSN-number.

CALL WAITING

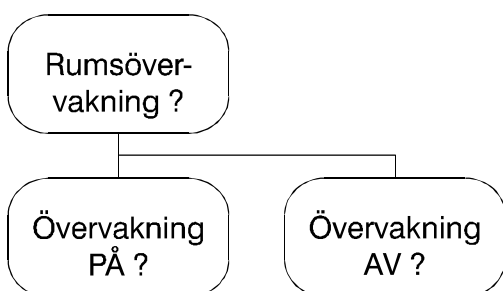

Then this function is activated could you answer a new incoming call means you are talking to somebody else. You will hear two short tons and the display show "**Accept?**" then the new call is calling. Answer the call by press on the **OK** button. You can now switch between the two calls or connect them to a conference call.

ROOM MONITOR

Room monitor let you monitor all sound i that room the DORO Kronos is standing in. Then you call your DORO Kronos it will answer automatically and activate the microphone. All sound in the room will now be send to the phone you make the call from.

To make the room monitor work, you must first activate the function and then make a call to your MSN-3 number (the number which is stored to MSN-number 3). The phone will answer automatically and it turns off then you finish the call. Observation! Means the room monitor is activated it will go on then somebody make a call to MSN-number 3.

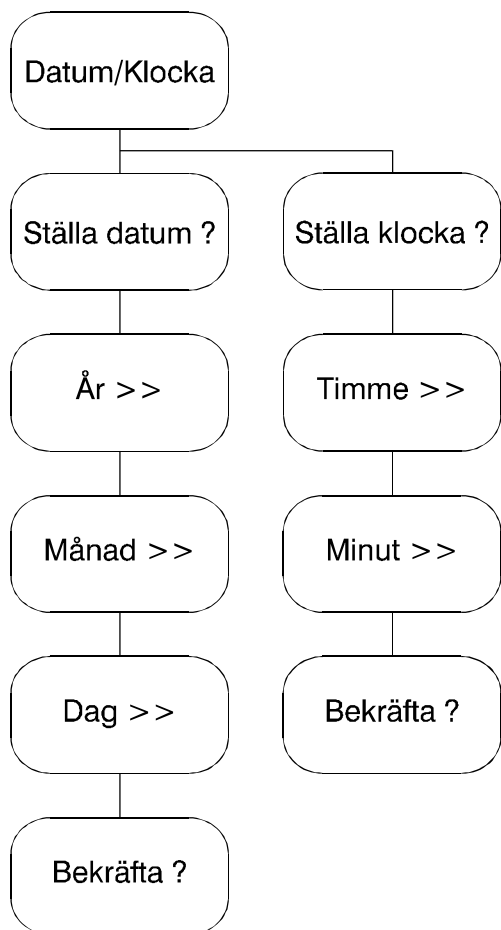

LANGUAGE

This function set the language in the display. Choose between Swedish, Norwegian or English. Observation that all the text from the PTT will show in English.

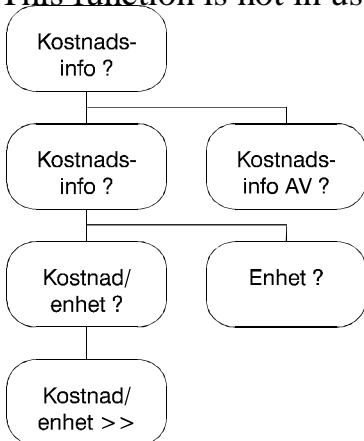

DATE AND TIME

The date and time will automatically be adjusted then you make a external call. You can also adjust this manual.

CHARGE DISPLAY

This function is not in use in Sweden.

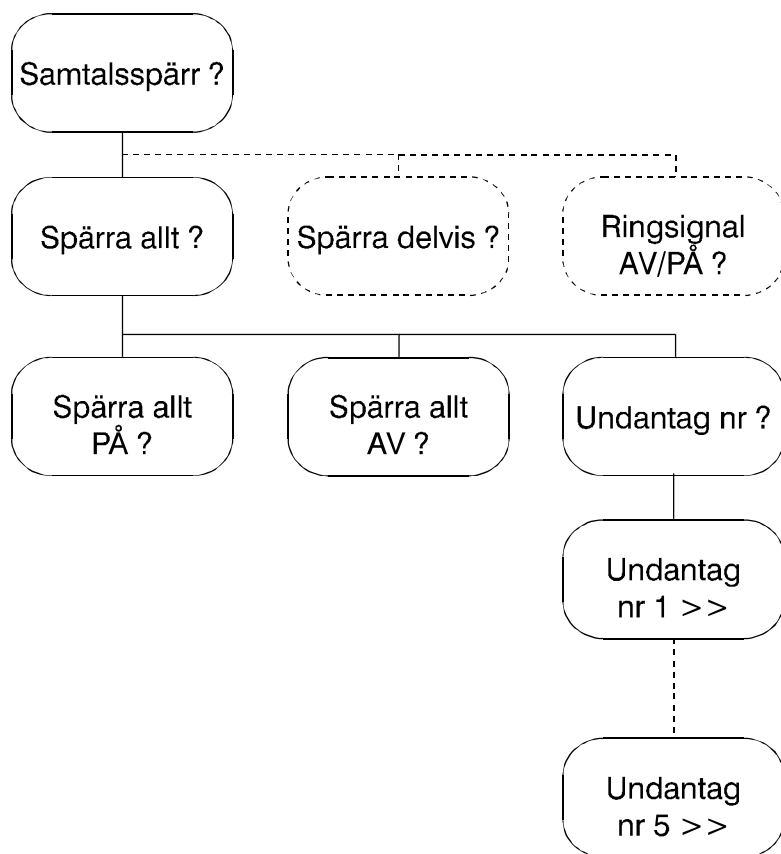

CALL BLOCKING

This function barrier different type of outgoing calls. This function is great if the phone uses of several persons and you want to be shore that no expensive calls makes..

There is following barrier:

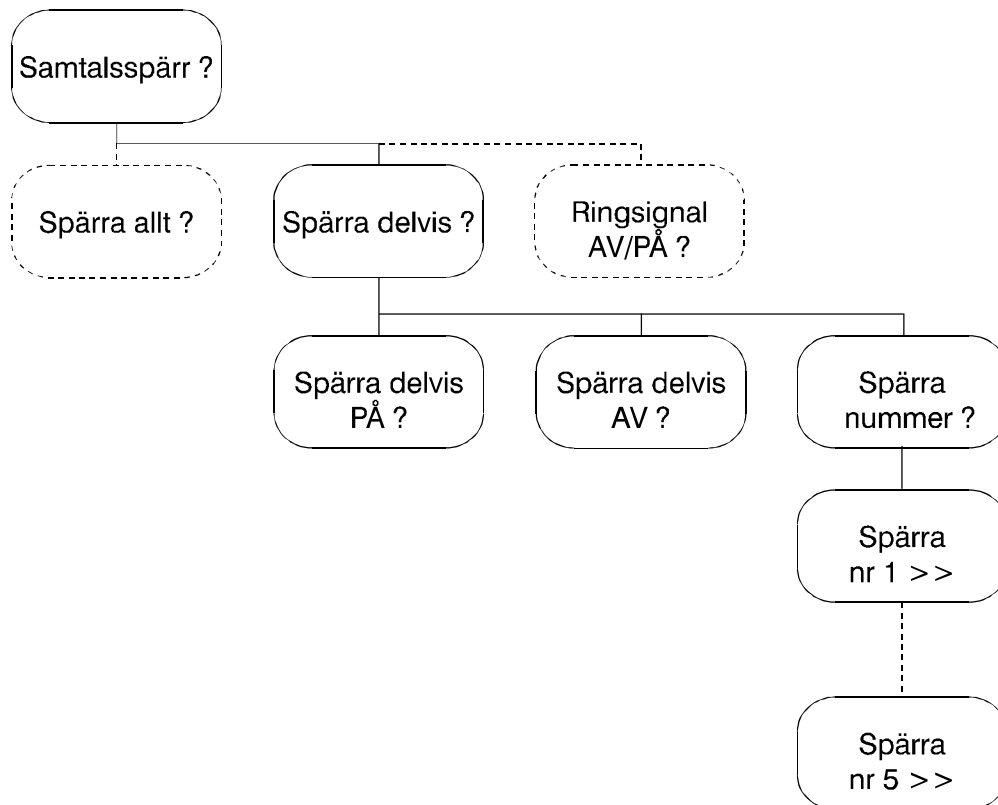

"Global Block":

This function block all outgoing calls. As soon you try to make a call will the display show **"Call Global Blocked !"**. You can make exception to five phone number there you can make calls.

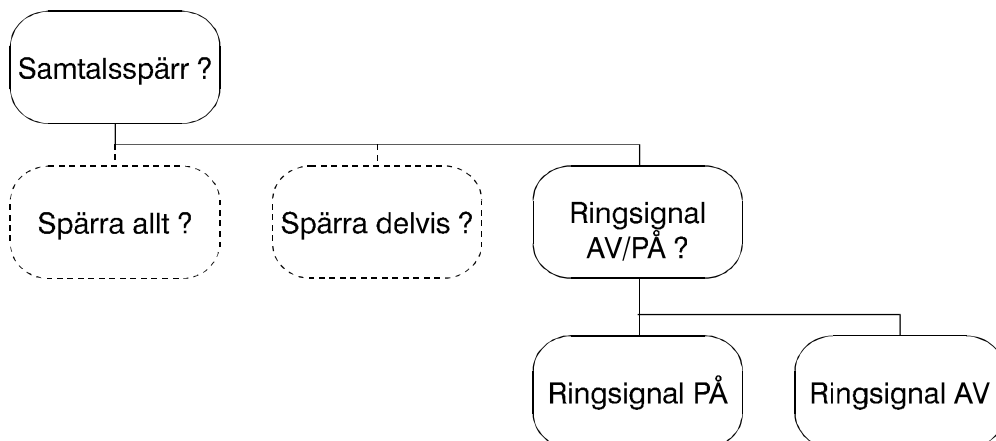

"Partial Block"

With this function could you block five phone numbers. You can make calls to all other numbers. All phone number that begins on that digits you have blocked will not be called. That means that you need just to enter ex "071" and all phone number that begins on "071" will be blocked.

**"Phone Silent"**

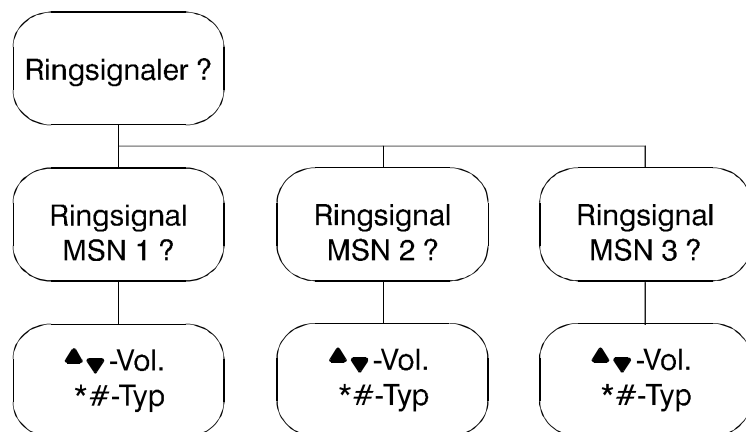

This function turns only off the ring signal. You can still answer incoming calls and make outgoing calls.

RING SIGNALS

The phones ring signal could be adjust to several different kinds, both in level and tone. The ring signal could be different on every MSN number.

Every ring signal could be adjust in eight different tones (01-08) and nine different level (00-08) there "00" is off.

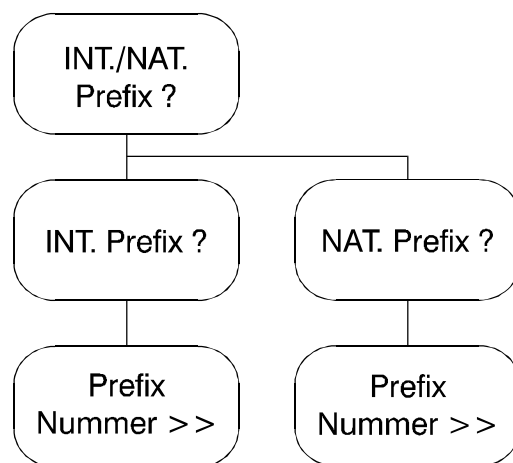

PREFIX

The prefix told the phone which the digit for abroad and national calls begin on. This is important so the caller identity will show correct phone numbers. This kind of information will not be send from your PTT.

In "NAT. Prefix ?" enter you digit "0".

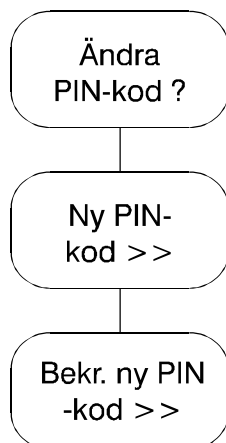

In "INT. Prefix ?" depends on which PTT you use.

CHANGE PIN-CODE

You can change the PIN-code at any time you want. You must erase the phone if you forgot the PIN-code (see page 35).

You can enter any five digits code you want.

ERASE

You can erase the phone if you got problem with the phone, or you have forgot the PIN-code. There are two different erase. One erase all functions to factory setting and the other erase just the PIN-code to 00000.

TOTAL ERASE (ALL SETTING):

P Press the functions button .

P Press  or  until the display show "**Service ?**".

P Press the **OK** button. The display show "**PIN-code > >**".

P Press the **OK** button.

ERASE PIN-CODE:

P Press the functions button .

P Press  or  until the display show "**Service ?**".

P Press the **OK** button. The display show "**PIN-code > >**".

P Enter: * 9 9 9 6

P Press the **OK** button.

EMERGENCY MODE

On the back side of the phone there is a switch that you use if there is any power cut. If there is a power cut put the switch to the "emergency mode". Now can you dial with the phone. Put back the switch then the power comes back. Then there is a power cut the phones function will be limit.

TROUBLE GUIDE

If the phone doesn't work, please read this manual first.

THE PHONE DOESN'T WORK

- P** Control all cables..
- P** Connect a another ISDN-phone, that you know work. If this work there is problem with your DORO Kronos.
- P** Try the phone on a another ISDN-line. If the phone work, the problem is in your ISDN-line.

NO RING SIGNAL

- P** Control that the ring signal not is turned off. Observation that every MSN-number have a own ring signal.

FORWARDING DOESN'T WORK

- P** This could depend on that your ISDN-line could not handle this function. (Function Protocol). Take contact with your PTT.

THE CALLER IDENTITY GIVES WRONG NUMBER

- P** Control that the prefix function is correct.
