## SignalLink™ Radio Interface Cables

Pick the correct radio interface cable for either a Mic connector interface or rear DIN plugs on radios so equipped. Some radios do not have the "RX Audio" signal on the Mic connector and will require a mono cable to be installed between the SignalLink USB and the radio. This is never an issue if you attach the SignalLink to your radio's Data or Accessory port.

**About Dummy Loads** The dummy load is a device used in place of an antenna when testing a radio transmitter. Also known as a dummy antenna, it is substituted for an antenna so the transmitter does not interfere with other radio transmissions. The dummy load absorbs transmitter power and presents the proper load to the transmitter output to prevent damage or incorrect adjustment. The dummy load should be a pure resistance, representing the ideal impedance of the antenna or transmission line that is used with the transmitter—50 Ω for amateur use. This will provide a standing wave ratio (SWR) of 1:1. The energy absorbed by the dummy load is converted to heat. That means you need a dummy load that is rated to safely handle the amount of power that is delivered by the transmitter.

## MFJ-616 Speech Intelligibility Enhancer

"As I got older, my high frequency hearing loss was destroying...ham radio for me..." Martin F. Jue, K5FLU/President and Founder of MFJ Enterprises, Inc.

Developed by Martin Jue to compensate for his hearing loss, this enhancer significantly increases speech energy above 500 Hz where 83% of intelligibility is concentrated, and reduces speech energy below 500 Hz where only 4% of intelligibility lies. Amateur radio communications limit audio to about 300 to 2700 Hz. The enhancer splits the audio band into four overlapping octave ranges centered at 300, 600, 1200, and 2400 Hz. You can boost or cut each range by nearly 20 dB to maximize speech intelligibility for most kinds of frequency loss.

Output audio is split into left and right channels with separate 2.5 watt amplifiers; a balance control lets you equalize the perceived loudness to each ear. The enhancer works with SSB, FM, AM, CW or any voice mode on ham, marine, aircraft, and CB bands.

The padded headband and ear-cushioned design make listening extremely comfortable. The headphones handle 450 mW and have 100-24,000 Hz frequency response. Impedance: 16 Ω at 1 KHz. Sensitivity: 102dB/mW.

### AL-811 600 Watt HF Amplifier, Three 811A Tubes

The AL-811 gives you 600 watts PEP output—nearly 2 full S-units over your barefoot rig. That could mean the difference between hearing “you’re Q-5 armchair copy” and “Sorry can’t copy you, too much QRM.” Now you won’t have to stand aside while the “big guns” steal your DX—you’ll be able to log some of those stations first. Going from 600 watts to the full legal limit (1,500 watts) gives you less than one S-unit increase and can cost three or four times more money. Get this amplifier and you’ll get a powerful punch at a price that’s easy on your wallet.

## i-Mate Memory Control

The i-Mate allows external selection of pre-recorded voice and keyed messages for the Icom IC-7600/7700/7800, IC-756 PROII/III, and IC-7000 transceivers, and keyed CW messages for the IC-746 PRO transceiver. It eliminates the need for shifting the display from operating mode to memory select mode just to transmit a pre-recorded message. Four buttons allow direct access to your messages. The i-Mate has a pulsed sine wave oscillator for tuning amplifiers and antenna tuners. An alternate audio input is provided for a second microphone or boomset. Connection and power from a single microphone jack.

- Works with CW and voice
- Send memories while keeping the spectrum scope on the display
- Easier access to memories with less hand movement
- Heil Pro-Set plugs directly into the i-Mate without an adaptor
- Separate PTT switch to key transceiver
- Auxiliary input can be used for digital modes
- MIC 1 switch allows switching between standard 8 pin microphone connector and MIC 2 auxiliary input
- Pulsed sine wave oscillator for tuning—save finals in the amplifier

### 1.8 to 30 MHz Artificial Ground

This artificial RF ground resonates a random length of wire thrown along the floor and produces a tuned counterpoise. This ground effectively places your rig near actual earth ground potential even if the rig is on the second floor or higher with no earth ground possible. It reduces the electrical length of the ground connection wire to virtually zero by tuning out its reactance. The artificial ground connects between your rig and a random length of wire or a connecting ground wire. It's tuned for maximum ground current using the built-in RF ammeter.

MFJ-931 .....\$104.95

### 300 Watt Antenna Tuner/Artificial Ground

This unit combines a versatile antenna tuner with an artificial ground. It turns a random wire into an effective antenna that works. It's great for traveling, emergency use, or as a makeshift antenna. The 300 watt, general purpose antenna tuner covers 1.8 to 30 MHz. It features a two range, lighted cross-needle meter that lets you read SWR, forward and reflected power all at a glance, and a 4:1 balun for balanced lines. You also get an efficient airwound inductor, a special high-current/voltage 12 position inductor switch, and two 1,000 volt air-variable capacitors. It tunes all types of antennas and feedlines including random wire, coax and balanced lines.
